"Though a little one, the Master-Word looms large in meaning. It is the open-sesame to every portal, the great equalizer in the world, the true philosopher's stone which transmutes all the base metal of humanity into gold. The stupid man among you it will make bright, the bright man brilliant, and the brilliant student steady. With the magic word in your heart, all things are possible, and without it all study is vanity and vexation. The miracles of life are with it; the blind see by touch, the deaf hear with eyes, the dumb speak with fingers. To the youth it brings hope, to the middle-aged confidence, to the aged repose. True balm of hurt minds, in its presence the heart of the sorrowful is lightened and consoled. It is directly responsible for all advances in medicine during the past twenty-five centuries. Laying hold upon it, Hippocrates made observation and science the warp and woof of our art. Galen so read its meaning that fifteen centuries stopped thinking and slept until awakened by the 'De Fabrica' of Vesalius, which is the very incarnation of the master-word. With its inspiration Harvey gave an impulse to a larger circulation than he wot of, an impulse which we feel to-day. Hunter sounded all its heights and depths, and stands out in our history as one of the great exemplars of its virtue. With it Virchow smote the rock, and the waters of progress gushed out; while in the hands of Pasteur it proved a very talisman, to open to us a new heaven in medicine and a new earth in surgery. Not only has it been the touchstone of progress, but it is the measure of success in everyday life. Not a man before you but is beholden to it for his position here, while he who addresses you has that honor directly in consequence of having had it graven on his heart when he was as you are to-day. And the master-word is *Work*—a little one, as I have said, but fraught with momentous sequences if you can but write it on the tablets of your hearts, and bind it upon your foreheads."

This citation is quite enough to show that the style of Dr. Osler is most felicitous; and those who think they care but little for the professional aspect of this volume, will be charmed by its graceful expressions, its acute suggestions, its thorough good sense. The medical profession among English-speaking people is especially noteworthy for its contributions to natural science beyond the field allotted to it, and not a few of the guild are distinguished non-professional writers. If Dr. Osler, in the new environment to which he is called, under the dominant influences of classical culture (for which he shows a strong predilection) should find time to devote himself to literature, would not the gain to letters be a loss to humanity?

BOOKS ON ART AND ARTISTS.

The Peel Collection and the Dutch School of Painting. By Sir Walter Armstrong. London: Seeley & Co.; New York: E. P. Dutton & Co. 1904.

A Record of Spanish Painting. By C. Gasquoine Hartley (Mrs. Walter Gallichan). London: The Walter Scott Publishing Co.; New York: Scribners. 1904.

Tuscan and Venetian Artists, their Thought and Work. By Hope Rea. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 1904.

Thomas Gainsborough, R.A. By A. E. Fletcher. (The Makers of British Art.) London: The Walter Scott Publishing Co.; New York: Charles Scribner's Sons. 1904.

Paolo Veronese.—Sir Edward Burne-Jones. Newnes's Art Library. London: George Newnes; New York: Frederick Warne & Co.

The director of the National Gallery of Ireland is one of the few writers on art who always has something interesting to say, and in his *Portfolio* Monograph on the Peel Collection he has made of what might easily have been a perfunctory piece of work an acute and valuable critical essay on the Dutch School. The Peel Collection includes one Italian picture, ten British pictures, twelve Flemish pictures, and eighteen drawings by Rubens and Van Dyck, besides the fifty-five Dutch pictures which are its principal glory. Two Rubenses, the famous "Chapeau de Poil" and the "Triumph of Silenus," figure in the illustrations of this monograph, but are not treated of in the text; Rubens and Van Dyck, as well as Rembrandt and Gonzales Coques, being reserved for study at "another opportunity." Rembrandt is such a lonely figure that he has constantly to be excepted from all general remarks on Dutch painting; and his elimination, together with that of the two great Flemings, leaves a compact and homogeneous body of artists whose work is so much of a piece that it may be profitably considered as exemplifying a point of view and a method. That they are artists and not merely mechanics—that they are designers as well as technicians—is Sir Walter Armstrong's main thesis; his whole book being a sort of sermon on a text from the first volume of 'Modern Painters,' and his argument a refutation of Ruskin's fallacies. It would be vain to attempt such a condensation of this argument, in the space at our disposal, as should give any fair idea of its scope or cogency; whoever will read it for himself will find it illuminating.

That such an argument should ever have been necessary—yet more that it is still necessary—seems almost incredible to the lovers of Dutch art; but there are still, undoubtedly, people who repeat and believe the old sneers at Dutch painting, made when that painting was as profoundly misunderstood by those who praised it as by those who damned. The reputations of Hals and Vermeer are so modern that no pictures by them are included in the Peel Collection; and while admirable examples of Metzu and Ter Borch and De Hooghe are to be found there, it is doubtful if the collector cared as much for them as for the industrious mediocrity of Dou. The works most admired by the connoisseurs of that day were the very ones which most nearly deserved the condemnation of Ruskin, while the qualities for which the better works were praised were the least of their real merits. Those who have felt that, in spite of controversy, Vermeer is as much, if not as great, an artist as Titian, may well be grateful to Sir Walter for showing them why and how this is true.

Velasquez was an even more isolated figure in the history of art than Rembrandt, and to read Mrs. Gallichan's volume or to study its illustrations is to accentuate one's conviction that there was only one great Spanish painter. His contemporaries, Ribera and Zurbaran and Murillo, were second or third-rate men, much farther below Velasquez's standard than were the little masters of Holland below that of Rembrandt. Before him the most interesting painter is the half-crazy Theotocopuli (il Greco), who was not a Spaniard; after him there is a hundred years' blank, and then that clever blackguard, Goya. We are bidden to see in the work of Zuloaga the hope of a renaissance of Spanish art, but the example reproduced shows no more than a superficial modern brilliancy, as little akin to the art of Velasquez as is Boldini's facile virtuosity to the grand Italian painting of the sixteenth century. The more one studies the really great figures in art, the more inadequate the theory of Taine appears, and the more one is forced to the recognition of the inexplicability and the importance of individual genius. The race, the *milieu,* and the moment may account for Botticelli, but not for Michelangelo; for Ter Borch, but not for Rembrandt; for Zurbaran, but not for Velasquez. The art of these greatest ones is colored by the race instinct and the time spirit, but is not produced by them. It is not the race or the epoch that interests us in their art: it is their art which interests us in the race and the epoch.

A great deal of industry has gone to the preparation of this stout volume of between three and four hundred pages. It is crammed with information, and we are willing to believe that most of this information is accurate, but it is not entertaining. With few exceptions the Spanish painters were very unimportant persons, and it would require great critical acumen and literary skill to interest us greatly in them; a lack of either faculty has reduced them to a row of labels. To read that so-and-so painted in such a town, that he drew well, or imitated the Italians, or was influenced by Venetian coloring, is much like reading that Pennsylvania is bounded on the north by New York. No one, indeed, could make Velasquez quite uninteresting, but it must be a rarely gifted person who can be justified in writing of him after Stevenson. The book has seven appendices, besides an index, and is a creditable production.

Hope Rea's modest essays, which come to us in a "new and enlarged edition," are of a very different texture. Here we have no cataloguing and very little history; the effort is to treat of certain large aspects of Italian art, using individual artists or particular works as illustrations only of the theme in hand. Thus, in the seven chapters, we have a consideration of the influence of building and goldsmith work on Italian painting, with Botticelli as the chosen exponent of this influence; of the relation between imagination and reality in art, with Angelico and Signorelli, Raphael and the Venetians, as contrasting types; of the artists as story-tellers, and of the comparative treatment of subject; as well as a separate chapter on the Della Robbia ware. The author writes intelligently, if with no great originality of thought, and in a pleasing if not over-exact style. That a second edition has been called for shows that the book has a value for a certain, probably a large, public, and its usefulness is increased by the thirty-eight well-executed half-tone illustrations.

Mr. Fletcher has nothing new or important to tell us of Gainsborough's art, but he has succeeded, in spite of the handicap of a wordy and inefficient style, in writing a fairly entertaining biography. His sentences rarely hit the mark, but he tries again and again and hits all around it, until one finds where the target must have been by allowing for the degree of deflection. Gainsborough had such a human and winning personality that even on these terms he is pleasant to read about, and he left a number of letters which are very briskly written, and which let us see him at first hand. Therefore, although there was no greater call for this book than the necessity of filling out the series to which it belongs, it can be read with a certain degree of enjoyment.

The two latest issues of Newnes's Art Library are like the earlier ones—collections of indifferently executed plates with a minimum of text. In the case of that devoted to Veronese, this text is much above the average of these publications, and gives some real idea of the range and force of Paolo's genius, though Mrs. Bell seems entirely to have missed the humor of the artist's defence of himself before the Inquisition, and to sympathize altogether with the inquisitors. The plates after Burne-Jones include a larger number of that artist's early works than we have seen elsewhere, and this gives the volume a certain interest. The extreme feebleness of these juvenile productions makes the real accomplishment of the later work seem by contrast even greater than it is.

THE OLDEST ENGLISH BOOK ON HUNTING.

The Master of Game. By Edward, Second Duke of York. Edited by William A. and F. Baillie-Grohman, with a Foreword by Theodore Roosevelt. With fifty-two facsimile photogravure plates and monotint reproductions. London: Ballantyne, Hanson & Co. 1904.

It was probably just five hundred years ago, during the unwelcome leisure of imprisonment in Pevensey Castle for conspiracy, that Edward, second Duke of York, grandson of Edward III. and of Pedro the Cruel, began the translation into English of the famous book on hunting written in France some twenty years before by Gaston III., Count of Foix and Lord of the Béarn, otherwise known as "Gaston Phœbus." Though the French work has been printed at various times, this English translation, to which Edward added five chapters and many shorter passages of his own, has heretofore existed only in manuscript form. Of the three manuscripts of special value, two lie in the British Museum and the third in the Bodleian Library. From one of the two former, the Cottonian, the text of Mr. Grohman's edition has been reproduced, with no alteration except "the addition of stops, and the correction of obvious clerical mistakes or repetitions." President Roosevelt contributes a characteristically enthusiastic Foreword, giving incidental expression to some of his own sensible views as to the proper subordination of sport to the more serious interests of life, the ethics of sportsmanship, and the best methods of game preservation. The revolt of his own taste against many of the older habits of the chase, as described in the volume, finds its way to the surface in his closing sentence:

"But, after all, no form of hunting has ever surpassed in attractiveness the life of the wilderness wanderer of our own time—the man who, with simple equipment, and trusting to his own qualities of head, heart, and hand, has penetrated to the uttermost regions of the earth, and single-handed slain alike the wariest and the grimmest of the creatures of the waste."

The President is guilty, we think, of historical injustice in asserting that the Romans, in comparison with the Greeks and Assyrians, cared little for the chase. We might readily fill a dozen of these columns with representative passages from Roman literature of all periods proving the contrary, were it worth while.

Aside from its aristocratic origin, in both the original and the translation, the treatise is of great inherent interest. The author believed in his sport, and threw his whole heart into his literary presentation of it. The hunter, to him, was one of the most favored of human kind. "Men desyren to leve long in this world in helthe and in joye, and after deth helthe of mannys sowle, and hunters han alle thise thingges." He "nevere segh man that loved travaile and lust of hundes and of hawkes that he ne had mony good custummes in hym, for that cometh to him of grett nobilness and gentillnesse of hert." His loving references to "the swete and fayre morrow, the clere wedir and bryght," and "the songe of the small fowles the which syngen swetely with grete melodye," all point to a genuine lover of nature, in spite of the strenuous existence in which he was involved by the troubles of the times. The Duke of York was apparently less at home with the pen than the Count of Foix, but criticism is disarmed by the closing entreaty:

"Nowe prey I unto every creature that hath herde or redde this lytell tretys whatever he bee of estate or condicyoun that ther as to lytel is of good language, that of theyre benignytee and grace they wol more adde, and ther as to is to muche superfulytee that they wol also abregge hit as hem seme the best by hure goode and wyse discrecion, nought presumyng upon me that I had other (over?) ful knowlegge or konnynge for to put in wryting this ryale desportful and noble game of huntyng so effectuelly but alwey to be submitted under the correccoun of alle gentyle hunters."

Both Frenchman and Englishman alike were evidently careful observers of the habits of the game of which they wrote, and the naturalist no less than the hunter will find much of curious interest recorded.

One can hardly speak too highly of the loving and enthusiastic care which the editors, Mr. Baillie-Grohman and his accomplished wife, have manifested in preparing the work for publication. Considering its age and origin, the simple reproduction of the manuscript, in sumptuous form, would have furnished a choice morsel for collectors, but the writers have wisely chosen to elucidate as well as to reproduce. No effort has been spared to explain the many technical terms of the chase, a class of words so difficult to the philologist that in some cases even the late Max Müller and Dr. Murray were obliged to admit themselves completely baffled. As none of the English manuscripts are well illustrated, about half of the remarkable series of miniatures of Manuscript 616 of "Gaston Phœbus," in the National Library at Paris, are included in photogravure reproduction. These miniatures are representative of the best work of the French illuminators of the middle of the fifteenth century, though the hand that painted them cannot now be identified. Their chief interest, of course, lies rather in their relation to the history of art than in their value as accurate illustrations of the facts of the chase. Their extremely conventional character strikes the eye at once, though the artist's deviation from his text in the use of colors is, of course, eliminated by the method of reproduction. Only the frontispiece is printed in the original colors. This represents the Count of Foix surrounded by his huntsmen and hounds, with some two dozen lines of the prologue underneath, and all surrounded by a very elaborate decorative border. In the Introduction, however, the color of the huntsmen's dress in the other miniatures is described in detail. The fact that in just a few of these miniatures we have a natural background in place of the conventional decoration so suggestive of wall-paper or oil-cloth patterns, is one of the evidences in favor of the date assigned, for it was toward the middle of the fifteenth century that the fashion began to change in this respect.

Aside from the introductory material which we have already noticed, there are

brief, but very compact, biographical sketches of the author and the English translator, a history of the remarkable adventures of the manuscript from which the miniatures are taken, and a chapter on English hunting in the Middle Ages. The notes and appendices furnish in the aggregate a vast amount of less connected information. We have mentioned above the possibility that the translation was made while the translator was imprisoned in Pevensey castle in 1405. There is no decisive evidence as to date, and the Pevensey-castle theory rests chiefly on the difficulty of finding any other time for the work in a life of such restless activity as the Duke was forced to lead. The prologue, at least, could not have been written earlier than 1406, since the Duke employs therein his title of Master of Game, a position which he held under Henry IV. from some time in 1406 until the King's death in 1413. Shortly after his pardon and promotion, the Duke was ordered to retire to his estates in the Welsh Marches and repress the rebels thereabout, and Mr. Grohman finds in this semi-exile another possible period for the work in question. There may be some doubt, however, whether the rebels of the Welsh Marches, five hundred years ago, constituted a favorable entourage for literary labor. But, however attractive the problem may be, it cannot be said to possess any serious importance. True, the book has been persistently attributed to the translator's father, Edmund de Langley, but this has been due merely to careless blundering, and Mr. Grohman has no difficulty in showing that there can be no real question whatever on that point.

One who has read to any extent in the older English will naturally feel inclined to resent the modernized version which accompanies the text in parallel columns, but perhaps the interests of the majority have been wisely consulted. It is impossible to modernize such a text, however, without some sacrifice of the quaint atmosphere of the original, and we counsel the reader to stick to the antique side of the page, resorting to the "pony" only when he finds himself absolutely baffled. Of course such a book cannot be put on the market, with its dozens of finely executed plates, its high-grade paper, its lavish margins, and its beautiful binding, at a price which will place it within the reach of "every gentleman's library." It must be frankly admitted, if we may take a little liberty with the well-known German phrase, that this edition has been produced "für die gegeldeten." Only six hundred copies have been printed, and three hundred of these are for sale in England. Purchasers in this country must take their chances with European competitors on the remaining three hundred. The inherent value of the book, however, is such that our leading libraries should be careful not to be left out.

The Campaign with Kuropatkin. By Douglas Story. Fully illustrated from photographs taken by the author. London: T. Werner Laurie; Philadelphia: J. B. Lippincott Company. 1905.

After a flirtation with the Japanese in Japan, where twenty-four hours assured him that their war plans had no place for correspondents, with whom he couples attachés in an equal yoke, Mr. Story entered the Russian lines by way of Niu-Chwang. Following certain compulsory oscillations, he appears to have reached Hoi Yan, a point in front of Liaoyang, late in June, and was present at a night reconnoissance on July 3. At the beginning this was a surprise, "and for a time there was nothing but the sound of great men cursing in their wrath, and of little men sighing as the cold steel found them." However, the Japanese awoke to the situation, and, at the expense of 380 casualties, "the Russians extricated themselves from the trap in which light found them"; but, "as a reconnoissance, the operation was perfectly successful," notwithstanding they had to fight a rear-guard action for eight weary miles, during which, had the Japanese artillery been up, they would have been annihilated.

Mr. Story gives no consistent account of the Russian generalship as a whole, except as a series of efforts to prevent the Japanese advance; and it may be added that the tactical accounts of the battles themselves are unsatisfactory. Instead of military history, we have a book of impressions, individual and general. Naturally, a correspondent speaks, perhaps thinks, of the side he rides with as "ours," and shows the sympathy due to association. But here Mr. Story, whether dealing with Russian history, with the prospects of the future, or with the matters before his eyes, becomes intensely pro-Russian and bitterly anti-Japanese, rating Japan's civilization and progress as "but the lacquer on her barbarism" (p. 43). Perhaps, amid a constant succession of reverses, the sky grows dark, and the moral as well as the physical landscape is tinged accordingly. With her fleet destroyed, Russia could not prevent Japan from landing her armies at will on the Korean or the Mantchurian shore. These having landed, the natural defence lay along the broken ground, rising into mountains—a somewhat remote coast range, that curved southwest from the vicinity of Feng-wang-cheng, northwest of the crossing of the Yalu, down along the Liaotung peninsula, at whose extremity lay Port Arthur. It was the business of the Japanese to penetrate that barrier, and the duty of the Russians, who held interior lines, to prevent them.

There was a curious survival of older tactics in the earlier Russian experience. Indeed, Mr. Story, having domestic examples in mind, calls Gen. Sassulitch "the Gen. Buller of the army." On the other hand, when, in the gradual elimination of "generals of a departed generation," Kuropatkin had "withdrawn efficient men from staff work to place them in actual command in the field" (p. 247), our author finds in Col. Putiloff "the real Baden-Powell of the Russian army." Some of the explanations for the various disappointments that clouded Russian hopes are amusing in their disingenuousness. Thus, with a recognized inferiority in cavalry, the Japanese held to the broken ground until the weather rendered the plains unfit for masses of horse. It is implied, although not directly asked, Was this quite fair? "The Russians had prepared their fortresses, their entrenchments, and their gun emplacements when the level of the surrounding country was twelve feet lower," owing to the plantations of high and well-feathered kiaolang, which "had been foreseen by the Japanese, dimly realized by the Russians," though their railway guard had really been an army of occupation on those very plains. "Positions thoroughly prepared for the defence had become practically useless, and the whole condition of the battleground was changed by three weeks of lashing rain and torrid heat" (pp. 231-2). "Gen. Kuroki, making use of secret passes through the hills, was able to bring his forces to bear upon the Russian right [left]" (p. 203). "Secret passes" is delightful, and reflects upon Wolfe at the Heights of Abraham. It hardly seemed aboveboard for Kuroki to go about his work circuitously, and, trusting to his opponent's blindness, leave a great unadvertised gap while he crossed the unfordable Taitse. Perhaps he merely did not care to revive Colenso and Magersfontein. At all events, at Liaoyang he cut loose on the right, and Japanese audacity and Japanese valor found the way, while for thirty-six hours the lips of the gap might have been curled back before a competent wedge. But the Russian service of information was miserable, and its scouting was poor. When Kuropatkin found the opening, he was too hard pressed to avail himself of it.

Making allowance for its partisanship, this volume grows upon one. At first there is a sense of triviality and of irritation; later, a feeling of interest, if not of sympathy, arrives; there is nothing to arouse sympathy. It engages the attention to read what purports to be the *ipsissima verba* of Admiral Alexieff, speaking as viceroy, in whom, as Mr. Story puts it, "is personified the policy of Russian evolution." "He did not seek the war, he did not expect the war; but the war, once entered upon, must continue until it reached its natural termination in the triumph of Russia." "The Russian occupation of Port Arthur is a *sine qua non* to the discussion of terms of peace" (p. 287). At least it is satisfactory to know what the late imperial lieutenant in the Far East thought.

In many respects it is from the detail rather than grand outline, in all these contemporaneous accounts, that the reader reconstructs the human side of the war, the conditions that are affecting such myriads of our fellow-beings, differing in speech and race but still our fellow-men, whether bearing arms or suffering in their stricken homes. We find the Russian rank and file to be peasants in arms—the private a big, burly, bovine type of fighting man, never absolutely the soldier, slow to anger, simple of faith, docile but dogged, long-suffering but formidable. He is loaded down with accoutrements (infantry and cavalry alike seem to wear heavy boots summer and winter), and extremes of temperature trouble him little. His camps sometimes are distinctly unsanitary. He is drunk when vodka is accessible, which it is not in the field; and always is deeply religious, praying and singing with constant and impulsive zeal (pp. 194-8). Such men are those for whom the shock tactics of the past were adapted; they are not the light troops to dash forward in corporals' squads, every man taking care of himself. The text and the admirable photographs together vividly explain some of the more intimate features of the combatant life. The bayonet appears to be always "fixed," even at night. A reminder of the bakery wagons of the Army of the Potomac is the soup-kitchens, huge

boilers on wheels that can go wherever guns may pass, from which at noon the soldier gets his bucket of beef and vegetable soup, subsisting meantime on black bread, which he carries around in huge loaves on his person, and tea. As may always occur after great battles, sometimes the wounded are transported in springless wagons, causing, unless beds of resilient boughs take up a part of the jar, great suffering. The only ambulances pictured (none are described) are a two-wheeled covered cart, again apparently springless but marked with the official red cross, agents of distress even greater than our own similar ones of 1861, whose "motion was intolerable and excruciating," notwithstanding that they had springs. A delightful touch of humane interest in helpless dependents is seen in the photograph of a mounted regimental medical staff, all of whose horses, one observes, are wearing the equine straw hat now common in our cities in the summer. The merciful man thus merciful to his beast may safely be trusted to care tenderly for his fellow-man.

We get nothing, except objectively, of the views of the soldiery themselves, if they have any; but Mr. Story discusses the personality of General Count Keller, killed on the firing line, where generals rarely have a place, but where his presence seemed necessary to animate his troops; the fascination of a Buddhist temple in Mukden, and of the Dai Lama presiding; Kuropatkin; the important Chinese viceroy; discipline; espionage. Nearly everything observed and not merely speculated upon is well worth reading. Finally, to the transatlantic reader there is an attractive simplicity in certain words that have fallen spontaneously from his pen which mark our writer as a North Briton. He finds "honest Scots bracken," the Narrows of Simonoseki are "the Kyles of Japan," Niu-Chwang is "a town longer than Kirkcaldy," he "climbed to a point higher than the top of Snowdon," "the coom of the coal-waggon" begrimed him, "the hills were as forbidding as those of Glencoe," a "strath" is his unstudied description of a broad valley down which the Japanese fire tore at Tashichao—so that one hardly requires to be told that "the gray metropolis of the North" held his alma mater.

Narratives of the Career of Hernando de Soto. (The Trail-Makers.) A. S. Barnes & Co. 1904, 2 volumes, 8vo, with portrait of De Soto and facsimiles of his signature.

These two little volumes are in perfect keeping with their predecessors in the important series of ancient narratives of the exploration of America, for which so much credit is due to the publishers and initiators. The fact that they are edited by Prof. Edward Gaylord Bourne of Yale University naturally adds to their value. Professor Bourne has been extremely cautious in his work. He has avoided engaging in the labyrinthine discussion of De Soto's route; and, while we can easily understand his reluctance to enter such a difficult and to a certain extent unsatisfactory field, we must regret his decision, as his views would be of particular value on many points. The same spirit of prudent restraint and (in a man of his attainments) of self-denial has kept him from substituting for the Life of De Soto by Buckingham Smith, which closes the second volume, a biography of the discoverer of the Mississippi written by *himself*. It cannot be construed as a reproach to the late Buckingham Smith if we say that the sketch written by him appears, at the present time, very much out of date, and is, for the general reader who has not at his command the means of critical investigation, not a little misleading. At the time that biographical sketch was written, documents on the subject (and on Spanish-American topics in general) were imperfectly known and much more difficult of access than to-day; hence a number of unavoidable misstatements. It is a matter of congratulation that Mr. Smith was one of the "Trail Makers" in the publication of Spanish literature, on Florida and Sonora chiefly.

The present volumes contain four ancient narratives of De Soto's ill-fated expedition, in which he reached the Mississippi at a point considerably above its mouth. He was by no means the "discoverer" of the mighty stream, as is well known, but the first white man who struck its course inland. After his death on the banks of the river, the survivors of his expedition crossed it and penetrated so far to the west that their appearance there became known to Indians from the plains, from whom Coronado gathered some confused indications about the presence of his countrymen on the western confines of the great plains. As the expeditions of De Soto and Coronado were nearly contemporary, not impossibly they might, after the former's death, have joined hands had Moscoso (who succeeded De Soto in command) been able to continue in his westward course and Coronado taken a more southerly route.

The narrative of the "Gentleman from Elvas," originally in Portuguese and presented in its English translation by Buckingham Smith, is generally regarded as reliable. Being from the pen of an eye-witness, it certainly deserves greater confidence than the next, which is the work of the Peruvian mestizo Garcilaso de la Vega. The 'Florida del Inca' is open to several objections, most of which are clearly stated by the editor. Still, it is a source, and evidently based upon oral or written statements of some eye-witness or eye-witnesses of the expedition. But Garcilaso is so inclined to color events and descriptions, as his Peruvian commentaries of the Inca show, that everything from his pen is to be taken very much *cum grano*. At least of equal importance with the "Gentleman from Elvas," if not of greater, is the third narrative, by Hernando de Biedma, given in Buckingham Smith's translation. It is shorter, and a useful check upon the two preceding sources. Lastly, we must congratulate Professor Bourne on having added the report by Rodrigo Rangel preserved by Gonzalo Fernandez de Oviedo y Valdez in his voluminous General History. Since Oviedo incorporated it in his book, it must be of positive value and undoubted authenticity. In point of fact, the reports of Rangel and Biedma must rank higher than the "Gentleman from Elvas," for they were both earlier in time, and present, therefore, fresher recollections. Whether they are as impartial, is a different question, since both of the former were superior officials! The report of Rangel is not the only narrative of the kind preserved, almost integrally, by Oviedo, and it is pleasant to notice how that chronicler, most unjustly appreciated by Robertson and Prescott, at last begins to take the rank he deserves.

There still remains untranslated a narrative of De Soto's Journey, of which the critical value would require close investigation before presenting it as a positive source. It is very little known, and not of easy access. We refer to the purported diary contained in the 'Relaciones de todas las Cosas que en el Nuevo Mexico se han uisto y sabido ansi por Mar como por Tierra, desde el Año de 1538 hasta él de 1626,' by Father Gerónimo de Zárate Salmeron. Professor Bourne may have had his reasons for not incorporating it in his collection of documents.

We shall offer one, very insignificant, criticism. Professor Bourne states that the mother of Garcilaso de la Vega was the sister of Huayna Capac. She was his niece, the child of one of his brothers. Still, Peruvian relationships before the Conquest were confusedly known to and understood by the new-comers. Garcilaso, who makes the statement, while very positive, is himself so contradictory in regard to rules of consanguinity among the Incas that Professor Bourne may yet turn out to have been right. All that it is safe to admit is, that she was a woman from the Inca tribe of Cuzco, more or less closely related to its former head-chiefs. In conclusion, we can only hope that the "Trail Makers" may continue in the path they have so far been travelling, and that they will always find editors as competent and judicious as the one to whom the narratives of Soto's Journey have been entrusted.

Recreations of an Anthologist. By Brander Matthews. Dodd, Mead & Co.

Mr. Brander Matthews has a good right to call himself an anthologist. He has already published three anthologies, and promises a fourth, to contain poems that celebrate the beauties of New York. A collector of literature is perhaps the only unselfish member of his tribe, for the hobby of collecting is usually an egoistic, acquisitive pleasure, and the pleasure to be bestowed on the world at large rarely enters into the game; but the anthologist's enjoyment is crowned only when he shares his collection with the public. From the day when Meleager wove his 'Garland' of forty-eight Greek poets, likening each poet to a flower, and so started the fashion of anthologies of lyric poetry, down to the 'Oxford Book of Verse,' every such collector has been a benefactor to his race. In the course of his trade, he has rare opportunities. He must hunt for his specimens in the curiosity-shops of literature, and he has this advantage over other collectors that he need not turn away with a sigh from any rare bit that would be out of place in his collection; the expense is the same; the odds and ends can wait their turn; they are the by-products of collecting, and give a fresh impetus, inspiring one as often as not with the prospect of yet another anthology. When you are collecting *vers de société*, it occurs to you that the epigrams would make a separate anthology, and when you are sorting the epigrams, you realize the variety and value of the quatrain. Hence the minor anthologies, the anthologist's recreations.

The little volume before us, containing some of the by-products of Mr. Matthews's

collecting, is a revelation of the possibilities of the art that will no doubt incite others to collecting on their own account. Not that anthology-making is a mere matter of going out hunting. There is a knack in it, and many a serious reader might range over the same manor as Mr. Matthews, but never put up the same game. In the short essay on "American Epigrams" the author has brought together a number of ingenious couplets and quatrains in which are recorded some of the chief crises of American history. The best are by Lowell, such as this, with a squint at Benjamin F. Butler:

"B——, taught by Pope to do his good by stealth.
'Twixt participle and noun no difference feeling;
In office placed to serve the Commonwealth,
Does himself all the good he can by stealing."

When Sir Frederick Bramwell was called on at a dull dinner in London, after a dozen and a half speakers, to respond to "Applied Science," he said that "at this time of night the only illustration of the toast I can think of would be the application of the domestic safety-match to the bedroom candle." Whereupon Lowell promptly handed him the following, scribbled on a card:

"O brief Sir Frederick, might the others catch
Your happy science—and supply your match!"

Less accessible than Lowell's are the epigrams of John G. Saxe, chiefly directed against feminine weaknesses:

" 'Whenever I marry,' says masculine Ann,
'I must really insist upon wedding a man.'
But what if the man (for men are but human)
Should be equally nice about wedding a woman?"

"The quatrain," says Mr. Matthews, "has never received due recognition." In the use of this form, as in the case of "American Satires in Verse," Lowell carries off the American honors; but H. C. Bunner, commonly known as a humorist, had an almost equal gift for the pathetic quatrain. To the uncollected poems of Bunner, whose early death was a real loss to American literature, one of these essays is devoted. In it Mr. Matthews collects certain "outcast" verses which their author and his executor did not think fit to include in the definitive edition of his poems. They are well worth saving, especially that *tour de force* of wilful mispronunciation entitled "Classic Journalism," which begins with the lines:

"The beautiful garland of justice awaits
The eminent poet and general Socrates,"

and ends with

"And Greek journalism has vanished beneath
The silent oblivious waters of Lethe."

The eleventh and last essay is a recreation apparently unconnected with anthologies. It is an account of a feat of conjuring performed by Robert-Houdin before Louis Philippe and his court in 1846, with an explanation by Mr. Matthews how the thing might have been done. But the anthologist who haunts the by-paths in search of rare specimens may well find himself in the company of prestidigitators when, like Mr. Matthews, he has loitered with plagiarists and gastronomists and the rest of the neglected writers to whom we are introduced in this entertaining little volume.

Industrial Organization in the Sixteenth and Seventeenth Centuries. By George Unwin, Sometime Scholar of Lincoln College. H. Frowde. 1904.

It is not too high praise to say of this volume that it is the most important contribution to English industrial history since Mr. and Mrs. Webb's 'History of Trade Unionism.' It deserves to stand, so far as the subject-matter of the work is concerned, along with Ashley's 'Economic History' and the now famous work of the Webbs as one of the three indispensable special histories of industrial organization in England. It is the more welcome to the student of this subject as it bridges the chronological hiatus between the works of Ashley and the Webbs, and supplies a reliable outline of the period between the Reformation and the Revolution. How little authentic information has hitherto been available upon the industrial evolution of these two centuries one may judge by comparing in Palgrave's 'Dictionary of Political Economy' the two articles upon "Gilds" and "Livery Companies," and the appended list of sources on which the two articles are based. The gild early became something of a fad with the economic historian, while between it and modern industrial organizations, whether of capitalists or employees, there was seemingly fixed a great gulf of ignorance, bridged only here and there by a speculative guess or a superficial crust of conjectural history.

Mr. Unwin begins by pointing out that there are four well-defined types of manufacturing systems: household manufacture, the household consuming its own output; handicraft manufacture, with independent craftsmen each producing a staple article and supplying a narrowly localized market; the commission system of manufacturing, where capitalist-traders supply material to craftsmen at the craftsmen's homes, and market the finished product; and lastly, manufacturing under the present factory system. Corresponding to this series of types is a constantly widening market. Mr. Unwin undertakes to show the historical process by which the second type (that of handicraft manufacture as embodied in the craft gild) was supplanted by the third type (the so-called domestic or commission system) as embodied in the so-called Livery Company. The transformation of the craft gild into the livery company was brought about by three different processes. In the fourteenth century certain closely allied crafts rose to a position of predominance over the other crafts. In the fifteenth century the trading function came to be mainly exercised by a select body within a single craft organization. In the sixteenth century, organizations which had arisen to represent the purely trading class acquired control over the craftsmen proper. Thus, in the Elizabethan century as in the century preceding, we find a bi-cameral trade organization consisting of the Livery with its Court of Assistants as a central body of control, and the Yeomanry, including the smaller masters and the journeymen, who had no prospect before them but that of remaining members of the lower house, and who were "therefore bound together by an increasing consciousness of a class interest which separated them from their employers."

The bulk of the book consists in tracing the three ways in which the transformation of the earlier craft guild was effected. The latter part of the volume is of interest as showing how the industrial corporation of the Stuart century tended to split in two through the efforts of the small masters to assert against the larger masters an independent organization having a local monopoly of trade. The efforts of the smaller masters, though supported by the Crown, were defeated by forces making for a wider internal market and for the development of the export trade. Singularly enough, it was just this class of submerged small masters, reduced, as they commonly were, to the journeyman status, who kept alive the traditions of class solidarity which culminated in the eighteenth-century trade union. As Mr. Unwin puts it, "In tracing backwards the spiritual ancestry of the organized skilled workmen of the present day, the first link is undoubtedly to be found in the small master of the seventeenth century" (p. 200).

The most interesting contribution which this work affords to current economic problems is the theory which Mr. Unwin propounds of the early industrial maturity of Great Britain and the earlier emergence of workmen's free organizations in that country. He rejects *in toto* the view to which even free-traders have sometimes yielded a cursory assent, that the protective or mercantile policy afforded the matrix for the early growth of British manufactures; and contends that it was, on the contrary, "the freedom of internal intercourse" and "the comparative absence of mercantile restrictions" which gave the early impetus to manufacturing industry. As to trades unions he says:

"The passing of the Combination Acts and the early prosecution of trade unionists should not blind us to the fact that it was the comparative freedom of England in the eighteenth century which alone made the combination of wage-earners possible. At the very moment when the workers of England were laying the foundations of a free organization . . . the Governments of France and Prussia were putting a veto on any such spontaneous popular development, by transferring these same institutions into the hands of the police, and utilizing them as a part of the machinery of a more or less benevolent despotism" (p. 227).

The only adverse criticism to be passed on the volume is that the very extensive use of the comparative historical method oftens mars the narration by obscuring under a mass of detail the objective point. If the illustrations of analogous processes of industrial evolution drawn from Continental history had been heroically depressed into footnotes, however bulky, it would be much easier to follow the expository clue. The make-up of the volume is far below the deserts of the subject-matter. It is to be hoped that a later edition may present us the uninterrupted description of the transformation of English craft guilds into Livery companies, with foreign analogues set more in the background. It requires a resolute perusal if the student of the present volume is not to get bogged occasionally in the adventitious illustrative material.

An Introduction to the Theory of Optics. By Prof. Arthur Schuster. London: Edward Arnold; New York: Longmans. 1904.

As the title imports, this text-book, by a physicist of fairly high standing, relates, not to light in general, but only to the *theory*. The student is supposed to be acquainted already with the phenomena of light, so far as they are described in college books of general physics or "natural philosophy." Nor is this a regular *treatise*

on the theory of light, but only an *introduction* to that theory of a peculiar sort. The first two-thirds of the volume are elementary; that is, they explain only polarization, interference, diffraction, the theory of optical instruments, and the peculiarities of the different crystalline media—phenomena that result simply from light's consisting of transverse vibrations. The remaining third of the book contains the deeper theory of light, and is written on a novel plan, the idea being to direct students to the original memoirs without repeating their contents, unless Dr. Schuster has some simplification or amplification of the matter of a memoir to bring forward. This spoils the book as a work of reference, but we think that all good physicists will highly approve of thus forcing upon students the habit of reading original memoirs.

There is another feature that cannot pass unnoticed. Probably a large part of our readers are aware that of late years there has been among physicists a split of no ordinary kind. How many approved writers, metaphysical analysts of high pretensions, have explained to us that there necessarily is a science of physics whose essence consist in its assumption that matter moves according to the principle of inertia, which Hoefding, for example (than whom no philosopher, perhaps, is more in vogue just now), calls, in his 'Outlines of Psychology,' "the fundamental assumption with which natural science comes into existence." Yet at this moment a growing moiety of the world of physics assumes this law to be only approximately true, and even that only for velocities not too great. The physicists of the nineteenth century took for the sole aim of their hypotheses the explanation of phenomena as special cases under the general laws of dynamics. The new school, however, proposes to explain dynamics as a special case under the general laws of electricity. The peculiarity of Schuster's position is that he wishes to treat the matter as a party question, and says that the new opinion must be "strenuously resisted." Such language will tend to make us all hope the new doctrine may turn out true, as scientific propositions that excited "strenuous resistance" usually have turned out in the past. We note, by the way, that Schuster seems to regard the fact that Kirchhoff (in 1857) remarked that the velocity of electricity was about that of light, as in some measure detracting from the merits of Maxwell. Why, then, does he not mention that the electromagnetic theory of light was originally propounded by Faraday in 1846?

The Book of the Iris. By R. Irwin Lynch. (Handbooks of Practical Gardening. Vol. XXI.) John Lane. 1904.

This is a book by a cultivator for cultivators. The author is the curator of the Cambridge (England) Botanic Garden. He deals with his subject in a practical manner worthy of high praise. Of course, his directions as to the management of this attractive group of plants are designed primarily for amateurs in Great Britain, and, within the limits of those islands, will be found wholly safe and useful. The directions have also a good degree of [illegible]cability to these plants under cult[illegible]n in all temperate exposures, and hence can be regarded as trustworthy even in our own climate. Mr. Lynch has arranged the species of this interesting genus in a way to satisfy every purpose of the cultivator.

One of the groups of the more capricious species was entrusted to another hand (now, alas, a vanished hand). This chapter, by the late Rev. Henry Ewbank, formerly Vicar of St. John's, Ryde, Isle of Wight, is full of pleasant reading. Everybody knows with what enthusiasm English clergymen ride their hobbies, taking in them the same keen interest that their hunting parishioners have in the chase. Roses and all sorts of wayward plants have had their devoted clerical friends who have tried to win them from provoking ways, sometimes by coaxing, and more often by heroic measures hardly ventured on by the layman. The Irises known as the Onocyclus class stand rather by themselves in their extreme whims, but the Vicar seems to have induced them to be uncommonly responsive to his skilful management.

Our common blue-flag, and its kindred, delight in the wettest places they can plant their seeds and roots in. They have gone far away in their predilections from their cousins in the same order. These latter are true Xerophytes, plants of dry soil. They have well-marked devices for making the most of what water they can extract from arid ground. Many of them have vertical leaves, obviously an adaptation that greatly reduces the demand for water, which all plants lose by evaporation. Curiously, the species of Iris have retained this ancestral method of checking evaporation, although it is plain that they no longer need it in their chosen marshy homes. The sabre-like leaves of Iris are folded in such a way that they have received the name equitant: near their bases they appear to ride astride, but nearer the top each leaf forms a veritable scimitar. From a cluster of these vertical swords there arise flower-stalks bearing blossoms of great beauty. Three of the divisions in the circles of protection stand as flaring banners, while, between these, three others droop gracefully in irregular and filmy folds, which sway in the lightest breeze. These often have striking contrasts of color, in spots or stripes, and cannot fail to catch the eye of even the most careless passer-by. The colors have been called nectar-spots and nectar-guides, and are interpreted as meaning to every welcome insect that here is plenty of nectar to be had. Allured by this attraction the insect visits the blossom, finding a convenient resting-place, while the head goes down along the nectar-guides into the flower, in search of the promised nectar. There it secures it, and, when the head is withdrawn, there is brought out upon the back of it a small amount of pollen from the anthers which were just behind. Now, flying away to flower number two, the same quest is made, but with this difference: the head just dusted with pollen is thrust down as before, but, in the early part of its descent, it comes in contact with a tiny shelf on which some of the pollen is taken off. This upper part of the sticky shelf is the stigma, the organ receptive of pollen, and from which the pollen tubes can grow down to the ovules, and thus secure the impregnation which brings about the ripening of them into seeds. This is obviously a very good way to prevent the self-impregnation of the blossom, for the stigma cannot be touched by the pollen which lies underneath, except by insect intervention; and this is practically put out of the question by the arrangement of the parts. Although an insect *could* stop on its way out of a blossom after it had taken the sought-for nectar and clumsily turn around on the summit of the stigma and there place some pollen on the sticky surface, he never does any such thing. He deposits the pollen on his way in. It is, therefore, one of the charms which attach to this beautiful alliance of plants to watch the insects in their busy straight-away work.

The genus Iris possesses another charm which cultivators have not been slow in finding out, namely, that, well-used to grow in swamps, it can also patiently adapt itself to the drier places in the garden. Irises are, therefore, capable of wide employment as decorative elements in landscape gardening on the grand as well as on the small scale. Mr. Lynch's book will be of utility to all who wish to use them in this way. It will also be a pleasant companion for that increasing number of sensible people who are cultivating a few plants around which historical and literary associations cling. Among such plants the Iris (the Fleur-de-lis) holds a prominent place.

Eighteenth-Century Essays on Shakspere. By D. Nichol Smith. Macmillan.

Of the nine essays in this volume, five are the prefaces to the chief editions of Shakspere, and all but two (Dennis's, 'On the Genius and Writings of Shakespeare,' and Morgann's, 'Essay on the Dramatic Character of Sir John Falstaff') are still fairly accessible in the various editions of Malone's Variorum. It is well, however, to reprint all of these, and to give us Rowe's 'Account of Shakspere's Life' unmutilated. The introduction and notes are accurate and scholarly, but the book is disappointing to one who had hoped to find in it some discussion of the tendency and value of the numerous minor essays, as well as some sort of selection from them.

Mr. Smith does, indeed, mention familiarly over thirty essays by nearly as many authors, but, with very few exceptions, (*e. g.*, Mrs. Montagu's 'Essay on the Writings and Genius of Shakspere'), he gives us no estimate of their value, either intrinsic or as illustrating the critical attitude of the century. He has, in short, picked out only those essays which are of most critical value even to this century. Unfortunately, one needs only a little knowledge of the minor writers of a generation to realize that an acquaintance with merely the great names does not give a fair basis for comparison and inference; a study based on the bigger men alone inevitably ignores significant and important substrata of ideas and habits of expression.

Some of the essays which Mr. Smith mentions without estimate or citation have familiar titles, but nearly, if not all of them, are practically inaccessible to the general reader. It would be of great value to have a companion volume which should contain such further reprints as bulk would allow, accompanied by a full bibliographical account of all eighteenth-century essays bearing on the subject. For essays not reprinted in full, this bibliography should

also give summaries of their contents, and the editor's estimate of their relative importance. The following essays are not even mentioned by Mr. Smith: F. Peck: 'New Memoirs of the Life . . . of Mr. John Milton,' 1740. (Has explanatory and critical notes on Shakspere's plays.) K. P.: 'Shakespear,' 1774. W. Kenrick, D. D.: 'Introduction to the School of Shakespeare,' 1774? Mrs. E. Griffith: 'The Morality of Shakespeare's Drama Illustrated,' 1775 and 1777. T. Davies: 'Dramatic Miscellanies etc.' 1784. J. M. Mason: 'Comments on the Last Edition of Shakespeare's Plays,' 1785. M. Sherlock: 'A Fragment on Shakespeare, extracted from Advice to a Young Poet,' 1786. Joseph Ritson: 'The Quip Modest,' 1788, and 'Cursory Criticisms on E. Malone's Edition,' 1792. J. Hurdis: 'Cursory Remarks upon the Arrangement of Shakespeare's Plays,' 1792. W. Whiter: 'A Specimen of a Commentary on Shakespeare,' 1794.

AN INVALUABLE NEW WORK ON THE AMERICAN INDIANS

Life, Letters and Travels of Father Pierre Jean De Smet, S. J.

Missionary Labors and Adventures Among the Wild Tribes of the North American Indians (1801-1873), Minute descriptions of their Manners, Customs, Games, Modes of Warfare and Torture, Legends, Traditions, etc., from Personal Observations; with Sketches of the Country from St. Louis to Puget Sound.

Edited from the original unpublished manuscript Journals and Letter-books, with numerous notes, also a Life of Father De Smet, by

HIRAM MARTIN CHITTENDEN, Major U. S. Engineers, and ALFRED TALBOT RICHARDSON.

Map and Illustrations

4 vols., 8vo, cloth (over 1,600 pages), $15.00 *net.*

"So fully and so well has he described life and customs of the North American Indians, that were the tribes and remnants of nations now swept away, a complete knowledge of their characteristics and stage of culture could be had from these volumes. His writings have contributed, perhaps, a greater fund of information concerning the American Indians than has been contributed by any other work in any other language. He has added new facts concerning the water courses, the mountain ranges, the boundless resources of the country, and of the wonderful opportunities it offered to settlers," etc.—*New York Times Saturday Review.*

FRANCIS P. HARPER, Publisher, 14 West 22d St., New York

HAKLUYT SOCIETY PUBLICATIONS. New Volume. Series II., vol. XI.: "Early Dutch and English Voyages to Spitzbergen in the 17th Century," including Hessel Gerritsz's "Histoire du Pays Nommé Spitsberghe" 1613, and Jacob Segersz van de Brugge, "Journael of Dagh Register," 1634. Edited with introductions and notes by Sir W. Martin Conway, F.S.A., pp. xvi,, 191, 3 maps, 3 illus., Bibliography, Index. Annual subscription, one guinea. A complete list of previous volumes, with Index, can be obtained post free on application to the Hon. Secretary, BASIL H. SOULSBY, F.S.A., 3 Spring Gardens, S. W., London, England.

NEW PUBLICATIONS

OUR NAVY AND THE BARBARY CORSAIRS
BY GARDNER W. ALLEN

The relations of the United States with the Barbary powers, a century ago, form an interesting and romantic episode in American history which has never before been presented as a complete story. The various events, scattered over a period of about forty years, are now brought together in this book. The war with Tripoli in 1801, and with Algiers in 1815, are fully described. With maps and other illustrations. Crown 8vo, $1.50 *net*. Postage 12 cents.

MANUAL OF TREES OF NORTH AMERICA
By CHARLES SPRAGUE SARGENT

The Manual contains brief descriptions in plain and simple language of some 630 trees of North America (exclusive of Mexico), accompanied by a figure of the leaves, fruits and flowers of each tree. This work will fill a place similar to that long held by Gray's "Manual of Botany." Professor Sargent is Director of the Arnold Arboretum of Harvard University, and author of "The Silva of North America," "Trees and Shrubs," etc. With plates by Charles Edward Faxon. Octavo, $6.00 *net*, postpaid.

ESSAYS IN PURITANISM
By ANDREW MACPHAIL

"A formal consideration of the theme of Puritanism containing five essays which bear the names of Jonathan Edwards, John Winthrop, Margaret Fuller, Walt Whitman and John Wesley. The book is full of good-humored satire, and, unlike many books of its class, can be perused with genuine pleasure."—*Montreal Daily Star*. Crown, 8vo, $1.50 *net*. Postage extra.

THE HAWTHORNE CENTENARY CELEBRATION AT THE WAYSIDE

"The most considerable recent additions to our knowledge of Hawthorne are made in the publication of the addresses and lectures at the Wayside centenary celebration. It contains mostly the remarks and recollections of those who knew Hawthorne personally—of Mrs. Howe, Colonel Higginson, T. P. Stearns, M. D. Conway, F. B. Sanborn and others."—*Springfield Republican*. Illustrated from photographs. 12mo, $1.25 *net*. Postage 10 cents.

SOME IMPORTANT BOOKS, PUBLISHED LAST FALL, FOR WHICH THERE IS A CONSTANTLY INCREASING DEMAND

THE RUSSO-JAPANESE CONFLICT. By K. Asakawa. Its Causes and Issues. With an introduction, illustrations and map. Large crown 8vo, $2.50 *net*. Postage 16 cents.

AUTOBIOGRAPHY OF MONCURE D. CONWAY. Two volumes. With portraits and facsimile letters. 8vo, $5.00 *net*. Postage 43 cents.

LETTERS OF JOHN RUSKIN TO CHARLES ELIOT NORTON. Two volumes. With many interesting portraits and other illustrations. Crown 8vo, $4.00 *net*. Postage 26 cents.

ROUTINE AND IDEALS. By LeBaron R. Briggs. By the author of "School, College and Character." 16mo, $1.00 *net*. Postage 9 cents.

SCIENCE AND IMMORTALITY. By William Osler. Regius Professor of Medicine at Oxford University, England. 16mo, 85 cents *net*. Postage 6 cents.

READY APRIL 8

THE FAR EASTERN TROPICS. By ALLEYNE IRELAND

Studies in colonial administration in Burma, Java, the Malay Peninsula, Hong Kong, French Indo-China, Borneo, and the Philippines,—the product of three years' travel, by an expert commissioned by the University of Chicago. With map. Large crown 8vo, $2.00 *net*. Postage extra.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.

$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

THE UNITED STATES 1607-1904

A History of Three Centuries of Progress in Population, Politics, Industry, Commerce, and Civilization

By WILLIAM ESTABROOK CHANCELLOR and FLETCHER WILLIS HEWES

To be in **10** volumes, 8vo, handsomely printed in pica type, containing numerous diagrams and tables showing industrial and financial development, comprehensive maps, and a series of portraits from steel plates or in photogravure.

Sold separately. Each $3.50 net.

Ready: VOLUME I.—Colonization, 1607-1697. VOLUME II.—Colonial Union, 1698-1774.

The London Academy (Eng.):—This first volume of a comprehensive History of the United States arrests attention by its thorough scholarship, its breadth of treatment, and its lucidity of style. Its literary qualities are most evident. The authors recognize the solidarity of history. . . . Vivid. . . . Clear. . . . Concise. The Republic of the West is . . . given its rightful place in the procession of the world powers.

The Dial (Chicago, Ill.):—One notes favorably the plan of the work, and especially the division of each volume into four sections (Politics, Civilization, Industry, War).

The Essays of Sir Leslie Stephen

Literary and Critical. AUTHORIZED AMERICAN EDITION. To be complete in 11 volumes printed from new type.

Now Ready

1. FREE THINKING AND PLAIN SPEAKING. With Introductions by JAMES BRYCE and HERBERT PAUL. 1 volume. 8vo, net $1.50.

2. HOURS IN A LIBRARY. 4 volumes. 8vo, net $6.00.

"There is little critical writing in the English language that can be compared with these essays for keenness and breadth of view. . . . One may search far and wide before finding estimates more discriminating, penetrating, and withal judicial . . . His essays are most instructive and delightful."—*Literary World.*

"Learning, sense, human urbanity, and critical insight, those are only a few of the qualities Mr. Stephen displays. . . . It is only when we pause to reflect at the end of a paragraph or essay that we recognize how smoothly and delightfully we have been carried along."—*Daily Chronicle.*

NEW YORK **G. P. PUTNAM'S SONS** LONDON

The Nation.

NEW YORK, THURSDAY, MARCH 16, 1905.

The Week.

Congress at the late session went only so far in the direction of reforming the land laws as to amend the Lien Land law of 1897, which the Public Lands Commission had called "scandalous." Hereafter, the holder of lands which have been included in a forest reserve cannot exchange them for other timbered lands, but must take lands of some other sort. Thus is ended a system under which, in eight years, it is said that two million acres of forest outside the reserves has already come into the hands of the large speculators and land-grant railroads. A recent report from the Commissioner of the General Land Office states that these roads still hold more than two million acres in the reserves, and the amended law comes when just half the possible mischief has already been done. But the Timber and Stone act under which such lands may regularly be acquired, remains on the books, and is as sorely in need of revision. Under it, the purchase of Government land, 160 acres to one person, is authorized at $2.50 per acre, when the applicant swears that the land is worth more for timber or stone than for agriculture. "It is an invitation to steal," said a Western publicist, of this statute. "Unless he can sell it, 160 acres of timber won't do the individual the slightest good. It is not enough to warrant him building sawmills, or transportation facilities to get his lumber or logs to market. Consequently, he sells it at the first opportunity to the corporations who inspired the law." One incentive to fraud arises from the fact that lumbering is an industry which must be conducted on a large scale, while the Government's policy has always been in theory to distribute the land among small holders. The Commission's plan out of the difficulty is to sell merely the standing timber in large tracts and afterwards divide up the land.

The laws under which the Government timber lands have got into the control of speculators were based on wrong principles. Those relating to agricultural lands need merely a thorough stiffening. Thus, the homestead law prescribes a residence of five years, the building of a house, and the cultivation of a certain amount of land before securing a United States patent to 160 acres. This might be an effective provision against the speculator, making his operations too tedious and expensive to be worth while, except for the commutation clause which enables the settler to reduce his necessary residence to fourteen months by a money payment of which $1.50 per acre is the minimum. The Desert Land law is supposed to permit the settler to take up arid lands to the extent of 320 acres for a nominal price if he does the work necessary to reclaim them. The principle of this law is all very well, but the Commission finds that it, too, in practice has been "an instrument of speculation, fraud, and perjury." If Congress neglects the subject for many years longer, the mischief will be past undoing. One difficulty in securing an overhauling of this subject is that, while it is of intense interest to the States directly affected, a great part of the country neither knows nor cares anything at all about it.

A considerable amount of Congressional work is to be done this year after Congress has adjourned. The Senate Finance Committee has been authorized to sit during the summer recess, which is believed to mean that it will take testimony on the tariff question. The Senate also passed Mr. Kean's resolution empowering the Committee on Interstate Commerce to investigate railroad rates and their regulation. This committee is planning to meet on April 10 and hold hearings for a month or six weeks. Last summer, in spite of the campaign, time was found for the Joint Merchant Marine Commission to travel to all the chief shipping centres, and the Senate Committee on Privileges and Elections to visit Salt Lake City and make special inquiries as to the eligibility of Senator Smoot. In November most of the members of the House Committee on Interstate and Foreign Commerce, with a few Senators for company, visited the Isthmus of Panama to study the canal work. It is rather curious that none of this overtime work brought any results in the session just closed. The Marine Commission's recommendations went over to next year, the Mormon Senator finished the first third of his term on Saturday week, still unmolested, and the two houses failed to come to an agreement on the canal zone bill.

If the Federal lawmakers have been going slow in the matter of regulating railroad rates, the members of State Legislatures have felt no hesitation in the matter. A half-dozen of the States not already supplied with railroad commissions are providing them as quickly as the legislative machinery will work. Indiana will have a commission of two Republicans and one Democrat appointed by the Governor. Washington has a new law creating a commission of the same size and method of appointment. In Montana a law providing for an elective commission has been passed by a Republican Legislature, but vetoed by the Democratic Governor Toole, out of whose hands the positions would be taken by the bill as passed. Even the Territory of Oklahoma has a new rate bill almost ready for passage. Gov. La Follette of Wisconsin is leaving his seat in the Senate vacant while he sees to the progress through the Legislature of the rate commission bill, the last of his reform measures to be enacted into law. Of course, the laws differ from each other and from the rate commission laws previously in force in some of the States, but the sudden movement to pass such laws is an extraordinary response to the campaign which brought such meagre results from Congress. Many of the State commissions now in office are little more than ornamental, but if, in the recess of Congress, they all try to demonstrate their efficiency, a mass of interesting experimental data may be available by the time our national legislators tackle the job again.

Testimony by the freight auditor of the Santa Fé last week that his road paid more than $1,000,000 in rebates in the year 1902 alone, should be of deep interest to President Roosevelt. His battleship-loving Secretary of the Navy, Mr. Paul Morton, was Vice-President of the Santa Fé at the time. He ought to know all about the details. He ought also to be able to explain why we must pass a new law giving the Interstate Commerce Commission power to fix rates, instead of enforcing the criminal provisions of the old law against rebates. The mere fact that a prosecution of that kind would compel the serving of a summons upon a member of Mr. Roosevelt's Cabinet would not, Mr. Morton may be sure, stay the President's hand.

The *Nebraska State Journal* contributes to the discussion of the direct-primary bill before the Legislature a comparison of the cost of the proposed new nominating method with the old convention system. The Republican State Convention last year cost the delegates (or some one else) for carfare alone almost $4,000. Other necessary expenses amounted to some $3,000. Two other State Conventions, the Democratic and Populist, are estimated to have cost another $7,000. But each county had previously held a party convention, the cost of all of which must have mounted to some $18,000; and when the expenses incident to the nomination of six Congressmen are added—$1,500 each, ac-

cording to a low estimate—the total cost of the convention system to the people of the State is shown to be above $40,000. This figure includes only the most necessary charges; the travelling expenses being based on special half-fare rates. In contrast, it is pointed out that there are about 1,600 voting precincts in Nebraska; and in Lincoln, where the Republicans have adopted the direct primary plan, the expense is a little less than $15 for each precinct. For the whole State the cost would, therefore, be approximately $24,000. The figures seem to furnish a sufficient answer to the objections urged against the bill on the ground that it would involve great outlay.

Political corruption in Connecticut is such an old story that the statements which Dr. Newman Smyth made on Thursday before the Judiciary Committee of the General Assembly are likely to fall on indifferent ears. The whole State knew that Bulkeley and Fessenden were making corrupt campaigns for the United States Senatorship. Bulkeley apparently had the longer purse, for he won with flying colors. If one may judge public opinion by utterances of the press, pretty much everybody in Connecticut was satisfied but Dr. Smyth and a few other fussy people who labor under the delusion that the Ten Commandments have a place in politics. Dr. Smyth, with singular persistence, still refuses to acquiesce in the Legislature's covenant with death. He believes that $150,000 was spent in corrupting the voters, and he offers to put prosecuting attorneys on the trail of gross bribery. He wants to enforce the Penal Code. A man of his years ought to know that the district attorneys do not care to be put on the trail of bribery—moreover, that the bare mention of penal codes in the presence of a United States Senator, president of a large life-insurance company, and liberal advertiser, is rank discourtesy, as out of date as John Knox.

Vermont cities and towns voted for the third time on the question of license or no-license on March 7, and nine more communities are added to the territory under voluntary local prohibition. In the first year of the new law, 1903, there were 91 license towns; the next year there were 40, and for the coming year there will be only 31. The Vermont cities seem to be developing habits of discontent with whichever system they happen to have in operation. Barre, which voted for license a year ago by a majority of 78, went the other way this time by 95, while Rutland, which was a license town in 1903, but became "dry" a year ago, has now gone back to license. As the Rutland *Herald* remarked the day before election, referring to the experience with local prohibition, while "things are not as they ought to be, . . . the traffic is neither as extensive nor as offensive as it was in the days of State prohibition."

We have frequently called attention to a growing uneasiness in the South itself at the restriction of the franchise, notably in Virginia, where there is danger of the State's becoming the property of a small white oligarchy. Somewhat the same feeling is apparent in Alabama. The Birmingham *Age-Herald*, commenting on the plan to levy a poll-tax as an inducement to voting in New York, notes that it is an aim directly opposite to that of the Alabama poll-tax. It then adds that the time is fast coming when the Alabama policy will be modified. "The cumulative feature of the Alabama plan," it continues, "must be removed unless the State is willing to be governed by a small and by no means select electorate, and is willing to have a large body of whites who cannot vote and who are therefore indifferent to all public duties." This is precisely the danger which comes from the limitation of the suffrage. Once begun, there is great difficulty in stopping. Rule out negroes first, and you naturally feel like discriminating against the poor whites; then your unscrupulous politicians find an easy excuse for still further limitations which promise to keep themselves in power. The awakening in Alabama is hopeful, but it should include the reënfranchisement of qualified negroes as well.

A foolish strike on the Subway and Elevated Railroad is perishing of its own folly, but certain aspects of it still invite comment. Why did the chiefs of the Locomotive Engineers and the Street Railway Employees wait till the strike was beaten before they denounced it as irregular? If treason to the national organization had been successful, would it have been no longer treason? Chief Stone declared that the strike was "in direct violation of our law"—that is, the law of the Brotherhood of Locomotive Engineers. But if that was true on Thursday afternoon, it was true on Tuesday morning; and a prompt and emphatic announcement of it then would have prevented much suffering. However, we must welcome, even if it comes late, Mr. Stone's declaration that "labor organizations must keep their agreements if they expect to succeed." This falls in with the statement of the Interborough Company that the men deliberately broke their word. They have got their punishment; and doubtless their crazy leaders will sink into the obscurity that yawns for the failures of organized labor. As for the management of the company, it deserves the thanks of the community for having withstood a peculiarly mad form of union tyranny with determination, and fought it with skill and vigor. It should firmly adhere to its announced purpose of retaining the employees who came to it in the emergency, and making the men who threw up their jobs insanely eat humble pie and wait their turn.

If James Wilson continues to serve as Secretary of Agriculture through the present Administration, his record of service in any Cabinet office will surpass all others, with but one exception, since the foundation of the Government. Even now, only two men have ever held a portfolio longer than he. Mr. Wilson is the only one of McKinley's original selections who is still in the Cabinet. He was appointed on March 5, 1897, and on March 5 rounded out his eighth year, thus equalling the terms of James Madison, who was Secretary of State from March 5, 1801, to March 4, 1809, when he became President, and Gideon Welles, who was Secretary of the Navy from March 5, 1861, to March 4, 1869. Henry Dearborn, whom Jefferson twice appointed Secretary of State, lacked about a month of completing his eight years. The two Cabinet officers with longer records are William H. Crawford and Albert Gallatin, who share with Mr. Wilson the honor of having been three times appointed. Crawford was made Secretary of the Treasury by Madison on October 22, 1816, and continued through both of Monroe's terms, making his total service about eight years and four months. Gallatin did not take office until two months and a half after Jefferson's inauguration, on May 14, 1801. Madison continued him in office throughout his first term, and did not appoint a successor until February 9, 1814, though during the year 1813, when Gallatin was abroad, the Secretary of the Navy performed his duties. Altogether, he held the office for about twelve years and nine months. Mr. Wilson could only equal that by being continued in the next Cabinet. Combining as he does the qualifications of a farmer and a politician, stranger things than that might happen should the next Administration be Republican.

No one could seriously have expected Mr. Balfour to be beaten on any of the critical votes taken in the debate on the Address. Then is the time of all others when party spirit and Government whips flog reluctant members into attending the House and voting. The majority of 42, in a division upon one of the aspects of the tariff controversy, on March 8, was only half the normal, but it shows that the Ministry cannot yet be turned out on a direct vote of want of confidence. Probably no Liberal expected that it could. The debates and the divisions have aimed, not at immediately defeating the Government, but at fur-

ther discrediting it. This end has been attained: Mr. Balfour emerges distinctly weaker. But the real test will come in the routine work of the session. The Government's strength will be apt to be eaten away piecemeal. Dispirited followers cannot be kept in regular attendance; the Ministry may be outvoted on chance divisions; and although it has announced that it will not resign for that, it may easily find the work of necessary legislation so dragging and finally impossible that it will give up in disgust.

In the Berlin *Nation*, Count Albert Apponyi, the new President of the Hungarian Upper House, analyzes the result of the recent elections. The victory of the united Opposition was most sweeping in districts where intelligence and thrift are greatest. In Budapest itself, and in a few of the larger towns, the Government succeeded in obtaining a bare majority, mainly owing to the large vote of petty officials and their indirect influence. But in the Magyar districts the overwhelming majority (about 90 per cent.) voted for the Opposition, and so did the German peasants, with the exception of the Saxons of Transylvania. Nor were the appeals of the Government to the national sentiments of Slavs and Rumans more successful. The Slovaks of Northern Hungary clung faithfully to the Catholic People's party. The main issue—the integrity of Hungarian institutions—appealed to the "plain people" with irresistible force. "Powerful magnates were defeated in their districts by unknown, petty journalists and lawyers; some constituencies, long notorious for corruption, broke with their unsavory traditions, and penniless candidates triumphed over the heaviest money-bags." Numerically, the united Opposition consists of 166 members of the Independence party, 26 adherents of Andrássy, 23 members of the Catholic People's party, 11 followers of Bánffy, 10 Independents, and 9 Rumano-Serb Nationalists. These 245 votes were increased bby the supplementeary elections to abobut 250, as against the 161 votes for the Government.

Count Apponyi is not disposed to make light of the obstacles which the Opposition is certain to encounter in attempting to form a Cabinet. The majority is composed of fractions, some of which are unquestionably loyal to the *Ausgleich* of 1867, and Count Apponyi concedes to Tisza not a few followers among the Liberal party, in spite of Count Andrássy's nominal leadership. It is doubtless the knowledge of this weakness in the Opposition that has confirmed Francis Joseph in his determination to withstand the demands of the Independence party on the army question. Perhaps he recalls the famous "Wir können warten," which his Premier, Schmerling, opposed to Hungarian demands in the sixties; though Kossuth may retort that Deák, too, could "afford to wait," and that Schmerling was forced to yield in 1865.

It is said that the French Socialists will interpellate the Government concerning its action in permitting the Russian ships to stay so long in Madagascan waters. The occasion will doubtless be seized for a thorough ventilation of the whole question of the Franco-Russian alliance. Even before the last military disasters, influential leaders of public opinion in Paris had made bold to predict its early collapse. Of sympathy with the liberal movement in Russia, there has been no lack. The general protest against the massacres of January 22 led to the formation of a society calling itself "Les Amis du Peuple Russe," among the members of which are Anatole France, Georges Clémenceau, Senator Adolphe Carnot, the historians Seignobos and Langlois, the mathematician Painlevé, the painters J. P. Laurens and Carrière, and others of distinction. One of the objects of this society is "to give precise information as to what is going on in Russia, and to make the Russian people aware of the sympathy felt for it in its struggle for liberty." Great meetings of professors, students, and laboring men have been held, denouncing not only the Czar, but the Russian army for fighting against the people; and the Socialists have called for an alliance between French workingmen and those of all other countries in place of the Franco-Russian alliance. M. Anatole France, in the course of a recent address, said that he had asked M. Combes, the former Prime Minister, whether there really existed a hard-and-fast compact between France and Russia compelling the French Government, in certain eventualities, to aid her ally actively. M. Combes answered evasively, but M. France stated it as his opinion that no French Ministry would be capable of such folly.

The results of higher education in India and in Japan differ widely. The Bishop of Madras has lately called attention to its comparative failure in India. Instruction in Western science and literature is given in the English language, which the average student has only imperfectly mastered. The Indian student has always in mind either a place in the civil service or an opportunity to gain an advantage in the world of commerce and finance. He is satisfied to learn by rote that which his instructors are pleased to impart, for the Indian is capable of extraordinary feats of memory. In Japan, all is different. Though at the Imperial University the curriculum prescribed is in some respects inferior to that of the Indian colleges, instruction is given in the vernacular, and the Japanese graduate is equipped for work in any field to which his taste may direct him. In neither country is the education religious; but while in Japan the student is animated with a patriotic zeal to benefit his nation, in India patriotism is rare. The present condition of affairs in India, in spite of the universities act of 1904, is another of the examples afforded by history of the failure of education when divorced from some living and dominant sentiment. Alexandria, with its cosmopolitan life and interests and its scholarly atmosphere, studied the past, but made no substantial progress. It furnished a museum with literary monuments; its philosophy was eclecticism without originality. And now it is seen that not even the intelligence, wealth, and political power of England have made the Indian colleges successful, while the young men in Japan find in university education an opportunity for the advancement of themselves and their country.

The occupation of Mukden on March 10 was the fruit of the Japanese attack of February 23 on the Russian advanced fortifications, combined with irresistible flanking operations which made Kuropatkin's retreat the most panicky perhaps ever known in Russian military annals. The pursuit, too, did not flag till it was clear that the defeated army was first in the race for Tie Pass. At Tieling a breathing-space has been afforded for bringing order out of chaos, but a further retirement upon Harbin seems inevitable unless the present disaster prove a prelude to peace. The distance which the Russian force has been moved back by the latest Japanese engineering exploit (for we can hardly help likening it to a feat in transportation), is about equal to that which separates Liao-yang from Mukden. If Russia were still practically intact, and had no internal dissensions to menace both the replenishment of the army and the very existence of the Government, we might look upon Oyama's successes as Pyrrhic victories. Just what they have cost him, what Kuropatkin, in lives lost, or what was the respective strength of their two vast armies, no one knows. The talk of cessation of hostilities is, of course, revived, all the more because the Paris bankers are withholding the Russian loan. We place no confidence in reports of the intended exaction of an indemnity, apart from territorial concessions. Indemnity should come from the party which began the war, as in the case of France and Germany. Russia is not yet so impoverished as to pay cash for her folly and bad faith over and above what poetic justice has exacted of her already.

THE SAN DOMINGO INTRIGUE.

From the Senate amendments to the San Domingo treaty, it is evident that the President will scarcely know his own baby when it is returned to him by the Senate nurses. Besides cutting out all of his Monroe metaphysics, the Senators have inserted precautionary clauses directly in the face of some of his proposals. The most important of these safeguards relates to the liquidation of foreign claims against San Domingo. There was undoubted peril in the President's plan to take the whole matter jauntily into his own hands. As the *Economiste Français* pointed out, Mr. Roosevelt was headed straight for embroilment with foreign countries. But the Senate has now checked him. It has practically adopted the scheme of joint action, in this matter of foreign debts, which the President rejected out of hand. To bring out the difference, we put Mr. Roosevelt's statement of his own proposal, in his second and meeker message, alongside the Senate's wise amendment:

THE SAFE PRESIDENT.	THE WARY SENATE.
"Many of the debts alleged to be due from Santo Domingo to outside creditors unquestionably on their face represent far more money than ever was actually given Santo Domingo. The proposed treaty provides for a process by which impartial experts will determine what debts are valid and what are in whole or in part invalid, and will apportion accordingly the surplus revenue available for the payment of the debts. This treaty offers the only method for preventing the collection of fraudulent debts, whether owed to Americans or to citizens of other nations."	"The United States is not bound by this treaty to consider or decide on any claim presented to it for adjudication, adjustment, or settlement until the Government of which the claimant is a citizen or subject has given its consent that the decision thereof by the United States, its agents, or officers thereunto duly empowered shall be accepted as final and conclusive."

These transformations find their counterpart in the relatively sober second thought of the President himself. If his latest message on the San Domingo treaty were to be put in parallel columns with that of February 16, some interesting contrasts would emerge. At the earliest date, he was all adrip with the Monroe Doctrine. What it forbade and what it commanded was the chief burden of his song. He wound up his former message, in fact, with the assertion that the disposition of the treaty would afford "a practical test of the efficiency of the United States Government in maintaining the Monroe Doctrine." Did we or did we not wish to make Monroe turn in his grave? But in the following message, the tomb of Monroe was not once invaded. The Doctrine was left mute and inglorious. All came down to a mere proceeding in bankruptcy. Moreover, the Senate was informed that, if the treaty fails, "foreign nations will be left to collect the debts due their citizens as they see fit, provided, of course, there is no permanent occupancy of Dominican territory." Yet on February 16, such occupancy was "the *only* way in which the Powers in question can collect *any* debts"; and that way the United States "cannot see."

We pass to Secretary Hay's repeated attempts to "set at rest" the "misleading and harmful reports concerning the San Domingo protocol," which betray a Department ill at ease. They do not clear up, but deepen the mystery. The real way to dispel it is to publish all the correspondence—including the orders to Commander Dillingham through the Navy Department, as well as those to Minister Dawson from the Department of State. But this simple step Secretary Hay has not taken. The Department is reported to hold that, "as an invariable rule," it "draws the line against the publication of preliminary correspondence." Waiving for the moment the question what the real precedents are, consider the exact nature of the difficulty which is causing Mr. Hay so much vexation. First is the fact of a protocol actually signed at Santo Domingo on January 20 by our naval and diplomatic representatives, which had nowhere within its four corners a hint that it required ratification by the Senate, and which was to go into effect in ten days—a period obviously shutting out action by the Senate. Nor did this strange proceeding burst upon the country unannounced. The Washington correspondent of the *Tribune* had fully and, as he alleged both before and after the event, "authoritatively" set forth what was to occur. The "arrangement," he explained, "has none of the attributes of a treaty, and will not require ratification by the Senate." Even on January 21, after the protocol had been signed, this correspondent, speaking in the name of "officials of the State Department," said that when once the document had been received and examined, "Senators may advise the President to put it in treaty form, *but that course is not now contemplated.*" But now the Secretary states that "no purpose of putting the agreement into practical operation without submitting it to the Senate for approval was ever entertained, considered, or discussed." To repeat the question in "Figaro," "Who is deceived here?" It is the Senate's business to find out and let the country know. Unless the matter is probed to the last dispatch, the most damaging suspicions will stay afloat. It will be intimated that the President went ahead with the aid of the Navy Department, possibly assisted by the too effusive "Loomis, Acting" (who, rumor now says, is to be provided for somewhere east of Suez—at any rate, outside the State Department), and got into an indefensible position from which Mr. Hay is doing his best to extricate him.

Precedents can, of course, be quoted on both sides, as relates to the American practice of making diplomatic correspondence public. Washington refused to send to the House the instructions leading up to the Jay treaty of 1795, but this was chiefly because the House had no business in that galley, not being a part of the treaty-making power. Besides, the Jay treaty had already been ratified by the Senate. In later years, certainly, the rule has been to furnish all the correspondence, even of that "preliminary" kind which the Department of State now thinks it would be against tradition to publish. The correspondence going with the Treaty of Paris, for example, made a stout volume. But the case nearest in point is the first San Domingo scandal, when President Grant tried in vain to force through the annexation treaty of 1869. It was precisely the publication of the correspondence, covering Babcock's extraordinary dispatches and the illegal orders of Robeson, the Secretary of the Navy, which then made ratification of the treaty impossible. Senator Sumner had personally had access to the incriminating records before he made his first speech against it, but it was only when, on his motion, the entire correspondence was sent to Congress that the country saw what a lawless course had been pursued by the Administration. Then, as now, there was a Dominican President in straits. Baez appealed to Grant much as Morales has appealed to Roosevelt. He was kept in power a year or more, purely by the assistance of the American navy. How do we know that Morales is not enjoying that favor now? Baez was driven from office soon after the treaty failed. Morales will almost certainly fall in like manner, unless we prop him up on bayonets. The San Domingo affair was one of the worst blunders in all of President Grant's Administration. His predictions of what would occur if we did not take that hornet's nest into our parlor, were almost as sweeping as Roosevelt's, yet have remained ludicrously unfulfilled. But Grant at least let the people see what he was doing. It is reserved for the frankest of all our Presidents to perceive that it would not be good for us to know the whole truth.

It may be said that, the original protocol having been withdrawn in confusion, none of these considerations apply to the pending treaty. But the two are inextricably mixed up. All that throws light on the protocol will also illuminate the treaty. It will show the animus of both parties to the negotiation. What did Morales first ask? What promises did he get? What aid and comfort, beyond the signing of an unauthorized treaty so as to "avert disorder," have our naval officers given him? All these and many more pertinent questions the Senate should insist upon having squarely answered. Until they

are, it should not ratify the treaty, even with some of its fangs drawn by amendment. Moreover, the country is entitled to the information. The treaty has been published. The President's messages about it have been given to the press. Now let us have the whole thing. Give us the orders of Mr. Morton, so as to assure us that the man who, as Vice-President of the Atchison, openly snapped his fingers at the Interstate Commerce law, has not, as Secretary of the Navy, been outdoing his unhappy predecessor, Robeson, in disregard of international law. Having made a beginning of taking the public into its confidence, the Administration should be made to go all the way. The President has put his hand to publicity, and knows what is written of those who look back.

THE HARD ROAD TO ECONOMY.

The late Congress was never out of the shadow of an impending deficit. The Speaker coined homely phrases from time to time to express the fact that revenues and expenditures were not likely to meet, while other sagacious members discoursed in more classic language on the same unfortunate condition. For the current fiscal year, the first for which the Fifty-eighth Congress made provision, the deficiency is now estimated as at least $18,000,000. Every one agreed, when the supply bills for 1906 were taken up, that the alternatives were squarely presented of increasing the revenue or cutting down expenses. The Ways and Means Committee, however, did nothing in the former direction; as for the second, members of both parties on the appropriation committees expressed the view that when they had scaled down every item to the lowest reasonable figure, they had done their duty. However big the deficit might be, the responsibility was on the leaders who refused to provide more revenue.

It is seldom that the tabular history of appropriations printed at the close of a session shows so plainly the effort made to keep down expenditures. The ways of saving money are very simple. Let the departments be instructed to pare down their estimates to the lowest possible figure. Let the House committees cut them still smaller. Let the leaders firmly repress the desire of members to swell the total of the bills after they are reported. Let the Senate use sparingly its power of tacking on new items, and, finally, let the representatives of the House in conference take a firm stand against all Senatorial extravagance.

Every one of these precautions was followed with unusual fidelity this year. The Departmental estimates were kept down so efficiently that they were only about nine million dollars above those of the year before. The House committees took off about fourteen millions more before reporting the bills. Then the House itself, which in the past few years had acquired the dangerous habit of adding to appropriation bills after they were reported, inserting thus $1,270,569 last year, went back to old precedents this time, and even cut out items aggregating $329,937 which its committees were willing to appropriate. Then the Senate committees contented themselves with adding but $10,133,776.89 to the bills—an extremely moderate amount, less than half the corresponding additions a year ago, and many millions less than in the years preceding. More noteworthy still, the Senate, which, as a body, owing to the power which the individual Senator may exercise, is almost always more liberal than its committees, added only $215,803 after the bills were reported. In the corresponding short session of the Fifty-seventh Congress, its additions of this sort were $3,804,025.

Most remarkable of all, when the various bills emerged from conference, more than half of the Senate's additions had been stricken out. For every dollar the Senate added to the appropriations, only a little more than 44 cents was left in the bill as it went to the President for signature. As it is without precedent in recent years for the House to come nearer than the Senate to getting its way as to the total of appropriations, the corresponding figures for other years are worth citing. A year ago, for every dollar the Senate added, 67 cents was in the bill as it became law. In the session of 1902-1903, under Speaker Henderson, the House consented to 72 cents in every dollar of Senate amendments; in 1901-2, it yielded on 86 cents, and in 1899-1900 87 cents. Mr. Cannon may be proud of his success in making the House assert itself in these appropriation conferences. Six of the thirteen supply bills are smaller than those of a year ago.

Thus it seems that Congress did everything that a Congress should do when anxious to economize. The only trouble was that, despite these pains, the total came out $37,306,539.63 larger than it ever was before. Although the regular supply bills are not party measures, it is the custom for the chairmen of the appropriations committees in House and Senate, and the ranking minority members, to present an analysis of the appropriations and their meaning. This year Mr. Livingston of Georgia, subtracting the estimated revenues for next year, $725,590,515; from the total of appropriations, $818,478,914, obtained "a difference of $92,888,399, a broad enough expanse between the buckle of expenditures and the tongue of revenues to startle the plain and common people who bear the burdens of taxation." Chairman Hemenway, more agile in the use of figures, deducted first the deficiency bills and all of the "permanent annual appropriations" except those to be applied to the ordinary expenses of conducting the Government during the fiscal year 1906, and thus obtained a surplus of $28,542,410.

But, for all these differences of interpretation, the figures themselves are for any one to study. They show, at least, of how little avail the ordinary measures of economy are when opposed to projects undertaken on a grand scale. It is almost impossible to abandon a line of policy once entered upon. All the supply bills, as we should naturally expect, are larger than they were ten years ago, but they have not grown at the same rate. In the four years of Mr. Cleveland, the Army, Navy, and Fortification bills included but a little more than 10 per cent. of the total money appropriated; Congress during half of that time being Republican. In the four years 1903 to 1906, with Mr. Roosevelt as President, those three items make up 22 per cent. of the total. That is, of course, at the expense of peaceful and domestic activities. For agriculture 82 per cent. more has been appropriated between 1903 and 1906 than between 1893 and 1896, but this makes a niggardly showing beside the 242 per cent. increase in provision for warlike purposes. And while, in the four years of Roosevelt, 46 per cent. more money has been appropriated for rivers and harbors than in Cleveland's four years, this is not even commensurate with the general increase, which was 56 per cent. It is plain enough that it is the "big stick" policy which is responsible for this abnormal increase of expenses in ten years. And if such a policy is followed out when the Government can hardly make both ends meet, the citizen may well ask what would happen if we had a surplus.

THE COMMANDER-IN-CHIEF AND HIS MEN.

The Japanese have won at Mukden the most important and, in its effect, the most far-reaching of their successive victories by land and sea within the last thirteen months. Whatever else results, Kuropatkin's military reputation is now badly shattered. If we review the development of the land campaign since last May, the conclusion that it has lacked foresight, a vigorous initiative, and a well-thought-out plan, is inevitable. Writing in the Berlin *Tageblatt*, Col. Gädke of the German army, who was with Kuropatkin until December last and enjoyed unusual opportunities for observation, declared early in February that the one hope of Russian success lay in a change of commanders. There is no worse leader, he declared, than the leader who does not dare. Such attempts at assuming the offensive as Kuropatkin made were undertaken so cautiously and hesitantly as to invite defeat, although, according to Col.

Gädke's estimate, the Russians had fully 75,000 more men than their enemy on February 1. It will be remembered that Gen. Gripenberg's charges against Kuropatkin were quite in line with this criticism. At the hour of that officer's success Kuropatkin frustrated his achievement by a failure to forward some promised reserves, because of a groundless fear that to do so might seriously weaken his line at a point which was hardly threatened.

The general who does not risk a complete defeat is little likely to win a complete victory. Kuropatkin seems never to have been able to forget the necessity of protecting the Mantchurian railway. In the battles about Liaoyang and Mukden his soldiers saw him accept battle by preparing to retreat. Construction of fortifications in the rear to serve as havens of safety have busied the General quite as much as plans for the checkmating of his foe. The policy of the Moscow campaign, of falling back before a superior enemy, may have had its justification at the outset of the Mantchurian hostilities. Col. Gädke was one of those who believed so at that time. But, as the summer passed and the Russian army gradually outgrew its adversary, Kuropatkin could not wholly shake off the policy of delay and of striking only when he felt sure that a repulse would not seriously injure the army. Hence the repulse, all but counted on, invariably came. Not once did Kuropatkin attack all along the line. It was always, after October, a steady pounding at the Japanese left wing and never with sufficient numbers, for the reason that Oyama, by repeatedly demonstrating in force on the Russian right and centre, accomplished his object of holding sufficient Russians opposite to him to prevent Kuropatkin's obtaining the desired numerical superiority on his (Oyama's) left. Furthermore, according to Gen. Gripenberg, Kuropatkin made the additional blunder in the battle of Sandipu, at the end of January, of prescribing in advance definite limits for the forward movement, beyond which his subordinate could not go. This was to cripple Gripenberg before he even encountered the enemy.

Observers, alike on the spot and at a distance, are agreed that the Czar's generalissimo has wholly lacked decision and vigor, with the pitiless will to succeed at any cost so characteristic of the Japanese generals. Personally brave and doubtless exceptionally fitted to be the right hand of a Skobeleff, Kuropatkin naturally suggests comparison with McClellan, whose chief concern was always the exact numerical superiority of his foe. Like him, Kuropatkin is a remarkable organizer, a man of talent and industry. But the Russian has never learned to stick to the offensive at all costs, to forget the possibility of a defeat, to get out of his men their last atom of strength. Honest and devoted, he has wasted precious time in striving to oversee the location of every division, every brigade, and even every regiment, in marked contrast to Kuroki and Oyama, who have lived and fought close to field-telegraph instruments, and put the responsibility for details on others. Finally, the successful general must have a certain gift for divining his adversaries' plans, and in this Kuropatkin would appear to be totally deficient.

As for Oyama, he has demonstrated that it is still strategy which counts, even with the vastly increased forces of modern warfare, and with a battlefront of ninety miles. He has achieved success by hazarding defeat. With Eastern stoicism and fatalism, he has thrown away regiment after regiment against the Russian centre entrenched behind barricades and natural obstructions which all the eagerness of his men to die could not reduce by front attack. Putiloff Hill was abandoned only when Nogi and Kuroki scored on the flanks. Not until the former struck home did Kuropatkin realize where the massing of the Japanese forces was, and then it was too late. His counter attacks failed as completely as had his more elaborate assuming of the offensive.

But if Kuropatkin has suffered a terrible defeat, the individual Russian soldier has once more triumphed; has once more shown himself one who cannot be demoralized even when retreating before a victorious foe, under the most trying conditions in warfare. It is to this steadfastness that Kuropatkin owes his escape with the bulk of his army to Tie Pass, quite as much as to the readiness of his massed artillery to sacrifice itself in order that the remainder of the force might make its way northward. What European troops would have achieved this feat after having been steadily beaten back for ten months in every encounter with their enemy? Gen. von Boguslawsky, perhaps the foremost German military writer, answers this question by saying emphatically that no other soldiers could take such a beating and still keep together.

> "Deprived of their officers, a body of Russian soldiers may degenerate into a helpless, inert mass, and be slaughtered by means of their very cohesiveness, but they will never take a panic; their history affords none of those examples in which a mass of crazy fugitives flies with a cry of 'Sauve qui peut' from a danger conjured up by the imagination, and exaggerated and inflamed by the senseless cries of others."

Thus wrote Gen. Francis V. Greene in his 'Army Life in Russia' as a result of his observations as United States military attaché in the Russian winter campaign of 1877-8, against the Turks. He added that the Russian soldier's patience is boundless, his endurance and good humor under hardship phenomenal, and gave his opinion "that he is probably the steadiest of all soldiers under defeat and adversity."

Colonel Gädke in the main confirms General Greene. But whereas the American observer noticed that the Russians went into action enthusiastically, Col. Gädke was astonished to see how unwillingly one battalion of old reserve men gave battle on October 16. After that time he observed a strengthening of the bonds of discipline, and was particularly pleased with the spirit of the artillerymen and pioneers. He, too, was amazed at the power of the Russian soldier in a frontal attack, and his obstinate refusal to retreat from the place assigned to him. For his conduct on the retreat the Prussian critic, like the American, has only the highest praise, and he also attributes it to the Russian's "instinct for masses." The Russian soldier, he finds, is still willing to give everything that there is in him in the way of strength and endurance. But while Skobeleff and his chief subordinate knew how to get the last ounce out of him, the generals of to-day have evidently no such knowledge. To them and to the regimental officers is due the weak character of the offensive movements of the Russians. To Gädke they seemed more like a mere "feeling" of the enemy instead of an attempt to drive an attack home at any cost save defeat.

Unlike Gen. Greene, Col. Gädke noticed a great deal of straggling. It generally took nine men to remove one wounded soldier, and the carriers were exceedingly slow in returning to the firing line. Not more than 50 per cent. of the available rifles were on the firing line in the battles which Gädke witnessed. While at Shipka Pass there were few stragglers and not a single case of insubordination, there seems to be now but little appreciation of the value of a provost guard. As for the work of the commissary department, the *Tageblatt's* correspondent found that the old sins of the Russian administration were less evident in this war than in previous ones. He attributed the constant begging of the stray soldiers he met more to their poor pay than to any other cause. Frederick the Great's soldiers once told him, at the battle of Kolin, that they "had fought enough to-day for seven groschen" (about eighteen cents). The poor Russian victim of the lust for empire receives in 1905 only three kopecks, *or less than two cents a day.* It is for this price that he is asked to sell his life. Is it any wonder that he sells parts of his equipment, begs of every one he meets, and occasionally forgets the difference between mine and thine?

THE WHISTLER EXHIBITION.

LONDON, February 28, 1905.

The Whistler Memorial Exhibition, organized by the International Society of Sculptors, Painters, and Gravers, has

opened at the New Gallery with every appropriate ceremony and distinction. M. Rodin, Whistler's successor as president of the Society, has come specially from Paris to preside on the occasion, and he has been accompanied by M. Armand Dayot, Inspector of the Fine Arts, officially sent by the French Government; M. Bénédite of the Luxembourg, and several eminent French artists. A banquet has been given at which foreign ambassadors—the Ambassador of the United States among them—as well as Englishmen of rank and office and of note in art and science and letters, have listened to or joined in the eulogy of Whistler. The show has been formally declared open by M. Rodin before one of the most distinguished audiences ever assembled in London, and the leading papers have declared in solemn editorials that the opening will be remembered as "one of the most important events in the history of Art." The critics have been as eager to praise as they were once to sneer, and the public has rushed in its thousands—and rushed to admire, not to laugh. In a word, never before has the whirligig of time brought about its revenge more thoroughly. And it is but right that Whistler's greatest triumph as yet should be in the country which, of all others, failed most signally to appreciate and honor him while he lived.

The exhibition is worthy of the attention it is attracting. Under present circumstances, a finer and more representative collection of Whistlers could not be got together. It is true that a few of the masterpieces shown at Boston have not been lent, that a few owners of Whistlers —Mr. Freer, Mr. Vanderbilt, Mr. Canfield in America, Mr. Studd and Whistler's executrix in England—have refused to have anything to do with the exhibition. This means, of course, that the "Princesse du Pays de Porcelaine," "The "Thames in Ice," "Bognor," some of the nocturnes, the portraits of Mr. Vanderbilt and of Whistler himself, the "Little White Girl," the "Rosa Corder," are missing. I believe that some of the pictures denied to London are to be in Paris, where, however, even though the coming show (in May) is to be divided between the Luxembourg and the École des Beaux-Arts, there is hardly as much space as at the New Gallery for a fine display. And, after all, if a few things of importance have not been secured for London, a great many more have.

It will give some idea of the size and scope of the exhibition now open if I say that, while in Boston there were catalogued 184 oil paintings, water-colors, pastels and drawings, 234 etchings, and 80 lithographs, in London the catalogue records 192 paintings, water-colors, pastels, and drawings (and this number represents about 250 different works, as in certain cases several are framed together), 292 etchings, and 153 lithographs. In point of quality, I think the mere possession of the "Mother" and the "Carlyle" casts the balance in favor of London. It is the more remarkable that such fine results should have been obtained as the International Society has neither the official standing nor the wealth —indeed it has no money at all—of the Royal Academy. Its artistic influence, however, has been sufficient to induce the King to lend his etchings from Windsor, and collectors far and wide—Mr. Theobald, Mr. Howard Mansfield, Mr. Kennedy, Mr. Frederick Keppel—to part with some of their rarest for the time; it has been sufficient to prevail upon the French Government to send the portrait of the "Mother" from the Luxembourg, and to obtain the "Carlyle" from the Glasgow Corporation, the "Sarasate" from the Carnegie gallery in Pittsburgh, the "Little Rose of Lyme Regis" and the "Mastersmith" from the Boston Museum, the "Southampton Water" from the Chicago Art Institute; it has been sufficient to persuade individual owners to contribute pictures as famous as "The Fur Jacket," "Miss Alexander," "The White Girl," "Mrs. Huth," "F. R. Leyland, Esq.," "M. Théodore Duret," "Irving, as Philip of Spain," "At the Piano," "Symphony in White, No. 3," and a beautiful series of nocturnes and marines.

To those whose knowledge of Whistler is slight, nothing in the exhibition will seem so amazing as the proof it gives of his talent for hard work and his great productiveness—a productiveness in which he has been equalled really only by the masters of the Renaissance (who were to him the true masters), and surpassed not even by them. Only a few months ago Sir Edward Poynter, president of the Royal Academy, was publicly sighing over him as the Idle Apprentice, who might have accomplished great things had he but cultivated the virtue of industry. It is extraordinary what this idle weakling managed to accomplish just the same. Had he been an industrious apprentice and a giant of strength, according to his critics' strenuous standards, I do not see how he could have been expected to accomplish much more. At the New Gallery, the central hall, the largest room, and the balcony are filled with his etchings, lithographs, and drawings; the two other rooms are hung with his paintings, though, as I have said, the collection is not complete. Signs of idling or of feebleness it would be hard to discover.

It adds to the interest that the pictures should include some of Whistler's very earliest, painted in his student days, before he had found himself, or while he was finding himself. I pass over the youthful efforts at illustration—one of Dickens, unexpectedly enough—for these are of value chiefly as curiosities. But there is a copy by him of a Boucher at the Louvre, which, though without a trace of the Whistler we know, is important as an example of the careful student work of which he was capable at the time when, we have been assured, he was busy idling. It is a picture, moreover, that will remind those who knew Whistler intimately of his wonderful stories of his own adventures as a copyist in the Louvre. It has been lent by Mr. Winans, so that there can be no question of its genuineness. The first painting he ever exhibited is also here, "La Mère Gérard," presented by him almost half a century ago to Mr. Swinburne, who now lends it. It is a small portrait of the old woman of whom he was making the well-known etchings at this period; and as she sits there, in white cap and sombre black, holding a flower, it is easy to fancy the reproaches it must have met from the fiery young fellow-student filled with disdain for a picture which, in their own words, "sentait du Louvre"—for the influence of days spent among the old masters is unmistakable in it. But there is not the least bit of that sort of suggestion of the Louvre in the works that followed almost at once. "La Mère Gérard" was scarcely finished when Whistler started the "Piano Picture," so beautiful in tone and design; and then, in the early sixties, with "The Blue Wave," "The Coast of Brittany," "Old Westminster Bridge," he was preparing the way for the later nocturnes and marines. These three pictures, which explain so much in the history of Whistler's development, are now in the New Gallery, as they were also in Boston. Probably the only modern artist who at the beginning of his career influenced him was Courbet, and two of the three were painted when he was working with Courbet on the French coast. There is a great deal of Courbet's vigorous handling and unflinching respect for realism in the treatment of the sky, and the rocks along the shore, and the wide stretch of deep blue sea. And the painter's attitude towards Nature and his method were the same when, instead of the French coast, he was studying the Thames as it flows through London. His rendering of Westminster Bridge in the building is full of the infinite detail critics used to say that Whistler shirked simply because he could not draw it. No one can look at this canvas—cracked, I regret to say, and bearing too soon the traces of time—and ever again maintain that Whistler had no powers of observation, no sound draughtsmanship. Beside it, Mathew Maris, greatest realist of the same kind, vanishes, and Pre-Raphaelite niggling is exposed in all its inconsequence.

It was because Whistler could produce pictures like these early performances, that he was able to paint the later masterpieces in which his observation was concerned with more sensitive effects, and the beauty he sought was more elusive. I do not know, really, if, after this first group of pictures, to which "The White Girl" belongs—a disappointment unless its date and its history are recalled—one can speak accurately of development in Whistler. It seems as if, with them, he was testing his knowledge of beauty and of technique both, and, once sure of himself, he emerged the master he remained; as if ever afterwards there was no question of degree in the quality of his work, but only one of difference. There were times when strong color and intricate pattern pleased him most, and the "Princesse du Pays de Porcelaine," the "Lange Leizen," the "Golden Screen," and the other Japanese-inspired arrangements were the result; times when he was enthralled by the mystery of night, which, with its splendors of sudden light and deep, impenetrable shadows, can dignify even the vulgarities and tawdriness of town life—and the Cremorne series was created; times when it was the coming of night or day that worked the miracle and held him spellbound, and he revealed to the world the hitherto unseen, undreamed of loveliness of London or of Valparaiso; times when the mystery was in the expression of a human face, the miracle in the grace of a human form, and he gave us the wonderful portraits which I wish were to remain in one collection forever, like the portraits at Madrid—which I should like to see some day added to the gift just made to the nation, which, indeed, without some such addition, will defeat its own object. Whistler's mo-

tives varied, but his end was always the same—always that which he himself has called "the painter's poetry"; and, after his first few preliminary experiments, his methods were always entirely his own. Consistently, he practised the dogma he proclaimed and showed in his own work, that pictures were to be looked at, not through; were to be a pleasure in themselves.

All these phases are represented at the New Gallery except the phase when he was preoccupied with brilliant color and intricate pattern, his Japanese period, as it has been "labelled." A decorative panel done, it is said, for South Kensington Museum, but never finished, is here, and in the grouping of the three nudes—one with a parasol, one bending over a blossoming plant—there is the Japanese feeling that animates the three or four better-known pictures. But the panel is scarcely one of his successes, and it is no doubt because he was unsatisfied with it that he left it as it is. There is, however, a most marvellous series of the nocturnes: both the Valparaisos, which seem still greater marvels of perfect color every time one sees them; the "Battersea—Dawn," the "Southampton Water," the "Blue and Silver" on the Thames near Westminster, and the "Blue and Green" on the Thames near Chelsea; the "Old Battersea Bridge," gray, with the little red roofs that tell so vividly in it; a "Blue and Silver" I never have seen before, the pale-blue haunting vision of night framed in a high pier of the old Battersea Bridge, one of the three pictures jeered at in the memorable trial. No one ever saw the beauty of night until Whistler came, though Japanese artists had already been seeking it, may even have given him the clue they failed to grasp themselves. These few pictures alone would have won for him immortality. And they are supplemented by four or five of the Cremorne subjects—one, "The Falling Rocket," produced in evidence at that same trial which will make Ruskin's name remembered long after the world has ceased to read his books.

The group of portraits is as fine, as representative. It seems unnecessary just now to describe paintings already so often described. A few of the less well known are the strange, Holbein-like "Mrs. Huth," the exquisite rendering of lace at throat and wrists breaking its sombre severity, a picture I remember writing about in the *Nation* when it was at Edinburgh last winter; the no less severe and sombre "F. R. Leyland, Esq.," in evening dress, as romantic a figure as any of Velasquez's courtiers or Van Dyck's; the "M. Théodore Duret," carrying his rose-tinted domino serenely and gaily, lighter in scheme, more robust in handling than most of the others; the "Miss Mary Agnes Alexander," overshadowed by the portrait of her sister; the "Miss Kinsella," which I referred to in writing of last year's Salon, lovely ghost of the lovely creature who passed across the canvas before Whistler (ever seeking greater perfection) scraped it down and then had not time to repaint before death overtook him. But the wonder is to see all these great portraits now together, to have the rare chance for comparison. It was part of Whistler's genius that he could repeat the same color scheme, the same arrangement even, and never incur the charge of monotony. The "Mother" and the "Carlyle" hang opposite each other; and when you turn from one to the other, it is to be struck not by the points of similarity in pose and background, but by the infinite variety in the painter's manner of using practically the same arrangement to express the character of the peaceful old lady, tranquil and at rest, and of the rugged old philosopher, tragic and sad. And what difference in the blacks of the "Mrs. Huth" and the "F. R. Leyland, Esq.," in those of the "Sarasate" and the impressive "Irving," the darks here lightened by the gold trimmings and silver slashings and tights. And how that gold is put in! Take again the contrast between the working-out of the harmony of grays in the "Miss Alexander" and in the treatment of the harmony of brown in "The Fur Jacket." There is no straining here to make every canvas convey a meaning, or preach a sermon, or bear a moral. But you come away from the exhibition with a more vivid impression of variety than you can get from all the labored didacticisms of Watts now at the Academy.

I have said nothing of the "Symphony in White, No. 3"; nothing of the "Little Rose of Lyme Regis," and the "Master-smith," and "Lillie in our Alley"; nothing of the little portraits and the little shops; nothing of the water-colors (among them, the dainty, exquisite "Convalescent"); nothing of the pastels, tender, luminous notes of Venetian palaces and Venetian lagoons, Tanagra-like studies of beautiful women, and graceful draperies. I have not as much as touched upon the prints, which must wait for another article. But where everything is of importance, it is impossible to do more than give a general idea of the collection.

N. N.

A CHAMBERLAIN OF NAPOLEON.—I.

PARIS, February 27, 1905.

The 'Memoirs of the Count de Rambuteau' will rank among the most important contributions to the history of the first half of the nineteenth century. They have just been edited by his grandson, the present Count. I will say at once that they have the great merit of being real personal recollections. The author does not lose himself in generalities, nor indulge in theoretical considerations; he is not a philosopher, but he is an excellent and truthful observer—he speaks only of what he has seen; and this realistic character of the Memoirs, written during the most dramatic periods of French history, gives them real authority.

The Count de Rambuteau was born of an old family of Burgundy. His father, after having served in the army, lived long at the court at Versailles, like his uncle, the Chevalier, who retired in his old age to the convent of La Trappe. The young Philibert de Rambuteau was born in 1781. When the Revolution broke out, his father would not emigrate; he was imprisoned at Mâcon, and owed his life only to the revolution of Thermidor. The son witnessed the many horrors which took place at Lyons during the Terror. He was accepted as a pupil at the Polytechnic School, which had been founded by the Convention, but he never entered it, and his parents preferred that he should lead a civil life. His mother again hindered him from entering the army after Marengo. He married the daughter of the brilliant and charming Louis de Narbonne, one of the last roués of the old régime. Narbonne became one of the favorites of Napoleon, who used him as an able diplomat, accustomed to all the ways of the European courts. He procured for his son-in-law, after Wagram, the place of chamberlain to the Emperor. This court service was an amusement for a young man, and introduced him into Napoleon's familiarity.

The first winter of his employment as chamberlain was very brilliant. Four or five times a week the Emperor spent the evening at the house of the Princess Pauline, his sister. In one of the masked balls given there, "the Emperor was disguised as a negro, and marched before the quadrille blowing a horn. The two queens of the quadrille, Madame de Bassano and Madame de Barrel, shone with diamonds. I was myself the partner of Madame Pellapra, for whom I had ordered a costume of a Mâconnese peasant girl; the Emperor was greatly struck by her extraordinary beauty." Rambuteau had his part in all the ceremonies of the marriage with Marie-Louise.

"I saw," he says, "her reception under the Arc de Triomphe de l'Étoile, represented in wood and hangings as it exists to-day (and by a curious coincidence, thirty years later, in my capacity as Prefect of the Seine, I passed under this same arch, which recalled to me so many memories, when conducting the body of the Emperor from Courbevoie to the Invalides). In the chapel it was my duty to seat the cardinals. Thirty-four chairs had been provided; only twenty-nine cardinals came. I had the empty chairs removed, but the first thing the Emperor did was to count the seats. He called me and asked if nobody was absent; I was obliged to tell him the number. The same day, in the evening, the five absent cardinals received orders to present themselves before him and to bring back their insignia. They were called the black cardinals."

Rambuteau was present at the famous ball of Prince Schwarzenberg, the Austrian Ambassador, when the ballroom took fire. The Emperor was able to convey the Empress safely to the garden. The Princess Schwarzenberg was already there, when, thinking of her daughter, she returned to the ballroom and was crushed by the fall of a lustre. Rambuteau attended the Emperor twice a week to the Conseil d'État, and took a lively interest in the sittings, where the new legislation was prepared.

"It was a great school of government, to which I owed all I was to be afterwards. I learned there to enter into the spirit of affairs. . . . M. X., a man of great learning, wanted one day to be eloquent. The Emperor, who did not like phrases, let him speak a little while, and then made a sign to the arch-chancellor. 'Sir,' said Cambacérès, 'we are here, not at the Academy; we are business men; we have not to examine isolated questions. . . . Each of our acts is a link in a great chain; it ought to be united to what precedes and to what follows. The rest is so much lost time.'"

Before entering on the campaign of 1813 Napoleon replaced many old prefects by young ones. He sent Rambuteau, who had a great disposition for administrative functions and did not much like the court service, to the new department of the Simplon, recently annexed, and which was a

part of Valais. The Simplon seemed very distant at that time—Sion, the chief town of the department, was almost a village; but Rambuteau did not hesitate, and entered upon his functions with much ardor. He visited on horseback all the villages of the department. In the autumn of 1813 he found himself isolated by the movements of the troops; after the disaster at Leipzig some Austrian regiments rushed in disorder into the valley of the Rhone. At the head of 300 Frenchmen, custom-house agents, gendarmes, and functionaries, Rambuteau left Martigny on Christmas Day in the direction of Chamonix by the mountain; he entered Savoy, and so presently reached Bourg and Mâcon. He was much disappointed. "I expected," he says, "to find France bristling with bayonets, and I found prefects who were packing their trunks." A decree of January, 1814, made him prefect of the Loire. He made great efforts to help Marshal Augereau, who was charged with the defence of Lyons; and when the marshal evacuated Lyons and plunged into Dauphiny, Rambuteau, who would not yet despair, retired to Roanne, entrenched himself with a few soldiers, and never consented to treat till he received the news of the capitulation of Paris and the abdication of Napoleon.

Louis XVIII. had near him the Abbé de Montesquiou, who had been his correspondent during the whole period of the emigration. Montesquiou was appointed Minister of the Interior. By marriage, Rambuteau was his nephew, and the Abbé de Montesquiou offered him first a place in the Garde-du-Corps, which he refused, and maintained him as prefect. Rambuteau's first interview with the Duchesse d'Angoulême, the surviving daughter of Louis XVI. and of Marie-Antoinette, is worth noticing. It is not to be wondered at, if, after all she had gone through, she had many apprehensions, and was not well disposed towards those who had been connected in any way with the Revolutionary or Imperial period. "I started from Roanne," writes Rambuteau, "where I had just received the Dowager Duchess of Orléans [the wife of Philippe Égalité and mother of Louis-Philippe], who had charged me to solicit an audience for herself, without concealing the embarrassment and uneasiness which this interview would cause her." Rambuteau asked at Vichy for a private audience, on the strength of an acquaintance which had existed between the Duchesse d'Angoulême and his own grandmother, the Duchess of Narbonne. He was received by the Princess, whom he found, "if not handsome, noble and imposing." He explained his situation to her:

"For three centuries my ancestors served your family; some of them died on the battlefield. I was imprisoned with my parents. Later, I engaged myself to the chief of my country, in the time of his victories. I was faithful to him in his reverses, and I defended the post confided to me to the last moment. If I did wrong, I am ready to expiate my error in retirement."

The Duchess urged him to remain at his post, and, to put him to the test, asked him to draw up at once a list of all the changes which he had to make in the administration of his department. "I answered in a single word: Madame, I propose no change at all." Then she burst out, and said: "I was well informed; people told me that I should be misunderstood." Rambuteau let her speak, and made her feel that a list of dismissals, if any were made, would have to be headed by his own name.

The interview with the Duchess of Orléans was more dramatic:

"The Duchess was introduced by Mme. du Séran with the same ceremonial as at Versailles. They had not seen each other since 1790. The Duchess trembled greatly, and, after having taken two or three steps, fell on her knees, with arms extended, and screamed 'Pardon, Madame, pardon!'—as if twenty-five years had not elapsed and as if they were both in the hour of their common misfortune. Madame remained motionless, leaving the Duchess dragging herself two or three paces on her knees; then, offering her hand to kiss, she said: 'Rise, Madame.' They sat down, exchanged a few indifferent words, and the audience ended abruptly, without a consoling word having been pronounced. . . . I left in the evening, full of pity for so great misfortunes, full of respect for such a high and firm character, but one in which the woman's heart remained mute and insensible."

The Duchesse d'Angoulême received Mme. de Rambuteau with more amenity, saying to her lady in waiting: "I present to you Mme. de Rambuteau; she is *la petite de Narbonne; une des nôtres.*" "The Duchess," says Rambuteau, "was noble and dignified at all the receptions, accepted my indications for the official answers, accepted everything, ball and banquet, but did not show herself gracious or desirous to please."

The Comte d'Artois afterwards came to Lyons. Rambuteau conversed freely with him, and gave him much information. In their conversations the Prefect sometimes spoke of Napoleon, and called him the Emperor. Fitz-James admonished him *sotto voce:* "Take care, my dear; don't ever use that word before Monseigneur." "I turned quietly towards him and said loudly: 'My dear Edward, there has never been a lackey in my family; therefore I could be a servant of M. Bonaparte.' 'Capital,' said the Prince, to whom I must do justice; 'M. de Rambutau is right, and I honor him the more for his answer."

Rambuteau early perceived that the new Government was making itself very unpopular, especially with the army and the middle classes; that the *émigrés* offended the feelings of the country and irritated its pride; everything announced a crisis. "The Emperor," he says, "placed in the island of Elba as in an observatory, was too intelligent not to have foreseen these errors, and not to try to take advantage of them."

Notes.

We receive from the *Athenæum* the gratifying intelligence that Mr. F. M. Nichols has not stayed his hand with the second volume of his 'Epistles of Erasmus' (Longmans), but is at work on the third, dealing with the year 1517.

The late E. Dannreuther's 'The Romantic Period,' in the "Oxford History of Music" (Clarendon Press), was complete at the time of his death and will be passed rapidly through the press.

Messrs. Putnam have in preparation a translation from the French, 'Metapsychic Phenomena,' "a series of impartial experiments made by the celebrated scientist, M. Joseph Maxwell."

'Japanese for Daily Use,' by E. P. Prentys, assisted by Kametaro Sesamoto, is among the spring announcements of W. R. Jenkins

Harper & Bros. will issue directly Mrs. Humphry Ward's 'The Marriage of William Ashe'; a 'History of the United States,' from the coming of the Norsemen to the present time, by T. W. Higginson and Prof. Wm. MacDonald of Brown University; 'Seléné,' a poem, by Amélie Rives (Princess Troubetzkoy); and 'Mother and Daughter,' by Mrs. Gabrielle E. Jackson.

'American Thumb-prints,' essays by Miss Kate Stephens, is ready for publication by J. B. Lippincott Co.

John W. Lane & Co., Boston, are about to bring out 'Epigrams and Aphorisms,' by the late Oscar Wilde.

A 'Lexicon Typographicum Italiæ,' or 'Dictionnaire Géographique d'Italie pour servir à l'Histoire de l'Imprimerie dans ce pays,' by G. Fumagalli, will attract all students of early printing. It has just been issued by Leo S. Olschki, Florence (New York: Dyrsen & Pfeiffer).

The volume of 'The Hawthorne Centenary Celebration at the Wayside, Concord, Mass., July 4-7, 1904' (Houghton, Mifflin & Co.), follows close upon the report of the Salem proceedings. Mr. Charles Francis Adams and Mr. F. B. Sanborn gave the principal discourses, the former in his well-known unconventional manner. The illustrations are of Hawthorne, Wayside, the path over the knoll behind the house, the boulder with bronze tablet let in—can anything escape a tablet in Concord?

The Salem Proceedings have, since our notice of them, been put forth by the Essex Institute in a large-paper edition, the rubricated title-page set off by an etched vignette of Hawthorne's birthplace. A splendid collection of twenty-two portraits includes all that are known. Three, taken on the same day in 1860, by a London photographer, show what different aspects one face may wear. The latest and most familiar aspect of Hawthorne is distinctly military, partly owing to the moustache, which appears to have been assumed about 1860, as Miss Lander's bust of 1858 shows none. Of all, we think the daguerreotype of 1848 is most to be prized, though it should have been reversed in photographing; yet how different from Cephas Thompson's oil painting only two years later! There is one profile, of 1862; it might pass for that of a Confederate general of the time. Finally, we will mention the well-known group of Fields, Hawthorne, and Ticknor in the tall stovepipes which were to give way in Hawthorne's case to a slouch hat.

Volumes xi. and xii. of "Early Western Travels" combine unequally the longer 'Memorable Days in America' (1818-20) of William Faux and the shorter Welby's 'Visit to North America' (1819). Both relate to the foregoing English Settlement (or English Prairie) of Birkbecks and Flowers in Illinois. We think Mr. Thwaites both underrates and censures excessively Faux's narrative, which has all the earmarks of honest report. He was a keen and truthful observer, and what he repeats from others seldom lacks verisimilitude. His remarks on slavery are just and forcible. He uttered a cry of humanity against an atrocious case of whipping a negro to death in South Carolina, and made a great sensa-

tion, his signed letter being printed in the Charleston *Courier*. Many respectable citizens expressed their regret at his advertising the crime, and said his account would be "greedily copied and extensively read to our injury, in the Northern and Eastern States, and all over Europe." "Go," said another, "and do justice to injured Carolina." "To do that," rejoins our blunt Englishman, "would be to make negroes and planters, for a few years, exchange places and stations." Faux listened in 1820 to some of the Missouri debates in Congress, and draws elaborate pictures of Clay, Pinkney, Rufus King, Barbour, and other orators and statesmen. Monroe and Aaron Burr are also in his portrait gallery.

Welby called upon Monroe at the White House. His narrative in general cannot be thought more flattering to our civilization than Faux's. He has, too, not a little to say about slavery, and reports a slave burning (for murder) in Georgia, in 1820, and quotes (xii., pp. 309, 310) a newspaper account of two in South Carolina in 1800. The American habit of soda-water drinking was already striking to foreigners. Welby had a pretty gift for sketching, and his lithographed memoranda of American scenery have a real historic value.

Mr. Kenyon Cox's 'Mixed Beasts: Rhymes and Pictures' (Fox, Duffield & Co.) was composed for his children, and pictorially is in the vein of Edward Lear. It shows us the Elephantom, the Walrustic, the Rabbittern, the Indianaconda, the Flamingocart, the Maniteapot, the Cigarctic Fox, the Peacockle, the Tomatocantelope, and many other monstrosities worthy of Mr. Burbank's failures in inventing vegetable species. First of all is the autobiographic Paintermine, with a quatrain that recalls Coleridge's bard without a penny in his pocket and even without a pocket for his penny:

> "Its innocence deserves no jibe—
> Pity the creature, do not mock it.
> 'Tis type of all the artist tribe:
> Its trousers haven't any pocket."

Most artists of distinction have indulged in thumb-nail caricature at least, in private. Mr. Cox evinces the possession of this humor; and older readers may remark that his poetic gift less easily descends to farce than his artistic. Of all these clever designs we fix upon the Bumblebeaver as the happy compromise between the two extremes of his range; it is comical at once and decorative—and perhaps the accompanying doggerel might be cited as the best, or nearly the best, for we will yield something to the claim of

> "At the bottom of the sea
> The Policemanatee,"

who safeguards the crossings for the pretty mermaid against the Triton's too impetuous course.

'Corner-Stones,' by Katharine Burrill (E. P. Dutton & Co.), is a book for girls in their teens. The advice is, as it should be, chiefly negative, and assumes that if the young woman addressed will only discard two-thirds of the characteristics that distinguish them from their grandmothers, the British nation will be safe. The book is written by a Scotchwoman and wholly from the British point of view, which regards smoking as a habit that has long, and rightly, lost its sex-distinction, yet still takes the chaperone for granted. Even the young woman who smokes is reminded that she must make allowances for the "old-fashioned nice man" who does not like to see his own women smoking, though he accepts the inevitable for the rest of womankind. The range of admonitions that may be offered to the modern young woman is very wide indeed, but Mrs. Burrill manages to cover a good deal of the ground, and to illustrate her observations with some apt quotations of verse. In her own field she may be taken as a safe guide, but we hope no young woman will turn to her for advice on grammar. On page 27 we read, "She would have been much better to have merely gone for a brisk walk"—a not unfair example of the style which we have observed to be, as a general rule, consecrated to the instruction of young women in manners and etiquette.

Among the publications of the University of Michigan, a "Humanistic Series" has just been launched, beginning with a volume on Roman Historical Sources and Institutions, under the editorial direction of Dr. Henry A. Saunders. The papers in the present volume are all too technical to be of interest to any but specialists; but perhaps the narrowly limited publication funds of the universities ought not to be expected to furnish material for any but the specialist, however desirable it is that the research workers in these institutions should themselves occasionally state their results in readable form to a wider circle. The series is under the joint control of the departments of philology and philosophy, and volumes are in preparation by Professors George Hempl, Francis W. Kelsey, Robert M. Wenley, and others. The Macmillan Co. are the publishers.

A ponderous volume of Transactions of the Wisconsin Academy buries rather than publishes a short paper on recent criticism of American scholarship, which should have seen the light in some of the higher-grade magazines. Dr. Slichter, the writer, admits that, along the leading lines of modern scientific development, American scholarship has not entered as a factor of serious importance into the general result. The successful application of American energy to invention, however, he regards as an offset, to some extent, to our deficiency in pure science. Alleged defects in the management of the Smithsonian Institution are severely criticised as partially responsible for our poor showing. About four-fifths of the income goes for salaries and expenses of administration, with a minimum to show for that "increase and diffusion of knowledge among men" which was the aim of the founder. Dr. Slichter quotes with approval a recent French writer, Jean Jussieu, to the effect that worldly success, the money-making ideal, has fettered and will continue to fetter American science, but is not quite ready to grant that the tendencies of democracy are inherently fatal to the highest scientific achievement.

The latest of the Knackfuss monographs on artists (Bielefeld and Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner) deals with Luca della Robbia and his family, and is written by Paul Schubring. It contains the usual wealth of illustrations which give a special value to this series, enhanced, in the present instance, by the inclusion of a number of illustrations of parallel treatment of subject by other artists, and of eleven plates in colors. These last cannot, of course, give much notion of the beauty of tints and glazes in the originals, but they do give, much more clearly than words could do, an idea of the extent and kind of coloring adopted by different members of the Della Robbia family, and are therefore of very considerable importance. Herr Schubring accepts as by Luca a number of works about which there has been a good deal of doubt and discussion; notably, the puzzling medallions of the Four Evangelists in the Pazzi Chapel, which are as unlike the accepted work of the master in type and form and general conception as they are in this very matter of the use of colored glazes. The theory first put forth by Herr von Liphardt and recently adopted by Maude Crutwell in her book on the Della Robbias, that these medallions are the work of Brunelleschi, the glazing and firing only being done in the Robbia workshop, is, it seems to us, though based on confessedly inadequate knowledge of Brunelleschi's works in sculpture, inherently much more credible than that Luca was ever, either in youth or age, so unlike himself.

The new volume of the Swedish 'Boktryckeri-kalender,' edited and published by Waldemar Zachrisson of Gothenburg, is published for the benefit of a proposed school of printing in that city, and two of the articles deal with trade schools in Copenhagen and London. Two articles are contributed by foreign writers: Mr. H. R. Plomer gives a sketch of the history of the Chiswick Press in London, and the secretary of the book exhibition in the Plantin Museum in Antwerp last summer, Mr. Emmanuel de Boom, describes that show. Baron Per Hierta, a well-known Swedish book collector and bibliophile, continues his series of articles, begun in the previous volume, on "The Invention and the Golden Age of the Art of Printing," and introduces not less than thirty-four facsimiles, reproduced (if we are not mistaken) from books in the author's library. The article is devoted largely to the development of the printing type, and with an eye to this the facsimiles have been selected; they are all finely executed, and show the character of the various types as well as could be expected from facsimiles many times smaller than the original. It would seem, however, that, for a comparative study of the types, a few lines in the actual size of the originals would have been preferable, even at the sacrifice of the artistic quality of the reproductions.

The movement for the erection of a Virchow monument in Berlin has reached the stage of organization of a committee, which has invited competitive sketches, the best three to be awarded sums from one thousand to three thousand marks. The monument is to be erected at the corner of Carl Street and Louisa Street, now generally known as Karlsplatz.

The next International Tuberculosis Congress will be held during the first week in October in Paris under the patronage of President Loubet. The Congress will do its work in two groups, each divided into two sections. The first group will deal with experimental and comparative medico-surgical pathology of tuberculosis, and the second with the prevention and cure of the disease. In connection with the Congress there will be a tuberculosis exhibit with a scientific and a practical division.

Professor Bücher, in retiring from his position as rector of the University of Leip-

zig, gave public warning to the students against the growth of luxury in academic life. He declared that practically a "code of luxury" had been established, under which a student is ranked in accordance with the amount he spends. He holds a return to the simple and inexpensive, not to say more studious, life of former days to be an imperative necessity.

Lord Cromer's earnest invitation to the English Church Missionary Society to establish stations on the Upper Nile is significant testimony to the value of the intelligent missionary in civilizing the savage. He designates in his letter, dated December 23, a definite, unoccupied district on either side of the White Nile, from the Bahr-el-Ghazal to the northern borders of Uganda and the Congo Free State. In addition to the religious work, he hopes that "special attention will be paid to some simple forms of industrial and agricultural instruction." This request, in which the Governor-General of the Sudan, Sir Reginald Wingate, joins, is regarded as affording the most important opening for the Society's efforts since Mr. Stanley's appeal for Uganda in 1875.

The Damascus-Mecca Railroad has been completed to Ma'an, a town about 60 miles from the Gulf of Akaba, and now there is railway connection between the Mediterranean and the whole Trans-Jordan region and Arabia. The formal opening of the last section was celebrated at the above place on September 1, the anniversary of the accession of the Sultan, who has taken a deep and conspicuous interest in the enterprise. There were present some fifty high officials, besides correspondents of Turkish newspapers; an oration was delivered by the representative of Abdul-Hamid, and medals struck in honor of the occasion were distributed. These bore on one side the Ottoman coat of arms, on the other the inscription: "In commemoration of the opening of the Ma'an section of the Hamidie-Hedjaz Railroad, 1322." The main object of the road, as its name signifies, is to carry pilgrims to Mecca, and so put an end to the perils and sufferings of the caravan life. In 1903 it is estimated that, out of 200,000 pilgrims, 20 per cent. were maltreated, wounded, or killed by the Bedouins, and more than $1,000,000 worth of property was stolen. A branch line to Haifa is open as far as the Jordan and is doing a good business. A fine stone bridge has been built, the first railroad bridge across the historic river.

In judging posthumous portraits of historical personages within the memory of the living, men will always be swayed by considerations of strict likeness to what they have themselves seen. The poetry with which the artist may have invested his subject will be resented, or at least allowed to affect one's interest in the work. One, for example, who saw Lincoln familiarly will thus be apt to want what would be called in prevailing fashion "The True Lincoln." This, certainly, rather than the legendary Lincoln such as Kruell gives us so beautifully, is what has been attained by Mr. Jacques Reich in a large etching, the latest in his series of American statesmen of which we have spoken from time to time. It is "Old Abe," with chin whiskers, in all his uncompromising plainness, and, therefore, all the nearer to the heart of the average American. The original photograph, we are told, is of 1864, one of Brady's, and has the approval of the family. We like best in the etching the treatment of the mouth. Mr. Reich's address is No. 2 West Fourteenth Street, New York.

—A new series, entitled "French Classics for English Readers" (Putnams), purposes giving, in a form both handsome and compact, a set of translations from Rabelais, Montaigne, Molière, and others, which may safely lie on any table. In the first instalment, with an introduction by Dr. Curtis Hidden Page, the work of Rabelais, generously truncated with the pruning-knife, is presented through the well-known version of Urquhart and Motteux. It is not specially designed *in usum puellarum*, yet no reader of this volume need feel constrained to follow Trollope's Archdeacon Grantly, and read his Rabelais only on the sly. Apart from passages of doubtful taste, others familiar through long association disappear; but, as the editor declares, the continuity of the story does not suffer seriously. Still, the true Rabelaisian cannot but miss the satirical enumeration of books in the "Librairye de Sainct-Victor" or the humorous episode of Panurge in peril of the deep waters. In the last two books the excisions are extensive. Dr. Page's introduction brings the spirit of Rabelaisian satire into relation with the work of other critics or cavillers from Aristophanes to Sterne, pointing out the extravagances of Rabelais's genius, and avoiding the too common error of the single point of view in attempting the reduction of his colossal complexity of scheme to a fixed unity of design. What, however, seems to distinguish Rabelais from the majority of satirists here mentioned is the undisguised *joviality* of his humor, skilfully combined with a most unmistakable purpose of specific attack on institutions and the rectifying of definite abuses. The notes are chiefly Ozell's, and might easily be enlarged or improved. For instance, the famous definition, "Deus, sphæra cujus centrum ubique, circumferentia nullibi," was not original with Rabelais, but is often attributed to Hermes Trismegistus. And why should *Dindenault* ever have been translated "Dingdong"?

—The tour of the Mediterranean is now so much a matter of course and so frequently made that a compact special guide-book for this sole purpose must commend itself to the traveller who wishes to minimize his *impedimenta*. 'The Mediterranean Traveller,' by Dr. E. D. Lorenz (Fleming H. Revell Co.), aims at fulfilling this purpose in a volume of about 350 pages, containing fifteen maps and plans and some pleasing but perhaps superfluous reproductions of photographs. The itinerary extends from Portugal, Madeira, and Spain, on the west, to Turkey, Palestine and Egypt, in the Levant, and includes an excursion to Tangier, Biskra, and Tripoli. No instructions are given as to routes and steamboat lines between the various ports, perhaps because it is assumed that the voyage will be made continuously on an excursion steamer. Obviously, however, this is an omission which should be rectified in future editions, and at the same time more minute information as to hotels might profitably be added. Ample room for such a supplement might be obtained by omitting, here and there, a page or paragraph of moralizings and reflections which the traveller is competent to provide for himself, according to his own mood. The text is in some portions accurate and businesslike, but in others it reveals amateurishness, and some inaccuracies and misprints, *e. g.*, Dionysius (for Dionysus), Sympegades, Delhi (for Delphi), Doge Dondols (Dandolo). The battle of Salamis is dated 430 B. C. (p. 111); page 114, seventeenth chapter of Acts should be read for seventh; on page 130, one lepta and 100 leptas occur (for lepton and lepta). The monuments similar to that of Lysicrates were not erected by winners of Dionysiac "games" (p. 117) but contests. The name of Alexander is not inscribed on the so-called Alexander Sarcophagus, as is stated on page 147. On page 134, the writer has twice confounded the Bosphorus with the Hellespont (Dardanelles): "Across the Bosphorus, Xerxes built his wonderful bridge of boats." The compiler of the description and plan of Pompeii ignores, or is unaware of, Mau's researches and identifications. Such errors will not, of course, prevent the tourist from reaching his destination, but they evidently call for some strenuous and expert revision.

—The Rev. Joel Foote Bingham, D.D., L.H.D., has translated Manzoni's 'Sacred Hymns and Napoleonic Ode' (Henry Frowde), and added so much comment that the result is a book of over 200 pages. His elucidation is so microscopic, indeed, that it may fairly be said that not a comma has escaped him. One cannot help feeling that the "letter killeth" when such obsequious attention is paid to it. For example, in the first two lines of the fourth stanza of "The Passion," which read in Dr. Bingham's version,

> "He is the Just the wicked crew
> In unresisting silence slew,"

is it necessary to quote Isaiah, xliii., 7, "He is brought as a lamb to the slaughter; and as a sheep before her shearers is dumb, so He openeth not His mouth"? Must nothing be left to the imagination? Must the ignorance of persons likely to use such a book be assumed to be total? Dr. Bingham's translations are painstaking, and, if one knows the original, one can recognize that he has given an equivalent for many of Manzoni's thoughts; but the metrical charm and the poetry have evaporated. Hymns are seldom poetic; it is enough if they are pious and adapted to church singing. For instead of imagination or poetic fancy, they offer Scriptural phrases or liturgical formulas which may have intense associations of worship, but be as unpoetic as a sentry's countersign. As a specimen of Dr. Bingham's skill, we quote stanza 7 of "The Nativity":

> "O Thou begot eternally
> Of the Eternal, one with Thee,
> Which 'mong the endless ages can
> Declare: 'With me Thy race began'?
> Thou art. And of Thy vast command
> The whole contains not Thee. Thy hand
> Has made and makes it stand."

Would anybody suspect that to be poetry? When he comes to Manzoni's stupendous ode on the death of Napoleon, Dr. Bingham falls far short. A hymn will pass, no matter what it says, so long as it is properly cut up into long metre or common metre; not so a magnificent poem, wonderful alike for its imagination, its metrical beauty, and its diction. Of the attempts to render "Il Cinque Maggio" in English, from that of Alexander Everett to this of Dr. Bingham,

the least unsatisfactory is Mr. Howells's. Here is Dr. Bingham's version of the stanza beginning *Tutto ei provò:*

"All he tasted; glory growing
Greater after great embroil;
Flight; and victory bestowing
Palace; and the sad exile;
Twice in the dust a victim razed,
Twice on the altar victim blazed."

Comment is unnecessary. But whoever desires a complete outfit of notes and critical opinions on Manzoni's hymns and ode will find them in this book.

—'From Epicurus to Christ,' by Dr. William De Witte Hyde (Macmillan), is a popular study of four schools of Greek philosophy considered only on their ethical side. In his first four chapters Dr. Hyde sums up the contribution to ethics of Epicurus, the Stoics, Plato, and Aristotle, and in the fifth and last adds to his eclectic system of ethics the final ingredient of the teaching of Christ. Why he should so disregard chronological order as to deal with Epicurus and the Stoics first, he does not explain, nor is it at all apparent. The book is hortatory and not historical. It is an endeavor to apply to modern life the fundamental teaching of the four Greek schools on the art of living. When that is done, and it has been shown that there is something of value for modern life in the pursuit of pleasure with Epicurus, the stern doctrine of self-control, the "Platonic subordination of lower to higher," and the Aristotelian sense of proportion, the exposition becomes a sermon, with its exhortation to temper all these principles by the "Christian spirit of love." "The time is ripe for a Christianity which shall have room for all the innocent joys of sense and flesh, of mind and heart, which Epicurus taught us to prize aright; yet shall have the Stoic strength to make whatever sacrifice of them the universal good requires; which shall purge the heart of pride and pretence by questionings of motives as searching as those of Plato; and at the same time shall hold life to as strict accountability for practical usefulness and social progress as Aristotle's doctrines of the end and the mean require." Dr. Hyde is extremely practical in his application of Greek philosophy to modern life. You can begin your day by consulting page 124, and considering which is the better breakfast, the American or the European, when judged by the Platonic teaching of the inferiority of appetite to reason. On page 127, Dr. Hyde discusses the question of dismissing your cook as Plato might have discussed the question of dismissing his, in a situation where that famous second part of the soul, 'the spirit of anger," seemed about to get the whip-hand of reason. On page 135 he tells us what Plato would have thought of manual training and nature study. Later he carves ten commandments out of Aristotle, and tells us what he would have thought of the clubwoman. Dr. Hyde's literature of Stoicism ranges from Marcus Aurelius to Henley and W. S. Gilbert. The only serious criticism to be made on the book is the order of the chapters. Few readers unacquainted with the classics could escape the impression that the Greek philosophers represent a gradual ascent, in the course of which they lifted themselves above the Epicurean pursuit of pleasure to the heights of Platonism, and so were prepared for the teaching of Christ.

—In the last issue of the *American Journal of Archæology*, Vol. VIII., No. 4, Mr. Clarence S. Fisher, architect of the last expedition sent out to Nippur by the University of Pennsylvania, 1898-1900, presents the first results of his work in that connection under the title, "The Mycenæan Palace at Nippur." The first expedition, 1888-1890, partially excavated a palace built around a colonnaded court, which was reported as a structure of the Kassite period, at or somewhat after 1200 B. C. In his volume entitled 'The Excavations in Assyria and Babylonia,' published in 1904 and carrying the account of the excavations of Nippur down to the year 1900, when this palace was entirely excavated, Professor Hilprecht rejected the above date with some contumely, and assigned the building to the Seleucidan period, in the third or even the second century B. C., largely on the ground that the architecture, and especially the free use of columns, indicated Greek influence. Mr. Fisher shows conclusively, from a study of the overlying strata, that this is impossible, and that the conclusions of the original explorers were correct as regards date. New and startling is the method by which he explains the apparently Greek features in the architecture of this palace, in the very heart of Babylonia, namely, that it is Mycenæan. Its plan is in general the same as that of the palace at Tiryns. It has the same arrangement of *prothyron*, court with colonnades, *aithousa*, *prodomos*, and presumably also *megaron* with hearth, and the same division into two parts for men and women respectively. This argument from the correspondence of building plans Mr. Fisher fortifies by the study of a few small objects found at Nippur, which seem to him to show a Mycenæan workmanship or design, notably, a small terra-cotta stele of a tree, with wild goats rampant on either side, which he compares with a gem from Mycenæ having a similar motive. His theory is that, at the time of the breaking up of the Mycenæan civilization and the migration of the nations, between 1200 and 1000 B. C., Mycenæan fragments were projected as far to the east and south as Babylonia. In view of our present limited information and especially our almost complete ignorance of the early art history of the region lying between Assyria-Babylonia and the Mediterranean, such a conclusion appears premature. The evidence presented certainly suggests some intercourse and relationship between the Greek and Babylonian regions at the end of the second millennium before Christ, possibly not altogether unlike that which existed in the Seleucidan and Parthian periods, a thousand years later. It is also possible that explorations in the intervening region or in Asia Minor may reveal some now unknown common source which affected both Babylonia and the Ægæan coasts and islands.

—A pamphlet recently issued from the Weather Bureau upon "Long-Range Forecasts" opens with the pertinent remark that "the proof of the forecast is in its verification," and continues by saying that meteorologists who have theories of their own, or who have tested those of others by recorded facts, obtain only negative results. Long-range forecasting, subjected to scientific investigation, is found to be curiously unjustified by fact. The popular notion that the moon influences the weather is also treated in this very interesting pamphlet, and is given at least respectful overthrow. As long ago as 1868 the attitude of the scientific world is indicated by the utterance of Alexander Buchan, secretary of the Scottish Meteorological Society: "That the moon's changes exercise an influence so strongly marked as to make itself almost immediately felt in bringing about fair or rainy or settled or stormy weather, an examination of meteorological records extending over many years conclusively disproves." On the other hand, it is admitted that sun-spots may be associated with terrestrial phenomena; but planetary meteorology is one of the relics of astrology. The decided influence of ocean currents on climate is treated at length, particularly that of the Gulf Stream and the Japan Current (Kurosiwo); and the opinion is quoted from *Nature* that the next development of weather study will almost certainly be in the direction of international or world meteorology and its relation to the phenomena of sunspots and terrestrial magnetism.

THE DOUKHOBORS.

A Peculiar People: The Doukhobors. By Aylmer Maude. With illustrations. Funk & Wagnalls Co. 1904.

At last we have a work from which the student of sociological experiments and systems, as well as the ordinary layman, can obtain a fair, clear, and sufficiently complete conception of the truly "peculiar" Russian sectarians about whom so much that is prejudiced or erroneous has been written. Previous writers have been ill equipped, in one respect or another, to understand the complex problems and situations involved. Mr. Maude has the advantage of having been intimately associated with the emigration to Canada of the Doukhobors; the Russian sources of information are accessible to him; and his admirable frankness in acknowledging his change of views in various directions makes the reader feel from the very first page that facts have been truthfully and impartially presented. He explains, in his preface, that the first chapter is an abbreviated and corrected reprint of a chapter in the first edition of his 'Tolstoy and his Problems,' published three years ago, and that he reissues it because it shows how some of those most closely connected with the immigration viewed the matter at the time. He admits that the famous "pilgrimages" showed him that he had been misinformed about the sect. "That my explanation, after discovering my mistake," he says, "has been so long delayed is due to the intricacy of the problem, to my unwillingness to risk blundering a second time, and to a certain reluctance to challenge opinions more or less vouched for by Tolstoy and strongly advocated by his lieutenant, Tchertkoff." It is precisely these (heretofore) unchallenged opinions which have obtained currency; and Mr. Maude is justified in asserting that his volume contains much that is new to English readers, and provides the first consecutive sketch in the English language of the history of this interesting sect.

The first chapter reads a good deal like an argument in behalf of the defendant in a criminal case. Mr. Maude mentions the

difficulty which arises from the lack of impartiality in what has been written about his protégés. When trying, originally, to state the case fairly, he fell into the error of assuming that the information supplied by the friends of the Doukhobors was more reliable than that emanating from the other camp. He is consequently obliged, from time to time, to add footnotes in which he acknowledges that he is now obliged to modify his favorable impressions. Herein precisely lies one of the merits of his work—the possibility of comparing the views of an enthusiast and a disillusioned convert in one and the same person. He furnishes a valuable history of the sect's beliefs, with ample quotations from Novitzky's book, which the Doukhobors adopted as a correct statement of their faith. He gives Novitzky's unfavorable criticisms frankly: "He [Novitzky] says that superstition, anger, and quarrels were prevalent among them, and the 'distinguishing traits in their character is obstinacy in their doctrine, insubordination to the authorities, insults and slander towards those who differ from them. They are very eager to get money,'" and so forth. "In practice," Mr. Maude continues, "the Doukhobor theocracy became, in course of time, a one-man power, based to some extent on custom, also partly on superstition, and more absolute than most monarchies. The rejection of all Church rites has not prevented the establishment, by custom, of meetings for worship, with forms as definite and as strictly maintained as those of most churches." He admits that there seems to be something mysterious about the laxity in moral matters allowed to the leaders of the Doukhobors, which the latter are reluctant to have investigated even by those who sympathize with them in their general views. He also gives a succinct account of the origin, rise, peregrinations, and leaders of the sect, with a survey of their customs and rules; and he shows how the split occurred which resulted in the appeal of one party against their brethren to the Russian authorities, ending, after many vicissitudes, in the voluntary expatriation of the majority.

Even before Mr. Maude had learned as much concerning the difficulty of dealing with these intractable people—and there are times when one feels that he would like to call them plainly "cantankerous"—he declares that the Russian general who was appointed to hear the Doukhobors' statement of the case and investigate the whole matter, actually went as far as most of the English clergy or officials would be prepared to go. Mr. Maude had not the advantage of having visited these people at their homes in the Caucasus; but Prince D. A. Hilkoff (nephew of the Minister of Ways and Communications) did so live with them, and Mr. Maude got his information from him when these two men and two specimen Doukhobor families travelled to Canada together on a tour of investigation. He also had sufficient personal experience with them to learn that, while they were, "in the eyes of the Tolstoyans, a folk who had well-nigh realized the Christian ideal," and really do possess many fine characteristics, there was reason for skepticism as to the claims for collective saintship set up for the Doukhobors by the Tolstoyans—the claims which are, practically, accepted by the world in general to the present day, with a few apologies thrown in for the temporary aberration of the extraordinary "pilgrimages." Mr. Maude says that his eyes began to be opened during his stay in Canada. They have been fully opened by later events.

Two important chapters on the "Sources of Doukhoborism" and "Doukhobor History" follow the account of the Canadian trip, and prepare the reader to understand many peculiarities which he meets with in the more recent history of this sect. Most curious of all (apart from the claims of various leaders to be God or Christ) is the story of their present leader, Peter Verigin, and the manner in which Count L. N. Tolstoy contributed some points of doctrine to their rather indefinite and fluid creed, and, although misled as to their character in general, nevertheless exerted a powerful influence on their fate. As for the contention that the Doukhobors believe in the divinity of their leaders, Mr. Maude shows that, unless the evidence pointing to that belief be accepted, the most remarkable occurrences in their history become absolutely unintelligible. That the influence of this belief has proved pernicious is demonstrated by the patent fact that it has caused two wholesale removals of the sect, with all the inevitable losses, suffering, and recriminations. In particular, it would appear to have been directly responsible for all the resounding troubles in the Caucasus and the eventual emigration to Canada, including the long exile of the leader Verigin, and the infusion of certain Tolstoyan doctrines which, as Mr. Maude confesses, were productive of many hardships and difficulties. An interesting point in this connection is Verigin's claim that he had no knowledge of Tolstoy's doctrines, while his own letters prove the contrary. The logical deduction would seem to be that he assumes to be the source from which all doctrine must emanate. Yet he borrows whole passages, verbatim, from one of Tolstoy's books, containing, in particular, a long quotation from the Declaration of Sentiments which William Lloyd Garrison drew up in 1838 for a Peace Convention held in Boston! Tolstoy's theory of non-resistance they proceeded to interpret in their own manner, and Mr. Maude remarks: "Verigin's immature assimilation of Tolstoy's not infallible opinions has, I fear, not tended much to enlighten or to clarify the mental perceptions of the sect, which he [Verigin] supplies with beliefs." Moreover, when Verigin reached Canada and saw the mess which his people were in through their interpretation, "he took the task in hand vigorously, and did not hesitate, on occasion, to call in the aid of that physical force which is such a terrible bugbear to Tolstoy." Having gloried in the name of Doukhobors (first conferred on them in reprobation), and asserted that they would die rather than change it, at Verigin's command they promptly and meekly did change it to "The Christian Community of Universal Brotherhood"; and Mr. Maude quotes the pithy comment of one who saw much of them in Canada: "They belie every noun and adjective of their cumbrous title."

Mr. Maude has had personal experience in the workings of a Tolstoy colony, at Burleigh, in Essex; for that reason, his thoughtful analysis of the Tolstoy doctrines and mistakes, on pages 164-166 (as well as elsewhere), are deserving of careful attention. He explains, with significant italics, that the Doukhobors won Tolstoy's sympathy "because they professed the very principles of Christian anarchy dear to Tolstoy, and (apparently) put these into actual practice *without that disintegrating result* so painfully evident in the failure of the Tolstoy colonies." In Canada, as the author shows us in detail, the communistic and the individual system prevailed, at different periods and in various degrees, among the several colonies of Doukhobors, until the arrival of Verigin from Siberian exile. Experience proved that the individualist practice was the best. "Generally speaking (with occasional exceptions), where the 'new life' was most strictly carried out, there human relations were most strained, least natural, and least healthy," is the verdict which Mr. Maude quotes from an observer who was long and intimately connected with Doukhobor life in Canada. The writer's general comment, which covers much ground, is: "One cannot follow the perturbed movement of these very sincere and worthy, but very ignorant, folk without being conscious of the responsibility that belongs to those educated men who weave social theories, and by literary skill hypnotize others into staking their lives on the validity of such theories."

After dealing very fully and impartially with the famous "pilgrimages," the author devotes a long chapter to the consideration of "Communism," chiefly, of course, in its bearings upon the Doukhobor theory and practice. His main conclusion is, that, while the sect is now flourishing under that system, under the strongly despotic and extremely able rule of Peter Verigin, yet "it does not at all correspond (as I, agreeing in this respect with the Toystoyans, was at one time inclined to assume) with any *moral* advance. In many cases it seems rather to indicate the reverse."

"The objection to communism as we see it reëstablished among them is really a *moral* objection; though at first it might not appear as weighty as the moral indictment Tolstoy brings against individualism. The fact, I suspect, is that *any* form of human organization that a man of Tolstoy's powerful critical capacity, impulsive temperament, and eagerness for human improvement might live under, would (being an imperfect human contrivance) seem to him abominably wicked; and the form of which he had less personal experience would, by contrast, always appear to him comparatively moral. I feel sure that if he cannot tolerate the yoke of Nicholas II., still less would he tolerate that of Peter Verigin, which certainly comes closer to the actual daily life and thought and occupation of each Doukhobor than the rule of any Emperor or Pope in Christendom comes to his subjects or to the adherents of his Church."

Yet Mr. Maude admits that Verigin's relentless despotism has been good for the sect, and was absolutely needed when first applied, although great dissatisfaction now exists over the enforcement of communism. Much quarrelling and fighting has been the result of this system, according to the testimony of a keen observer in 1903, in places where peace prevailed under the individualistic system; and the testimony of an intelligent Doukhobor, in a letter to Mr. Maude, asserts that the Commune "is nourished by anger, by defrauding one another, by slander and by violence." Meanwhile, as to the great and constantly increasing material welfare of the sect under the present system, there seems to be no doubt.

Mr. Maude has been known as an enthusiastic Tolstoyan and ardent advocate of all Tolstoy's ideas, to an extreme degree. In a

footnote he announces a change of view which may be quoted: "Greatly as I admire Tolstoy, I do not claim to rank as a Tolstoyan, but agree with those who would employ and improve existing institutions rather than abandon them as incurably corrupt." In this spirit of fairness, and guided by a spirit of justice to all parties, and entirely adequate preparation in the past (both of experience and first-class information), he has made a book which should be carefully read and pondered by all students of social topics, as well as by those who have been or are especially interested in the Doukhobors.

HURRELL FROUDE.

Hurrell Froude: Memoranda and Comments. By Louise Imogen Guiney. With seven illustrations. London: Methuen & Co.

Miss Guiney's book is in two parts. First, we have from her hand a biographical study of her subject in 229 pages, into which many letters from and to Froude are taken up; and, second, we have a collection of some thirty comments, covering 176 pages, upon Froude's person, character, and career. These demonstrate that Froude has excited abundant interest among the more or less friendly historians and critics of the Oxford Movement. But all these comments, it should be observed, have an incidental character. None of them are from books devoted exclusively or dominantly to Froude, except those from the 'Remains of Richard Hurrell Froude,' published in 1838. This must be thought strange. Miss Guiney might well address herself to fill so obvious a gap. She has brought to her task abundant sympathy and much careful preparation. If her judgment is at fault, she has furnished us the means of correcting it in no halting fashion. Her collection of comments is no mere device for confirming her own views. Here is the most flattering commendation jostled by strictures that are extremely angular and harsh; on the one hand Newman's exaltation, on the other such mordant depreciation as Mark Pattison's. Many, and indeed most, of these comments are familiar to the coterie to which the Oxford Movement is always an engaging matter, but it was a happy thought to present a conspectus at once so extended and so fair.

Dean Church's nice discrimination, from his 'Oxford Movement,' has deservedly the place of honor, but some of the most notable extracts are from far less accessible sources. A full and trenchant one is that from Sir James Stephen's 'Essays in Ecclesiastical Biography.' His son Fitzjames could strike no harder blows than these; his son Leslie pierce the joints of an opponent's armor with no keener thrust. Sir James's anti-slavery associations with Wilberforce, Zachary Macaulay, and others of "the Clapham sect," made Froude particularly obnoxious to him when, during a period of residence in the Barbadoes, Froude finds in "the niggers" (he has no other name for them) a fresh excitement of his habitually active spleen. The give and take of J. A. Froude and E. A. Freeman over the former's covert reference to his brother in his 'Life and Times of Thomas Becket,' is more damaging to Freeman than his controversies with Froude were for the most part. Froude says:

"I look back upon my brother as, on the whole, the most remarkable man I have ever met in my life. I have never seen any person—not one!—in whom, as I now think of him, the excellences of intellect and character were combined in fuller measure. . . . I consider the publication of the 'Remains' the greatest injury that was ever done to my brother's memory."

Richard Hurrell Froude was the eldest, as James Anthony was the youngest, of eight children of Archdeacon Robert Froude. There was a difference of fifteen years between the two brothers. Miss Guiney's standpoint is that of an ardent Roman Catholic convert who is persuaded that, if Froude had lived a few years longer, he would have made his peace with Rome, not following Newman, but leading him, and shortening his death-bed agony, as Newman regarded his last Anglican years, a good deal. He was certainly, as Charles II. said of himself, "an unconscionably long time a-dying." There has been much difference of opinion as to where Froude would have brought up, but Miss Guiney's judgment seems to be sustained. His hatred of Protestantism was certainly much more acute than Keble's or Newman's, his principal coadjutors in the origination of the Oxford Movement. In 1836 he adjured Newman to stop his "cursing and swearing," meaning his criticisms on the Roman system. Miss Guiney's point of view necessitates her favorable opinion of Froude in proportion to the definiteness of his Roman inclination. She is not novel, and she is undoubtedly sound, in her opinion of Froude's relation to Keble on the one hand and Newman on the other. Keble was his teacher and inspirer; he was Newman's. It is quite possible that, without the action of his energizing disposition upon Newman's mind, the currents of the latter's tendency to Rome would have been turned away and lost the name of action. Newman's intelligence and culture were so much larger than Froude's that his subjection to his friend's influence may appear unwarranted, but the spectacle of a stronger intelligence subject to a weaker is not uncommon, especially where the stronger intelligence is joined with a weaker will. Newman had the Hamlet, Froude the Hotspur disposition. Nor is it likely that Froude's influence upon Newman was diminished by Froude's death. Newman's publication of Froude's 'Remains,' to many so malodorous, goes far to prove that for him his friend's death was an apotheosis, and idealized and consecrated for him even those elements of Froude's character which for more sober minds were limitations and defects.

Miss Guiney has done her best to supplement the more obvious sources at her command, the 'Remains' being preëminent among these, with others more remote; but great gaps in Froude's correspondence have opened with the lapse of time, and some of the deficiencies she has not been able with her utmost diligence to make good. The most interesting letter which she presents is not one of Froude's, nor one of Newman's, but a long one written by Froude's mother, apparently to some imaginary person, but very certainly for his warning and rebuke. Whether he ever saw it and what good it did him are things left untold. We gather that as a boy he was an insufferable little wretch. A spirit of mischief was his dominant trait; this with a spice of cruelty, which did not spare his invalid mother. He was already seventeen when the letter was written, and after a period of improvement he had relapsed into his worse and meaner faults. His "funny tormenting," as he called it, kept a younger brother screaming under the sick mother's window for an hour, his aim being to increase her misery. It is strange that it does not occur to Miss Guiney that something of this worrying temper, this teasing disposition, remained with him through life. After the death of his mother, he worried the Evangelicals, he worried his friends, he worried himself. He cultivated the pleasant art of saying disagreeable things. Miss Guiney admires his "fierce sincerity," but more obvious is a certain histrionic quality. To be astonishing and shocking was his meat and drink. If it be demurred that his most daring flippancies were in his private letters and journals, and only published by his friends, it must be answered that his talk appears to have been even more extravagant and outrageous. What we most miss in him is the ground-tone of reality.

His relations with Keble were the most beneficent of his maturer years. They began in 1821, only a year after the mother's anxious letter, when Froude went to Oxford and had Keble for his Oriel tutor. It was from Keble that he derived the ideas of a High-Church system very different from that type, so comfortable and so little militant, in which he had been reared under his father's arch-diaconate. In 1825, two years before the publication of 'The Christian Year,' we find Froude sending Keble his criticisms of that classic, presumptuous for his years, but wiser than the general acclaim. There was "something Sternhold and Hopkinsy in the diction" which he "began to note down, but, finding it went through, concluded it was done on a theory." He finds it "addressed too exclusively to plain, matter-of-fact, good sort of people," not enough to the "visionary and uncomfortable."

Wide was the range of Froude's abhorrence. It included Hampden, Milton, Wyclif, Luther, Cranmer, Latimer, and the Protestant Reformers generally; the Reform Bill of 1832, and, indeed, everybody and everything that has engaged the sympathy of liberal minds. A sonnet on "The Hateful Party" cannot be fitted confidently to the Reformers of the sixteenth century or to those of 1832. Both were the same to him—

> "Those proud, bad men whose unrelenting sway
> Hath shattered holiest things."

All reformers and reforms were as such distasteful to him. The Oxford Movement attracted him not as a reform, but as a reaction. But, apart from the exigencies of his particular fight, he had some wider sympathies, and wrote of Socrates, and of paganism in general, with no stinted praise. In this connection it may be said that his learning, compared with Newman's, was alphabetical, and yet Newman was remarkable for the immense voids in his reading, confessing, "I never read a word of Coleridge; I never read a word of Kant." The *nil admirari* disposition was as far as possible from Froude. Each repulsion had some equivalent attraction. Sometimes we pass directly from one note to the other. Thus: "I am glad to know something of the Puritans, as it gives me a better right

to hate Milton, and accounts for many of the things which most disgusted me in his not in my sense of the word poetry. Also, I adore King Charles and Bishop Laud!" Froude's own poetry, often very beautiful, consisted mainly in hitching his Romanizing Anglicanism to some star-like Bible incident or phrase.

Miss Guiney follows Newman's lead in taking Froude very seriously in his main effect, but humorously when he comes in a too questionable shape for her ethical requirements. Visiting Rome with Newman and meeting Wiseman (not yet cardinal), he writes:

"We got introduced to him to find out whether they would take us in on any terms to which we could twist our consciences, and we found to our dismay that not one step could be taken without our swallowing the Council of Trent as a whole."

Miss Guiney agrees with Newman in treating this as a bit of jesting extravagance, but in its connection it seems to be intended seriously enough. That Newman contemplated at this time (1833) the Roman ending to which he did not arrive till 1845, is tolerably plain. Only two months later he wrote "Lead, Kindly Light," in which hymn

"I do not ask to see the distant scene"

means plainly that he preferred a wilful ignorance of his journey's end to any frank anticipation of his certain goal.

We have Froude saying of Wiseman: "He desired me to apply to him if on any future occasion I had to consult the Vatican Library; and a transaction of that sort would sound well." Here may be, as Miss Guiney thinks, humorously cruel self-depreciation; but the truth appears to be that the man who was a mischievous boy at seventeen, teasing a small brother and sick mother, was at thirty still dreadfully young and remained so till his death, in 1836. It is evident that he made a personal impression to which there was nothing fully corresponding in his journals, letters, and published writings, among which were four of the famous "Tracts against the Times," as George Eliot called them. These had too little of the vivacity of his letters and his talk. It was quite impossible for the more sober critics to find in the 'Remains' the man of Newman's passionate admiration. His little learning was a dangerous thing, unqualified as it was by a due modesty. Whether, had he lived longer, he would have developed a juster tone, with less eagerness to "make a row," no one can now make out. The publication of the 'Remains' was an ecclesiastical scandal of no ordinary celebrity. It put Newman in a very bad light, so glared in it his lack of taste and judgment. It gave the Movement a setback from which it never recovered. And though Froude's function as "Keble's poker" and Newman's spur was undoubtedly of great importance, he remains at the end of Miss Guiney's affectionate rehabilitation preëminently remarkable for the prolonged immaturity of his mind and the wild and whirling rashness of his speech. It is strange that she should think to honor him by predicating of him "an utter disregard of human feeling where the interests of religion were concerned"—the terms of Newman's praise for St. Basil.

TILLEY'S LITERATURE OF THE FRENCH RENAISSANCE.

The Literature of the French Renaissance. By Arthur Tilley, M.A. 2 Vols. Cambridge (England): University Press; New York: Macmillan.

There is no more complicated period in French literature than the sixteenth century, and, with some exceptions, such as Rabelais, Ronsard, Montaigne, or Calvin, few of its writers were formerly studied with interest, although, as far back as the beginning of the nineteenth century, Sainte-Beuve rediscovered much of its poetry. But of recent years, as the traditions of historians of the Nisard type, circumscribed in their classicism, have passed away, and the fields for original research become more narrow, the sixteenth century has received much attention. Not only has the favorite study of origins shown the poets of the Renaissance to be in many respects the ancestors of an apparently very different classicism, but other literary genealogies and parallels, such as between Montaigne and Pascal, have been emphasized. Fuller notice is now taken than formerly in the programmes of French *lycées* and colleges of the writers of that time, and a considerable proportion of the theses for the French doctorate are monographs on its less read poets and prose writers. The *Revue des Études Rabelaisiennes* and the spasmodic *Revue de la Renaissance* are two new periodicals devoted to the same age, and even the more general *Revue d'Histoire Littéraire de la France* gives considerable space to the sixteenth century.

The result is a vast amount of uncorrelated matter, which the student has been obliged to seek in many remote quarters, especially if any question of international influence was involved. In 1898 Heinrich Morf issued his small handbook of facts, and now, by an interesting coincidence, Mr. Arthur Tilley's 'Literature of the French Renaissance' appears soon after the opening *fascicule* of M. Brunetière's history of modern French literature, the first volume of which is to deal with the sixteenth century. The two works (for enough of M. Brunetière's chapters have appeared—some in the *Revue des Deux Mondes*—to enable one to discern his treatment), are decidedly different, and, frankly, M. Brunetière's work is going to be infinitely more readable than that of the Cambridge don. M. Brunetière sets forth, with a minimum of notes and with the usual clearness of classification for which French critics are so distinguished, the main ideas exemplified in the Renaissance and its authors. Even for him the first step is no easy one, because, as he has often complained, there is absolutely no history of the important Latin literature of French humanism which had so great an influence on the Humanists of the Pleiad. A large amount of even lyrical poetry was written in Latin in the early sixteenth century, nor was it all in the form of schoolboy exercises. By the side of scholars such as Budé, the Latin poets Salmon Macrin, Nicolas Bourbon, and Jacques Voulté deserve more than the passing mention that Mr. Tilley gives them.

The early first half of the sixteenth century is, indeed, at first sight a chaos, and the reign of Francis I. seems to present an almost inextricable confusion. But a closer examination distinguishes three main tendencies whose conflicting or concurrent action contributes to this confusion, namely, of the Renaissance proper, of Humanism, and of the Reformation. Humanism may be differentiated from the Renaissance feeling as being, not the mere bursting free from the shackles of individual authority, but the return to the authority of a more remote and better known antiquity; just as the Reformation is the acceptance of a new servitude drawn from the tenets of the primitive Church. And it is because so many writers participate in different movements at different periods that the early sixteenth century seems confusing. How far was Marot a Humanist and how far a Reformer? What was the position of Margaret of Navarre? Was Rabelais, the greatest and fullest writer of his age, more a Humanist or a Man of the Renaissance?

Another reason for emphasizing the study of French literature in Latin in a history of the century lies in the fact that not only were Rabelais and Montaigne Humanists in temperament and training, but the whole Pleiad movement is merely an expression of the feeling of Humanism in literature. Ronsard, Du Bellay, and their followers were, in their love for both Greece and Rome, pure Humanists, and the "manifesto" of the school, the 'Défense et Illustration,' was merely the battle-call of writers whose views were precisely those of the learned scholars about them, and who differed from them only in demanding the use of French and in proclaiming its possibilities as a means of expression.

Such are some of the many questions raised by this confusing period, whose solution demands a full exposition of the literature of Humanism, which, though it concerns French so closely, was itself mainly in another language. We should have been glad to see the difficult task undertaken by Mr. Tilley. He clearly possesses all the qualities of painstaking research and of accuracy required for it, and in 1885 he did publish an introductory essay on the Humanistic stage, which, though in many respects immature and superficial, should not have deterred him from more elaborate investigation. The value of the present history is, indeed, precisely in respect of minute research. The work is certainly tedious: it may be doubted whether the most devoted lover of the sixteenth century would have courage to read it through from beginning to end. The author has worked into his text or his notes mention of almost every article, important or unimportant, dealing with sixteenth-century topics, so that one is sometimes tempted to ask if the narrative was not written round the references. Moreover, there are useful appendices to the chapters, giving general bibliographical information; material concerning the older investigators such as Lacroix du Maine, Du Verdier, Colletet, Niceron, Goujet, etc., whose writings are still indispensable to the student of the sixteenth century; and even collations of the early editions of important writers, such as Rabelais. This stamps his work as most useful for reference.

He has divided his study into three parts, beginning with the accession of Francis I. The first has as central figures Marot and Rabelais, and one chapter is assigned to Humanism. The second is devoted to the Pleiad, and the third largely to Montaigne.

In the second and third parts the author's task was more easy. With the advent of the Pleiad the differentiation of literature into *genres* begins to show itself, and it becomes possible to study the poets as composers of sonnets, of odes, of epics, or even to group the drama under one separate head. Mr. Tilley adheres, it is true, as much as possible to the biographical treatment, taking each author separately, but the reader's course is now much smoother, though the new period is not without its complications, and problems such as the relative priority of certain odes of Ronsard and Du Bellay beset the study of the various isms—Pindarism, Petrarchism, Anacreontism—of which the history of the Pleiad is full.

In this second part of the century the influence of Italy becomes prominent. Italianism is significant enough in the age of Francis I., but in the school of Desportes and the later members of the Pleiad group a debased Petrarchism did much to bring upon the literature of the period a discredit which it had to bear from the time of Malherbe to the last century. And yet it was the period of Montaigne, of Ramus, the greatest technical philosopher in France between the days of the schoolmen and Descartes; of D'Aubigné, one of the few successful epic poets since the Middle Ages; and of Du Bartas, who, in the opinion of the English Puritans and of Goethe, was one of the greatest writers of epic.

The critical attitude of our author is judicious and eminently safe. His method is to register all possible conflicting views, and then select the most conservative judgment. Take it all in all, the work will for a term of years undoubtedly be in constant use by students interested in the minutiæ of scholarship, and will be consulted along with the first volume of M. Brunetière's work, when that has finally appeared. On the other hand, as a compilation of detail and piecemeal information it is more likely to be superseded, or to require copious additions, as investigation of the sixteenth century proceeds, than would a work of broader scope.

From Tokio through Manchuria with the Japanese. By Louis L. Seaman, M.D., LL.B. Appleton & Co. 1905.

Commenting on the report of Col. Taylor of the British Army Medical Staff, upon the medical service of the Japanese in their war with China in 1894, where he pointed out that, notwithstanding occasional unavoidable overcrowding, "there were no cases of septicæmia," we said that "that establishes a record, a mark below which military surgery should not fall, but doubtless it will." The United States has since fought in Cuba, with a most commendable advance over the surgery of the civil war. "But during and following that six weeks' campaign the immediate and consecutive mortality from gunshot," says Dr. Seaman (p. 234), "was 268, while that from disease reached the appalling number of 3,862, or about 14 to 1." We have not verified the figures. Of 14,000 men sent by the French to Madagascar in 1894, 29 were killed in action and 7,000 died from preventable causes (p. 235). The Hiroshima hospital in Japan received, prior to August 1, 1904, 6,636 wounded and 3,226 other cases. Of these, 34, and only 34, had died up to that date. In the great base hospitals the wards for communicable diseases were conspicuously empty. There were some disorders of the chest, apparently from exposure to wet and cold, a few typhoid cases, and occasionally one of dysentery, indicating that such causes were active, but were controlled; for among the thousands in those institutions the intestinal conditions that ravage ordinary armies showed "scarcely a baker's dozen" of cases (p. 238). Now except for this voluntary and unofficial observer, these facts and the conditions on which they depend, so important to the world at large, would have been unknown to and unrecognized by that world. Dr. Seaman remarks with commendable severity that the War Department sent a cavalry officer to inspect the operations of the mounted service, which from the nature of its island home could have no very high development; but it could not, or did not, detail a medical officer to observe, in the interest of the fourteen men who may continue to die of disease as compared with the one who falls by the bullet (even if the secondary and pensionable disabilities are ignored), what this new people might have to offer in practical medicine.

The old conception that a military medical officer is a doctor and nothing more than a doctor—a civilian if one chooses—engaged simply to treat invalids, with hands tied for the removal of disease-causes however plainly he may see them, died hard in "civilized" armies. The Japanese, open to progress, realize that everything that tends to military efficiency has a place in the military system, and that it is just as important to maintain by intelligent sanitation the vigor of the troops when not actually in action, as it is to mask impatient batteries and conceal waiting infantry against unnecessary slaughter. In discussing the relative numbers of the combatants, a distinguished Japanese officer is reported as saying that his country proposed to neutralize the odds against it by eliminating disease as a factor, in the expectation that, as usual, four Russians would be disabled by sickness to one by the bullet (p. 240). Dr. Seaman thinks that expectation has been substantially realized, Utopian as it appears. He estimates that the Japanese disability from preventable disease in the first six months will prove to have been a fraction of one per cent., even in notoriously unsanitary Mantchuria. To that end the medical officer is at the front much more than at the rear, incessantly occupied with all those scientific observations and precautions on which in unhealthful regions health depends. And it appears that, such is the deference to official opinion, his directions are respected and complied with by officers and men alike. This, unfortunately at second hand, is the message the author brings, in painful contrast to what might be told from nearer home, were it expedient. He has clearly made known the results of the hospital work in Japan, and we deeply regret that he could not join the armies in the field and narrate from what he might see the exact situation there. For 'Through Manchuria with the Japanese' seems a publisher's title, rather than one strictly descriptive. Dr. Seaman did indeed reach the port of Niu-chwang by way of China proper before the Russians evacuated it, and he was there a little while after the exchange of flags. That brief experience agrees with his opinion expressed elsewhere, for only three cases of typhoid fever fell under his personal notice. But one may hardly suppose that the Japanese retained in camp many of their seriously ill while water communication was open. Still, it would be useful, and not simply the gratification of curiosity, to settle at first hand the exact state of their sick report.

Dr. Seaman's observations were not all professional. He had some amusing and exciting experiences with the Hung-hutzes (Chun-chuzes), ex-bandits, now nominally Chinese soldiery, many of whom were operating as guerillas on the Russian flank and communications under Japanese officers, as is charged (pp. 161-170). These gentry, more disposed to bring in an enemy's head than to trouble themselves with an entire prisoner, have their headquarters, beyond which the author penetrated toward Mukden, at Hsin-Min-Tung. A Cossack advance in force encouraged his departure. For some time he hovered around Chefoo, that centre of international fiction and friction, and four unsuccessful adventurous attempts to reach Port Arthur add interest to the tale. The cutting-out of the torpedo-boat *Reshitelny* was generally regarded by those on the spot as infringing neutrality, as a flagrant violation of international law. But the Russians had already openly and continuously maintained at this neutral city a wireless telegraph station (pictured at p. 178) in direct communication with their besieged fortress. *We* must remember the beam of the *Florida*, and England that of the *General Armstrong*, before too seriously condemning this Japanese mote. The formal *res gestæ* of war as affecting the rights of neutrals receive a valuable record in the note made from personal observation, and in the photograph *in situ*, of a Russian contact mine anchored in the fairway of the Gulf of Pechili, 38° 45′ N., 120° 34½′ E., a menace to neutral commerce, thirty miles from the blockaded port; and it was reported (p. 121) that the Japanese had picked up no less than twenty of these engines of destruction in the open sea, besides extracting numerous observation mines from positions along the coasts.

The farcical feature in this great struggle was the invasion of Japan by an uninvited handful of American female nurses. With no working knowledge of Japanese speech, and no practical familiarity with Japanese ways, they were drops, but incompatible drops, in the great bucket of the perfectly effective native organization. With characteristic courtesy the Government received these unsought guests and quartered them, as it might have sheltered a herd of white elephants, in an establishment at Hiroshima arranged for their foreign needs. There they may have observed others render with extreme skill the service they had in mind. With enviable gallantry the author chiefly dwells on this physical exhibition of international good will, and designates their reception as one of enthusiastic recognition of America's kindly feeling; adding that the limitations of the visitors compelled them "to play a somewhat minor part," but that they were useful in the surgical wards (p. 46). After a pleasant vacation these nurses-errant returned, and it is conceivable that with one party, if not with both, "Sayonara"

may not have been an expression of pure regret.

The text is colloquial in manner. There are about forty illustrations, chiefly from photographs, many instructive.

In the Days of Chaucer.—In the Days of Shakespeare. By Tudor Jenks. With an Introduction by Hamilton Wright Mabie. A. S. Barnes & Co. 1904, 1905.

In the world of book-making, few problems are more rarely successfully solved than that of popularizing the results of research. Of making text-books, indeed, there is no end, and the need of bread and butter forces only too many of the scholars in our higher institutions of learning into this exhausting drudgery. But the presenting to the general reader of the riper fruits of investigation and speculation is too often left to the amateur and the hack, with the most disastrous results to truth and genuine enlightenment. Yet the matter is of great importance. So long as new facts remain buried in technical journals they are but slightly operative, and it is desirable that all attempts to make them accessible to the larger public should be honestly examined and appraised. The aim of the present volumes, and those on Milton and Scott that are planned to follow them, is to provide an introduction to the pleasurable reading of our great poets by a delineation of their personalities. The somewhat meagre biographical outline which is all that is possible in the case of Chaucer and Shakspere, is supplemented by an account of "the manners, customs, institutions, and happenings that made each what he was and are reflected in his poems," and by an appreciative discussion of the outstanding features of some typical works.

To readers who lay stress on accuracy and precision of statement rather than fluency and ease of style, it may seem ominous that the series is introduced by Dr. Hamilton W. Mabie. The Introduction is indeed discouraging. It is a familiar talk about Chaucer, implying a knowledge of that author which shows no sign of the writer's having gone beyond the Prologue to the Canterbury Tales. He is properly enthusiastic over that unsurpassed portrait gallery, but seems unaware that Chaucer also tried his hand at story-telling; and his vague generalizations about the "sweet-voiced singer" and "dreamer of fair dreams" will help no one to a truer conception of the poet or his work. On the whole, the books are better than this unfortunate start might lead us to expect. They contain much information, imparted vivaciously and succinctly, and fulfil to a considerable degree their promise of a concrete and vivid picture of the social and material surroundings of their subjects. As to accuracy, the verdict must be slightly less favorable. The mediævalist will be apt to sniff at a writer who undertakes to write on Chaucer and defines a *fabliau* as a fable in rhyme, names Thomas the Rhymer among the Scottish successors of Chaucer, and murders one of the greatest lines of his author by misquoting it, thus:

"The smiler with the knife hid under the cloak."

The Shaksperean will hardly think the book worth reading when he hears that Mr. Jenks considers Scott's sketch of Euphuism in 'The Monastery' lifelike, and still supposes that the "noverint" passage in Greene's "Menaphon" refers undoubtedly to Shakspere. Some compensation, however, may be found in the patriotism that places "the Revolutionary period of our own country" alongside of the age of Pericles as the only possible rival to the age of Elizabeth in the production of a "galaxy of celebrities."

In style the books are for the most part pleasant to read, but too often condescending. Simplicity and explicitness, such as are sufficient to bring writing within the comprehension of even quite young readers, can be attained without childishness; yet at times Mr. Jenks talks down to his audience in a manner that becomes offensive. But this fault is only occasional, and may easily be avoided in the remaining volumes.

From what has been said it will have appeared that Mr. Jenks is not a specialist giving to the public a choice selection from his own ample treasures, but rather a maker of books who can work up a congenial subject in a fairly satisfactory way. With a little more stress on accuracy, a little more manliness of style, and by taking as model (say) M. Jusserand or John Richard Green rather than Dr. Mabie, there is no reason why he should not make the succeeding volumes serviceable additions to the list of popular books about literature.

The United States of America. By Edwin Erle Sparks, Ph.D., of the University of Chicago. (Story of the Nations Series.) G. P. Putnam's Sons. 1904. 2 vols. Pp. xi., 425, viii., 378.

The title of the series of which this book is a part permits a great variety of treatment. Some of the series are stories indeed; some, true history. That of the United States might have been told from many different points of view, but Dr. Sparks has wisely chosen to limit himself to a particular theme, a single point of view; equally wise has he been, we think, in the choice of them.

"An effort is made in this narrative," says the preface, "to trace the gradual evolution of a confederated republic under the laws of necessity; to acknowledge that radical departures have been made from first ideals as a result of progress; to take into constant consideration the underlying forces of heredity and environment; . . . to show how the phrase 'The United States is' has been slowly and unconsciously evolved in the process of time from the early practice of saying 'The United States are.'"

The story being conceived in this light, it is plain that much will be omitted that otherwise might receive consideration. Dr. Sparks has not scrupled to omit whatever, in his judgment, has contributed nothing to the working out of the central theme. It was, nevertheless, still possible to proceed in one of two ways: to exhibit the growth of nationality in terms of concrete events related in some detail, or in terms of a commentary on events that are assumed to be generally known. Dr. Sparks has chosen the latter method. His book is in no sense a narrative of events—even of those events that were vital in the development of national sentiment. The reader will find in it but little of concrete fact; he will find more or less suggestive criticism rather than information set down in order. The work is, indeed, not a history of the United States, but an interpretation of United States' history.

The use of this method is sufficiently obvious throughout, but it may be best perceived, perhaps, in the chapters on the Articles of Confederation and the Louisiana Purchase. It would be difficult to learn the provisions of the Articles from Dr. Sparks's book, however clearly he may have pointed out their defects. It would be quite impossible to work out a connected account of the Louisiana Purchase from the chapter that is here devoted to the subject. That Monroe was appointed to assist Livingston (i., 286) is almost the only concrete fact that the author sets before us. The date of the appointment, the progress of the negotiations, the provisions of the treaty, the progress of the debates in Congress, the organization of the Territory—the facts which go to make up a narrative of the Louisiana Purchase—are alluded to, if at all, only incidentally, as something thoroughly familiar to the reader. On the other hand, the bearing of these events upon party politics, upon sectionalism, upon the theory of strict construction, is discussed at some length, suggestively, if not with originality or great force. So slight has been the effort to construct a narrative or provide orderly information, that to one unfamiliar with the history of the United States in some detail the work must, we should suppose, prove vague in the extreme and largely profitless. To one better instructed, on the other hand, it should prove suggestive and readable.

A book of this kind will, most probably, contain few positive errors, because it deals so slightly with facts that may be established or disproved. On the other hand, a captious critic might find something to cavil at on almost any page of the book. On the whole, Dr. Sparks's interpretation of the subject commends itself to us as sound. Without slavishly copying the ideas of other men, he has mainly given us conclusions justified by the best special studies which have appeared. The author's explanation of the rise of political parties appears to us to be an exception, however. Whether the United States should aid France or not, we are told, "brought about eventually the rise of parties in the United States" (i., 204). Again, the first epoch in the history of parties "turned entirely upon the choice of sides in the war between France and England" (i., 205). Party animosity would have been checked instead of advanced if "John Adams had been sent as Minister to France and Thomas Jefferson to England" (i., 207). The emphasis on this cause of party alignment is difficult to understand precisely because the author is primarily interested in exhibiting the conflict between centralization and localism. For the very same reason, too, we could wish that the importance of Calhoun's letter to Pakenham in "nationalizing" the slavery question had been pointed out. One is left with the impression that the Fugitive Slave Law was the first indication that the Southern leaders were giving up the old "local-institution" theory.

The illustrations which accompany the book are numerous and well chosen. They exhibit the author's familiarity with political caricature, just as the hundreds of incidental facts with which the book is filled exhibit his familiarity with the pamphlet, broadside, and newspaper sources of his subject.

Old Florence and Modern Tuscany. By Janet Ross. E. P. Dutton & Co. 1904.

Mrs. Ross's volume on Florentine themes, ancient and modern, is full of varied interest. Some of these essays have seen the light in English magazines, but well deserve being collected into book form on account of their historical research and of their keen observation of actual conditions of peasant life in Tuscany. She begins with the history of the Misericordia, the confraternity of Pity. Visitors at Florence cannot fail to have been impressed by coming across a weird company of black enshrouded forms carrying a catafalque in the streets and in the lanes outside the city, hurrying along on some mission of mercy. There is a tradition that, in 1240, at the time Florence supplied cloth to foreign countries, many porters were employed carrying bales between the weavers and the dyers, and afterwards to the warehouses of the merchants. These porters had a refuge against wind and weather in certain cellars belonging to the Adimari in the Piazza del Duomo. One of their number, Piero Borsi, a devout man, shocked at their constant cursing and swearing, proposed that whoever took the name of God or the Holy Virgin in vain should as penance contribute a small coin to a box kept for the purpose. After a certain time, large sums having accumulated, Piero further suggested that six letters should be made, one for each quarter of the town, and that each porter should devote six days during the year to carrying the sick or those who had been victims of accidents to the hospitals, receiving for each journey a giulio. This origin of the Misericordia brotherhood has been, we are told, set aside by Passerini, the latest authority on the charitable institutions of Florence, who is of opinion that they are an offshoot of the Laudosi confraternity of Or-San-Michele, founded in 1292, who separated in 1326, during the pestilence caused in the city by the unburied corpses of those who fell at the battle of Altopascio.

In 1340 the plague again broke out in Florence, followed by the great plague of 1348, of which Boccaccio writes, when the sound of the brotherhood's measured tread about their work of removing the victims alone broke the silence of the stricken city. The Florentines made a gift of 35,000 golden florins to the confraternity in recognition of their heroism and devotion in burying the dead, taking charge of the orphans, and distributing food and clothes. Again in 1363 they proved their courage in behalf of the suffering during another outbreak of plague, and the large fortune of a Florentine usurer, Neri Boscoli, a banker of Naples of bad reputation, was bequeathed to them. The Misericordia had scruples as to accepting money procured by extortionate usury, and, having applied to the best theologians in Florence to decide this matter, accepted their decision, which was that their captains might receive the legacy; thus giving back to the poor what had been taken from them, after returning to those who could bring proof of exorbitant extortion the money that had been unjustly wrung from them.

Our author tells us that a century and a half before European cities instituted the registration of births, the Misericordia decreed that their notary should keep a book with the record of every child born within the city and of every person baptized in San Giovanni. Till then the priests kept count of the number by dropping black beans in a box for males and white for females. The books of the confraternity were swept away, unfortunately, in the inundation of the Arno, in 1557.

Notwithstanding the great services this institution continued to render to the State, it got into difficulties through the intrigues of the Medici, who induced the Signory to fuse it with the confraternity of S. Maria del Bigallo, which was given sole power to manage the funds. This led to the treasure hitherto entirely dedicated to the uses of the poor being squandered in junketings and festivities, and the brotherhood of Pity ceased to exist for a time. The need of their services was soon very keenly felt in the city, and in 1480 it was decided to reconstitute the confraternity by a fresh code of statutes, which remain unchanged to this day. Seventy-two brothers were ordained to minister to the needy, bury the dead, attend to the sick, and practise other needful charitable work without remuneration. Their privileges seem limited to a small monthly stipend to any of their number fallen into poverty, and the right to be buried in the cemetery of the Misericordia with fifteen masses for the repose of their souls, secured by a small annual payment.

Another chapter on old Florence treats of two Florentine hospitals, that of the Innocenti in the Via de' Servi, so well known through Andrea della Robbia's swaddled babies, which appeal to the public from Brunelleschi's graceful loggia, the asylum for illegitimate children built in 1421 under the auspices of the Guild of Silk Merchants in Por San Maria, and which continues to this day the good work of receiving these unfortunate infants, bringing them up and helping them to earn their living later on and serve their country. The other hospital is that of Santa Maria Nuova, built by Folco Portinari, the father of Dante's Beatrice, in 1288, a year before his death. It began with only twelve beds, but was enlarged in a very few years. Its history is remarkable, for it is said to have owed its origin to Monna Tessa, an old servant of the Portinaris, who devoted her later years to nursing a few sick people in a small house belonging to her master, who built the hospital at her instigation. In later centuries, it was held in such good fame abroad that Leo X. sent his physician from Rome to study its management, and Henry VIII. of England, wishing to establish such an institution in London, requested of Francesco de' Portinari a copy of its rules and regulations, which, needless to say, are not in accordance with the present ideas on hygiene, for it was not till 1650, after various changes in the direction and proprietorship, that each patient had a separate bed. This hospital used to be much visited by travellers on account of the magnificent triptych by Van der Goes, now in the Uffizi Gallery, painted in 1470 for Tommaso Portinari, head of the Medici Bank at Bruges.

Those who are interested in the present conditions of land tenure and agriculture in Tuscany may turn with advantage to the articles on the Mezzeria, Oilmaking, and Vintaging. Mrs. Ross knows the Tuscan people well, having lived for many decades in the country outside Florence in great sympathy with the workers of the soil. The most attractive article of all in this volume is on the popular songs of Tuscany, of which she has made a considerable collection, noting them down from the peasants in the country just as they are sung. Very different they are in form from the sophistications by the well-known composers, Gordigiani, Campani, etc. The illustrations of this instructive book are few and not up to the mark.

Modern Practical Electricity. By R. Mullineux Walmsley. Chicago: W. T. Keener & Co.

Appearances are against these four thin royal octavo volumes. They display a kind of ornateness by which the stern reviewer, lover of the leaden casket, refuses to be charmed. It is an ill omen, too, that the title-page bears no date and does not testify that this is a second edition, while the worn appearance of a good deal of the type does. Such lack of frankness creates a prejudice, and has caused the book to receive at our hands a more searching examination and comparison with other treatises than would ordinarily be bestowed upon a popular exposition of an established science. However, the final verdict is that an intelligent man of business or profession, who, by way of preparation for twentieth-century contingencies, would like, without too severe study, to understand the scientific basis of the wonderful inventions which have been revolutionizing life, and to learn as much as he easily can of the relation between practice and theory in electrics—so as, for example, to comprehend in some measure why one great company employs continuous current dynamos and others alternators—such a man cannot find a book better suited to his wants than this. That delight with which a work of genius like Maxwell's 'Theory of Heat' thrills him who reads it is not to be looked for from these volumes, but our readers understand what is the sort of cultivation required for the conscious enjoyment of a fine talent well trained; and they will take pleasure in noting the deftness of Dr. Walmsley's expositions. Clearness of statement is a small part of it. There is an accomplishment by which one suggests the right idea at the right moment and in the right form, a finish of expositional tactics, for which the science of electricity affords an interesting field. That art is Dr. Walmsley's; and in sinking those parts of the theory that need not perplex the reader, such as the displacement current, in so arranging the different sections of the book and governing their contents that each difficulty that is to follow shall find the reader in the precise state of preparation needed to meet it, he at one point forced us to exclaim: This is verily the high strategy of perspicuity! Yet it moves so smoothly that the reader will deem it a matter of course unless he goes to the trouble of comparing this work with others.

Extreme devotion to perspicuity has in one place had its inevitable disadvantage —namely, after explaining in considerable detail the arrangement and shape of the lines of force from a charged conductor placed near an uncharged one, and how those lines move when one of the conductors is moved about, until the reader fully possesses it, the author supposes a chain thrown over the uncharged conductor so as to connect it with the earth, and correctly

enough says that the ensuing motion of the ends of the lines of force, during this discharge, is an electric current. To have analyzed the phenomenon into two parts would have been a monstrous blunder of exposition. But the author abstains from pointing out that the so carefully described features of the lines of force, with their perpendicularity to and termination at the surfaces of conductors, refer exclusively to a state of equilibrium, and cannot be expected to persist when the lines move with luminal velocity. Doubtless his reason was that, if he did that, he would have to indicate how these features would necessarily be modified under rapid motion, which would bring complications mountains high. Yet, as he has left the passage, we will venture to predict that no small perplexity will be occasioned for the innocent who is at first led to believe that the displacements of the lines of force in moving an insulated conductor about in an electric field accurately represent an electric current.

The book is undoubtedly a second edition; but it must have been radically remodelled in some parts, for not only are all the latest discoveries treated, but early chapters present features for which there could have been no motive except to prepare the reader for a clear understanding of the new developments.

Indian Basketry: Studies in a Textile Art without Machinery. By Otis Tufton Mason, Curator Division of Ethnology, U. S. National Museum. Doubleday, Page & Co. Two volumes, quarto, with 212 text figures and 248 full-page illustrations.

These two volumes, profusely and exquisitely illustrated, are comparable with the best ever brought out by the ethnologic offices at Washington, and this is certainly saying a great deal. The colored illustrations are nearly all of rare beauty. The work is an ornament as well as a source of very elaborate information on a subject whose importance is very properly indicated by the author in his first chapter: "Basketry is the mother of all loom work and beadwork. . . . It is the alpha of an art in which billions of capital are invested, millions of human beings are employed, whose materials and products are transported to earth's remotest limits, whose textures are sought by every tribe of mankind. It is from this point of view that the present work is written."

Naturally, the overwhelming majority of the material illustrated and discussed is derived from North America, or, rather, from the United States. Mexico, Central America, and South America furnish but little, for the obvious reason that not much from these regions is accessible in this country, or anywhere else as yet. May the exhaustive work of Professor Mason animate collectors to fill up the vacancy. It is true, however, that this city harbors quite a respectable gathering of basketry from the Peruvian coast, which Professor Mason does not seem to have deemed worthy of attention, probably because it contains but a limited number of different shapes. Neither is there any reference to the Calchaqui of the Argentine Republic, or to the basketry of the Amazonian tribes. But so far as our own country is concerned, the work is so elaborate that it might be regarded as exhaustive. Every kind of process is most minutely and accurately described, and, as often as possible, figured. Professor Mason has produced a model monograph.

While not by any means an appendix to Professor Mason's book, but an independent and equally elaborate discussion, also handsomely illustrated, we notice here the 'Basket Designs of the Indians of Northwestern California,' by A. L. Kroeber of the University of California, forming No. 4 of volume ii. of the University Publications on American Archæology and Ethnology. This conscientious and thorough study is a handsome addition to the literature of the subject.

Die Psalmen. Neu übersetzt und erklärt von Arnold B. Ehrlich. Berlin. 1905. 8vo. Pp. 438.

The author or commentator of this work lives in New York and writes English very well; he evidently thought that Bible students generally can read German, and that more of his books would be sold on the Continent of Europe than in England and America. As a Jew, and a thoroughly modern one, he does not, like many Christian divines, hunt in the Psalms for Messianic predictions; nor, like the Talmudic sages, for incidents in King David's life. Though he disclaims all sympathy with the "higher critics" in their efforts to fix late dates for the origin of Biblical books, and decries their habit of emendation whenever the Masoretic text offers difficulty, he is almost unwilling to place the composition of any Psalms earlier than the Maccabean age, and he "reads" something easy out of almost every outlandish word found in the Psalter. The headings of the Psalms, such as the third, which refer the composition to some event in David's life, he very properly rejects as unhistorical, and, moreover, as inappropriate. The musical terms, like "Lamnasseah" ("to the chief musician" of the English Bible), he does not translate, but marks their places with asterisks.

The author's interpretation of the poems fits the times in which he places their composition. Thus, he points out that the sinners in Ps. I., 1, are habitual sinners (such is the grammatical meaning of *ḥattaïm*), men who have given up the observance of the Mosaic law; and in the same verse he puts the "sitting" (the Arabic *mejlis*) for the "seat" of the scornful, who are not jolly fellows in the tavern, but educated disbelievers, talking seriously of their disbelief. The *holelim* of Psalm V. are to him *Griechler* (Hellenists), not fools, nor the arrogant; the Hebrew verbal root being coined from *Hellen*. Yet the materialism which the Psalmist combats is that of life rather than of the school; it is the hunt after wealth and pleasure.

Mr. Ehrlich is not satisfied with any vague, cloudy renderings; to him the poet always meant something definite. Thus, in dealing with that hard nut, Ps. IV., 4 (5 in the Hebrew), he turns it thus into German:

> Gönnt euch keine Ruhe, nur sündigt nicht!
> Zermartert euer Hirn auf eurem Lager, aber schweiget. Sela."

—and says that the poet thus addresses the fretful hunters after gain: Go on with your fretting, only stop short of actual sin; let your business cares trouble you even in bed; but keep your low sentiments to yourselves. And in the closing verse, the poet glories in his own freedom from cares and in his peaceful slumber; for he trusts himself to the Lord. But here, as elsewhere, the poet, when speaking in the first person, does not mean himself alone, but the whole patriotic class, party or sect for whom he speaks, and who are to sing his poems. In short, the Psalms are to Mr. Ehrlich a set of party campaign songs, as they are to most of the higher critics.

Our author finds a specific meaning also for the first half of the twenty-fourth psalm. It answers the problem of proselytes; any Gentile may "ascend the mount of the Lord" (enter the Temple yard as an Israelite) who is "clean of hands and pure of heart," etc., without assuming the yoke of the ceremonial law. In the second half of this psalm, which he considers a separate song, he falls into a grave anachronism. "The King of Glory enters" in the form of the Ark of the Covenant on its return from battle. But as all the psalms were, in our author's opinion, written long after the Babylonian exile, when the Ark of the Covenant was only a dim recollection, the poet could not have harbored such a thought, nor would the singers and hearers have caught the implication. The King mentioned as "His Anointed" in the second psalm, and the King of the 45th and 110th, were for our author post-exilic high priests, wielding, with or without the title, the royal power.

In Psalm CL. 1, the "expansion of his strength" is to our author not the sky, but the roof of the Temple; in parallelism to the first line, "Praise ye God in His Sanctuary." For this rendering of *raqia'* he brings some strong but not convincing proofs from later Hebrew writings.

Psalm CL. 6 is commonly rendered: "Every soul shall praise the Lord, Halleluiah." (The new version makes it, "Every breath, etc.") The Hebrew *neshamah*, as denoting a living creature, says our author, is, in the Bible, always used in a contemptuous sense; hence the old rendering makes an anti-climax. But as the praise of the Lord is to be sung, and to be intoned on horns and flutes, it is only fitting to wind up: "Jeder Atemzug sei ein Hallelujah!"

Our author shows, rather unjustly, but little faith in the authority of the Septuagint, for this version, if he is right as to the age of the psalms, was made so soon after their composition that the translators must have been in full touch with the poets. They certainly were in touch with Palestinian custom by denoting, in harmony with the Mishnah, the psalms for the days of the week.

Mr. Ehrlich, in his commentary, lays bare the ponderous apparatus with which he has done his work. There are the Septuagint, Vulgate, and Peshitto, the Talmud and the Midrashim, the mediæval Jewish and modern Christian and "critical" commentators, to cull from; though very often he cuts loose from them all. He calls in the help of Aramaic, Syriac, and Arabic; but never a word of Assyrian, now so popular among Bible students. He seems never to have looked into Assyrian grammar; for, in commenting upon *yeshuatah* in Psalm III., he claims that Hebrew shows two case endings only, the independent and dependent case; and in note (4) in the appendix of outlying erudition he tells his readers that Arabic also had only two cases, till, after the invention of the vowel points, three end vow-

els for three cases were introduced. Declensions in a language are never gotten up by its grammarians; and the least acquaintance with the best-known Assyro-Babylonian book, Hammurabi's Code, convinces any one that the three case vowels belong to the oldest form of all Semitic languages.

Mr. Ehrlich's version, though often couched in strong idiomatic German, is written for the needs of the earnest student, not for the devotee or the lover of poetry. The stress laid in the notes on the historic background and on the standpoint of the writers must necessarily repel the reader from making the Psalms an expression of his own religious, ethical, or patriotic feeling.

JUST PUBLISHED

A new Romance of Travel

by the authors of

The Lightning Conductor

The Princess Passes

Illustrated by EDWARD PENFIELD, $1.50

An Anglo-American love story of a trip by automobile and on foot through northern France and Switzerland to the Italian Lakes, thence among the Valois Alps to Nice and Monte Carlo.

When "The Lightning Conductor" appeared, the *Nation* said:

"We are only too well satisfied to go with such delightful people, and especially through such delightful scenes, on any terms." In their new book, the authors maintain the high level of the earlier one, which the publishers have now brought out in a new illustrated edition, uniform with "The Princess Passes."

OSLER

Aequanimitas and Other Addresses

By WILLIAM OSLER, M.D.

Regius Professor of Medicine at Oxford University, England; Professor of Medicine, Johns Hopkins Hospital, Baltimore, Md.

A series of 18 master addresses.
12mo; 389 pages. Cloth, $2.00 *net.*

"Dr. William Osler, about to leave this country for the Regius Professorship of Medicine in the University of Oxford, has published a sort of valedictory volume, almost, if not quite, as interesting to the laity as to the profession of which he is a distinguished ornament. . . . We may almost say he has unconsciously written an autobiography—not the annals of his life, nor the story of the friends with whom he has been associated, but he has given his thoughts on education; on investigation; on the relation of physicians to patients, and to nurses; on ethics; guardedly, on religion, and fully, on the conduct of life."—THE NATION, NEW YORK.

THE NEW MACMILLAN BOOKS

RELATING TO HISTORY AND BIOGRAPHY

AN ADMIRABLE THOUGH BRIEF BIOGRAPHY

Mr. Frederic Harrison's Chatham

It is not often that the life story of a man of such rare personal ascendancy is told by such a master of lucid narrative. *Cloth, 12mo, $1.25 net (postage 9c.)*

"If the intellectual greatness of a man is to be attested by the verdict not only of contemporaries but of posterity, and if the splendor of achievement is to be measured by its durability, it must be acknowledged that no other British statesman, not even his own son, the younger Pitt, can vie with him who is best known to us as the Earl of Chatham. Worthily to portray him is a task at which many an accomplished man of letters has tried his hand, from Horace Walpole to Macaulay, and nobody has produced a sketch so adequate, so sympathetic, yet withal so discriminative, as that which is published by the Macmillan Company, and for which we are indebted to Mr. Frederic Harrison." —From an extended review in the *New York Sunday Sun*.

OF UNUSUAL VALUE TO READERS OF HISTORY

Professor Lamprecht's What Is History?

FIVE LECTURES ON THE MODERN SCIENCE OF HISTORY. By KARL LAMPRECHT, Ph.D., LL.D., Professor of History in the University of Leipzig. Translated from the German by E. A. ANDREWS.

These lectures include "Historical Development and Present Character of the Science of History," delivered at the World's Fair in St. Louis; also the addresses delivered last October in New York during the celebration of the founding of Columbia University. Recent psychological literature, too, has seemed to the author to invite a further application of the laws of psychology to the science of history, particularly to the "Problems of Universal History" discussed in the final lecture of this valuable book. *Cloth, 12mo, $1.25 net (postage 9c.)*

THE LATEST VOLUME OF THE CAMBRIDGE MODERN HISTORY

Planned by Lord Acton Vol. III. The Wars of Religion

Among its chapter titles are: "The Wars of Religion in France"; "French Humanism and Montaigne"; "The Catholic Reaction, and the Valois and Bathory Elections, in Poland"; "The Height of the Ottoman Power"; "The Empire Under Ferdinand I. and Maximilian II."; "The Revolt of the Netherlands"; "William the Silent"; "Mary Stuart"; "The Elizabethan Naval War with Spain"; "Rome Under Sixtus V."; "The End of the Italian Renaissance"; "Spain Under Philip II."; "Spain Under Philip III."; Britain Under James I."; "Ireland, to the Settlement of Ulster"; "The Dutch Republic"; "Henry IV. of France," and "The Empire Under Rudolf II."
Cloth, 8vo, gilt tops, $4.00 net (postage)

FOR THE STUDENT OF ORIGINAL SOURCES

Hakluyt's Voyages

The Principal Navigations, Voyages, Traffiques and Discoveries of the English Nation. Made by Sea or Overland to the Remote and Farthest Distant Quarters of the Earth at any time within the compasse of these 1600 Yeeres. By Richard Hakluyt, Preacher, and sometime Student of Christ Church in Oxford. Vols. IX., X., XI. Orders received for complete sets only. To be complete in twelve volumes.
Cloth, 8vo, with reproductions of the quaint original illustrations. Price per volume, $4.00 net.

Hakluytus Posthumus; or, Purchas His Pilgrimes

By SAMUEL PURCHAS, B.D. Edition de Luxe, limited to 1500 sets for England and America. In 20 volumes.
Vols. I. and II. now ready. Cloth, Post 8vo, $3.25, net, per volume. (Supplied only to Subscribers for complete sets.)

Coryat's Crudities

Hastily gobbled up in five moneths' travels in France, Savoy, Italy, Rhetia commonly called the Grisons country, Helvetia alias Switzerland, some parts of High Germany and the Netherlands; Newly digested in the hungry aire of Odcombe in the County of Somerset, and now dispersed to the nourishment of the travelling members of this Kingdome. By THOMAS CORYAT. Originally published in 1611, since when the only reprint was in 1766.
Edition de Luxe. In two volumes. Cloth, 8vo. Nearly ready.

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave., N. Y.

At all bookstores.

The Biography of the Season. Ready March 29

Autobiography of ANDREW D. WHITE

With Five Photogravure Portraits of the Author

THE autobiography of the Hon. Andrew D. White is a living, breathing, inspiring record, not alone of a life which has been a powerful factor for good in American growth and progress, but of the people and events which have shaped American history and thought in the last half-century.

Just through college, Mr. White went to St. Petersburg as an attache of the American legation. He returned to become professor of history at the University of Michigan. He was a State senator from 1864 to 1867. He was president of Cornell University from its inception for twenty years, and his work in advancing the cause of American education is beyond all estimate. He was one of the commissioners to Santo Domingo in 1871, and a commissioner to the Paris Exposition in 1878. He was Minister to Germany in 1879-1881, and to Russia in 1892-1894. He was a member of the Venezuelan Boundary Commission, and Ambassador to Germany from 1897 to 1903. Last, but by no means least, he was president of the American delegation to The Hague Peace Conference.

Mr. White has led a life filled to overflowing with active usefulness in many causes—education, politics, statecraft, diplomacy, and literature. In the midst of demands that would have overwhelmed most men, he has found time for important and valuable writings on political and historical subjects. His work has brought him into intimate relations with almost every person of note in this country and abroad during the half-century of his active share in the world's affairs, and his personal worth has made friends of great men on both sides the water.

This is the wealth of material which enters into the making of this autobiography. As a record of events and men it is a model of proportion, of simplicity, of vividness. The two handsome volumes are a contribution to American history standing well-nigh alone in breadth and accuracy, in scholarship and charm. The work will take enduring rank among the classics of American literature.

Royal octavo, 2 volumes of 600 pages each. With full index. Price, $7.50 net; carriage extra.

THE SMOKE-EATERS

By HARVEY J. O'HIGGINS

The New York "Globe" says:

"Here are men as real as Kipling's 'Soldiers Three.' . . . Rarely does one read a book in which human strength and human weakness are so capitally portrayed. Seldom in the pages of fiction is it so impressively brought home to one how heroism and folly can shade into one another."

Frontispiece, 12mo, 300 pages, $1.50.

IN THE NAME OF LIBERTY

By OWEN JOHNSON

Author of "Arrows of the Almighty."

John Luther Long says:

"Don't send me another story as fascinating as that. It has demoralized me. For here I am at three o'clock on Sunday morning, with every minute capable of sixfold use, finishing that book."

Frontispiece by Castaigne, 12mo, 406 pages, $1.50.

READY SOON

SANDY

THE CENTURY CO. - - - - - Union Square, New York

A DIARY FROM DIXIE

By **MARY BOYKIN CHESNUT,** being her Diary from November, 1861, to August, 1865. Edited by ISABELLA D. MARTIN and MYRTA LOCKETT AVARY. 8vo. Ornamental Cloth, $2.50 *net;* postage additional.

This is the diary of a brilliant woman, the wife of a United States Senator who became an aide to Jefferson Davis and afterwards a Brigadier-General during the Civil War. Mrs. Chesnut travelled about with her husband, and met and entertained all the foremost men in the Southern cause.

THE PORT OF STORMS

By **ANNA McCLURE SHOLL,** author of "The Law of Life." 12mo. Ornamental Cloth, $1.50.

Is Pride stronger than Love? Is Love stronger than Faith? Can Love forgive a breach of Faith caused by Love, and fail to forgive a breach of Faith caused by Pride? All these questions are handled in this book in the feverish atmosphere of modern New York, where a beautiful girl abandons all the fruits of Love for the elusive satisfaction of social power.

THE HOUSE OF HAWLEY

By **ELMORE ELLIOTT PEAKE.** 12mo. Ornamental Cloth, $1.50.

Sweet is the adjective that most properly applies to this entrancing novel. It is a pure, lovely story of a grand old man, a beautiful young girl, and her noble young lover. The dainty descriptions of the heroine and her friends are so crisp and vivid that the reader is awe-stricken at the writer's grasp of the beautiful in life. The scene is laid in southern Illinois, and that locality will henceforward have a definite place in fiction.

THE CLOCK AND THE KEY

By **ARTHUR HENRY VESEY.** 12mo. Ornamental Cloth, $1.50.

This is the tale that tells to you of stolen jewels that gave the clue that caused the man to build the Clock that had the Key that fitted the lock that opened the heart of Jacqueline, making the outcome all serene in the famous novel that Vesey wrote. Have you read it?

The Nation.

NEW YORK, THURSDAY, MARCH 23, 1905.

The Week.

The President spoke smooth things in this city on Friday night about our now ranking as "one of the big naval powers of the earth," but it was left for Admiral Coghlan to state the rough truth. He explained, as he has done before, from the strictly naval standpoint, that our fleet is not what it is popularly supposed to be; that eleven of our "first-class battleships" are far from being first-class; and that we are, or soon shall be, 50,000 short of sailors to man the ships we have. The Admiral, as in professional duty bound, said that we must keep on building warships "rapidly," and "get more men." That is the old naval game, as worked so successfully in this country, year after year. First inform Congress that added men-of-war are an absolute necessity, and then turn around and ask, with fine indignation, if it is going to be so foolish as to spend millions on ships and then refuse to vote the millions more necessary to man them? President Roosevelt's complacency over the state of our navy is not at all shared by the real experts. There is no end to their demands. And the pity of it is that Mr. Roosevelt's words lend themselves to the policy of extravagance, at the very moment when a truly far-sighted statesmanship would be preaching peace and economy as the urgent needs of this country.

It is disquieting to note the accumulation of evidence that the President is not as careful as he ought to be in appointing Federal judges. The Chicago scandal is only the latest instance of a laxness in this respect on Mr. Roosevelt's part. His course in allowing Senators to dictate judicial nominations is in unpleasant contrast with President Harrison's sturdy insistence upon the Presidential prerogative in that matter. By personal inquiry and acquaintance, and by consulting more with members of the bar than with politicians, Mr. Harrison succeeded in doing much to raise the standard of judicial appointment. President Roosevelt has, unhappily, fallen away from that example. He has too often himself treated judgeships, and allowed spoils-hunting Congressmen to treat them, simply as so many "places" to be divided up among friends and the faithful. In Chicago, the promotion of District Judge Kohlsaat to be a Circuit Judge has made a very bad impression. It was formally protested against in advance by leading lawyers, including Mr. Charles H. Aldrich, formerly Solicitor-General of the United States, and the grounds of objection which they urged were solid, and should have been conclusive. The original appointment of Judge Kohlsaat was an impropriety. As the Chicago *Law Register* says, it was simply "a personal favor and gift from one friend to another." This means that President McKinley, who was obtuse in such things, named Christian C. Kohlsaat a judge mainly because he was the brother of his friend and benefactor, H. H. Kohlsaat. But there were in addition serious charges against Judge Kohlsaat. He had appointed two of his private secretaries as receivers. He had appointed his brother-in-law appraiser of an estate. He had appointed his own son as his private secretary. All these acts were grossly improper; at least one of them is admitted by the Attorney-General to have been in violation of the law. Yet, strangely argues Mr. Moody in his report to the President, "to deny the promotion . . . would impair, if not destroy, his usefulness as a district judge." That is, having been proved unfaithful over a few things, make him ruler over many!

The President has ordered each of the Executive departments to consult in all building matters the special commission composed of artists and architects, and to choose no site or erect no building except with its sanction. The occasion of this decision was undoubtedly the proposal of the Secretary of Agriculture to place his building athwart the Mall. This action is sure to give prestige to the commission, and reinforces handsomely the campaign of æsthetic education which for some years has been quietly conducted at Washington. It still remains possible that Congress may prescribe sites at random and without regard to the general plan of the capital; but the President's order at least points out the desirable procedure, and puts those who would develop Washington on the easy lines of a mining camp very clearly in the position of sinning against light. Congress, however, is gradually coming to have a proper pride in the beautiful city under its charge, and doubtless it will soon be realized that to develop a national capital without expert advice would be as foolish as to man the National Observatory by casual protégés of the Senators and Representatives. For this change of temper much credit is due the President, who has upheld every effort toward putting the development of Washington in skilled hands.

Ten days after the inauguration of a Republican President, at least three Republican Presidential "booms" are clearly defined. Mr. Fairbanks admits that he is a candidate; Senator Foraker leaves it to his friends to do the admitting; Secretary Shaw "refuses to discuss the matter at all"—which is his coy way of consenting. This prompt entering of a field from which Mr. Roosevelt has withdrawn himself has its amusing aspects, but, politically, it is no joke. It portends manœuvring and realignments within the party which are sure to have a great effect upon public measures. In a considerable degree, it tends to diminish President Roosevelt's weight in party councils. It will be all very fine for him to desire to have this or that project made a party measure, but the partisans of the various active candidates will be apt to consult the wishes of the man who, they think, is going to be President, rather than of the one who is President, and who, under our party system, may come to be looked upon during the next four years merely as a "public functionary." In any case, the changing situation, both in the Republican party and in Congress, will furnish future Bryces with a great deal of interesting material bearing on American party politics.

As an avowed candidate for the Presidency, Vice-President Fairbanks spoke on international relations, at the Ohio Society dinner on Saturday night, and made the huge blunder of talking like a civilized man. He praised arbitration, and prated about a "just sense of decency and honor" as being "a more powerful influence in the preservation of the world's peace than any manifestation of physical force." As if to pile mistake upon mistake, he added that an international peace due to "moral forces" is much more desirable than one "predicated upon mere might." This will never do, Mr. Fairbanks. In all truly statesmanlike speeches, the word "mere" is applied to morality, or benevolence, or friendship. To say "mere might"—meaning the precious guns and the men behind them, and the shots that hit and never hit soft—is sheer political ineptitude. Does Vice-President Fairbanks think that nominations for the Presidency are made by college professors and clergymen and philanthropists?

Secretary Taft's latest definition of our Philippine policy has some charmingly innocent features. He makes it in order to allay "timidity about investments in the Philippines." We thus see that the security of foreign investors, not the consent of the people, is the true test. To encourage exploiters

of the islands, Mr. Taft assures them that "indefinite retention" is what the Administration intends. But is any Administration certain of indefinite retention itself? May not a new one come in after four years to inaugurate an entirely different policy, which then, according to the Secretary's reasoning, would be the policy of the nation? He concedes that the "question of the future" is one "wholly of conjecture," yet he would erect his own conjecture into a fixed policy for at least a generation. Mr. Taft ought to take down the 'Sherman Letters' and read what Gen. Sherman said when told that it was his duty to let the Republicans nominate him for the Presidency, since it was a "call from the country." The General wrote crisply, "I am ready to answer a call from my country, but the Republican Convention is not this country." So the policy of "the Administration" is not necessarily the policy of this country.

If nothing else, Pennsylvania's representatives in Congress are hard to beat. This year they were after an appropriation for dredging a thirty-foot channel in the Delaware River, and another appropriation to pay for a survey on a thirty-five foot channel. The House made the first of these sums contingent on the expenditure of a certain amount by the local authorities, but Senator Penrose offered a gallant fight and secured the money unconditionally. Against the thirty-five-foot survey, however, the House stood firm; so the bill became law without it. But that a Pennsylvania politician would be discouraged by such a defeat as that was not to be expected. At 11:15 o'clock on the last night of the session, Mr. Penrose offered a harmless-looking little resolution, "directing" the Secretary of War to communicate to the Senate "at the earliest possible date" an estimate of the cost of deepening the river to thirty-five feet. This was passed without objection. Obviously, the Secretary of War cannot find out how much the new channel will cost without a survey, and, if he answers the Senate's question at all, he must accordingly make one. The Washington *Post* declares flatly that the Secretary will not be able to give an answer at all until a special appropriation is made, though the point is rather a nice one. At all events, it shows how quietly an important enactment may sometimes slip through if offered in a strange guise. William V. Allen of Nebraska once, when most of his colleagues were either absent or nodding, offered and had passed without a dissenting vote a set of resolutions committing the Senate to the most radical doctrines, which he recalled, after waking up the members and telling them what they had done.

It is not at all remarkable that the choice of a Republican Senator in Missouri on Saturday was attended by "riotous scenes." The Legislature could not, as in the case of an ordinary deadlock, adjourn to take up the fight at the next meeting where it was dropped. Both Democrats and Republicans knew that if a Republican Senator was not chosen before adjournment, Cockrell's reëlection would be made the issue in the next campaign, and the State would go Democratic. The agreement which was reached in the last fifteen minutes of the session, after sixty-six ineffectual ballots, was on a candidate who had several obvious qualifications for the office. He is a man of education, an old soldier, has had four years of Congressional service, a term as Mayor of Kansas City, and was once the candidate of his party for Governor. While no one ever supposed the long deadlock to be due to high or disinterested motives, it seems to have resulted in a decidedly better choice than either the Republican caucus or the Kerens bolters would have made. The chief regret will be that President Roosevelt's premature telegram congratulating the State on choosing a man of "the German stock which, in 1861, saved Missouri to the Union," is robbed of its significance. But the greeting may easily now be marked "misdirected," and sent on to Senator Warner.

The seating of Peabody as Governor in Colorado on the understanding that he would resign as soon as possible—as he did—had the one merit of admitting that neither side in this remarkable contest came into court with even approximately clean hands. The proceedings before the legislative committee amounted merely to the piling up of evidence regarding fraud, each side trying by a little to overbalance the other. The moral victory, if there can be said to be one, is with Adams, for, if the Republicans had believed that the evidence disposed of his apparent plurality of 9,874 beyond a reasonable doubt, there was no reason why they should not have seated Peabody unconditionally. A few Republican papers from the first opposed the plan for throwing out entire Democratic precincts until a Peabody plurality appeared. One of them, the Pueblo *Chieftain*, presented an analysis of the vote, showing that for Peabody to win, even by a single vote, he needed to have 87.75 per cent. of the vote for the highest Roosevelt elector, and that in only 11 of the 59 counties did he receive the requisite proportion. This paper further declared that any one familiar with the political geography of Colorado could see that Peabody was fairly defeated by looking at the returns of any group of counties in the State. The Supreme Court decided a fortnight ago that it was illegal to install the Lieutenant-Governor in place of Adams, but that result is now secured in a round-about way. As in the Goebel case in Kentucky, the Legislature seems to have the legal right to decide between the two aspirants, even if it goes contrary to the evidence in doing so.

The excommunication of ex-Senator Cannon for editorial utterances against the policy of the Church leaders, without opportunity to prove the truth of his assertions, and the filing of charges against an influential citizen for "rebellious" utterances relative to free speech and political independence, hardly confirm President Smith's assertion last year that the Mormons are "the freest people in the world." Nor does the attitude of the Canadian authorities bear out the "prophet, seer, and revelator's" statement regarding the prevalence of polygamy. Prosecutions in large numbers are being begun against polygamous Mormons, of whom, as the reports state, there are "thousands" in the Northwest provinces alone. But, according to the statement of President Smith last March, there were in 1902 only 847 polygamous families in his Church, and this number had since been decreased by deaths. Items of this sort are in some ways considerably more telling than the bulk of the testimony taken in the still unsettled Smoot case. Senator Dubois, speaking before the Mothers' Congress last week, urged the amendment of the Constitution so as "to place plural marriage and political control by the Church entirely out of the realm of possibility." Few things, however, are more unlikely at present than such an amendment.

Judge Hooker and his lawyers made a most unhappy impression on Thursday at the first hearing of his case by the Judiciary Committee of the New York Assembly. In his letter courting and even demanding investigation, he had assumed the rôle of an outraged judge, stung to the quick of honor by the charges against him, and anxious to have the whole truth brought to light. But now, when the actual inquiry begins, we see him falling back on one nice technicality after another, and trying to hamper the investigation by every *nisi prius* trick known to clever counsel. This procedure can only deepen suspicion. Judge Hooker must be obtuse indeed if he does not perceive that his only hope of moral rehabilitation (to say nothing of his judicial) is to fling wide the doors and justify himself, if he can, by letting all the facts be seen. To fence and dodge and delay and resort to legal subterfuges is the last course on earth for him to elect. He is not on trial for crime. The only question is whether the allegations against him, if not disproved, do not render him unfit to be on the bench. Hence the vehement insistence of his counsel

upon the strict rules of evidence; and their attempts to narrow the investigation make it seem as if the free and full eliciting of the facts was the thing of which he has most reason to be afraid.

The settlement of the controversy in the Equitable Assurance Society has been hailed as a wise and generous compromise, the results of which will be lasting and salutary. In short, the vocabulary of courtesy and even of enthusiasm is exhausted in honor of President James W. Alexander, Vice-President James Hazen Hyde, and the committee which patched up the wretched truce between them. It is impossible, however, to see how, on any theory of sound finance or morals, Mr. Alexander could accept Mr. Hyde's plan of surrendering to the policyholders the right to elect seven directors each year until they have chosen twenty-eight of the fifty-two. The struggle has been as to whether the Alexander or the Hyde faction should control the Equitable, with its vast funds, upon which financiers of all grades have looked with eager eyes. Mr. Hyde, who inherited a majority of the stock, has the whip hand, but Mr. Alexander has publicly declared that the interests of the policyholders are not safe when entrusted to a man of Mr. Hyde's intelligence and character. Mr. Hyde's friends have retorted that Mr. Alexander has his own selfish aims in view in the effort to break the power of Mr. Hyde. Whatever Mr. Alexander's motive, the fact is indisputable that a company like the Equitable should be "mutualized," so that in an emergency, in default of honest and able management, the policyholders can rally and protect their rights.

The compromise adopted is not a redress of grievances. Mr. Hyde will still remain entrenched for three or four years; and at the end of that period, if he can win over but three of the directors elected by the policyholders, he will be exactly as well off as he is now. In fine, nothing short of a general and persistent revolt of the policyholders can overthrow him. Such unlimited power should not—for practical purposes—be irrevocably lodged in one man, were he the greatest of living financiers—to say nothing of a person who is chiefly noted for social exploits. If Mr. Alexander's charges against Mr. Hyde be well grounded, Mr. Hyde is unfit to fill any important office in the Equitable; and Mr. Alexander's present acquiescence is either an admission that he is ready to eat his words and hail Mr. Hyde as a man of judgment and experience, or it is a surrender and betrayal of those policyholders for whose welfare Mr. Alexander professed such solicitude. After all these accusations and recriminations, the friends of the Equitable cannot do less than insist on an honest and thoroughgoing mutualization.

The sudden panic of the Maine liquor dealers, with its picturesque incidents of departing steamers overloaded with bar fixtures and cases of whiskey, does not mean that the penalties of liquor-selling have been made any more drastic or the law any more inclusive. All that the Legislature has done is to make impossible, for the present at least, the "gentlemen's agreements" under which saloons have been kept open in most of the cities. Hitherto it was a common thing for a Democratic chief of police, say, to raid and close all saloons kept by Republicans, while a Republican sheriff revenged himself by descending on all the Democratic publicans. The condition of affairs thus created would be obviously intolerable, and some compromise would be reached. The new law enables a State commission, appointed by the Governor, to go over the heads of the local officers to suppress illicit liquor-selling. It thus destroys an exquisitely balanced system of practical local option. The enforcement of the Maine law has always been spasmodic, and it is fair to assume that some way will be found to mitigate the rigors of this new provision.

Venezuela is pretty obviously the sister republic next on the programme of making our neighbors "decent." With France said to be offering to join us in the disciplinary work, an effusive and glorious time is in prospect. It was, of course, a disgusting thing in Germany to send warships to coerce navyless Venezuela; but a new Franco-American alliance engaged in that grand enterprise would be a noble and inspiring spectacle. Precisely what is proposed, however, it is just as well to fix in mind, before we forget, in the excitement, the gist of the matter. In a word, the suggestion is that our squadron go and overrule the highest legal tribunals of Venezuela. It is not denied that the Asphalt Company (in whose behalf all these flourishes are made) violated the law; not denied that it was duly summoned to court and found guilty according to established legal forms—that competent judges passed upon the matter. But, it is hotly said, the Venezuelan courts are corrupt; the judges decide under orders from President Castro; hence we will go and set aside their decision. This, it is admitted, is a novelty in international law; but Americans long since made up their minds to rival the Athenians in fondness for "some new thing."

Nobody can blame Mr. Balfour for applying the closure to debates on supply when he finds himself with the estimates to be voted and within two weeks of the close of the fiscal year. Criticism falls rather upon the bad management which, session by session, leaves important routine business to hasty and inconsiderate action in the last days. When the closure was similarly voted last fall, it naturally offended the Liberals, but it did even more to demoralize the majority. Debate became perfunctory, and attendance merely for the purpose of being counted on division became irksome to the Government members. Discreditably small majorities were soon the rule, and defeat was avoided on many occasions by time-wasting expedients that still further increased the general boredom. All these symptoms are likely to reappear in the remainder of the session, and there can hardly fail to be a notable increase of that staleness which is evidently more lethal to the Ministry than any direct attacks of the Opposition.

The indifference with which the world has received the news of the completion of the Simplon tunnel, as compared with the excitement over the finishing of the Hoosac tunnel and the piercing of the St. Gotthard, is an excellent proof of the vast progress made by engineering science. The Simplon is by nearly three miles the longest tunnel in the world, and its construction, even in the face of extraordinary difficulties, took but six and one-half years. Yet it is accepted in Europe much as was in this city the opening of the second bridge to Brooklyn. The first was something to marvel at and boast of; the second, merely an incident in the growth of the metropolis. So, to the general public, the Simplon tunnel is scarce a nine days' wonder; but, to the engineer, it is a shining milestone on the road of his profession. Tunnelling under a great mountain is still hazardous, because of the difficulty in foretelling the geological conditions to be encountered. There is already in progress a lively debate as to the part played by the geologists in the Simplon work. So far as the temperature was concerned, both scientists and engineers were quite misled.

The Russian retreat continues, but Kuropatkin is no longer at the head of it. The Mukden disaster was too overwhelming to leave anything of his prestige as commander-in-chief, whatever excuses might be made for his series of defeats. His disgrace, however, is not ignominious, and if he gives way to Gen. Linevitch, commanding the First Mantchurian Army, he succeeds that officer and will serve his rival in a subordinate position. We know little more of the progress of the flight towards Harbin and Kirin than that no fresh panic has arisen. In Russia, public opinion is more openly for peace; but what *is* public opinion?

THE SAN DOMINGO FIASCO.

From being the President who "does things," Mr. Roosevelt is rapidly becoming the President to whom things are done. Wound after wound has been inflicted upon him in the house of his friends; and the Senate's latest stroke cuts deepest of all. By hanging up his pet Dominican treaty, it has openly humiliated him and impaired his prestige, both at home and abroad. Those facile European commentators who have seen the United States, under the masterful lead of Theodore Roosevelt, taking charge of the finances of all the Americas, must be rubbing their eyes to-day and admitting that they have much to learn about American public policy. So has the President, and a succession of most wholesome lessons—not the last—has been set him.

His rebuff by the Senate has every mark of deliberate intent. His appeals were disregarded; his statements doubted; his policy sneered at; his predictions flouted. Seldom has a President with nearly a two-thirds majority in the Senate been so cruelly treated. On February 15 Mr. Roosevelt sent in his treaty and called attention to "the urgent need of prompt action on this matter." Again, on March 6, in a second special message, he said that "action on the treaty should be had at as early a moment as the Senate may find practicable." This was the President's finest "now or never" manner. But the Senate's response was a flat refusal to hurry, a formal notice to the President that the treaty would be defeated if now put to vote, and a vague promise to take the matter up again and dawdle over it further next October—or never. On Saturday the Senate adjourned without action.

Herein first of all was a rebuke to President Roosevelt's precipitate ways. He thinks to solve the most intricate questions at the drop of the handkerchief. To dictate a momentous departure in our foreign policy is as easy as to dictate three great speeches in three hours. "Details?" These are not for the President to bother about. The maxim of statecraft which says that the details are everything, was never meant for a man of his lightning-like methods. Vast general decisions in haste, and repentance concerning misapprehended facts at leisure, seem to be more to Mr. Roosevelt's mind. Just now he is said to be "deeply impressed" with the evidence laid before him respecting the muddle of fraudulent claims against San Domingo which he was jauntily proposing to liquidate out of his abundant wisdom. One would think that it might have occurred to him to glance over the precipice before leaping. It is better to be slow than to be sorry.

The President is himself to blame if the Senate's cold shoulder is taken to imply that his course in the whole affair has not been straightforward. The mystery of the original protocol has not been cleared up. The more it is explained, the more inexplicable it appears. One cannot get over the early inspired statements that the Administration's plan was to forget that there was such a thing as the Senate or a Constitution. The belated and fantastic reasons given for signing a protocol that was obviously a treaty, yet which just as obviously was never intended to be laid before the Senate, have convinced nobody. Even the loyal *Tribune* reports that, "despite the reiterated declarations," "prominent Republican Senators have asserted their conviction that the Dillingham-Sanchez 'memorandum of agreement' was primarily intended to be put into effect without the approval of the Senate." This is most damaging to the President. That he should first have been audacious and then tortuous, is a suspicion which it must be terribly galling to him to perceive is fixed in the public mind.

The result gives an emphatic negative to President Roosevelt's idea that he was ordained to be the Policeman of this hemisphere. He enunciated it most plainly in his letter read at the Cuban banquet last year. Therein he distinctly threatened "interference from the United States" in any neighboring republic that did not "know how to act with decency," or to "keep order and pay its obligations." San Domingo was the first field chosen for the application of this Roosevelt Doctrine (artfully placed in the shadow of the mighty name of Monroe), and we now see what a complete fiasco has followed. That entire novelty in international law, with its cavalier disregard of the sovereign rights of an independent nation, must hereafter be regarded as a Presidential whimsey, not at all as a settled policy—or a policy which could do aught but unsettle everything. In a word, the first swing of the Big Stick has simply barked the shins of its rash wielder.

What the Senate, with the general acquiescence of the country, has given Mr. Roosevelt to understand is that his rash ventures in the rôle of self-appointed policeman are not wanted; that a popular majority of even 1,500,000 votes is not a charter for a President to do whatever comes into his head; that laws and precedents cannot be set aside in a day, nor the millennium be created out of an Executive happy thought; that not even the youngest President is necessarily infallible. If Mr. Roosevelt takes these hard truths to heart, as all his friends hope he will, he may not have so much delicious excitement, and his Administration may be less spectacular, but it should be far steadier, saner, and more fruitful.

For the moment, this most optimistic of Administrations has been soured into pessimism as respects San Domingo. It now officially announces that it fears the worst. Already it sees foreign navies swooping upon the defenceless isle, with no corollary of the Monroe Doctrine to protect it. What is most to be dreaded, it seems, is an "ebullition of feeling" in this country when the process of debt-collecting begins. But that largely depends upon who gives the signal for public feeling to become ebullient. There are, of course, some alert patriots who keep their feelings always on the simmer, ready to boil over at a moment's notice and on the slightest provocation. But most of the honest and dull folk among us do not know whether they ought to be internationally indignant or outraged until some one tells them. Here is where the function of the Administration comes in. By keeping its own emotions well under control, it can act as a kind of public generator of calmness. There will be no general ebullition of feeling if the authorities at Washington do not first ebulliate.

IN DARKEST NEW ENGLAND.

"Political Corruption in Connecticut" is the title of an article by the Rev. Dr. Newman Smyth in the last issue of the *Outlook*. "In one hill town," says Dr. Smyth, by way of illustration, "the amount of purchasable votes became so large that the town committees of both parties made a mutual bargain that year not to buy any votes." The moral condition of this community is evident from the fact that "the compact resulted in a popular outcry, and the keeper of the country store protested 'against any movement which cut down the revenues.'" This sample of New England intelligence and virtue can, as the *Evening Post*, the Springfield *Republican*, and more recently *McClure's Magazine* have shown, be exactly matched across the border in Rhode Island. Not by accident is it that public spirit has gone to seed, so to speak, in these adjoining commonwealths. In each of them similar causes have produced similar effects.

Both States suffer from antiquated Constitutions. In Rhode Island, under the Constitution of 1842, each town and city has one Senator. Three-quarters of the population, in eight large cities and towns, elect only eight of the thirty-eight members of the Upper House. About one-tenth of the population, in the small towns, elects twenty Senators, and thus controls all legislation. These towns, which hold the key to the treasury, have been flooded with money for a generation or two, and have become incredibly corrupt. Their representatives refuse to commit political suicide, and therefore block every movement for revision of the Constitution. In much the same way the rural towns of Connecticut have a great preponderance in the Legislature, have become a political pig-stye, and answer the de-

mands for reform by nothing but a display of brute force.

This intolerable situation could not continue were not each State infested by corporations whose managers have the consciences of pirates. In Rhode Island the Aldrich-Perry-Brayton gang, with its extended investments in street railways, electric and gas-lighting plants, and other public utilities, finds its traffic in franchises and privileges relatively cheap and simple while it can make its bargains with the rotten boroughs. The looters of the public can send Nelson W. Aldrich to the United States Senate, where his commercial instincts are fully gratified; they can, unless a man of ex-Gov. Garvin's capacity oppose them, name all the State officers from Governor down; they can fill vacancies on the bench; they can manipulate municipal administrations; they muzzle the press; they do as they like with their own. But vulgar plunder is not their only resource. They make and unmake the careers of lawyers and other professional men; through their trust companies and banks they lay a heavy hand on merchant and manufacturer; by their generosity to churches, hospitals, and other philanthropic enterprises, they win, if not the approval, at least the kindly tolerance, of clergymen and educators, and establish strong and useful social connections.

Connecticut tells the same shameful story. The Consolidated Railroad, as Dr. Smyth remarks, adopts the plan of "opening the bag"; and the alliance between corporations and politics has many ramifications. As a fit colleague of Aldrich, Connecticut has just sent to the Federal Senate Morgan G. Bulkeley, an avowed corruptionist. Since he is president of the Ætna Life Insurance Company, his favor is courted by men of all ranks and occupations, from heads of railways to bartenders. The newspapers of Connecticut have, like those of Rhode Island, been chloroformed. "One paper," writes Dr. Smyth, "is editorially in favor of all the virtues in general, but rarely against any political corruptionist of its party in particular." Another "was independent once—long ago, in the Blaine campaign." And still a third, "formerly with independent proclivities, has become too commercialized to count." Thus the vicious circle is completed; thus Connecticut and Rhode Island pose as "Laocoön" brought up to date.

As a remedy for the demoralization Dr. Smyth proposes two things: outspoken protest and organized work. His exhortation should lead to a searching of hearts in every State of the Union. In New York and Massachusetts, however, a roused majority can at any election turn the rascals out, while the peculiar Constitutions of Rhode Island and Connecticut make such a happy deliverance impossible except by something resembling a miracle. The agitation may go on for years, but so long as an Aldrich or a Bulkeley thinks it worth while to debauch a majority of the country towns, the reformers are confronted by arguments which they cannot answer in kind. They are dumb and helpless before a farmer who prefers a ten-dollar bill to civic decency. Good men in Rhode Island assert that the only resource yet untried is to fight the devil with fire—to raise a huge fund, outbid Aldrich, Perry, and Brayton once and for all, and buy the voters over to a revision of the Constitution.

This plan for restoring democratic government is obviously a counsel of despair. The problem is to get at the conscience of the individual voter. If his soul is to remain forever wrapped up in a greenback, no appeal from earth or heaven can reach it. But the general forces of religion and education have not yet ceased to operate. The Episcopal clergymen of Rhode Island, under the leadership of Bishop McVickar, have boldly denounced political corruption as a matter of morals, and therefore within their own jurisdiction. Some of the professors at Brown are also active in the agitation. True, no one who is familiar with the Episcopal Church in Connecticut now looks to it for any display of courage. Dr. Newman Smyth is the only clergyman who has openly dared to speak out. But continued agitation by him may ultimately stir the consciences of other ministers of the gospel, and perhaps even of bishops. No man should be rash enough to assume from past silence that every pulpit in Connecticut is filled by a poltroon, and that a white tie is invariably a badge of cowardice. The State in which Yale, Wesleyan, and Trinity set the intellectual standards must contain many college graduates who can be neither bullied nor bought.

THE LOST HANDY MAN.

That the present excessive division of labor is gradually abolishing that peculiarly American character, the handy man, can be verified in the experience of every householder. Within the memory of most of us every community had its quota of Jacks-of-all-trades—and very useful fellow-citizens they were, clever with all manner of tools, and resourceful before novel and difficult jobs. The temper that went to make these excellent workmen is illustrated in the proverbial young man who didn't know whether or not he could play the piano, because he had never tried. To-day that young man would resentfully refer the inquirer to the Brotherhood of Instrumental Soloists. Unionism unquestionably has done more than any one thing to cramp the artisan within the narrow round of minute employment.

Only the other day the case was illustrated at Toronto in a protest of the painters, plumbers, and carpenters against the practice of having minor repairs to the buildings of the fire department done by the force. Firemen, it was maintained, should do nothing but put out fires. Very graciously the carpenters' union conceded the right to do such incidental hewing and hammering as may be necessary to save a burning building, but beyond that no concession was possible. For a fireman to lay a board or drive a spike in his own loft would be "unfair." To be sure, the pleaders of this strait doctrine got little comfort from the city authorities of Toronto, showing that unionism sometimes fares rather ill even when it deals with a government; witness the railway employees of Holland and Italy.

We laugh at the lawsuits between the painters and gilders of Venice, in the fifteenth century, over the respective functions of artist and framemaker, but we constantly suffer annoyances quite as grotesque. The carpenter who sets a rung in a chair or puts up a few bookshelves cannot apply the necessary stain; that is a varnisher's business. Nor can a plasterer who displaces a hearth tile reset it; that is a mason's or tilelayer's job. In short, the simplest chore about the average house may involve a conference almost as formidable as that of physicians in council, and sometimes almost as expensive. Meantime, this specialization, which theoretically ought to carry the highly divided handicrafts to the point of perfection, practically does nothing of the kind. It is harder than ever to get a workman who can saw to a line, unless it be some German lately arrived, or other untutored foreigner.

In a measure, the passing of the handy man is merely an indication that our youth as a nation is behind us. There comes a time when a mature organism hardens with some loss of flexibility; but it is an uncomfortable fact to face. Nobody enjoys the first time he sticks at a leap he has always made with ease. And chagrin in such a matter is particularly justified in a nation because versatility in its workmen is a recognized aid to national efficiency. Our histories celebrate with pride those volunteers of the civil war who turned their hand to everything, from cobbling a boot to reassembling the parts of a wrecked locomotive; and recently the British journals have plausibly ascribed the calamitous beginnings of the Boer war to the general unreadiness of the average British soldier. Evidently, Great Britain produces in small supply those handy men whom Mr. Kipling celebrates in "Soldier and sailor, too;" and in case this nation again entered upon a great conflict, there would be found in the ranks too few of the Jacks-of-all-trades who rebuilt the

Southern bridges and railways in the '60s; too many

"Sons of the sheltered city—unmade, unhandled, unmeet."

Yet, waning as the honorable profession undoubtedly is, one cannot believe that it will be allowed to perish. The Jack-of-all-trades is by far too useful a person to follow the five-toed horse and the flying lizard. Something is to be hoped from the gradual infusion of common sense into unionism. In the long run, it will be seen that to leave the workman only one string to his bow is to place him equally under the tyranny of his employer and his walking delegate. And even if labor should be slow to perceive the advantage of versatility, the increasing demand for the handy man is likely to replenish the supply. Never was the need greater. Large office and business buildings, apartment houses and spacious residences all require men who can promptly turn their hand to all sorts of repairs, and such men will receive pay as high as the union scale with far steadier employment. While the handy man is in abeyance, it is probable that he is fomenting a rather formidable competition from the downtrodden householder. Exhausted by the expense and delay of consulting several artisans about every small job, he replaces instead of repairing, whenever practicable, and for the irreducible minimum becomes, perforce, a handy man himself. We see already clergymen who not only preach the word, but, at a pinch, stop a leak, set a pane of glass, or erect a kitchen shelf; jurists who dabble in plain plastering; and physicians who set a washer as deftly as they straighten a fractured tibia. Yet most of these amateurs are handy men more or less under compulsion, and none would more heartily welcome the rehabilitation of a craft short-sightedly crippled by the mandarinism of the labor unions.

THE WHALE FISHERIES OF TO-DAY.

This is the season for the floating paragraph about a forthcoming great revival in the old-time whaling industry, and almost every year some facts can be pointed to in support of such prophecies. At the close of 1903, for instance, it was announced with entire accuracy that no vessels in the whole history of whaling had ever taken so many whales in one season as the four steamers then engaged on the Labrador and Newfoundland coasts. In connection with well-authenticated reports of sales of whalebone at prices beyond all precedent, a pretty general impression got about that great things were being accomplished.

The fallacy of such assumptions lies in the fact that there is not one whale fishery, but many; and some go up while others go down. The whales caught in such abundance off Newfoundland, for instance, were not of the kind which yielded the $7.50 whalebone. In the Arctic Ocean, this same season was the worst known in the fifty-five years since those waters were first entered by whaling ships. In 1904 the conditions were reversed: the Newfoundland fishery was in straits, while the vessels in the Arctic had a reasonably good year. It can hardly be said, as a general proposition, that whaling is either dying or reviving, but it has gone through a remarkable evolutionary process, some stages of which have been noted within a very few years.

There are few industries which have had to withstand more severe blows. In the great days of Nantucket and New Bedford the captains cruised primarily for oil. The introduction of mineral oils for illuminating purposes destroyed in a few years the most important demand for this commodity. For other purposes it has had also to meet the competition of a large variety of fish and other oils. This year's average price for sperm oil, as given by the *Whalemen's Shipping List*, is less than one-fourth what it was forty years ago, while that of whale oil is about a third of what it then was. As a result of these conditions, the pursuit of the sperm whale somewhat slackened, and the Fish Commission's experts believe that its numbers are now actually increasing. But the price of whalebone meanwhile continued to mount. Thus, though the bowhead and right-whales which yield the bone have steadily thinned in numbers, the price to be obtained from the products of one carcass is larger than ever. While the whalebone of a right-whale might be worth $1,200 or so in 1860, it is worth nearer $8,000 to-day. For all the decline, there are still great prizes for a successful cruise.

This last year the fleets of New Bedford, Provincetown, and San Francisco killed, between them, 52 bowheads and 15 right-whales, as against 21 bowheads and 5 right-whales in 1903. The vessels in the Atlantic averaged 700 barrels of sperm oil, as against 620 barrels last year. One bark, the first in many years to cruise in the Indian Ocean, secured a thousand barrels in six months. As an index of the status of the industry at these three ports, it may stated that the tonnage to-day—25 ships and barks, 1 brig, and 16 schooners—is about one twenty-fifth what is was in 1846, the highest year; the imports of whale oil are about one-eleventh what they were then, those of sperm oil one-seventh, and of bone one-twenty-eighth.

But within the past five years the law of diminishing returns has operated in the development of an entirely new branch of the industry. The rorquals or furrowed whales, which are comparatively abundant off Labrador and Newfoundland, were formerly despised by the whaling captains as they yield only short whalebone of inferior quality. But now, instead of trying out the oil on shipboard after the old fashion, and throwing away everything else, the Newfoundland whalemen tow each carcass ashore to factories, where it is utilized almost as completely as that of a steer at the stockyards. Not merely the oil, but quantities of valuable fertilizer are obtained, and in the last year or two a process has even been invented for using the choicer parts of the flesh for human consumption. Whale meat in this form does not pretend to be a rival of fresh meat, but it is hoped that a market can be found for it in some of the South American countries, where it competes with jerked beef.

The pioneer whale factories were immensely profitable, but last year the development seems to have been abnormal, In 1903, there were only four steamers employed in this fishery, and they made the unprecedented catch already referred to of 859 whales, or an average of 215 apiece. Last year, seven steamers were added to the fleet, and while they increased the catch to 1,270, the average was only 115 per vessel. This fact, combined with unfavorable market conditions, made the year such a bad one that, according to the *Fishing Gazette*, only three of the fourteen factories have paid dividends.

So long as whaling was carried on in remote seas, it affected other industries as little as any business possibly could, but its development on the coast has brought up some curious new questions. The fishermen believe and are vehement in asserting that the slaughter of the whales will result in destroying the supply of bait for the cod fisheries. The whales, they say, drive the schools of caplin and herring, which would otherwise be out of reach in the open sea, into waters where they can be caught. Scientists have given little credit to this theory; but in Norway the influence of the fishermen has been powerful enough to secure the prohibition of similar whale fisheries for a period of ten years. In Canada, Sir Robert Thoburn is one of the most recent converts to the view that whales are essential to the success of the cod fisheries. Thus the whale, remorselessly pursued for centuries, has at last lobbyists working in his behalf.

A CHAMBERLAIN OF NAPOLEON.—II.

PARIS, March 2, 1905.

The memoirs of Count de Rambuteau are very rich in personal details concerning the Emperor Napoleon. They must have been recorded at random, and make us enter into his daily life, as will appear from a few extracts:

"Napoleon," he says, "lived very retired. Except on Thursdays and Sundays, when there were reunions, he worked the whole day. At five o'clock he regularly took a drive in an open coach. From time to time he would scream, 'To the right, to the left,' and the postillions turned immediately, often in very impracticable roads. . . .

It frequently happened that he worked ten, twelve, fifteen days in succession without interruption; he would then say to me, 'My legs are swollen; you see, I need exercise; write to Berthier.' He fatigued seven or eight horses, took a bath on his return, dined in it, went to bed, slept seven hours, and recovered strength for a week. . . . The Emperor breakfasted on a simple loo-table. They brought him habitually mutton, chicken, sometimes fish, a dish of vegetables, fruit and cheese—always Burgundy. . . . He spent only about 20,000 francs a year on his wardrobe, and he got angry when this figure was exceeded. He always wore silk stockings, even with his boots, which were on this account richly lined."

"It was impossible," continues Rambuteau, "to keep a great house with more order than it was kept by the Grand Marshal. Our valets received new candles only upon showing the ends of the old ones. No fire was lighted in the rooms before the 1st of November." These particulars are adduced merely in proof of Napoleon's strong sense of order. Rambuteau has passages which are of much greater importance. Young as he was, he was impressed by them and made notes of them. Here is a very striking passage describing a *sortie* which Napoleon made when Chateaubriand's speech was read before the Academic committee which always thus passes on the speech before it is delivered at the formal reception of a new member of the Academy. Chateaubriand alluded to the Revolutionary period, and spoke several times of liberty and of tyranny. Napoleon was advised of it by Daru, and in the evening he said to M. de Ségur, grand master of ceremonies and a member of the Academy:

"You men of letters and authors look everywhere for dramatic subjects; it is quite indifferent to you whether you disturb a country and revive discord if you procure yourselves success and fame. As for myself, I am charged with a heavy responsibility. I try to calm hatreds, to attract all the talents to the service of the country. I lead them between two walls of granite, offering them great rewards in front and punishment for those who run away; you think I am going to allow you to ruin my work, to foster divisions, to recommence civil wars, and all this for literary effect! You are mistaken. You speak of the death of Louis XVI. Who can be more moved by it than the Empress, whose aunt these people killed? And while, surmounting her very legitimate repugnance, I prevailed upon her to be silent on the subject when the first persons who were admitted to play with her were Fouché and Cambacérès—while I give such pledges towards the pacification of the country, you would resuscitate the past and place yourselves athwart my efforts. Monsieur de Ségur, you ought to have warned me. I must know everything. If this speech had been delivered, I should have manifested the greatest severity. Either it will be modified or M. de Chateaubriand will not be received."

Chateaubriand would not modify his speech, and had to wait for the fall of the Empire before he was formally received into the Academy.

Napoleon, when he became Emperor, when he divorced Josephine and took a wife from one of the old dynasties, when he surrounded himself with kings chosen in his own family, conceived the most gigantic plans that could have entered the mind of a successful general; but he had a very clear perception of the character and the dangers of his task. "'I have achieved,' he told us one evening, 'the greatest fortune that history can report. Well, in order to leave the throne to my children, it was necessary that I should be the master of all the capitals of Europe.'" He did not, however, add London and St. Petersburg to the list, and he destroyed himself in the struggle against England and Russia.

As soon as Rambuteau heard the news of Napoleon's return from the island of Elba, and of his landing on the French coast, from M. de Bouthillier, prefect of Var, a near relation of his sister, he wrote to the Abbé de Montesquiou: "There is not a moment to lose. You will not find in the whole French army a single soldier capable of firing on Napoleon; he knows it, and draws from this knowledge his hope and confidence. Don't send a regiment against him; it would be furnishing recruits to his cause." He advised sending only national guards, who, from fear of a new invasion, might oppose Napoleon's progress. Napoleon made his triumphal march through France; on his way he ordered General Bertrand to write to Rambuteau, who replied that he would be faithful to the established Government, as he had been to the Emperor's Government. He changed his mind when Louis XVIII. left France, and set out for Paris. He was summoned to the Élysée by the Emperor.

"'If you had joined me at Lyons,' were Napoleon's words, 'you would be Prefect of the Seine.' 'Sire,' said I, 'I was the last to leave you; and, your Majesty having yourself given me liberty, I was bound to do for the King what I had done for you. I know that your Majesty has justified me.' 'It is true: if I had had twenty-five prefects like you I would not have abdicated.' 'Well, Sire, your Majesty can dispose of my life; I am paid beforehand by this declaration.'"

The account of the intrigues which took place, almost under the eyes of the Emperor, is very interesting. Many were doubtful of the result of Napoleon's efforts against the coalition which was preparing its armies; a new invasion was imminent; Fouché was almost openly preparing his treason. One evening Caulaincourt said to Rambuteau: "'I know very well that he is betraying us, but we are not strong enough to turn him out.' 'Then, my dear duke,' said I, 'you may as well say that the Emperor, and we with him, are in a very bad way, and that France is in the hands of Providence.'"

Rambuteau consented to go to the south as prefect. He found the population extremely divided. At Montauban he received news of the battle of Waterloo and of the Emperor's abdication.

"I was," he writes, "profoundly afflicted, but not surprised. Persuaded that there was for France no solution but a return to the legitimate monarchy, more or less quickly accepted, on the best possible conditions, I had only to terminate my task without any other ambition than to retire afterwards with the esteem of all parties. . . . The seventeen days which followed were, I believe, among the most painful and the most honorable of my life. Placed between adversaries whom it was necessary to conciliate, moderating the impatient ardor of some, calming the irritation of others, who were all the more animated because they still had the armed force in their hands and disposed of 4,000 men, I went from one camp to the other to prevent a collision. I constantly heard threatening screams in the squares and in the streets. I answered the cry of 'Vive l'Empereur!' by saying, 'There is no longer any Emperor; he has abdicated'; and the cry of 'Vive le Roi!' by saying, 'There is no King yet'; and I had but one word for those who asked me, 'Then, what ought we to cry?' I said, 'Cry, "Vive la France!" France is for all time.'"

This passage recalled to me a very striking scene in the trial of Marshal Bazaine at the Trianon. The Marshal, having to explain his attitude at Metz, his withdrawing the troops behind the walls of the town after the bloody battle of Saint Privat, his negotiations with the Germans, excused himself by saying that he had heard the news of the September revolution in Paris; he had been told that there was no legal government left in France, that everything was in a state of disorder and anarchy. "In fact," he said, at the end, "il n'y avait plus rien"—when suddenly the voice of the Duke d'Aumale was heard, saying simply, "Il y avait la France!" These words expressed the feelings which moved Rambuteau, at a moment when France, after Waterloo, was placed, as it were, between the government of the eve and the government of to-morrow.

During the second Restoration, Rambuteau remained unoccupied and in private life for twelve years. He was elected Deputy in 1827, and took his seat in the ranks of the Liberals, with Royer-Collard and General Foy. His detailed account of the efforts of the Liberal nucleus of the Chamber is not without interest. When the Revolution of 1830 took place, Rambuteau found himself among the defenders of the Constitution and the supporters of the new Constitutional monarchy. He gives a very graphic account of his interview with the Duke d'Orléans at the Palais-Royal, offering him his services. "Sir," said he to him, "you may be sure that if there was any hope for the son of the Emperor, I would not be here; but I have learned in the school of his father that France takes precedence over everything. You alone can save the monarchy and prevent the worst evils, the Republic and civil war." The Duke said: "But I cannot accept the crown as long as the King is in France." And the Duchess, who was present and who had so far been silent, said: "No, M. de Rambuteau, it is impossible." "Her emotion and her tears moved me much. 'Madame,' said I, 'revolutions do not go backwards, they do not wait. You will be Queen before Sunday, or never. To return to the shades of Neuilly is no longer possible; you must choose between the throne or exile for yourself and your eight children.' She sighed, without answering."

This very interesting volume ends with a minute account of fifteen years' administration of the prefecture of the Seine. M. Rambuteau was a model prefect, and his name is still popular in the capital of France; he remained prefect till the Revolution of 1848, of which he gives a most painful account—a revolution which had for its consequences the restoration of the Empire, in the person of Napoleon III., and, after some years of deceptive military greatness, the terrible calamities of the years 1870-1871.

Correspondence.

A FAULTY ASCRIPTION.

TO THE EDITOR OF THE NATION:

SIR: In volume ii. of James Grant Wilson's 'Memorial History of the City of New York,' there is, between pages 484 and 485, a facsimile of a recruiting poster. This is called a recruiting poster of the Revolu-

tion, and as such has been widely copied into other books. Woodrow Wilson, in volume ii. of his 'History of the American People,' gives it to illustrate the text for the year 1777.

I find in Heitman's 'Historical Register of Officers of the Continental Army' that Lieutenant-Colonel Aaron Ogden and Major Shute, the two officers of the "11th Regiment of Infantry" referred to in the poster, were appointed January 8, 1799. This poster, therefore, refers to the year 1799, when the United States had trouble with France, and not to the Revolutionary war. CHARLES K. BOLTON.

THE SORROWS OF PHILOSOPHERS.

TO THE EDITOR OF THE NATION:

SIR: Now that the subject of healing diseases by mental suggestion is being so much discussed, readers may be interested in a fragment of parallelism connected with the early history of the subject.

James Hinton's philosophy of the Art of Thinking was analogous to the special kind of mathematical philosophy of which a writer in the *Nation* (January 5 of this year) says that "English mathematicians generally" have shown "a marked aversion" to it, and that Babbage, Herschel, and Boole were "much addicted" to it. In consists, as the writer says, in treating mental "operations as if they were things." In the "fifties" of the last century, Hinton carried on a series of experiments suggested by Hahnemann, with a view to testing the truth of the homœopathic system of medicine. Results followed as predicted by Hahnemann. It occurred to Hinton to repeat the same series of experiments with plain sugar-of-milk; fixing his mind, when administering the pillules, on the symptoms which, according to Hahnemann, should have followed from the administration of a special drug. The new set of experiments proved as successful as the old. Hinton came to the conclusion that the results were due to the imagination of the patient, acted upon by silent suggestion from the doctor. The story, so far, is told in his biography. The sequel, I believe, has never, till now, been alluded to in print.

If we examine the literature of Christian Science, or any other variety of "mental healing," we find the authors, for the most part, expending their energy on proving the one point, that disease is the product of false thinking, and can be cured by true thinking. They hardly touch on the inquiry, What is the normal order of the process of thinking? It is here that Hinton showed his peculiar genius for treating mental operations "as if they were things." Having come to the conclusion that the action of the doctor's mind on the patient's could affect the health and sensations of the latter as a drug does, he proceeded to deal with the newly discovered remedy, in all simplicity and good faith, on the same principles as an honorable physician deals with a new drug. A physician does not bind himself down beforehand to use one set of remedies exclusively and abjure others; he deals with each case as it arises, according to the best of his present judgment enlightened by past experience. James Hinton would never have consented to commit himself to use, in all cases, imagination and suggestion rather than iodine or sulphur.

He laid great stress on the principle that all remedial agents have reactions as well as direct actions. When a new drug is found capable of allaying unpleasant symptoms, the good physician does not therefore immediately feel himself justified in using it freely to get rid of those symptoms; he uses it with great reserve, in cases of illness, until every effort has been made to find out as much as possible about its nature and properties, and about its effects *and after-effects*, when taken by persons in ordinary health. Having discovered that the operation of framing mental postulates, hypotheses, opinions, imaginations, etc., can induce or can cure disease, Hinton devoted himself to the study of that operation as an entity in itself, on the same principles as he would have studied any anodyne or alterative drug.

The consequences much resembled those which followed my husband's mathematical analysis of the Laws of Thought. By the mere fact of analyzing the process of forming hypotheses, Hinton shed light on many departments of science of which he had only quite ordinary medical knowledge, such as morphology, embryology, physiology, and sociology; and even on mathematics, of which he knew hardly anything at all till he studied it as a branch of the Art of Thinking; much as George Boole, by his analysis of the Laws of Thought, shed light on obscure questions of mathematics, probabilities, electricity, chemistry, and economics. In each case, some section of the public welcomed enthusiastically such results of the investigation as proved directly useful or attractive (Hinton's little object-lessons on Morphology, published under the title, 'Life in Nature,' are exquisitely graceful and fascinating). But, in each case, the readers missed the true purpose of the writer, which was to present the process of thinking and show its normal course.

As it was my father, Thomas Everest, who had induced Hinton to try Hahnemann's experiments, I was naturally interested in just that part of Hinton's work which to most of his friends seemed uninteresting and unimportant. I sometimes felt that his most fervent disciples hated his philosophy "with the hate of hell," though they "loved passing well" the "beauty" of its results! His fate, in this respect, resembled that of my husband. Both were at times crushed by their failure as regards the main object of their life-work. In my husband's case, the disappointment showed itself in fits of remorse about accepting medals and degrees granted for the external results of his thinking, by authorities who, he said, would shun him if they realized what his books were really about. In Hinton's case, the grief was more profound and continuous. It overshadowed all his later years and hastened his end. It made him, in a certain sense, *ashamed* of the artistic beauty and intellectual charm of his work, and at times, even of its very moral excellence, because all these things attracted attention away from the study of the Art of Thinking itself, which he, as well as George Boole, believed to be the true key to the physical and moral regeneration of mankind. MARY EVEREST BOOLE.

LONDON, March 3, 1905

Notes.

Paul Elder & Co., San Francisco, announce 'Impressions of Ukio-Ye,' the school of Japanese print artists, by Dora Amsden, illustrated with reproductions of typical prints from color tint blocks.

Prof. Otto Heller's 'Studies in Modern German Literature,' to be published shortly by Ginn & Co., will give considerable space to the women writers of the past century.

John Lane's spring list includes an abridged translation of the 'Life of Peter Ilitch Tchaikovsky' (by his brother), by Rosa Newmarch, with numerous illustrations; a Life of Cervantes, by Albert F. Calvert; 'Memoirs of a Royal Chaplain [Edmund Pyle, D.D.], 1729-1763,' edited with notes by Albert Hartshorn; 'Napoleon: The First Phase [1769-1793],' by Oscar Browning; and 'The Duke of Reichstadt,' by Edward von Wertheimer.

McClure, Phillips & Co. are on the point of bringing out Prince Kropotkin's 'Russian Literature,' and 'The Yellow War,' by "O."

Forthcoming publications of the Clarendon Press (H. Frowde) are Canon Bigg's 'The Church's Task under the Roman Empire,' 'The Masai: Their Language and Folklore,' by A. C. Hollis, and 'Author and Printer,' "a guide for authors, editors, printers, correctors of the press, compositors, and typists," by F. Howard Collins. This last title moves us to mention a little brochure, No. 5 of the Publications of the Clark University Library at Worcester, Mass., on "Preparing Manuscript for the Press," whose instructions are clear, succinct, and sensible.

We omitted to mention, in our recent review of Dr. Osler's 'Aequanimitas,' the name of the American publishers, Messrs. P. Blakiston's Son & Co., Philadelphia.

We can also state that Mr. Baillie-Grohmann's edition of 'The Master of the Game,' recently reviewed in these columns, is now to be had of the American agents, Messrs. Charles Scribner's Sons.

From Messrs. Scribner we receive the fourteenth edition of Baedeker's 'London and its Environs,' fortified with four maps and twenty-four plans, its list of the principal streets, public buildings, etc. The total bulk has been but slightly increased. It is almost a pity that these successive editions could not graphically record the chief changes in the general aspect of the metropolis, which of late have been as imposing as they are extensive.

The latest issues in George Newnes's companionable Thin Paper Editions, with their flexible covers in orange and gold, and etched frontispieces and title-pages, are Chapman's translation of the Iliad and Odyssey (two volumes), Ben Jonson's Plays and Poems, Coleridge's Poems, and the Autobiography of Benvenuto Cellini (Scribners). The Coleridge has been edited for this series by Prof. William Knight. It embraces all the poetical and dramatic works published in Coleridge's lifetime, and Professor Knight arranges them in approximately chronological order, reducing the inconsistencies of spelling and punctuation, and adding a few notes to Coleridge's. Most welcome is the prefixed chronology of the poet's literary life. The 792 pages

of this collection are still compact enough for the pocket or hand.

Three years ago we noticed with approval the second edition of Banister F. Fletcher's 'History of Architecture on the Comparative Method' (London: Batsford; New York: Scribner). The peculiar excellence and convenience of this work, whether for reference or as a text-book, are proved by its now appearing in a fifth edition, both enlarged (by more than 200 pages in the interval) and extensively revised and rewritten, as befits any self-respecting standard work. The author is prepared to furnish lantern slides of all the plates for lecture purposes, and large diagrams of the 168 plates of architecture and decoration.

Two years ago we had to speak of Mr. John Holland Rose's annotated edition of Carlyle's 'French Revolution' in three volumes (London: Bell; New York: Macmillan). A popular impression has just been made in cheaper but still presentable attire, and with the retention of the many valuable contemporary illustrations. The portraits of Mirabeau, Louis XVI., and Robespierre constitute the frontispieces.

An interesting reprint is that of Samuel Rowland's 'The Bride,' edited by Mr. Alfred Claghorn Potter, and printed for C. E. Goodspeed at the Merrymount Press, Boston. Save for an entry in the Stationers' Register under date of 1617, this work has hitherto been unknown to bibliography. Last spring an unique copy was purchased from a German bookseller for the Library of Harvard University, and this is now reprinted in partial facsimile, with a brief introductory note. The poem turns out to be pretty much what might have been expected by a student of Rowland's work—a conversation between a bride and her attendant maidens concerning the respective advantages of the married and single estates. It is written in Rowland's habitual cleanly-turned six-line stanza, and is freighted with the bourgeois wisdom and sentiment which gave him so wide but so transient a vogue. There is nothing in the poem either to add to the poetic treasures of our literature or to furnish any new footnotes to literary history. It is, however, not insignificant as illustrating again the taste of the average reader in Elizabethan days. As a piece of book-making, this edition is particularly good. It is a typographic rather than photographic facsimile, but in arrangement, choice of type, and even in the selection of paper, the look of an old page has been very happily caught.

A protest is surely in place as to Prof. G. A. Barton's 'Year's Wandering in Bible Lands' (Philadelphia: Ferris & Leach). When an archæologist of repute undertakes such a book, the reader has a right to expect some material of archæological value, and other than personal or family interest. What, in fact, we have here is simply Prof. Barton's home letters, apparently without any editing or abbreviation whatever. Undoubtedly, their gentle, sunny spirit and mild didacticness gave them a charm for their first audience, but a charm too evanescent to endure print, and in perpetual danger of becoming ridiculous.

M. Hippolyte Dreyfus, with his Persian collaborator, Mirza Habib-Ullah Shirazi, has already done good work in expounding, to the West, Babism and Behaism, those two very queer developments of Islam and Persian mysticism which threaten to push even Christian Science hard. His last little brochure, 'Les Paroles Cachées' (Paris: Ernest Leroux), is a rendering into very charming French, but with some regrettable misprints, especially in stray Arabic phrases, of four of Beha-Ullah's flying leaflets—three tracts addressed to different classes of the unconverted, a Sufi Sheykh, a Christian priest, and a skeptical philosopher, and a fourth, a series of precepts and exhortations on spiritual things, not without likeness to the 'Imitatio' of Thomas à Kempis. The first three illustrate excellently the "all things to all men" which characterizes a certain group of Muslim sects; and the fourth raises anew the question, ever present to the student of the East, How can such beautiful thoughts and emotions coexist with the lack of veracity and morals which accompanies them?

That the mediæval Arabic translations of both the Old and New Testaments are of great value as clues to the more or less popular Arabic of the times when they were made, may be taken as certain. They, with the different recensions of the 'Arabian Nights' and such tales, are almost our only materials for the history of the development of spoken Arabic for several centuries. Further, such versions can mostly be dated, while the varying MSS. of the 'Nights,' almost without exception, are undated, and undatable with any precision. Every contribution, therefore, to our knowledge of these versions is to be welcomed. When it comes, however, as in the case of Dr. Paul Kahle's 'Arabische Bibelübersetzungen' (Leipzig: J. C. Hinrichs), to incorporating in its scanty bulk several pages from the modern Smith-van Dyke translation and thirty pages of an elementary vocabulary, the welcome will be dubiously expressed. The scientific publication of mediæval popular texts and the providing of an elementary reading-book for tyros in Arabic have absolutely nothing in common. It is an attempt at two publics which will repel one and be very bad for the other. Dr. Kahle's editing seems careful, but his *Literaturübersicht* is irritatingly incomplete. The investigations in his subject of neither Guidi nor Burkitt appear to have come to his knowledge.

A few American libraries are going in thoroughly, if somewhat late in the day and therefore compelled to be content with gleanings, for the building up of their MS. collections. Notably, Mr. Robert Garrett enriched Princeton with a large Oriental collection. To it he has now made an addition of over four hundred volumes, and Dr. Littmann, the curator, has published a hand-list of 355 of these, or the Arabic portion. As a temporary clue, the list will be very useful; the only pity is that the collection itself is not more interesting.

The initial article in the *Library* for January is an account, by the associate editor, Mr. A. W. Pollard, of certain rarities among "Recent Purchases at the British Museum." These have been mostly books of the sixteenth and seventeenth centuries, not so many from the fifteenth, but among them at least one of particular interest, namely, a hitherto unknown edition of Tindale's New Testament, a reissue of George Joye's surreptitious edition, with an interesting preface, "Unto the Reader," in which Joye seeks to justify his reprinting Tindale's translation. The present edition is earlier than Joye's "Apology," and casts an interesting light on that production.

Mr. L. Stanley Jast, who represented the Library Association of the United Kingdom at the St. Louis Conference of Librarians, gives in the February *Library Association Record* his Impressions of American Libraries. "The American library," he says, "is an inspiring example of what the public library is capable of being in the life of a town, when efficiently administered on the most free and democratic lines, and adequately supported by a community which thoroughly believes in library work and the library idea." What struck him particularly was the freedom with which readers are admitted to the shelves in many of the libraries which he visited; he puts it down as an instance of our desire for absolute freedom, and mentions as another instance Euclid Avenue in Cleveland, which "has no rails, nor hedges, nor partitions between the separate gardens or the road, so that the road seems to run through a park, with handsome villas dotting the greensward, a most effective *tout-ensemble*. It is perfectly obvious," Mr. Jast remarks, "that the library must lose books, and that people must trespass over the gardens, but it is all very democratic, and that is sufficient for the United States." He mentions, further, the ample resources of American libraries, which make it possible for them to provide many accommodations for which as yet the demand seems slight, *e. g.*, lecture-rooms. The staffs are larger than in English libraries, and more highly specialized, but he thinks there are too many women workers.

Mr. William Abbatt of this city has revived under a slightly different name the old *Magazine of American History*, which was founded in 1877 and ceased to appear in 1893, not long after the death of Mrs. Martha J. Lamb, who had been its editor for nearly ten years. The new publication, a monthly, bears the title of the *Magazine of History, with Notes and Queries*. A genealogical department is added.

The two leading obituaries, with portraits, in the *Harvard Graduates' Magazine* for March, are of the late William H. Baldwin, jr., and George F. Hoar—promise and fruition. Of Senator Hoar not much that was new could be said; but the younger Puritan's simple record exhibits an extraordinary capacity for civic activity, rare independence, and that ardent interest in the spiritual elevation of the South which glows in the annals of Tuskegee and the General Education Board. The memorial fund now being raised in his name for the further support of the great work of Booker Washington deserved to be mentioned by his biographer if the exigencies of the press permitted. More exclusively Harvard topics are discussed under the captions "The Social Question" and "The Winter Quarter." The one article exposes the dissatisfaction with club and preparatory-school control of undergraduate affairs, leading to successful revolt at recent Freshman elections for class president, and to the *Crimson's* refusing to print the list of society elections except when made wholly on a basis of merit (*e. g.*, the Phi Beta Kappa). The other tells of 61 college rooms untenanted, partly because of location on the wrong side, socially speaking, of Massachusetts Avenue; and of the decrease in active membership of the Harvard Union.

Attention should be called to the article

in the current issue of *Charities* by Mrs. Elsie Clews Parsons, on a rescue plan for those much-to-be-pitied young women who, after leaving college or school, find no means of carrying on such a life of happy activity as they have for years been accustomed to. The plan involves systematic training at the Teachers' College in scientific ways of bringing up children (both rich and poor), to be followed by the putting in practice of their knowledge in the management of children's hospitals, reformatories, and day nurseries, and in other as yet undeveloped means of ameliorating poverty through work with the children of the poor.

In the scientific *Beilage* of the Munich *Allgemeine Zeitung*, No. 24, the German archæologist, R. Engelmann, of Rome, discusses at considerable length the new Italian law in reference to archæological researches and investigations in that country. He deplores it, not only because it practically excludes the foreign savant from engaging in such work, but to a great extent also hampers the Italian scholar. He discusses in particular the enactment with reference to the making of plaster of Paris casts and photographic reproductions, declaring that it will on the one hand ruin a flourishing business, and on the other make almost impossible the preparation and sending out even of photographs of archæological material. It virtually puts a stop to excavations, except in the case of native scholars. Engelmann further reports that the Government seems to be convinced that the statute is too stringent. The Italian savants themselves are calling for a modification of it. In No. 28 of the same journal is found an interesting correspondence between Professor Waldstein and Minister Orlando, with reference to the proposed excavation of Herculaneum under international auspices. This correspondence took place in April of last year, in connection with audiences given to Dr. Waldstein by the King and by Minister Orlando, and makes it quite evident that the Italian Government originally favored the project of the Cambridge professor. The new and stringent archæological code was published more than six months after the Waldstein episode. Was it a case of *post hoc, ergo propter hoc?*

Professor Doerpfeld, the distinguished head of the Athenian branch of the German Archæological Institute, has not been converted by the objections raised to his theory that the classical and modern Leucas was the Homeric Ithaca, but is more confident than ever that he is right. He has been accustomed in other matters to see former objectors range themselves later on his side, for no one else has brought forward so many new views with regard to Greek topography and architecture which at last have become generally accepted. Several wealthy Germans have supplied him with funds for the continuance of his excavations on Leucas (his Homeric Ithaca), and the German Emperor has detailed two Prussian officers for the survey of the island and the preparation of a better map than now exists. Dr. Doerpfeld probably expects to find no demonstrative evidence for the truth of his theory, such as would convince Von Wilamowitz of Berlin, the most pronounced critic of his view; but he hopes to find the remains of a great Mycenæan palace, less magnificent than those in Argolis, but of the same age. That the classical Ithaca fails to satisfy the requirements of the Homeric Ithaca is generally conceded by those who have visited it. In opposition to those who explain this lack of agreement by supposing the Homeric poet to have lived exclusively in Asia Minor and to have had no personal knowledge of Western Greece, Dr. Doerpfeld urges that, so far as the Homeric poems have been tested by the results of archæological excavations, the Homeric descriptions have been found to be based on fact to an extent hitherto supposed impossible. He believes in the essential original unity of the poems, and would assign the poet to an earlier date than scholars generally accept—to the twelfth century B. C., before the Dorian migration.

The establishment of a Danish experiment station in Greenland seems to be at last assured by a private gift of the required amount, $10,000, and it now only remains for the authorities to furnish the necessary funds for its support. As this annual expense is estimated at less than $3,000, there can be little doubt that the amount will be appropriated. The plan, which has received enthusiastic approval at home and abroad, was first proposed in the fall of 1903 by a young Danish scientist, Morten Porsild, who is willing to move to Greenland with his family to act as first director. The advantages of the station are twofold: first, as contributing to the world's knowledge of plant and animal life in the Arctic regions, and second, as developing the natural resources of the country by tree-culture, scientific breeding, etc., and thus improving the condition of the people.

A Joint Announcement of nineteen field courses in geology offered by eleven institutions in different parts of the country—from Harvard to Stanford—for the coming summer has lately been issued, and twenty-eight of the larger colleges and universities will, under certain conditions, give credit to such of their students as take any of these courses. The Intercollegiate Appalachian Course promises to be especially attractive, as it will be given in successive weeks, beginning July 3, by Profs. Clark of Johns Hopkins, Davis of Harvard, Hopkins of Syracuse, Cushing of Western Reserve, and Barrell of Yale, on the coastal plain of Maryland, the Susquehanna-Juniata district of Pennsylvania, the Syracuse district and the border of the Adirondacks in New York, and the hill country of crystalline rocks in western Connecticut. A circular giving details of the course can be had of Prof. W. B. Clark, Johns Hopkins University, Baltimore. The general Joint Announcement can be had of the professors of geology in Wisconsin, Stanford, Ohio, North Carolina, Minnesota, Kansas, Johns Hopkins, Harvard, Columbia, or Chicago University.

—We are glad to receive from Messrs. Longman a new edition of Sir George Trevelyan's 'American Revolution.' It appears now as in three volumes, instead of two parts, the second in two volumes. Volume i., the former part i., we are told, has been largely rearranged, carefully revised, and in part rewritten. We have not collated the two editions in detail, with a view to finding out exactly the limits of rearrangement and rewriting, but it is certain that, as far as revision goes, the author has left uncorrected several mistakes of which he had been duly apprised, in all three volumes. Volumes ii. and iii. (part ii.) are not said to have undergone revision, yet some of the errors were too bad, and too easily corrected, to stay as they were. Foremost is that amazing blunder of calling Camden Rockingham's Lord Chancellor (ii., 52). Sir George Trevelyan well knows who Lord Rockingham's Lord Chancellor was. Long since he described him and his treachery in a scathing manner ('Early Life of Fox,' p. 128). The Bishop of Derry was never *Lord* Frederick Hervey (iii., 325), and one would like to know when the Hon. Augustus Keppel received knighthood (iii., vii.). Batterymarch Street, a name known to Boston for two centuries, still appears as Battery "Marsh" (i., 57), apparently from dogged following of a misprint in the ancient map of Boston; a like cause is responsible for "McKenkey's" ferry (iii., 99) for Meconkey's, and perhaps for "Gowan's" Creek (ii., 281), instead of Gowanus Creek. Amherst is Sir Geoffrey (iii., vii.) and Sir Jeffrey (iii., 207). "The Chapel of their connexion" (i., 86), however familiar to English Nonconformists, is simply meaningless to an American; and the Old North "Chapel" (i., 331), instead of either Church or Meeting-house, is equally fantastic. If we are always to have "Bunker's" Hill, why say "Governor" Island (ii., 286)? The proof-reader must be held to account for "*rovus homo*" (i. 215), "caldrons" of coal (for chaldrons) (i., 343), and "Massachussetts" (ii., 307, note). It may be said that most of these slips are trifles. So they are in a first edition; but they are inexcusable in a second, purporting to have been revised.

—The second volume of Prof. Edward Arber's reprint of the "Term Catalogues" is now ready, and covers the period 1683-1696. He records the discovery by Mr. Falconer Madan of five hitherto unknown numbers of the abridged issue of the fourth series of these catalogues, but has been unable to discover any copy of No. 59 [58] of the same series. He hints that it may never have been issued. It is needless to emphasize the importance of this unselfish labor of Professor Arber. These catalogues offer the nearest possible approach to a bibliography of the Restoration and the Revolution of 1688. Due allowance must be made for the political troubles that interfered with the original compilation; the censorship of the press, too, prevented the recording of many important issues. Newton's 'Principia' does not appear, nor is there any trace of the lost first book of Defoe. But Milton appears as a lexicographer, and Mr. Arber believes that his three manuscript volumes which were incorporated in the Cambridge Latin and English Dictionary of 1693, may still be in existence. Books on America are to be found in the list. Jamaica was the cause of controversy; and Esquemeling's 'Bucaniers' twice appeared in 1684. Two years later was printed a translation from the Portuguese of 'A Relation of the Invasion and Conquest of Florida,' and in 1690 John Palmer's 'Impartial Account of the State of New England' was announced. Not a few sermons delivered in the colonies were reprinted in London. The great interest of the catalogues lies in the English books they announced, and their usefulness has been much increased by Professor Arber's indices supplying titles, names, and initials omit-

ted by the original compilers. The printing leaves little to be desired, and Professor Arber inserts the following characteristic note announcing a change of printer: "The new Types are all of the same series; and are certainly among the most beautiful founts to be found anywhere in the world. The new Paper has been made under the advice, and subject to the constant tests, of most eminent London Paper Experts and Chemical Analysts; and will last till the Day of Doom. The new Ink will keep its intense blackness as long as the Paper will last." This reprint is a necessity for every library of any size.

—Coöperative cataloguing is coming to the front in England, as well as in Germany. Some time ago Mr. L. Stanley Jast outlined in an article contributed to the *Library* a plan for a Cataloguing Bureau for Public Libraries, and the January number contains a symposium of opinions on the subject by several librarians. All the writers are favorably disposed towards the scheme, though not many have any new suggestions to advance; to one writer, however, it has occurred "that the British Museum authorities might possibly be induced to issue catalogue slips by arrangement with libraries willing to subscribe towards the cost of such an undertaking"—a timely suggestion. It remains to be seen whether or not the Museum authorities are as ready to take the lead in this matter as the Librarian of Congress was when the project for a central cataloguing bureau was discussed by the American Library Association. Thanks to his leadership, cooperative cataloguing has in this country passed the experimental stage. The success of the undertaking here makes it reasonable to hope for success of similar plans in England and Germany, and we might yet behold international coöperation. Mr. Jast's proposition in St. Louis, that a common cataloguing code be prepared for English and American libraries, will now have to be carefully considered by the Advisory Committee on Cataloguing which was appointed some years ago by the Publishing Board of the American Library Association, and will necessitate a careful reconsideration of the advance edition of the new "A. L. A. Rules" which that committee issued two years ago. This has caused the chairman of that committee, Mr. J. C. M. Hanson, chief of the Catalogue Division of the Library of Congress, to contribute to the February *Library Journal* a careful and scholarly article on "Rules for Corporate Entry." Previous discussions on this particular topic have been concerned with the question of right of existence of the corporate entry. The problem before Mr. Hanson's committee is whether corporate bodies should be entered under their names or under the place where they have their headquarters. Mr. Hanson's article ends with a plea for exceptions. "The real test," he says, "is not the ability to follow a given set of rules, but to know when and how to make exceptions to them"—which is true enough, though something should be said in favor of the ability to know when *not* to make exceptions.

—In 'Les Grands Écrivains Scientifiques' of Gaston Laurent (Armand Colin & Cie.), along with much that is familiar to all, everybody will find something new to him with which he will be glad to become acquainted, while some extracts there are which will be known to nobody, unless by accident. Notes accompanying the text, along with judicious geographical notices, go to compose a decidedly entertaining volume. We cannot make out exactly why these particular passages from these particular writers should have been selected, but it is easy to see that the reasons have been of the kind that usually prevail in France, where it never would do to allow the youth to suspect that any German could combine the characters of a man of science and a writer of distinction. So that accounts for the omission of Goethe. Nor will a strictly defined patriotism accord any hearing to Belgians, Swiss, Lombards, or Catalans. After appropriating a portion of the volume to foreigners—the English Harvey, Newton, and Darwin, the Italian Galileo, the Dutch Huygens, the German Kepler, and Leibniz (Copernicus being treated as a Pole, and Leibniz being chiefly a writer of French)—the rest is given over to eighteen authors pretty fairly distributed among the different provinces of France; but a volume at least as good as this might have been made up of extracts from strictly French scientific wits not here represented. We note an anecdote or two of Sainte-Beuve. The mathematician Bertrand reports that he always used to insist that the expression "Il est de nos amis" was bad grammar. Again: "Sainte-Beuve repoussait avec indignation cette maxime cynique que beaucoup d'honnêtes gens, comme s'ils se vantaient d'un devoir accompli, se disent fiers de pratiquer: 'Il faut toujours défendre ses amis.' Aimons nos amis, partageons leurs chagrins, réjouissons-nous de leurs succès, mais ne les défendons que quand ils ont raison, ne leur accordons, même en public, que les louanges qu'ils ont méritées. La vérité est, comme la justice, le droit et le profit de tous: à qui, dans certains cas, se vante de l'oublier, il serait bien sévère de ne pas pardonner, il n'est pas tolérable qu'on en fasse un mérite." That is a morality which needs to be combined with delicate judgment.

—History repeats itself. In volume xix. of the series 'The Philippine Islands—1493-1898' (Cleveland: A. H. Clark Co.) there is reproduced in translation a "Memorial and Relation" about the Philippines, prepared for Philip III. by Hernando de los Rios Coronel, long procurator-general of the Philippine Islands, and published at Madrid in 1621. The second part of the memorial "treats of the importance of the Philippines and of the means for preserving them." The summary by the author of his various theses is worth quoting, both because it gives a fair idea of Spain's various aims in conquest, and because it has been parodied—quite unconsciously—many times since 1898. The reasons assigned for "the preservation and increase" of the islands in 1621 were:

"The first is the increase and extension of the holy gospel and the glory and honor of God, which is so incumbent upon your Majesty in the first place, because your Majesty has inherited from your blessed father and glorious ancestors this pious and holy seal for spreading and extending the holy Catholic faith, by reason of which your Majesty enjoys the wealth of the Indies; in the second place, because it is so suitable to the greatness of your Majesty's sovereignty and your reputation. For to leave this work when begun would be a great scandal before the world, and the occasion of much comment to all its nations—and especially to the heretics, who would say that your Majesty was influenced not by the glory of God, nor the preservation of the Indies, but by private interest, since where you had not that you allowed Christianity to perish.

"The second concerns the peace of your royal conscience, if you should not preserve those islands while possible.

"The third is for causes of state; for it would amount to giving your enemies arms and forces against your Majesty, and would encourage to the same enmity others who are envious of your Majesty's greatness. . . . [They] clearly recognize that, if they could possess that archipelago without opposition, it would be worth more to them than eight millions clear (as I will demonstrate to whosoever may be curious or may desire to know it), through the profit which they can make on spices, drugs, and the trade with Great China, Japan, and the neighboring countries.

"The fourth is, because straightway the whole of Portuguese India would be lost. . . .

"The fifth is the knowledge (which is evident) of the immense wealth which lies in the Philippines, as I shall explain further in this treatise, and which hitherto has been unrecognized.

"The sixth would be the loss of the most convenient and important post which your Majesty holds in all his kingdoms, not only for the extension of the holy gospel in so many kingdoms of idol-worshippers who are capable of receiving it, but, as these are in the neighborhood of the Philippines, the hope, consequently, of enjoying the immense wealth which they possess through their trade and commerce."

HORACE WALPOLE'S LETTERS.

The Letters of Horace Walpole, Fourth Earl of Oxford. Chronologically arranged, and edited with notes and indices by Mrs. Paget Toynbee. Vols. IX.-XII. 1774-1783. Oxford: Clarendon Press; New York: H. Frowde.

There is an historical, almost a dramatic, unity in volumes IX.-XII. of Mrs. Paget Toynbee's edition of Walpole's letters, which, extending from May, 1774, to May, 1783, just overlap at the beginning and end what every contemporary must have considered one of the most calamitous, as it certainly was one of the most inglorious, periods of English history. Though too fond of his ease to be an active patriot, Walpole was not indifferent to the misfortunes of his country, and the depression occasioned by the national reverses conspires with kindred motives to tinge this section of the correspondence with a melancholy not altogether unwelcome, as it reveals the heart within the apparently frivolous man of fashion and connoisseur in elegant trifles. Among contributory private circumstances may be enumerated advancing years, declining health, deaths of friends, constant worry from the affairs of his lunatic nephew, and criticism and self-criticism for having allowed Chatterton to perish. He admits no fault on this score, yet evidently wishes that it had been otherwise. In fact, he had no reason for serious self-reproach—he had acted according to the best light he had; but if the light within a man be darkness, how great is that darkness! The fault, however, was Chatterton's, whose deception recoiled upon himself. Had he presented himself as the author of the Rowley poems, he would have had a strong case against his age if it had refused him recognition, but

as their mere discoverer he had *prima facie* no more claim than any other lucky young man.

Walpole's perspicacity showed him that the Rowley poems could not be genuine; and this was the real head and front of his offending with the numerous party who, extraordinary as this now appears, believed in their authenticity. He was one of those interesting persons who move in the van of one epoch while they bring up the rear of another. It is remarkable that the strongest epistolary indication Walpole ever gave of his part as a harbinger of modern criticism has never appeared in his letters until the publication of this edition, having hitherto been printed only in *Notes and Queries* for August 6, 1870. It is in a letter, dated November 8, 1777, to Robert Jephson, a witty satirist and now forgotten dramatist, who had consulted Walpole upon one of his plays, and to whom Walpole addressed his "Three Letters on Tragedy." He here says of Shakspere:

"Dr. Johnson goes much farther, far beyond truth, and says that that most sublime genius never attempted to be sublime without being bombast,—but indubitably Shakespeare is never so superior to all mankind as when he is most simple and natural. Recollect Constance, Arthur, Juliet, Desdemona, or Hotspur's mockeries of Glendower. . . . Henry IV.'s image of the cabin-boy *in a night so rude*, and Richard II.'s sensibility to his favourite horse being pleased with the load of Bolingbroke—are texts out of the book of nature, in comparison of which the works of all other writers in every language that I understand are to me apocryphal."

After this, he may be forgiven for thinking that "there are parts of 'Oroonoko' and 'The Fatal Marriage' worthy a disciple of Shakespeare," and for questioning whether Drayton produced five guineas' worth of poetry in the whole of his life. Perhaps his appreciation of Shakspere may have been stimulated by his dislike of Johnson, who appears in the correspondence as "Demogorgon" and "Caliban," and is declared to possess neither taste nor ear, nor any criterion of judgment but his old woman's prejudices, and is most unjustly accused of "crying up" Blackmore, which he never did, and Thomson, which he did to his honor. Boswell attributes this enmity to Johnson's having, by his own acknowledgment, deliberately misreported Sir Robert Walpole's speeches; but no two men could have had less in common. It is interesting to find him a better judge than Johnson, not only of Shakspere, but of a great author infinitely removed from Shakspere:

"Lo!" he writes on February 18, 1776, immediately after the publication of the first volumes of 'The Decline and Fall,' "There is just appeared a truly classic work: a history, not majestic like Livy, nor compressed like Tacitus; not stamped with character like Clarendon; perhaps not so deep as Robertson's *Scotland*, but a thousand degrees above his *Charles;* not pointed like Voltaire, but as accurate as he is inexact; modest as he is *tranchant*, and sly as Montesquieu without being so *recherché*."

The other great publication of 1776, 'The Wealth of Nations,' is not mentioned, but the author is disrespectfully termed "a wight." He was probably obnoxious as the friend of Hume, antipathy to whom was perhaps the only feeling that Walpole shared with Johnson. Walpole's preference of Robertson's 'Scotland' to his 'Charles V.' will not command general assent. He seems, indeed, to have underrated Robertson, and to have discouraged the latter's design of writing the history of William III. and Anne, which he thought a subject for Watson, the now forgotten historian of Philip the Second.

Admiration for William the Third is an excellent token of a good English patriot, and should have appeased Macaulay, who has painted Walpole, as was his wont with striking characters, as a painter paints a dragon, with more regard for effect than for veracity. Walpole's observations on the ambiguous conduct of Marlborough and Godolphin display much good sense, but he seems to be under the impression that James the Second lived till after the accession of Anne. His enthusiasm for William, whose history even so eminent an historian as Robertson was not, in his view, eminent enough to write, reveals the apparent fop and curiosity hunter in the else unsuspected character of a hero-worshipper; and prominent amid the incessant complaints of his own country is one of her inability to produce a hero, which, indeed, she shares with the rest of the civilized world.

"Though we have parts, we have no wisdom. Orators we have, I believe, superior to the most boasted of antiquity, but we have no politician. Can either the Government or the Opposition boast of a single man who is fit to govern a whole country, much less to restore one? It is my opinion that Europe itself is worn out. Has one great general or admiral risen out of this extensive war?"

Rodney, it must be remembered, had not then (1780) been revealed as the conqueror of De Grasse, nor had Heathfield defended Gibraltar. The attitude of England on the latter occasion extorts a burst of admiration from the veteran *frondeur:* "There is something sublime in this little island, beset with foes, calmly dispatching its own safeguard to maintain such a distant possession." Nothing is more remarkable throughout the whole current of Walpole's criticism than its restriction to a purely aristocratic circle, whether as regards its objects or its audience. King and Commons are equally out of it. Though it must have been well known that George the Third's obstinacy was at the bottom of the whole calamity, he is seldom mentioned and never attacked; nor is there any hint of an appeal from the representatives of the pocket boroughs to the general sense of the people. There can be no doubt that if there had been a fair representation of public feeling in Parliament, the war would have been stopped upon the first appearance of a hostile foreign coalition.

Twenty-three of the letters now published are entirely new, including five in French to Madame du Deffand—poor salvage from a much more extensive collection. The others were recovered and destroyed by Walpole himself, whose conscience probably smote him for his bad French. We hear from himself of an equally regrettable loss: "On Mr. Chute's death his executor sent me a bundle of letters he had kept of mine for above thirty years. I took the trouble to read them over, and I bless my stars that they were as silly insipid things as ever I don't desire to see again." He must have destroyed them, for the two or three letters to Chute that exist in his correspondence belong to a much later period. The loss of both the Du Deffand and the Chute letters is deplorable for his own sake, since his sincere affection for both correspondents would have aided to redeem him from the imputation of heartlessness. His letter to Mann of May 27, 1776, on the death of Chute, is a model of expression of manly sorrow, and one sentence perhaps suggests why we have no more like it: "Don't wonder I pour out my heart to you; you knew him, and know how faithfully true all I say of him."

It is superfluous to repeat how eminently Mrs. Toynbee's edition of Walpole overtops all others. To render it supremely enduring it needs but one addition, which we trust may be supplied—a companion volume of annotations, not bulky, but sufficiently copious to preclude the necessity for exploring recondite regions of literature in quest of information which ought to be at hand, and to entitle the possessor to proclaim *Omnia mea mecum porto.* We should gladly learn, for instance, without a hunt in the biographical dictionary, what caused serious and, as it would appear, groundless charges of embezzlement against Sir William Chambers, the architect of Somerset House; and what Governor of Barbados got into what scrape, and whether he got out of it. Much piquancy would be added to the mention of "the Archbishopen of Canterbury" playing whist with Walpole and Gibbon, were we reminded of the disgrace into which this lady's Sunday card parties brought her amiable husband with George the Third. In a postscript to the letter of April 8, 1776, Walpole confesses an error which, so far as can be judged from the letter itself, he does not seem to have committed. The error, nevertheless, is there, conveyed in the words "as if to avenge his namesake," for the interpretation of which the modern reader must resort to Gray's correspondence, if only he knows the way. One assertion of Walpole's invites inquiry, his claim to be able to fix the date of the first cultivation of the pineapple in England by his possession of a picture representing the royal gardener, Rose, presenting one to Charles the Second. This is particularly interesting, for Beckmann, in his 'History of Inventions,' produces no authentic instance till near the end of the century. But is the precise date of the picture known? And how is the priority of this pineapple above all other pineapples established? There is a curious testimony that the pineapple, if not grown, was known in England as early as 1663 in an epitaph of that date upon a young lady in the parish church of Fowey, Cornwall, where the perfume of her virtues is alleged to have fully rivalled the fragrance of a pineapple.

Mrs. Toynbee's too chary annotation is always pertinent. We have noticed but one apparent, and, perhaps, only apparent, error, the seeming implication (on p. 344 of Vol. IX.) that John Townley translated but one canto of Hudibras into French, whereas, in fact, he translated the entire poem.

These volumes are as interesting as their predecessors in point of illustration. Wide, indeed, is the interval between Angelica Kauffmann's propriety and Dance's eccentricity in their representations of Walpole, though evidently depicting the same person. Lawrence's sketch is interesting as an early example of his manner, but shows, we fear, that flattery was innate in him. Of the other portraits the most striking are the resolute though not highly intellectual coun-

tenance of Clive, and the uncomplimentary delineation of Lord North, which illustrates the truth and fallacy of painting, allowing him no vestige of the statesman, which he was not, but not any, either, of the man of wit and sense, which he was.

HARVARD LECTURES ON GREEK SUBJECTS.

Harvard Lectures on Greek Subjects. By S. H. Butcher. The Macmillan Co.

The late Professor of Greek in the University of Edinburgh has published little. He is known to every schoolboy as the collaborator of Mr. Lang in the best English prose translation of the 'Odyssey,' and no student of the 'Poetics' is unfamiliar with his translation and interpretation of Aristotle's critical principles. But his best-known work is probably a volume of essays on 'Some Aspects of the Greek Genius.' The six lectures before us, delivered at Harvard last April as the Lane Lectures, are very similar in their tone and general tendency to those earlier essays.

The first is devoted to a comparison of the political and religious ideals of Greece and Israel, a study of the profoundly different temperaments and points of view of the Hellene and the Hebrew, about which there is always something more to be said.

"'He hath set Eternity in their hearts: so we might sum up the spirit of Israel. But the Jewish ideal simplified life by leaving half of it untouched. It remained for Greece to make the earth a home, ordered and well equipped for the race, if not indeed for the individual. . . . Hebraism and Hellenism stand out distinct, the one in all the intensity of its religious life, the other in the wealth and diversity of its secular gifts and graces.

> Thus the sharp contrasts of the sculptor's plan
> Showed the two primal paths our race has trod;
> Hellas the nurse of man complete as man,
> Judæa pregnant with the living God."

Professor Butcher makes a detailed comparison of Prometheus and Job, not so much in the spirit of the literary critic as with the aim of setting forth clearly the problems that confronted these two revolted beings. The essential difference lay, of course, in the Greek and Hebrew conception of the two deities whom their subjects had defied. The Hebrew God is both strong and good. Zeus is only strong. One could wish that the purely literary parallels of Greek and Hebrew literature had been more interesting to Mr. Butcher. We have often wondered why some classical scholar has not taken up the challenge that was offered by Chateaubriand in 'Le Génie du Christianisme.' He devoted some pages of this work to a comparison of Homer and the Bible, which he regarded as typifying the opposed endowments of the two races. The parallel was by no means to the advantage of Homer, as was, of course, to be expected from one who wrote with the definite aim of proving the inferiority of all things pagan. Chateaubriand compares the sinister omens seen by the second sight of Theoclymenus among the suitors of Penelope—the shroud of mist that rose about them and the walls that dripped with blood—with the vision of Eliphaz in Job, "when deep sleep falleth on men. . . . Then a spirit passed before my face; the hair of my flesh stood up. It stood still, but I could not discern the form thereof, . . . and I heard a still voice." He thinks this unknown face, this whisper, far more terrible than the blood and darkness and hurrying ghosts of the 'Odyssey.' Nothing in Homer can match the terror of the prophecy of Ezekiel: "Now shall the isles tremble in the day of thy fall . . . when I shall make thee a desolate city"—Tyre, that busy city of traders, with her streets made empty and no figure of man passing through her gates. One may not always agree with Chateaubriand, and these are in the end matters of individual taste, like all questions of literary æsthetics; but few will disagree with his judgment that Homer must yield to the Bible in certain parallel passages. For instance, who can deny that the tears of Joseph at the sight of Benjamin, and his words, "I am Joseph; doth my father yet live?" are more effective than the tears of Odysseus when he hears the minstrel sing of Troy, or his recognition by Telemachus, whom he first dazzles with the help of a goddess?

The second lecture, on "Greece and Phœnicia," contrasts the "inhuman and unlovable race" of the Phœnicians, who have been called by a French writer "those English of antiquity," with the wider and nobler aims of Greek civilization. They lived to satisfy a single passion, the greed of gain. "Theirs was, in Bacon's phrase, 'the sabbathless pursuit of fortune.' . . . To the past and the future they were alike indifferent." They had no literature, their art was mere imitation; and though they supplied Greece with an alphabet, they used writing merely for keeping their accounts. Never was such a nation of shopkeepers. And so they passed away, and, as Ezekiel foretold, their cities were made desolate, "like the top of a rock, . . . a place to spread nets upon." In the third lecture, on "The Greek Love of Knowledge," Mr. Butcher hints at the power of a Greek poet to transform into a masterpiece of literature what to the Phœnician had served a wholly utilitarian purpose. He accepts with some reserve the theory of M. Bérard, reviewed in our columns two years ago, that the poet of the 'Odyssey' shows a remarkably close acquaintance with the navigation of the Mediterranean, that his storms are not the storms of literature, but can be paralleled in the modern French "Instructions Nautiques," and that the poem is really a sort of mirror of the sea, as the mariner knows it on those coasts to-day. But he is careful not to touch on the theory which was the basis of M. Bérard's book, that this expert knowledge was derived from a Phœnician "periplus," or chart of the Mediterranean, which must have been in the poet's hands. Perhaps M. Bérard would think that it was not necessary to quote him or the French Admiralty instructions to prove that a careful observer such as the poet of the 'Odyssey' knew the best hour for setting sail from a neighboring island, and had even had some experience of rough weather at sea. Such expert knowledge really demands no more intelligence than has been displayed by a Henty or a Conrad; and if that were all, we certainly do not need M. Bérard's two elaborate volumes to convince us. The whole question is whether we can trace a Phœnician canvas behind the embroidery of Homer; if we accept less than that, why drag in M. Bérard?

The last two lectures are on "Greek Literary Criticism." To begin with, we reject Mr. Butcher's footnote (p. 169), in which he seems to think that Mr. Saintsbury's 'History of Criticism,' volume i., has made it superfluous for English scholars to sketch the development of Greek literary criticism. English readers on such a subject will probably have a reading knowledge of French, and Mr. Saintsbury has not by any means superseded Egger's 'Histoire de la Critique chez les Grecques.' He has merely compiled a very creditable handbook, which can be used as a book of reference as one uses an encyclopædia, and the literary treatment of Greek criticism is still a comparatively untrodden field for the feet of such genuine scholars and humanists as Mr. Butcher. There will indeed be nothing new to Greek scholars in his pages on some absurdities of Greek criticism of Homer—for instance, the efforts of some of Homer's interpreters to explain away his outworn theology by taking his stories as symbolical of moral truths. "Homer," said a Stoic philosopher, "would certainly be impious if he were not allegorical." Then there were certain Alexandrian grammarians who tested Homer by the rules of Alexandrian etiquette, and expelled those lines in the 'Odyssey' in which Odysseus seemed to them to do the work of a hall-porter (which was "unseemly") when he took charge of the opening and shutting of the door of the Wooden Horse. Fortunately these comments are not really typical of Greek criticism. They may be paralleled, however, by the judgments of certain distinguished German critics of our day, who tell us solemnly that at this point we must reflect that our Homeric hero receives a Mycenæan wound though he is wearing Ionian armor of a later period, and that at that point only an inferior and therefore later poet would have shown such "lack of proper feeling" as to make Penelope sit waiting for Odysseus while he took a bath.

On page 229 Mr. Butcher seems to accept the theory of Norden, though he does not mention him, that it was not till late in the Græco-Roman period that men fell into the habit of reading to themselves and not aloud, and quotes the *locus classicus* on this—a passage on which too much stress has probably been placed. It is from the 'Confessions' of Augustine, who tells us how his master Ambrose used to read and understand as he read, though he uttered no word aloud. On page 236 he amazes us by saying that a certain essay of Dionysius of Halicarnassus is "little read even by scholars." Can this be true in England? Many students of Greek literature must have noticed how persistent has been the quotation by English-speaking scholars of the tract 'On the Sublime' since the appearance of the very handy edition of Professor Rhys Roberts; Demetrius 'On Style' has lately secured a vogue for the same reason. If only some scholar high up in one of the English universities would bring out just such an edition of Dionysius 'On the Arrangements of Words,' we should shortly find a marked familiarity among English-speaking scholars with this essay by a most intelligent Greek on his own language, with its careful analyses showing how the finest effects in Greek prose and verse have been secured.

Mr. Butcher's own style is admirably suited to such essays as these. No one can read them without recognizing how desirable it

is that a synthetic mind like his should handle these larger questions of classical scholarship. He proves not only that one can be extremely accurate and scholarly without being minute, but also that the minute scholars whom only specialists read are justified of their existence, and brought into touch with a larger world of readers, when a humanist gathers up the finespun disconnected threads of their theories and weaves them into a texture that will wash and wear, and is yet decorative enough.

TWO NOVELS.

Dear Fatherland. By Ex-Lieut. Bilse. John Lane.

Walter Pieterse: A Story of Holland. By Multatuli (Edward Douwes Dekker); Translated by Hubert Evans, Ph.D. Friderici & Gareis.

'Dear Fatherland' attracts attention first of all because the author was court-martialled and imprisoned for his former novel, 'Life in a Garrison Town.' Its revelations of army matters were too much for the German authorities. The present book is also a story of the army, and we should suppose might have secured for its author a court-martial, had the earlier one failed to do so. It pictures unmercifully a world of iniquity. Cruelty, dissipation, immorality, and flagrant injustice are the rule of German military life, as the author shows it. The difficulty of living within his means is the beginning of Benno Koehler's troubles, and his way descends through darkness and degradation to a bitter end. The only officers who are actuated by either reason or principle are Preusse, who falls a victim to the anger of a drunken dragoon, and Schill, who, although he is on the eve of promotion, sends in his papers, and retires in deep disgust to a civilian career. The conversations of these men, their views on military matters, and their real love of the Fatherland supply the meat of the matter—the actual argument, which is perhaps made more effective by putting it into an utterly depressing story. But it is a hideous picture, and it must be admitted, even by the author, that many of the predicaments of his characters are such as befall all who are weak or worse, and that they need not be foisted upon their profession, be that what it may. Patriotism, from a point of wide vision, has no doubt inspired the book. Room has been found in it for all opinions, from bitter and justified hate to a shadowy hopefulness. In fact, this is a novel in which the chief interest and the strongest conviction are found less in the story than in the talk. From Schill and Preusse one may learn. From others we hear this: Grube, about to destroy in his wrath the portrait of the Emperor, says gloomily: "I wrote to him just what had happened to us from prison, and also begged for a reduction of the sentence, and do you know what they answered me? That he would not." To him in reply says his comrade Weidner: "Don't believe it, Ernst. I tell you again he knows nothing about it—they tell him nothing; they tell him what is nice and pretty, but what is bad they keep to themselves, because it is their own fault that it is so. . . . He means to be good to all of us, and therefore I hold him dear—Hang up the picture!"

'Walter Pieterse,' according to its author, is "the story of one who in his youth was in love with a sawmill, and had to endure this torture for a long time." Mr. Chesterton has observed that if a poet "suddenly fell in love with the buffers of a railway train, it would take him considerably more time than his allotted threescore years and ten to communicate his feelings." No one need be surprised, then, to find that this Dutch story was originally published in a seven-volume work, "sandwiched in between miscellaneous sketches, essays, and treatises." It has been sifted out from its surroundings, and its first part is given in the present volume, bringing the young hero up into his teens. Dekker, the author, was born in 1820, and died in 1887. His first work, written under the signature of "Multatuli" (in reference to his Government's ill-treatment of him), brought him instant fame. It was an appeal to the people from the Government which flouted him and thwarted his plans for improving the condition of the Javanese, made familiar to him by his position in the colonial service. By an English critic Dekker has been called the Heine of Holland, and by Anatole France the Voltaire of the Netherlands.

Walter Pieterse is a little boy of a poetic temperament, born into a family unspeakably dense and vulgar—into a community hardly less so. His story is immensely detailed and told in a bygone style of confidentialness, but a style highly animated and frequently witty. It is easy to see how the book might have appealed to Dutch contemporary readers as a protest against Philistinism and stupidity of all sorts in matters social, educational, and religious. It is a lively satire on a very dull state of things, and must have been as sensational to the society it caricatured as 'Nicholas Nickleby' was to the English schoolmaster. The public has become so accustomed to diatribes on the narrowness of the social system as seen through childish eyes that there is little now to impress one as original in the scheme. A raw, coarse world, made up of the middle and lower classes in Amsterdam a few generations ago, supplies a strong color for background to the small boy's romance reading and domestic knight-errantry. But Dekker's medium, for all its brilliancy, is farce, and farces are poor travellers. If the story possesses a profound interest to-day it must be for Holland, hardly for a public which requires a translator. Its visible contortions over conditions either bygone or incredibly crude we should expect to have slender hold on English readers, as slender as have at present the Charlotte and Werther style of love story or the Byronic hero. The translator, though a Ph.D., affronts style and even grammar at moments. Dekker's own manner is colloquial and keen, the Heine quality coming out in sentences like this: "After the houses had been covered with slate, it was thought that there was too much danger of fire in firecrackers, but on that evening, when the houses still had thatch roofs, the dangerous pleasure of Amsterdam youth was unrestrained."

The Holy Roman Empire. By James Bryce. New edition. Macmillan. 1904.

It is doubtless true, as the late Professor Freeman remarked, that "the greatest of all witnesses to the unity of history is the long-abiding drama of the Eastern power of Rome." The history of that Eastern empire is, indeed, a drama, and a prodigiously effective one—a drama which goes far toward helping the student to realize that essential kinship between history and poetry which the ancients were fond of pointing out. Above all things, it is a drama of vital existence. The Holy Roman Empire of the West is, on the other hand, no really tragic figure, but rather an elusive wraith that seems to belong in a world of romance, far distant from the actual abodes of men; and yet she drifts alluringly through the complex of hard knocks and soiled politics, tangling the threads of diplomacy, casting a glamour over the rude and solid outlines of national movements, and helping to make poetry (though it be not tragic) also out of this history of the growth of the Germanic power in Europe. How could she be anything but a ghost? What possible reality of imperial existence was left in the ancient city when a King of the Franks assumed the Roman diadem, and Italy, so far as it was imperial, became a mere appendix to a German realm? So the shade plays Una; and Charlemagne—that other creature of romance who supplants in our imagination the plain Charles of the historian—takes the part of Tristram. And for centuries after Charlemagne fell into dust, sitting there in his chair of empire in the deep vault of Aachen, the wan Una, ever frailer and more ethereal as time grew old, played her elfin part in the life of growing and decaying nations, till, almost a full century ago, the sceptre-wand of another would-be Charlemagne contemptuously dissolved the spell, and the feeble ghost paled away into nothingness.

The Holy Roman Empire, said Voltaire, is neither holy, nor Roman, nor an empire. But ghosts walk, for all Voltaire's skepticism, and to some people it is given to see them, even in the full daylight of Mr. Bryce's famous and brilliant sketch. His story of that shadowy power was first published forty years ago *(eheu fugaces!)*, and now appears, after various intermediate editions, in a revised form that scorns numerical sequence. The identity of the book is by no means lost in the revision, for the changes have not been such as to alter the general mode of treatment, nor to increase the size of the work beyond the limits of a single volume. A full and very useful chronological table of important events, together with three maps, makes the tale easier to follow. Two new chapters have been added, one on the Eastern Empire, and another on "the constitution of the new German Empire, and the forces which have given it strength and cohesion." Certain other important events have been more fully or precisely described, and a comparison of several chapters in their revised form with the same passages in the latest edition other than this which we have at hand (the eighth), shows a very considerable number of small but significant changes in phraseology, mainly in the interests of accuracy and of accord with the recent progress of the study of the Middle Ages.

Mr. Bryce's history has now lived long enough to delight and instruct three generations of speaking men, and there seems to be no reason for supposing that that number may not be many times multiplied.

Introductory History of England. By C. R. L. Fletcher. E. P. Dutton & Co. 1904.

Mr. Fletcher's point of departure is the complaint made by "certain uncomplimentary young gentlemen" that history is intolerably dull. This view recalls, of course, the saying of the mouse who, during the adventures of Alice in Wonderland, alludes to the history of the Norman Conquest as the driest thing *he* knows. Mr. Fletcher's opinion is "that English History should be an inheritance of childhood; that its legends and its romance should grow into our thoughts from very early years, and should expand themselves with the expansion of our minds; that we should see History and dream of it rather than learn it as a lesson." Following this profession of faith, there is a bit of pedagogical theory regarding the place of history in the school curriculum which we shall not stop to discuss. Mr. Fletcher's avowed object is to avoid intolerable dulness, even when discoursing of the Norman Conquest; and without further delay we may as well state that he has succeeded. "The Celt seems always quite ready to mingle with inferior races; it is only with superior races that he entertains even occasionally at the present day an objection to amalgamate; and yet this cannot be attributed to his humility, which is by no means his strong point." A writer who is willing to adopt this strain cannot fail to catch the attention of his readers. Whether he always gives them sound doctrine is another question.

Mr. Fletcher's book is "introductory" in a double sense. Besides being intended for boys, it stops at the beginning of the Tudor period. In style, it is explanatory, and the author is enabled, by excising a large number of subjects, to treat those that remain with tolerable fulness of detail. The nature of the protest here made against dulness can be appreciated only by those who have examined with some care the text-books used in English schools. Mr. Fletcher is a fellow of Magdalen College, Oxford, and most of his readers will have been nurtured on the works of Ransome, Oman, and Airy. These books are all written by scholars, and have merits of a certain kind; but how the fourth, fifth, or sixth-form boy can wade through such a mass of facts as is presented in them, we have long been at a loss to understand. Mr. Fletcher has a facile pen, and infuses much ozone into his pages. Without professing to be a deep student of records, he has been a pupil of Bishop Stubbs, and learned from Professor Maitland the superior claims of the large-hide theory. The dry-as-dust critic might pick holes in some of his statements, but, where the aim is more to enliven than to record, one must not be too exacting. "Westward the course of empire takes its way" could hardly have been written by a poet "who wished to pay a compliment to the United States of America," since Berkeley died in 1753. Constantine was not born at York, as is stated on page 22 and reiterated on page 24. Theodore of Tarsus was not Archbishop of Canterbury from 669 to 700. Philip the Fair did not "terrify the cardinals into electing one of his own creatures as Pope." These will serve as typical slips, though a good many might be cited. But Mr. Fletcher has a grasp of essentials, and some lapses may well be condoned in the case of one whose light touch really does lend interest to the mediæval history of England.

The Principles of Relief. By Edward T. Devine. Macmillan. 1904.

The title of this book is ambiguous. Relief is a word of many meanings. It perhaps includes the idea of humanity in its connotation; but until we know what men are to be relieved, and who are to receive relief, we cannot formulate its principles. The author occasionally uses the term "charitable relief," but it is with reluctance. Charity is obsolete. "The idea of charity, attractive and inspiring at one stage of social development, becomes in time obnoxious, and, as a permanent element in the relation between classes, it becomes an anomaly." Apparently Mr. Devine has chiefly in mind relief by the community, or society; which implies governmental agency. Yet he has little to say of this method of relief, and his maxims usually imply that aid is to be given systematically to the needy through organized charity. From this it would seem that charity is, after all, not superseded, and that it is the poor who are to be relieved, although paupers are not reckoned among the poor, nor is alms-giving considered as relief. On the whole, it seems correct to say that only those temporarily and not chronically unable to support themselves come within the purview of this treatise.

To discover the principles of relief in this sense, we must assume a "standard of living." In the city of New York this standard corresponds roughly with an income of $600 a year for a family of five persons. Under normal conditions, this income may be regarded as steady; but when men are thrown out of work, or lose their health, or die, the family may find itself unable to maintain the standard. In many cases there are savings or insurance funds to fall back on; but when these are exhausted, relief from some quarter must come. Neighbors, friends, relatives, and employers do much, and often all that is required. There is a remnant, however, consisting of really deserving people, widows and orphans largely, who can often be brought to a self-supporting condition by a little judicious aid. Unfortunately, the fact that the aid must be judicious in order not to be mischievous, renders it almost hopeless to try to formulate principles of relief. Every case must be carefully studied, and dealt with according to its own circumstances. The quantity of relief to be given, its quality, and its duration, can be determined only by experts. The amateur philanthropist may be as destructive of character as the amateur physician is of health. Yet many persons who would not venture to dose the rich with drugs of the effect of which they are ignorant, will give money to the poor without regard to consequences.

The difficulty of establishing principles of action when action must be largely discretionary, is illustrated by Mr. Devine's attempts to show that charitable relief does not affect the rate of wages. We must not, he tells us, adopt the practice of the old English poor law and allow employers to get the benefit of underpaid labor. "We are not to encourage, directly or indirectly, the payment of wages below the normal or self-supporting standard." This is well-meant advice, but it does not enlarge our wisdom. Assuming, as we must, that there will always be many persons whose income is not equal to the standard, we wish to know how we can increase this income by donations without drawing on the fund from which any increase in wages must be provided. In other words, if the vast sums now expended in relief of many kinds were paid out as increased wages, would there be fewer poor and less suffering, or more?

This book does not throw much light on these fundamental problems, but it contains many practical maxims. Disease should be prevented by the coöperation of the medical profession with social workers, and tenement houses should be improved. Four of the most important causes of need are family desertion, intemperance, industrial displacement, and immigration; and the most approved methods of action in these cases are described. The examples of the treatment of specific instances are very interesting, showing what long and complicated problems are implied in the short and simple annals of the poor. Under the title "Relief in Disasters," we have brief accounts of what was done at the time of the Chicago fire, the Johnstown flood, the Baltimore fire, the *Slocum* disaster, etc. While Mr. Devine's statement of principles is not very lucid, his practical suggestions are instructive, and his book will interest every one who is concerned to lessen that great mass of suffering which exists only because the wisdom of men is not equal to their benevolence.

The True Henry Clay. By Joseph M. Rogers. Philadelphia: J. B. Lippincott Co. 1904. Pp. 388.

Mr. Rogers gives us a very lifelike picture of Henry Clay the man. Here is properly neither history nor biography, but a series of essays, sketches for the most part, in which snapshots are taken of Clay from different points of view. In separate chapters we are invited to look at Clay the speaker, Clay the duellist, Clay the compromiser. Again, it is as a member of the "triumvirate," or as engaged in Senatorial colloquies, that he is held up for our inspection. Back and forth from youth to old age, from old age to youth, we are taken repeatedly, until all sense of chronology, of history, of growth and development is utterly lost. Nevertheless, out of this confusion—seemingly worse confounded by irrelevant anecdote, questionable jest, unprofitable analogy—there does somehow emerge a live man. Mr. Rogers is fair-minded in that he does not scruple to lay bare the weaknesses as well as the strength of his hero. Nor has he any race or sectional prejudices to air. But excessive preoccupation with the one figure makes the author unheedful of the importance of others. Lack of a sense of proportion, a feeble grasp of the subject as a whole, constitute, indeed, his chief faults. The man Clay he sees and comprehends.

Of positive errors there are, so far as we have noticed, comparatively few. Clay's influence at Ghent is clearly overestimated. Mr. Rogers maintains that Clay was not a "trimmer," but has considerable difficulty in explaining the Texas letters

and some other things; and we may readily surmise what the "Puritan Adams" would have thought of the statement that, after the compensation bill, Clay was "obliged to make personal appeals for votes in a manner that he would *at all other times* have considered undignified" (p. 96).

BOOKS OF THE WEEK.

Altsheler, Joseph A. The Candidate. Harpers. $1.50.
Anecdota Oxoniensia: Cáin Adamnáin. Henry Frowde.
Archives and History of Mississippi, Third Annual Report. Nashville, Tenn.
Baldwin, Charles Sears. How to Write. Macmillan Co.
Berton, Guy. Art Thou the Man? Dodd, Mead & Co. $1.50.
Brunot, Ferdinand. Histoire de la Langue Française. Vol. I. Paris: Armand Colin.
Burden of Armaments. London: The Cobden Club. 3s. 6d.
Call, Annie Payson. The Freedom of Life. Boston: Little, Brown & Co. $1.25 net.
Capen, Edward Warren. The Historical Development of the Poor Law of Connecticut. Macmillan Co.

Zunser, Eliakum. A Jewish Bard. Zunser Jubilee Committee.

Henry Holt and Company's Spring Books

(PUBLISHED AT 29 W. 23RD ST., NEW YORK.)

PUBLISHED THIS WEEK **Deledda's AFTER THE DIVORCE** $1.50

A translation by MARIA HORNOR LANSDALE of probably the best story of a noteworthy Sardinian authoress, whose work is esteemed both in Italian and French, and who has been the subject of laudatory articles in the *Critic*, *Fortnightly Review*, *Revue Bleu* and other distinguished periodicals. It is a highly dramatic and picturesque tale, turning on a law that permits the wife of a convict to divorce him and remarry.

Colton's BELTED SEAS $1.50

The *Bookman* has called Mr. Colton "an author who recalls the old tradition that there were once such things as good writing and good story telling," and his work has been highly praised by other high authorities. In the "Belted Seas" he strikes out into a new vein. His irrepressible Captain Buckingham, and the amusing verses with which the captain constantly interlards his yarns, will linger in the memory. Mr. Colton has never shown more humor nor more imagination than in this story of the captain's wild adventures in Southern Seas.

Pattee's HOUSE OF THE BLACK RING $1.50

A humorous and dramatic story of a community of Pennsylvania Dutch in a little valley in the Seven Mountains. It tells of the squire, a sort of feudal lord, his enemies, his fate, and of his daughter and how she would have her way in love. The weird influence of the House of the Black Ring is ever present.

Owen Seaman's HARVEST OF CHAFF $1.25 net (by mail $1.31)

Parodies in verse by one who probably has no superior among living parodists. Among his victims are Kipling, Richard Wagner, Austin, Wordsworth, Browning, Byron, Morris, and others. The author's prose burlesques BORROWED PLUMES ($1.25) are already in their third edition.

TO APPEAR IN APRIL Jordan's GUIDE TO THE STUDY OF FISHES 2 Vols. Over 800 Illustrations. Kellogg's AMERICAN INSECTS With over 800 Illustrations. $5.00 net. Postage additional.

Champlin's YOUNG FOLKS CYCLOPAEDIA OF NATURAL HISTORY Illustrated.

Edward Everett Hale's DRAMATISTS OF THE DAY, being an informal discussion of the principal plays of ROSTAND, HAUPTMANN, SUDERMANN, PINERO, PHILLIPS, SHAW and MAETERLINCK.

RECENTLY PUBLISHED THE POINCESS PASSES By the authors of "The Lightning Conductor." $1.50
C. N. and A. M. Willsamson's LIGHTNING CONDUCTOR. New edition. Illustrated from photographs and with frontispiece by ELIOT KEEN. $1.50.

Sinclair's DIVINE FIRE. A story of a London poet. $1.50
B. E. Stevenson's THE MARATHON MYSTERY. By the author of "The Holladay Case." $1.50
Ella Calista Wilson's PEDAGOGUES AND PARENTS. $1.25 net (by mail $1.37)

The Principles of Chemistry

By D. MENDELÉEFF. *Third English Edition*, Translated from the Russian (*Seventh Edition*) by GEORGE KAMENSKY, A.R.S.M. of the Imperial Mint, St. Petersburg, and edited by THOMAS H. POPE, B.Sc., F.I.C. With 110 Diagrams and Illustrations. 2 vols. 8vo. $10.00 *net*. By mail, $10.60.

LONGMANS, GREEN & CO., New York

The Literature of The English Language

From the Earliest Times up to our day

Biography, Bibliography, History, Criticism. Composite Studies of all English and American authors who have made important contribution. All contained in **THE LIBRARY OF LITERARY CRITICISM**, 8 Royal Octavo Volumes, over 6,000 pages 250 portraits. No other work like it. Set $40 00. Customary terms. ONE HUNDRED DOLLARS

will be paid for information leading to the arrest and conviction of the thieves.

Address JAMES WARRINGTON, Lock Box No. 17, Philadelphia, Pa.

SECOND EDITION

MORAL EDUCATION

By EDWARD HOWARD GRIGGS

A discussion of the whole problem of moral education; its aim in relation to our society and all the means through which that aim can be attained.

"Every one who owns and reads Stanley Hall's monumental work on 'Adolescence,' will want to own and read Griggs' 'Moral Education.' And the wise parent who cannot have both books will choose the latter because of its more immediate availability in child training and its saneness and informed conservatism."—THE CHURCH STANDARD (Philadelphia).

352 pp., including full bibliography and index; 5½x7¼, cloth, gilt top, $2.00 net; postage 12c.

NEW PUBLICATIONS

The Personality of God
By LYMAN ABBOTT, D.D.
(Editor of *The Outlook*)

A great commotion has recently been caused by a sermon preached by Dr. Abbott before the students of Harvard, in which he gives his definition of God. The utterance has called forth the widest discussion not only among ministers and theological papers, but also in the secular press. The appearance of this "authorized version" will be hailed with interest.

Type and presswork by De Vinne. Cloth, 50 cents; limp leather, 75 cents net. Postage 5 cents.

The Drink Problem in Modern Life
By HENRY C. POTTER, D.D.,
(Bishop of New York)

No more perplexing problem has confronted our law-makers and reformers during recent years than the regulation of the saloon. Among noteworthy men who have advocated new methods, Bishop Potter has attracted foremost attention, and a frank discussion of the issue from his pen is therefore of timely value.

What Is Worth While Series. 12mo, 30 cents net. By mail, 35 cents.

The Minister as Prophet
By CHARLES E. JEFFFRSON, D.D.
(Pastor of the Broadway Tabernacle, N. Y.)

"Dr. Charles E. Jefferson's books get read. Not only individuals find them out and buy them, but his 'Things Fundamental' is now one of the required books of the reading course of Methodist preachers in this country for the coming year, and his book, 'Quiet Hints to Growing Preachers,' has been sent forth to every Presbyterian preacher in the land by the evangelistic committee of that denomination."
—*The Congregationalist.*

OSLER

Aequanimitas and Other Addresses

By WILLIAM OSLER, M.D.

Regius Professor of Medicine at Oxford University, England; Professor of Medicine, Johns Hopkins Hospital, Baltimore, Md.

A series of 18 master addresses.

12mo; 389 pages. Cloth, $2.00 *net.*

"Dr. William Osler, about to leave this country for the Regius Professorship of Medicine in the University of Oxford, has published a sort of valedictory volume, almost, if not quite, as interesting to the laity as to the profession of which he is a distinguished ornament. . . . We may almost say he has unconsciously written an autobiography—not the annals of his life, nor the story of the friends with whom he has been associated, but he has given his thoughts on education; on investigation; on the relation of physicians to patients, and to nurses; on ethics; guardedly, on religion, and fully, on the conduct of life."—THE NATION, NEW YORK.

AN INAUGURAL ODE

By Alexander Blair Thaw

4to, Boards. 50 cents net.

A great critic writing in the LONDON DAILY CHRONICLE on this Poem says:

"Dr. Thaw has published an ode combining the patriotic glory with all the dignities necessary to a poem which the poet declares and, as it were, declaims in public. . . .

"Dr. Thaw has such emotion as can be shown in the great market place, the Commonwealth; thus did a Roman, with honor, exhibit his wounds. His style has the appropriate frankness and the appropriate measure and restraint. . . .

"Dr. Thaw writes with a notable control of classical, yet actual and practical English, and with an eloquence that not only confesses but conveys a genuine passion."

ALICE MEYNELL.

THE PALL MALL GAZETTE (London) says:

"Dr. Thaw sings fully, spaciously, sincerely, and makes a level appeal to the patriotism and pride of President and citizens. . . . Of Dr. Blair Thaw's faith in this militant mission the reader is convinced, and such conviction is not thus imposed, in literature, without poetry and power."

The Monadnock Press, Nelson, N. H.

New York Offices: 36 East 74th St.

TWO BOOKS OF GREAT IMPORTANCE

ON TOPICS OF NATIONAL INTEREST

THE AFTERMATH OF SLAVERY

By WILLIAM A. SINCLAIR

For sixteen years Financial Secretary of Howard University.

With an Introduction by THOMAS WENTWORTH HIGGINSON

12mo, cloth, gilt top, 360 pp. Net, $1.50; by post, $1.62

This book, written by one of the ablest and best educated colored men of the time, gives the first comprehensive account of the condition of the negro since his emancipation and contains just the information that the American voters and readers need to enable them to understand the burning race questions of to-day.

Colonel HIGGINSON says of it in his introduction: "It is in almost all respects admirable, and shows much more thoroughness in dealing with both sides than any book recently produced."

PARIS AND THE SOCIAL REVOLUTION

By ALVAN FRANCIS SANBORN

With over 72 Illustrations (25 full page) drawn by VAUGHAN TROWBRIDGE

8vo, cloth decorative, gilt top, 424 pp. Net, $3 50; by post, $3.75

An exhaustive and intensely interesting study of the revolutionary element in all the strata of Parisian society, from the anarchist laborer to the leading writers and artists, of France, many of whom, while in no way classified as socialist or anarchist, are as truly revolutionary in spirit.

In this book Mr. Sanborn tells who and what the revolutionist is, what he wants and how he expects to get it, and how he gets himself heard. He shows what part in the revolutionary movement is being taken by the laborer, the criminal, the student, and by the literature and the art of to-day. Although the study is of foreign life, its appeal has no national limitations. In portraying conditions in Paris, it discloses the principles of human nature that underlie feelings of unrest which are world-wide in their manifestation, and its interpretation of these principles will prove full of suggestion to the thinking American reader who wishes to understand the trend of radical thought in his own country.

A DRAMATIC STORY OF RUSSIA

OLIVE LATHAM By E. L. VOYNICH,

Author of "The Gadfly." At all Booksellers.

The Nation.

NEW YORK, THURSDAY, MARCH 30, 1905.

The Week.

For the first time since his rebuff by the Senate, the President is betrayed into a petulant tone. He tells Congressman Babcock that the Senate's refusal to act on the Dominican treaty has reduced him to "impotence," and exposed him to the insults of Castro and every other South American upstart. We do not think, however, that this will help Mr. Roosevelt with either the Senate or the country. An intensely practical statesman such as he is should have reckoned in advance upon the stupidities and jealousies of the Senate. He now bitterly resents the "drawing of party lines" in dealing with a treaty. It has been remarked that when a politician exclaims against party politics, it means that he wants all hands to turn in and pull him out of a hole. We do not remember any loud protest from Mr. Roosevelt when his own party drew "lines" against the Bayard-Chamberlain treaty, and killed it. And as for "impotence," the failure of the Dominican treaty leaves this Government with all the power it ever had. It can protect its citizens abroad in every lawful way, just as before. The President's Constitutional prerogatives remain in full vigor. He has simply been given to understand that a policy is not necessarily wise simply because it falls in with his whim, and that he is not infallible as a Monroe Doctor.

The cooling down of the Administration as regards Venezuela is gratifying, if somewhat amusing. On Saturday, we were grossly "insulted" by Castro; on Sunday, we were not so sure of it; and by Monday we were instructing Minister Bowen to take his time about it and let us know by the slowest mail whether we really had been insulted or not. To have the insults forwarded by cable would be, of course, a sheer waste of the public money. Going back to the cause of the alleged insult, we are now informed that the Administration quite gratuitously offered its nose to be tweaked by Castro. It is at present "the consensus of opinion" in the White House, so the *Tribune* gravely announces, that the United States cannot forcibly collect claims still pending in the Venezuelan courts. The President is also advised by Senator Spooner, and eke by Senator Lodge, that "the principles of international law require the recognition of Venezuela as an equal." Restraining our impulse to say that then international law is an ass, we merely congratulate the country on the growing frequency of Presidential second thoughts. Of how many of them the Senate became the only begetter in refusing to ratify the Dominican treaty, we are just beginning to see.

Kansas is proving hard to satisfy in the various Trust investigations now in progress. Commissioner Garfield's Beef Trust report aroused the State to the necessity of making sure in advance that the Standard Oil Company should not get off so easily. Hence came the resolutions and telegrams denouncing Mr. Garfield, and demanding that some more energetic "Trust buster" be put in charge of the coming investigations. Now comes the report of another wrangle in the Kansas oil fields. The County Attorney of Chautauqua County has discharged Frank J. Monett as counsel in the inquiry relative to the Santa Fé Railroad, and the oil producers are swearing that this is a tame surrender to Standard Oil. The elimination of Mr. Monett, a man of reputation in hunts of this kind, is due to the charge that he came into the case without an invitation, having "newspaper connections," and with his mind already made up as to what he should find. It is puzzling that under those circumstances the Kansas authorities should have rejected him. If the conditions are as stated, his report ought to have had all the qualities that Garfield's lacked. In his capacity as a journalist, his first consideration must have been to write something interesting and striking. Kansas must learn that the qualities of "Frenzied Finance" and Poor's Manual are not to be combined in one investigator.

Of the five Democratic Governors who were elected last November in States which gave their electoral votes to Roosevelt and chose Republican Legislatures, Governor Folk of Missouri had the most comprehensive programme of reforms to carry through. Besides home rule for the large cities of the State, an anti-pass law, and the abolition of licensed race-track gambling, his important recommendations related to the "boodle" issue on which he made his campaign. He proposed to have all franchises disposed of by public auction, to make such privileges voidable when secured through corruption, to extend the statute of limitations in cases of bribery, and finally to compel the testimony of witnesses to bribery transactions, while giving them immunity from prosecution. This last was by far the most important. The House of Representatives, though it had a Republican majority of 22, followed the Democratic governor's lead and passed the bill unanimously. When it came up in the Democratic Senate, however, the Republicans divided evenly, while the Democratic members stood 10 to 9 against the bill, with 3 not voting, and defeated it. Throughout the session, in fact, the Republican House gave more assistance to the Governor's reform programme than the Senate of his own party.

The case of Governor Toole in Montana is somewhat different. He had already served two terms with a Legislature and State officers of his own party. Nor did he come into power on an issue which would induce the Republicans to make common cause with him against any element among the Democrats. Yet he fared reasonably well in legislative matters. A direct-nomination bill which he recommended was passed by the late Legislature. He also wanted a railroad-commission bill, and the House passed one substantially as he desired, but the Senate inserted a clause naming the commissioners in advance, and the Governor finally vetoed it. On other matters, especially on appropriations, Governor Toole had occasion to use the veto power with some freedom.

Delaware has again chosen to go unrepresented in the Senate of the United States rather than place credentials in the soiled hands of Addicks. For this we should all be profoundly thankful. But we ought also to do everything possible to nerve the indomitable band of anti-Addicks Republicans in Delaware for the fight that is still before them. They will have to encounter impatience in high quarters because they are not able to "do things"—as if preventing the rape of the State by Addicks were not of itself a magnificent achievement! They will be subjected to party pressure. It will be said that every Republican vote will be needed in the Senate to "save the Monroe Doctrine," or prevent the wicked Democrats from thwarting a benevolent Administration, and that it is no time to be squeamish about electing a briber if only he will promise to "uphold the President's hands." But against all such appeals we hope to see the Delaware opponents of Addicks remain firm as a rock. They have one business in hand—to beat an unspeakable corruptionist. If that injures their party or hampers their President, let party and President see to that; their skirts are clean.

The legal questions preliminary to Senator Gorman's negro disfranchising amendment having been disposed of in the Maryland courts, that measure is now to be taken up on its merits. The

Democratic State Committee proposes to make acceptance of the amendment a condition of its endorsement of any candidate, State or local, next fall. At the same time a considerable body of Democrats, including the Governor of the State, are strongly opposed to the amendment as it stands. It contains, in fact, nearly all the objectionable features ever devised for such a law. The "grandfather clause," which, in Alabama, for instance, was made to apply to only the first few years of registration under the new law, is inserted in the Maryland amendment without limitation. The test of literacy, moreover, requires the voter to read "*and* to give a reasonable explanation" of a section of the Constitution, his judges being the registration officers. Letting off the white men from any requirement at all, it would impose only a travesty of a test on the negroes. According to the last census, there were 24,676 illiterate negro males of voting age in Maryland. They are to be deprived of the ballot, while the illiterate white men, who numbered 15,678 according to the same enumeration, are to be unmolested.

The decision of the Maryland Court of Appeals that the "Jim Crow" law passed by the last Legislature does not apply to interstate traffic, shows that the passage of any train or steamboat south of certain State lines will not be marked by an immediate rearrangement of passengers. The court at Annapolis was called upon to consider the case of a colored school teacher who was arrested while on his way from New York to Washington because he refused to move into the "Jim Crow" section as the train entered Maryland. Its decision only followed the law as interpreted by the Supreme Court in a Louisiana case, setting the Legislature right as to the extent of its powers. The court points out that the segregation order can be of no effect when the passenger on a train or boat or other public conveyance crosses the Maryland line, but admits the right of the Legislature to prescribe separate compartments for traffic wholly within the State. In practice it is hard to see just how this limited application of the law can avail to save the sensitive Marylanders from the shock they dread.

Governor Higgins is finding out the truth of the old saying that to tax and to please is as impossible for man as to love and be wise. He discovers a great willingness that "the other fellow" be taxed, but stout objection by every one to letting taxation begin at home. All the plans for increasing the State's revenue by further indirect taxes are meeting with strong opposition. It appears extremely probable now that the proposed tax on stock transfers will not be made law. The mortgage tax is again in troubled waters. Meanwhile, the appropriations continue to pile up. Governor Higgins will detect no reluctance to let the other fellow get his little bill through, provided the amenities of logrolling be strictly observed. The Governor, however, has taken the correct position. He declares that he will not sign the supply bills until the revenue bills are either passed or definitively abandoned. In the latter case, he will be bound to thrust in his pruning pen, as he fortunately is able to do, and cut out enough superfluities to keep outlay down to income. Direct taxes may be too dire an alternative to face just yet; but the budget must be balanced though the "deestricts" fall.

D. Cady Herrick and Perry Belmont were among those who appeared at the legislative hearing on March 21, on the Brackett and Palmer bills to prevent corrupt practices in elections. Both gentlemen have had experience which qualifies them to speak as experts. Indeed, Mr. Herrick frankly declared: "I am no reformer, nor am I a hypocrite. I have used money. Both political parties do." The bill which these two eminent students of practical politics are urging, is admittedly drastic. It prohibits corporations from contributing campaign funds, provides for the publication of all contributions and expenditures, and permits legal action—accompanied, of course, by investigation—by any citizen who believes an election has been conducted unfairly. That our present laws are too lax, too full of loopholes, is the conviction of reformers as well as of Messrs. Herrick and Belmont. The general principles of the measures proposed by Senator Brackett and Assemblyman Palmer are so excellent as to command the approval of all good citizens. Yet there is room for doubt as to the great efficacy of legislation in the present state of public opinion. The Democrats knew what Judge Herrick's political methods had been; nevertheless, they nominated him for Governor last autumn. A reputation for unscrupulousness is too often a valuable asset for a party leader.

By the new copyright law, the burdensome requirement of simultaneous publication here and in the country of origin is relaxed in the case of writers in foreign languages. The act applies to residents of the thirteen countries included in the international copyright agreement, and allows the taking out of an option for a year before the copyright is completed by manufacture and publication in the United States. It is a welcome if a small concession, for it gives the European publisher a breathing space to study our market before making his ventures. Books in foreign languages are seldom sought after by our publishing houses, and the principal benefit that will accrue under the new law will be to the few foreign authors who attain great vogue among us. From now on, the Sienkiewiczes and Pastor Wagners will get proper royalties. So far as English books are concerned, the case stands just as it did before. The burdensome and ridiculous requirement of a second printing here still holds for all copyright works. This is on the theory of making work for our compositors and pressmen, who are also protected by a rattling duty on the finished product. If Congress cannot make up its mind to revoke this wasteful rule, at least it may be hoped that the one year's option of copyright granted to foreign authors and publishers may be extended to our kinsmen across the sea.

An American Academy of Fine Arts at Rome has existed for several years on a provisional and somewhat precarious basis. Last Saturday it was announced that more than half of an endowment of a million dollars had been already raised and that Villa Mirafiori, beyond the Porta Pia, had been purchased. With this step is permanently founded a very interesting auxiliary to the American art schools. Instruction will be given not in the theory and history of art, but in its practice; and the general conduct of the school will be modelled on that of the historic École de Rome. Presumably only a few students of proved competence will be accepted. This élite will naturally fall under the most persistent and persuasive classical influences, and to some extent their work should tend to offset among us both the authority of the academic and the allurement of the eccentric schools of Paris. The success of this attempt to set the current Romewards—a movement foreshadowed by the Powerses, Storys, and Crawfords half a century ago—will depend upon the material the school attracts. It requires a certain hardihood to promote neo-classicism in a time given over to excessive individualism and romanticism at bottom. But our architects, chiefly under the discipline of the École des Beaux-Arts, are already becoming classicists, and doubtless the founders of the school at Rome believe that the painters and sculptors will follow that lead.

An export tax on Newfoundland herring would squeeze Senator Lodge's Gloucester fishermen more sharply than any possible competition under a reciprocity treaty. Moreover, if the insular government actually declares the cargoes of the herring freighters to be a Newfoundland export, it will be very difficult to maintain the convenient pretext that they are the "product of American fisheries," and hence exempt from

duty. Notoriously, the herring from the Bay of Islands are bought from the Newfoundlanders and fraudulently certificated as American-caught. The local authorities wink at the practice, because our shippers pay a substantial license fee. Evidently, the proposed export tax will make a continuance of the subterfuge more difficult, and the fish merchants in whose behalf chiefly the Hay-Bond convention was amended to death are likely to learn that Newfoundland possesses very substantial powers of retaliation. On all fishing matters Newfoundland holds the whip-hand, a fact strangely forgotten by those who were chiefly intent on keeping foreign fish out except when it was Senator Lodge's protégés who smuggled them in.

The Russian Finance Minister's invitation to the London *Times* to come over to St. Petersburg and count the gold reserve, if the editor really doubts its existence, throws a gleam of humor on a sombre subject. The *Times* has been publishing conspicuously a series of articles to prove the insolvency of Russia. The argument did not, as might have been supposed, concern itself with the question whether the Russian Government is provided with resources for enduring the strain of war, but undertook to show that Russia as a community is "marching direct to insolvency." The main ground for this conclusion was that, although Russia's exports of merchandise exceed her imports, nevertheless that excess cannot provide for such other dues to outside markets as interest on the public debt, profits of foreign capital invested in Russia, money spent by Russians living outside of Russia, and so on. These additional debits, so contends the *Times's* article, force us to the inference that "the Russian Empire, as a trading concern, is carrying on its great business at an annual loss of at least 250,000,000 rubles."

So far the *Times* threads the maze of the "national balance of trade," in which investigators are usually either lost in the bewildering contradictions of their own statistics, or buried hopelessly under a mass of figures. Mr. Lucien Wolf, however, the author of the articles in the *Times*, makes a bold dash for daylight. How was this "annual deficit" met? Not by commercial gold exports, for gold imports have been the rule. "All we can say with certainty is, that it is paid out of the gold reserve of some 1,900,000,000 rubles," belonging to the Russian Government in St. Petersburg and elsewhere. Mr. Wolf admits that he has no proof of such use of the gold reserve; but, cheerfully assuming it to be true, he concludes that Russia's "gold reserve is a colossal Humbert safe." It will be observed that this line of argument rather closely resembles that employed on the stump by Mr. McKinley during 1892, when he demonstrated conclusively that the United States could not be "losing gold on balance," because the year's "merchandise export balance" was $200,000,000. Mr. McKinley was invited to inspect the custom-house returns, showing a heavy gold export movement, but he declined to do so.

The notable fact about the new Japanese loan for $150,000,000, announced at the end of last week in London and New York, is the rise in the public credit of Japan which its terms reflect. The special security is apparently quite as good as that pledged to secure the $60,000,000 loan of last November—a lien on the highly productive Japanese tobacco monopoly—while that of five months ago was a second lien on the customs revenue. The market price of the two loans is also nearly identical; last autumn's figure being 90½, while the pending issue brings 90. But where an annual interest rate of 6 per cent. was exacted in 1904, the Government this year borrows at 4½—a very substantial concession by the bankers, and one almost if not quite unparalleled for a third large loan while war was actually going on.

No doubt, belief in an early peace has something to do with this rise in Japanese credit; the sentimental influence of the Japanese victories possibly has still more. But it is also possible that the financial world has learned something during the year as to the real resources of Japan. A letter from the Tokio correspondent of the *Evening Post* throws interesting light upon the much-mooted question whether Japan was at any time really in danger of being crushed by the burden of carrying on the war. Not only is testimony borne to the fact that Japanese industry has prospered, in the face of this enormous drain of men and treasure, but the tests by which we are wont to measure our own prosperity are applied with encouraging results. The December exchange of bank checks at the principal Japanese clearing-houses, for instance, footed up $182,000,000, against $144,900,000 in 1903 and $124,700,000 in 1902. The volume of business at last year's close on Japanese stock exchanges, though smaller than at the similar period a year before, was larger than in 1902. Still more striking is the report of post-office savings-bank deposits, which in December reached some $18,600,000, comparing with $15,600,000 one year before, and $14,400,000 two years back. These results are achieved at the end of a year in which Japan's own people have subscribed to $140,000,000 war bonds of the Government. London newspapers, taking some other figures, are calling attention to the striking fact that Japan's export trade, in 1904, increased $15,000,000, or 10 per cent., over 1903; Japan's export trade, in 1904, increased ably silk, having risen nearly $19,000,000.

To judge by the debate last week in the House of Lords, recent arbitration treaties have not affected competitive naval schedules. So sound and conservative a statesman as Viscount Goschen said explicitly that to the old two-Power standard—which meant specifically France and Russia—must now be added Germany, with her twelve battleships. The first lord of the Admiralty, in the same tenor, declared that no retrenchment of the programme should be made in view of the great losses to the Russian fleet, but that an approach should be made to a three-Power standard. For many years England ran under the two-Power doctrine, with an additional provision of cruisers justified by the extensiveness of her dispatch service. Now, apparently, the scale is to be raised a point, not in view of possible or probable hostile alliances, but simply with regard to the gross number of fighting machines possessed by any three nations. Thus, Lord Selborne used the remarkable growth of the Japanese navy, that of an allied Power, as an argument for pushing the construction of battleships, while Goschen counted up the German and French navy as if it were likely to make a joint descent upon the English dockyards. Obviously, the naval rule of three, however computed, must in the long run spell ruin. Indeed, many of us may live to see England staggering under an immutable four-Power doctrine.

M. Paul Deschanel, former president of the Chamber of Deputies, cites America as the ideal instance of separation of Church and State. This is a virtual repudiation of Combes, whom Deschanel served for a time, and indicates that the plan of separation now under debate will be conducted in the spirit of progress, not of persecution. M. Rouvier seeks not to punish the Church, but to secure a permanent and satisfactory relation between it and the nation. Many of the Catholics will assent freely to this policy, stipulating only for sufficient notification of the withdrawal of the stipends to the clergy, and for continued tenure of ecclesiastical buildings on easy terms. This the Government project concedes, and it looks now as if separation might be brought about without any great immediate strain. M. Rouvier's apparent success in smoothing down the gravely ruffled sensibilities of all parties concerned shows that there are many ways of killing your political cat short of killing her with kindness. The removal of M. Combes's bristling personality has had the almost unexampled effect of bringing something like calm into the most troubled of political controversies.

SHOWING MR. CHAMBERLAIN OUT.

On March 22 a resolution condemning in precise terms Mr. Chamberlain's proposals of a 10 per cent. duty on manufactures found only two dissenting votes in Parliament. Mr. Balfour and his followers, excepting twenty-two Unionist Free Traders who welcomed the chance to vote against Chamberlainism, walked out and left the motion to its fate. The resolution, which Mr. Balfour had explained was non-contentious, was passed by a majority of 254 to 2. Mr. Chamberlain could not desire a more positive vote of no confidence. Lord Hugh Cecil did not fail to point out that those who feared to defend Imperial reciprocity in Parliament could be but craven advocates before the nation. He also scored severely a Government so uncertain of its own mind as to fight anti-Chamberlain resolutions for two years, and then desert the cause completely. In fact, this heroic method of lightening ship, while primarily disastrous to Mr. Chamberlain, may prove almost equally damaging to Mr. Balfour.

Mr. Chamberlain it put in the novel position of a man who blows hot and cold while his dearest principles are kicked about scornfully. For look how little is left of the great programme launched nearly two years ago in the historic Birmingham speech. Food taxes are necessary to attract the colonies to any reciprocity scheme; Mr. Balfour has consistently opposed food taxes. Duties on manufactures are indispensable both to the reciprocity scheme and to an anti-dumping campaign; but Parliament has declared against such a tariff, practically *nem, con.* There remains the scheme for colonial conferences. This Mr. Balfour has made his own, stipulating simply that the conferences should be uninstructed and unauthoritative. Meanwhile, wherever organized labor has found a voice, its verdict has been hostile to a change of fiscal policy, and the bye-elections have returned Free Trade members with significant regularity. All signs point to a crumbling of the propaganda of which Joseph is the prophet.

Of course, he consciously faced the chances of defeat. That he should appear to be going down not as the fighter he has always been, but with some ignominy, like an importunate book agent finally shown the door, is contrary to all expectations. Yet it is evident that he must defend his cause or see perish with it his own prestige. Mr. Chamberlain is not a man to ride two horses. He is on record for a prompt appeal to the electorate. Only the other day he rebuked in unmistakable set terms the "unnecessary timidity" of those who failed to declare their allegiance. It is plain that he cannot safely put off this aggressiveness and devote himself to the gentler service of prolonging Mr. Balfour's official existence. For the day of pretences is over Mr. Balfour's professions of open-mindedness and neutrality mean nothing in view of last week's desertion. Whatever he may have intended by running away, the fact remained that when a shaft was aimed at Mr. Chamberlain's heart, Mr. Balfour stepped aside and said: "That's nothing to me." How long under these circumstances can Mr. Chamberlain affect to support Mr. Balfour? Not long, unless he surrenders his case. When the Free Trade Unionists are voting gladly with the Opposition, the so-called Fiscal Reformers cannot maintain indefinitely their loyalty to a leader who, declining to defend his own cause in Parliament, bids them support a Premier who ignores both cause and leader. To rehabilitate himself and his policy, Mr. Chamberlain will have to turn upon those who have shown him the door, and put them out.

To follow the Parliamentary tangle resulting from Mr. Balfour's policy of abstention would defy ingenuity itself. Technically and numerically, Mr. Balfour may gain strength from the decline of Chamberlainism; but it seems also as if the late "walk-out" could not fail to be viewed in a sense unfavorable to the Premier. Such an expedient is usually that of an abused minority; for a leader with a strong majority it bears the look of playing the baby. Moreover, it casts a sinister light upon all Mr. Balfour's relations with Mr. Chamberlain. Of the latter's loyalty there can be no doubt; he has proved it to his own hurt. Can as much be said for Mr. Balfour? Was he really taking time to make up his mind, or was he merely waiting until it was safe to snub his troublesome friend?

Mr. Chamberlain's *riposte* came with characteristic swiftness. On Thursday he authorized a protectionist candidacy at Greenwich against Mr. Balfour's candidate and kinsman, Lord Hugh Cecil. Thus ends the unnatural alliance between Chamberlain and Balfour, and not without grave impeachment of the Premier's clear good faith. It was palpably absurd to profess friendship for Mr. Chamberlain, yet allow his bitterest opponents, Mr. T. Gibson Bowles and Lord Hugh Cecil, to preach free trade in their constituencies. It required a peculiar casuistry to praise Mr. Chamberlain on his resignation for doing bravely outside the Cabinet what, with reluctance, those inside must do more cautiously, and then to condemn essential parts of the Chamberlain programme. Indeed, nothing is stranger than the fact that a gentleman of chivalrous and idealistic bent, as Mr. Balfour unquestionably is, should have been caught in so many equivocal dealings. From the time when he managed to let two Free Trade Ministers resign, and yet keep the Duke of Devonshire, whom they confidently expected to go out with them, Mr. Balfour has frequently profited by misunderstandings which in another man would roundly be called tricks. His nursing of Chamberlainism until the protest of the bye-elections had proved its vast unpopularity, is characteristic. England will put up with a good deal of casuistry when, as in Gladstone's case, it is of a robust sort; such vacillation as Mr. Balfour has shown, runs counter to British notions of fair play. The breach with Chamberlain comes too late to bring him either personal credit or political advantage. As for Mr. Chamberlain, when he is fighting Mr. Balfour's candidates in the constituencies, how long can he refrain from opposing him in the House of Commons?

HANDING ON THE TORCH.

With the opening of spring, the sporting columns of the daily press are peppered with announcements of "interscholastic meets." The intercollegiate athletic contests are imitated with admirable seriousness by the boys of our high schools and academies; the fashion is forcing its way into the grammar grades; and soon we may be chronicling the muscular prowess of four-year-old Tommy and Jimmy, the heroes of an interkindergarten meet. Fond parents who attend the interscholastic contests glow with pride as they note the interest which the greatest living Americans, our college champions, take in the performances of darling Harold and Reginald. Smith, the famous senior whose skill in putting the shot has made Harvard the foremost university in the country, pats the lad of sixteen on the back and assures him that a career of great glory will be his at Cambridge. Jones, whose speed in the quarter-mile is the boast of all loyal Yale men, is convinced, on the other hand, that New Haven is the place to get a start in the grave business of life. Surely, the labor of committees on endowment is superfluous when the flower of our undergraduates will spend their days and nights in persuading high-school boys to go where culture waits them.

We are pained, therefore, to note the pessimism of the *Harvard Bulletin.* We trust this paper merely expresses the superciliousness of Harvard, and does not speak for the athletes of other institutions. "One of the worst concomitants of intercollegiate sport," says the bilious *Bulletin*, "is the solicitation of athletes in the secondary schools." While admitting that to try to capture for your own college an athlete of ability is not a crime, the *Bulletin* yet holds—inconsistently, of course—that "the way in which these so-called inducements are urged upon the young men shows how far the desire to win has outstripped everything else"; and that "the methods now in vogue have become a menace to the preparatory schools." Then follow specifications. The principal of a large New England academy complains

that the hallways of his buildings are sometimes almost crowded with representatives of different colleges who are "special ambassadors" to a good football or baseball player. The principal, whose prosaic mind is obviously fixed on his wretched little text-books, fears that the boys in his charge may get a wrong idea of the real importance of athletics. He worries because his pupils scarcely pretend to study, but play baseball or football, and "then wait for an offer from some college." Furthermore, at a recent contest of athletes of New England preparatory schools, the conduct of some of the college men and coaches who were after swift runners and good jumpers was, in the opinion of the *Bulletin*, disgusting. "Their attempts were open and flagrant." The athletic trainer of a college not in New England —this the height of offending—had the impudence to be on hand; and one of the Boston papers gave the names of men to whom he had offered inducements.

Such are the facts which disturb the soul of the *Bulletin* and lead it to say in its haste that the motto of politics and business, "Anything to succeed," should not govern intercollegiate athletics, and that Harvard graduates should not take part in "the scramble which is now going on in the schools and academies of New England, and probably elsewhere." This advice may be followed in the conduct of a Sunday-school, but not, we are confident, in the management of a college. Unless the sons of Harvard get out and hustle, there will be more tears for the crimson and cheers for the blue. Take an example from a kindred enterprise. Were the proprietors of our large racing stables—say, Keene, Belmont, and H. P. Whitney—to maintain a dignified indifference, and run only such horses as were bred in their own paddocks, their turf winnings would simply dwindle to nothing. But they know their business. They have experts watching all the tracks for "promising youngsters." The competition is keen—sometimes, perhaps, unscrupulous; but need we affirm that it is wholesome? The analogy holds precisely; it is not in the least vitiated by the argument that horse-racing is a more thoroughly organized, better paid, and highly esteemed profession than college teaching.

There is nothing new in the essence of college rivalry; the change is in the outward form. A generation or two ago it was the lad of intellectual parts and attractive character who had to endure the ordeal now reserved for athletes. "Harvard has the finest college library in America," would be the plea of one advocate. "Yale has Professor Whitney," would be the answer. "You can study under Harkness at Brown." "Yes, but under Hopkins at Williams." This kind of talk, we submit to anybody but the prejudiced principal mentioned above, was sure to give a boy a wrong idea of the real importance of study. Old men can recall those days of darkness. Fathers had not begun to understand that athletics were the chief thing, and studies a mere elegant diversion; professors were often steeped in the same ignorance; and even undergraduates, in order to humor the powers that be, pretended to be busy with their books. But, thank Heaven! we no longer compel ingenuous youth to sear their consciences with hypocrisy. We have discovered the true function of the college in modern civilization, and we avow our convictions frankly.

We do not assert that there will never come a reaction in favor of books and laboratories; the brilliant civilization of Greece and Rome was followed by stagnation and mediæval superstition. But while the present age of enlightenment lasts, we must make the most of it. If our colleges are to fulfil their high destiny of developing muscle and figuring in "scare-head" stories in the newspapers, we must spare neither time, effort, nor money to bring in the best athletes. President Eliot and other mossbacks may prate about "the difference between practising generously a liberal art, and driving a trade or winning a fight, no matter how"; but Wall Street, Washington, and the prize-ring are teaching us the invaluable lesson that the end will justify any means.

THE NEW CREDULITY.

Prof. S. W. Williston of the University of Chicago was reported a week ago as having expressed some fantastic views in a lecture on palæontology. Among the least of the absurdities attributed to him was the prediction that, after a trifle of a million or two years more, birds would be the dominant animal type on the earth. But now the learned and apparently somewhat mortified professor writes to the *Sun* protesting against being written down an ass. He never held the language fathered upon him. Categorically and in detail, he denies having ever uttered a single one of the opinions tied to his name. But they have flown the country over. They have got the proverbial start which the lie has over handicapped truth, and the latter will doubtless struggle in vain to catch up.

Professor Williston is only the latest victim of the great modern art of mishearing, misunderstanding, and misapplying. It has had an enormous development. Two agencies have nourished it—a sensationalized press and a boundless popular credulity. The latter seems to fasten itself especially upon "science." This it regards as a kind of thaumaturgy. A scientific professor is thought as *capable de tout* as Habbakuk himself. Any extravagance, any wild nonsensicality, any sheer impossibility, is accepted as coming from him with the easy good faith of a child or a savage. "I see that Professor Exray says that when the oxygen of the universe is all used up, people will have to maintain combustion in their lungs by carbon inhalations ignited by an electric spark." This is hardly an exaggeration of the monstrosities of belief that gravely pass current.

Every honest newspaper writer must admit that inaccurate and sensational press reporting is mainly to be blamed for this topsy-turvydom of the public mind in many of these matters. Distortion and misconception of a speech or a lecture are discreditably common in the slap-dash journalism of the day. The trouble lies, however, more in haste and ignorance than in malice. The reporter does not deliberately set out to misrepresent. He is ever on the watch for something "spicy," something that will make the jaded newspaper reader "sit up," and his temptation constantly is to wrest some half-understood sentence from its context, and send it out reverberating as if it were the whole, or the most important part, of what was said. Not long ago, for example, a New York newspaper gave an account of a lecture at the Museum of Natural History, which, it was said, was "a complete refutation of Darwinism." The lecturer was even represented as saying that if Darwin were alive and had the information possessed by the speaker, he would confess on the spot with shame that all his theories were wrong. Of course, every instructed man would know instantly that this was a "howler." He would know that every scientific worker is to-day a Darwinist *malgré lui;* that all science thinks in terms of evolution; and that the alleged statement could have been made only by an escaped lunatic. Investigation naturally discovered the blunder. The lecturer had, in fact, said that certain classes of facts which had come to light since Darwin's day tended to modify, in unimportant particulars, one of his unimportant theories of descent. That was all; but the hurried and ignorant reporter had the whole Darwinian theory done to death, and the doctrine of special creation triumphantly reëstablished. As we say, this was not so much dishonesty as incompetence. It was merely a proof of the danger of careless and untrained reporting, over which self-respecting newspaper men have so often occasion to grieve.

We would not by a hair diminish the responsibility of the press for disseminating sensational misinformation, but we can but marvel at the ease with which the public allows itself to be blown about by every wind of doctrine —particularly scientific doctrine. What is all our diffused education for if not to steady us against such gusty onsets

of ignorance? It seems as if our grasp on general principles were relaxing. We stand ready to throw over any of them at the first rumor of their being attacked. Scientific notions, in particular, we seem to hold at the beck and call of the first whimsey that gets itself into print. This is largely because we have gone over nowadays to the spectacular conception of science. Its favorite devotees and expounders are "wizards" or "magicians"; and the gaping crowd stands about waiting for them to come out of their laboratories or workshops with a miracle in either hand. From the definition of science as simply "organized and trained common sense," we appear to be drifting away; as from the conviction that the great lines of scientific attainment and future progress are pretty definitely marked out, and that any man who strays widely from them—especially if he is plainly suffering from the itch of publicity—is either a weak-minded enthusiast or a charlatan.

Against the credulous acceptance of malformed newspaper "science," it is the duty of every thinking man to brace himself. Unless we are to slip back into universal superstition, we must refuse to abandon fixed ideas at the demand of floating speculations; we must be stoutly skeptical when asked to believe that a university professor has suddenly been made mad by much learning; we must, in a word, preach more urgently than ever that chief tenet of the scientific faith—salvation by verification alone.

GUARANTEEING OLD MASTERS.

Mr. Louis Ehrich, whose collection of old masters was sold at auction on Friday night, has come in for varied comment for guaranteeing the genuineness and authenticity of every example. The critics of two leading papers have indulged in mock admiration of the guarantor's hardihood. But, generally, Mr. Ehrich's action has been praised as suggesting a needed reform in the picture market. Evidently, the merits of the case depend neither upon the authenticity of the pictures just sold nor upon the verbal form of the guarantee. If the seller has taken an over-hopeful view of certain old canvases, he at least offers complete protection to those who have bought upon the strength of his judgment. Ten years ago he sold a collection of Flemish and Dutch masters under identical conditions. Since then the example has been imitated only once, to our knowledge—in the case of the collection of the late Brazilian Minister Mendonça, whose estate took back some disputed pictures under the guarantee. This would seem to show either that the average amateur is well content to buy his objects of art "as is," or that our dealers and auctioneers, counting upon the ignorance or indifference of the salesroom public, are neglecting a desirable reform.

There is much to be said for the absolute irresponsibility that prevails in the greatest art centre of the world, London. Your true connoisseur is not only willing, but delighted, to buy his objects of virtue "subject to all errors of description." It is the prevalence of the dubious or worse in the auction-room that affords him precious opportunities. His peculiar triumph is to cut out a treasure from its unworthy surroundings, and do it cheaply. Certainly, the critic who picked up a fine Domenico Veneziano in a Fifth Avenue auction-room, for a song, too, had no reason to regret the absence of a guarantee. And if all of our collectors were connoisseurs, or even bought frankly what pleased them regardless of attributions, the matter of description would be of minor interest. Indeed, the game, as a free-for-all, would become intolerably dull if the rules were made by the dry-as-dusts. But, as a matter of fact, real amateurs are rare among us. Most buyers follow, sheeplike, the fashions set by the dealers, and, beyond a narrow round of French and early English painters, regard all art with the distrustfulness bred of ignorance. It may fairly be said that the cavalier treatment Mr. Ehrich's old masters have had in certain quarters, while in part justified, evinces rather the uneasiness of the critics before unfamiliar material than any serious attempt at appraisal. His guarantee sets, we believe, a valuable example; and until it is generally followed, New York will hardly take its proper place as a market for objects of art.

After the Marquand sale it was freely said that New York must be ranked with London and Paris. Nothing could be further from the truth. Where great prices are attained, it is usually the result of puffery. Even at our best salesrooms the fluctuations in the prices of similar objects shows that in the main the bidding is not by persons who know, but by ill-instructed enthusiasts or timid bargain-hunters. The same public that absorbed many of Mr. Marquand's rugs at about four to five times their value, let some of the best of Mr. Benguiat's go at base prices. But the eagerness with which objects associated with a great collector are disputed, shows that our public welcomes any sort of authority, and, if there were any reasonable assurance that it was getting money's worth, would constitute itself a real market for art. To ascertain values, we should then turn to our own sales prices as we do now to those at Christie's or the Hôtel Drouot.

Before that can be, somebody must be made responsible for the motley objects that fill our auction rooms; and in the absence of *expertise* among our dealers and collectors, that somebody must obviously be the vendor, or his agent, the auctioneer. And no form of partial guarantee is of value. Occasionally, the seller admits dispute *before* the sale, holding the dissenter from the catalogue financially responsible for any loss his opinion may cause. Such a stipulation is clearly unfair. A critic must pass upon pictures quite apart from money considerations; to implicate him in any fashion in the sale is to reduce him to silence or platitudes. If he abuses his privilege of criticism, his rashness will soon discredit him. Evidently, some form of professional guarantee is desirable, and one that fairly divides the inevitable risk of false judgment equitably between buyer and vendor. Such, in theory at least, is the practice of the Paris sales. Every collection is catalogued and appraised by a *commissionnaire priseur*, generally a dealer. For the attributions he is responsible, and—in case of error and substantiated protest—financially also, up to the sum set by himself before the sale. This fixed guarantee does the double service of limiting the expert's liability and of expressing his valuation of the picture apart from its attribution. Thus, if we found an apparently important Rembrandt priced at, say, 25,000 francs, we might fairly assume the expert thought it a genuine but inferior example. Should the appraisal run as low as 5,000 francs, we might assume that he had his doubts.

We believe that the art auction companies, at least one of which undoubtedly makes an honest attempt to accept only well-accredited collections, would do well to go a step further and offer no important collection except under some such guarantee. With a public in which sporting spirit abounds, there is little danger that such a sponsorship would be taxed vexatiously. As for occasional ignorant or bumptious criticism in the press, there would actually be less of it if the really admirable collections were authoritatively distinguished from the ruck of the fraudulent and worthless. But it is to be feared that criticism is about the last thing many of the interested parties desire. The other day a well-known dealer whose old masters are generally old, occasionally important, exceptionally what they purport to be, and always expensive, begged not to be "sandbagged" by a certain art editor. Sandbagging meant saying unfavorable things about pictures for sale. Until our dealers learn to welcome as free a discussion as prevails, say, in London, the claim of New York to be an enlightened art market will be most contestable, and the need of certified old masters fairly a crying one.

JULES VERNE.

The death of Jules Verne should strike with a sense of personal bereavement all boys who read and all men

in whom the romantic imagination of boyhood has not yet perished. He was a prophet with honor in his own country, for he and the famous Cathedral of Amiens were the twin marvels of the provincial city. Their two pictures, in all sizes and styles, stare from hundreds of shop windows. But this tribute is only a faint echo of that which came to him from every corner of the globe. Wherever love of adventure, coupled with curiosity as to the mechanism of the universe, exists, there Jules Verne finds his disciples. 'Around the World in Eighty Days,' 'Twenty Thousand Leagues under the Sea,' 'The Mysterious Island,' 'A Voyage to the Centre of the Earth,' 'From the Earth to the Moon'—here is a rollcall that should stir the pulses of graybeards, and almost summon back their irrevocable youth.

Verne's novels lack, we must admit, the great and enduring excellences of 'Robinson Crusoe,' yet to fall short of that matchless tale is far from failure. Many have tried to shoot with the bow of Defoe, have come cheerfully near to the target, and have still missed the bull's-eye. Paltock's 'Peter Wilkins' is, in spite of Lamb's generous praise, thin tissue in comparison with 'Crusoe.' Stevenson's 'Treasure Island' is the product of extraordinary intelligence and dexterity, but it wants bulk and depth. We lay down our 'Crusoe,' notwithstanding all its prolixities, with the conviction that we know the man. Whether wearing his skin cap and attended by Friday, or dressed as a sailor or a merchant, that heroic embodiment of ingenuity, piety, and fortitude could not escape our instant recognition. Captain Nemo, on the other hand, would be unrecognizable off the *Nautilus* and with his clothes changed; Cyrus Harding is a mere walking handbook of 'Facts Every Boy Should Know'; and even Phileas Fogg is not a convincing personality. In the art of characterization Verne is feeble. His creatures have certain tricks of dress or speech; they have specialties in knowledge, but no blood and vitality. They are hollow inside. Each, notwithstanding a fairly elaborate make-up, is, as Jean Passepartout described the redoubtable Phileas Fogg, "a genuine automaton."

Fortunately, boys are not contemplative philosophers. They will tolerate skilful character-drawing in a story that is crammed with incident; but, given the incident, they are entirely happy with characters which are differentiated in the most rudimentary fashion. "We read story-books in childhood," says Stevenson, "not for eloquence or character or thought, but for some quality of the brute incident." Nothing is better in its kind than the 'Arabian Nights'; nothing was ever written in which the caliphs, beggars, and robbers are more palpably wood and pasteboard. The fascination of the tales lies in the enchantment and the astounding adventures which vivify every page. 'Sindbad' thrusts upon us "brute incident," stripped of all the accessories which appeal to sophisticated taste, and captivates instantly the savage and the child.

The books of Jules Verne are the 'Arabian Nights' elaborately fitted with all modern improvements. The genii and the sorcerers of a few centuries ago have their lineal descendants in the accomplished gentlemen who are sometimes described as "the wizards of science." A submarine boat, a fast express, an automobile, a dirigible balloon, or a hollow shell shot at the moon, is a comfortable and highly plausible substitute for a travelling carpet or a roc. Given the problem of annihilating space and time, the unknown authors of the 'Arabian Nights' and Jules Verne both solve it according to formulas popular in their own day.

The charm of mystery is evident in the very title of Verne's works. No lad of twelve can resist the challenge of 'Twenty Thousand Leagues under the Sea,' 'Voyage to the Centre of the Earth,' and 'The Mysterious Island.' Had the subject-matter belied the captions, many eager readers would still have pegged away, lured by the mere magic of the words stamped on the binding. But the stories are worthy of their delicious names. The island *is* mysterious. Once you learn that the dog Top has been snuffing about the well in the Granite House, you and Cyrus Harding will never rest satisfied till you have discovered what it is that the sagacious animal hears and smells, till you have penetrated to that secret cavern where the *Nautilus* lies with the dying Captain Nemo.

On the scientific side of Verne's writing one may easily lay undue stress. He is not the first to embed scientific knowledge in stories for boys, though he is uncommonly successful in sugar-coating the pill. The method of Abbott and his imitators is to let Rollo draw Uncle George into endless and often futile discussion of the wonders of earth and sky. There is too much talk and too little action. Verne, on the contrary—and he has had many followers, notably H. G. Wells—vitalizes the dead fact by employing it in some striking feat in mastery of man or nature. The discourse on air pressure, water pressure, and hydraulics in 'Twenty Thousand Leagues under the Sea' is not knowledge for its own sake, but for the sake of managing the first and greatest of submarines in the delightful business of exploring the depths of the ocean. Nevertheless, as we have said, these contributions to science are not to be taken too seriously. The average boy can shed information as a duck sheds water. Who ever followed through those complicated calculations for constructing the great cannon and aiming it at the moon? If parents are severe-minded and doubtful about the propriety of the novel, the young reader can protest, "See, father, it tells us that, at 32,000 feet below the surface of the ocean, pressure on the human body would be 97,500,000 pounds"—an unanswerable argument. But the science, after all, is a mere husk. The kernel is of such stuff as dreams are made of.

THE WHISTLER EXHIBITION.—II.

LONDON, March 15, 1905.

Had Whistler never painted a picture, his fame would still rest as securely on his etchings and his lithographs, and it happens that at the Memorial Exhibition in London the collection of his prints is more complete than the collection of his paintings. There are fewer gaps in the series of etchings. There are hardly any gaps at all in the series of lithographs. Step by step, his progress in these arts may be followed, from the moment he set out on the roads of France, a student laden with copper-plates; from the moment when, in the fulness of his powers, he made his first experiment on the stone, down to the last plate he bit and printed, the last lithograph he issued. It seems scarcely possible that any museum, any national or municipal gallery, will ever be able to give the chance to study his black-and-white work which has been provided by a private society in a show destined now to close in a very few weeks.

The members of the committee in charge have realized to the full—at any rate, one of them has—the importance of this chance, and have done everything they could, by judicious hanging and arrangement, to help the student and the collector to make the most of it. Though the question of space has been a serious one, the prints are never crowded; on the contrary, they are hung so as to produce a decorative effect on the wall which alone is restful to the eye, while they are arranged in chronological order. The greatest difficulty of all has been presented by the loan of the etchings from the Royal Library at Windsor, a splendid contribution numerically; but when royalty "graciously condescends" to contribute to an exhibition, a due appreciation of the condescension must be shown in the treatment of the royal contribution, no matter what its merit. The King's collection has been hung apart, in the central hall, on the white walls that not long ago were the background to Rodin's "Main de Dieu," and up in the balcony, where the wonderful Venetian set can be seen better than it ever was seen before. This, necessarily, interrupts the chronological sequence; the rest of the fine series, lent by the several collectors whom I mentioned in my last letter, having a place in the largest of the three rooms. But, by a careful system of cross-references in the catalogue, this difficulty is disposed of. It is the student's own fault if his study of the series is less systematic; and, in studying Whistler's etchings, it is worth while being systematic in order to understand his wonderful command of the art from the beginning, and also the changes in his technical method of expression.

I do not say development, for, after the first experiments, there was, in a sense, no development. He revealed himself at once the master, even in the prints of what is known as the French set—the greater number in the present exhibition coming from Windsor. They are amazing as the performance of the mere student which Whistler was when he produced them, and this not simply because of their promise as the work of one so young and inexperienced, but for their actual accomplishment. Still, it was really in the London etchings, "the Sixteen," and the others, that he may be said to have found himself. Already, in the late fifties, when he came over from Paris, he was creating the masterpieces that surpass the best etchings of Rembrandt, and, of course, are far above those of any other artist who had at that date worked upon copper. The recent outburst of praise from the critics in London was bound to bring about a reaction, and I notice that in some quarters the old familiar charge of his technical feebleness—his impotence they appear almost to think it—is being revived. "Because achievement to him was so difficult, he had to pose as impeccable," we are assured; and again, that "to realize what he wanted was so intolerable a strain that every scrap of paper his hand had touched, every plate his needle had scratched, had to be inspired"; and so on, and so on. But who can look at these London plates and discover in them any sign of strain, intolerable or otherwise, any trace of difficulties in achievement? They are the work of a man sure of himself, to whom the realization of what he wanted was such a pleasure that, so far from evading difficulties, he might seem to be seeking them. He saw, as no one yet had seen, the beauty of the old tumbled-down Thames warehouse and the picturesqueness of the riverside, with its grime and glitter and toil, and he spared himself not a detail in giving it expression. He who was popularly supposed never to have learned how to draw—though one has only to turn to the two Coast Survey plates here exhibited to know what he could do technically—elaborated these London plates with the skill and knowledge of the accomplished draughtsman; never, however, forgetting the value of line in an etching, never sacrificing the spontaneity and freshness of his impression, never vying, like some etchers who came after him, with the detail of the steel-engraver, never losing sight of the well-balanced design in over-attention to its parts.

The London series in etching, like the "Blue Wave" and the pictures of the so-called Japanese period in painting, show upon what a solid foundation of knowledge and technique his later, broader style was based. As time went on, one can see in the London plates (in the "Adam and Eve," for instance) the approaching change. Detail is less elaborately worked out, more is left to suggestion, there is greater breadth in the handling. And then we come to the Venice sets, in which he seemed almost to paint on the plate with his needle as no artist ever had done or attempted to do, in which he appeared the master-printer as well as the master-draughtsman. The Venice prints from Windsor are extremely beautiful, fine examples of the color Whistler got in the printing, the quality he obtained by this painter-like method of expression—and indeed this and the Naval Review set are the only things of importance, as far as the prints go, from Windsor. The Amsterdam, the Brussels plates have much the same characteristics as the Venice work. And so one reaches at last the marvellous Naval Review or Jubilee set, the merest notes, they might be thought, on copper—water, sky, ships, all rendered with the greatest economy of line, the least possible detail, and yet as expressive in their way as the early Thames plates in all their beautiful minuteness.

Of course, the collection is not limited to the prints that were published in sets or that belong to groups. There are many of Whistler's portraits, strong in character as Rembrandt's, and full of a grace—as in the lovely "Jo's Bent Head" and so many more—never found in the Dutch master. There are the studies of models, the little shops the artist loved, the notes of streets in London, Paris, and the French towns, he knew so well. In fact, the omissions are comparatively rare down to the latest Paris series, which he never finished. And if there are even prints from plates he destroyed because he was not satisfied with them, it is a good thing that they should be exhibited, if only to silence the British critics who declare, in their ignorance, that he would have preserved and passed off as inspired every scratch of his needle, and who, in their hearts, continue to hate him. One of their number has gone so far as to revive the old Ruskin description, and to proclaim him anew the coxcomb. But writers who pass for prophets in the United Kingdom need not be accepted implicitly in the United States, and Americans must always remember that one reason why Whistler was never taken seriously as an artist in England, is because he was an American—an unpardonable crime in English eyes.

The lithographs are arranged with equal care in chronological order, and, as with the etchings, there is hardly a suggestion of a tentative or experimental stage. It was not until the end of the seventies that Whistler tried working on stone and lithographic paper, but at the first trial he evidently understood just what he could do, just what he should want to do, with this new medium—new, that is, to him. He never emulated the elaboration, the strong color—the "velvety blacks" that became so hackneyed in the writings of certain English critics a few years since—the greater finish and minuteness, the more deliberate picture-making, found in the prints of the French lithographers of an older generation, who had worked for publication in the weekly or monthly press, or of the English lithographers who had drawn on the stone for the illustration of large and imposing, but forgotten, gift-books. It happened that some of his lithographs were published in papers—for instance, in the *Whirlwind*, when they were to be had for the rare price of a penny apiece. But this may be said to have been an accident; certainly, he never used lithography for illustration as Daumier and Gavarni, or Prout and Lane did. He used it for no more definite end than to note for his own pleasure the beauty or character of the person or scene before him, and to note it in such a way that it could be multiplied for the pleasure of others. He never asked more than this of the lithographic chalk; and his wonderful little portraits, his churches, his sweep of the Thames with its bridges, his smithies and laundries and shops, his gardens and streets, are as complete and perfect, if in another fashion, as the bull-fights of Goya or the landscapes and marines of Isabey. If he exchanged chalk for wash on the stone, it was to obtain the same perfection in the result; his Thames "Nocturne" in lithotint is as lovely, as charged with mystery and poetry, as any he ever painted on canvas. If he introduced color, it was, again, only to achieve perfection; his old houses, with just the right touch of warm red or brown, of green or yellow, in the right place; his little draped models, tinted as delicately and daintily as the little figures of Tanagra, are as reticent as most modern lithographs in color are exaggerated, and they have the charm of his own pastels without ever losing the true lithographic quality.

But I think the great interest of seeing so many of Whistler's etchings and lithographs together is that it helps one to realize all the more fully how entirely Whistler, like every great artist of any age or race, lived in the present and relied upon what was about him for his subjects and motives. He did not have to borrow the habits and climate of others, to wander in groves, to be roasted out of broadcloth, in order to open his eyes to truth, to beauty. He found it in his own world, as Rembrandt had seen picturesque grandeur and noble dignity in the Jews' quarter at Amsterdam, or as Tintoret and Paul Veronese had in Venice, making no attempt to change its brocaded silks for the classic draperies of Athens, or as Velasquez in Spain, painting the Infantas, who, clad in unæsthetic hoops, are, as works of art, of the same quality as the Elgin marbles.

No matter where he was, where he went, beauty was ever with him. It was in his studio, in his models and sitters, as they were, in the costume of the day, with never a lament on his part that they were not Greeks. If he crossed the threshold of his studio, beauty was still everywhere—in the old shops and smoky streets of London as in the palaces and canals of Venice, in the churches of Wren as in the castles of the Loire, at the country blacksmith's as in the "fairyland" of the Thames at night; everywhere he found beauty, everywhere he recorded it, either on his copper-plate or lithographic paper, according to the need of the moment. And so it has come about that the artist who concerned himself least with "subject," who never designed his work to tell anything but the artistic facts he entrusted to it, has left in the series of his prints as complete a record of his life as if he had set out deliberately to etch and draw his autobiography. To go round the walls of the New Gallery, where these prints now hang, is to know where he lived, how he lived, what he cared for. You see him the student, wandering and working through the little towns of France; you see him settled down to work in London; you accompany him on his rare journeys to Venice, to Holland, to Belgium, and again through France. You even live his life with him, on terms of intimacy, I might almost say, with his sister, Lady Seymour Haden, whose home was his, and her daughter, "Annie Haden," who has come to be as historic a figure as the little Infantas of

Spain or the royal children of Stuart England. You are even admitted into the privacy of the apartment in the Rue du Bac, and watch with Whistler "The Sisters" at the piano, or his wife, now sleeping, now watering the flowers, now deep in "Confidences"; you breakfast with him in the garden there. And then you return with him to London, rambling in his company to the little out-of-the way churches of Soho, or the theatres of the Strand, past the old sweetshops and ragshops, to which few but he would give as much as a glance. You look with him from the windows of the Savoy to the Thames flowing under Waterloo Bridge, past the warehouses—the Thames that for him never lost its enchantment to the very end. You even have glimpses into the tragedy, the sorrow, of these later years. In a word, the life of Whistler is unfolded before you because art was his life, and art, as he believed, was concerned with the beauty that he himself saw and knew and felt until it became his own; not the beauty that had been seen by other men, living in other days, under other conditions. There was no artist who respected and reverenced the great traditions of the past more deeply and sincerely than Whistler, and this was why he understood, as so few modern artists do, that it was his business to carry on these great traditions by using his own eyes and giving to the world, not somebody else's impressions, but his own record of what he saw for himself.

To add to the completeness of the exhibition, the wood-engravings of the few illustrations Whistler made in the sixties for *Good Words* and *Once a Week* are included. There are also some of the originals of his series of drawings for Sir Henry Thompson's catalogue of his Collection of Blue and White Nankin Porcelain, and these are as extraordinary as Jacquemart's etchings of similar subjects. It is curious to find some comparatively recent designs on the wood—one or two quite elaborate—evidently intended for illustrations; one or two but slight sketches of heads. For some reason, they were never engraved, and, as they are now seen on the block, they give an idea of what the originals of the *Good Words* and *Once a Week* series may have been like. There are many other drawings in different mediums; one, with a peculiarly personal interest, being a pen-and-ink study of Whistler himself, done for the large full-length portrait he sent to the Paris Exhibition of 1900.

I must say at least a word in praise of the catalogue, which has been most carefully prepared and revised in the various editions, it now having reached the fifth. The pictures are accurately described, and this is most important for the purpose of identification in the case of Whistler, who sometimes changed their titles. Between twenty and thirty new etchings have been catalogued, Wedmorian blunders corrected, and the excellent supplement to the Wedmore catalogue, published in New York, supplemented. All the lithographs in Way's catalogue except two are entered, and twenty hitherto never described have been added. The type, spacing, and cover used are Whistler's. And altogether it is a catalogue to be bought even by those who are not fortunate enough to see the show.

It is a pleasure to be able to state that the Memorial Exhibition has proved a success, a tremendous success. It has been visited by the King and Queen, which means much in England; and in three weeks twenty-five thousand people have rushed to the New Gallery to applaud the artist they were as eager to despise during his lifetime.

FITNESS FOR THE SUFFRAGE.

To the Editor of The Nation:

Sir: If those good men, doubtless now in heaven, who laid the foundations of this Government, could know the provisions of the new Constitution of Alabama, they would, I imagine, heave a long-sigh of relief that we in this country are gradually recovering our political sanity. The candidate for suffrage must show some fitness for that privilege beyond the fact that he wears breeches and has survived twenty-one winters. Incredible as it may seem, some of our countrymen have recognized the fact that physical qualifications are not sufficient—that there must be some proof of mentality in the voter. To my thinking, this and similar movements, coupled with the Australian ballot, constitute the most important political development of recent years in America. The reaction against mob-democracy has undoubtedly set in, and there can be little doubt that the next generation will see the finish of its pestiferous reign.

Imagine the effect of a Constitution similar to that of Alabama, if applied to Illinois, or especially to Chicago, where we are now in the throes of a municipal election. Aside from the absolute silliness of electing a city clerk—a survival of the old hurrah-boys days of prairie-village democracy—interest is concentrated on the mayoralty. One of the candidates, himself a man of unimpeachable personal honesty, has endorsed in a public speech the notorious "Hinky-Dink." The lodging-house district is jammed full of tramps and vagabonds ready (and under our laws qualified) to vote. These "critters," and thousands like them, equally well qualified under our laws to vote, have no understanding whatever of the duties and obligations of citizenship; have not within the last twelve months been engaged in any lawful occupation, cannot read and write any article of the Constitution of the United States in the English language, have paid no taxes, and have nothing to pay taxes on, and probably never will have; a large part of them have been in jail, and undoubtedly more of them would be there now if they had their just deserts. They are the lads that swing elections.

Truly, American optimism is a fearful and wonderful thing! E. L. C. Morse.

Chicago, March 25, 1905.

THE HARVARD-TECHNOLOGY MERGER.

To the Editor of The Nation:

Sir: The publication, on Saturday, of the plan of merger between Harvard and the Institute of Technology—the plan, it should be understood, is not that proposed by Harvard nor accepted by her conferees, but that of President Pritchett—will at last cause Harvard men to speak out. They have held their peace for a year while the Technology alumni have vehemently expressed their opinion—not complimentary—of Harvard; but the body of Harvard alumni will be, in the last resort, the constituency whose opinion will decide this question; and already, in the past two days, one hears only condemnation of the scheme as set forth in President Pritchett's manifesto.

For a year Harvard has been made to seem the suppliant in this transaction, and her Scientific School has been unsparingly defamed by the men of the Institute. And yet Harvard men have not forgotten that it was covetousness for the millions left to Harvard by Gordon McKay which suddenly quickened the zeal of President Pritchett for an alliance. Nor are Harvard men blind to the fact that President Pritchett's plan stipulates that three-fifths of the income from the McKay fund shall go to the Institute. In return, what does Harvard get? The more President Pritchett's plan of merger is pondered, the more clearly will it be seen that Harvard gets nothing.

The plea that the merger will prevent duplication of plant and competition in education becomes more and more specious the closer it is analyzed. Stripped of verbiage, President Pritchett's plan will have this result: It will wipe out at Harvard the Scientific School—that department of the University which has made the greatest progress in relative numbers and efficiency during the past ten years. It will turn over to a board of which President Pritchett is the head, the men who have brought about this great change in the Scientific School, and who are opposed to him personally and to the merger. It will deprive Harvard of the opportunity which the McKay fortune has brought of developing a great School of Science, a school which in a comparatively short time may well attain to the eminence of Harvard's schools of law and medicine.

But for Harvard, and, indeed, every endowed institution in the land, the consummation of this merger may have the gravest consequences, if it shall happen—which seems incredible—that the Harvard Corporation and Overseers, against the known wish of Gordon McKay, shall practically hand over the spending of his money to the Institute of Technology. For years he was solicited by the friends of the Institute to leave his fortune to it; he looked over the ground deliberately, compared both institutions, and most deliberately decided that Harvard should administer his benefaction. No one denies these facts; but the advocates of the merger hope that, by getting the Supreme Judicial Court to support a legal quibble, they can really contravene Mr. McKay's wishes. But legal sanction is not moral sanction; and if the Harvard authorities shall so disregard the moral obligations of a great trust, it is certain that future benefactors of colleges will be careful how their draw their wills.

It is noteworthy that the School of Architecture is not included in this scheme. The inference is plain. Mr. Nelson Robinson, the munificent founder of that school, is still alive, and the advocates of the merger are too wary even to suggest laying their hands on it. Will they be equally mindful of his wishes after his death? Or, if Mr. McKay were living, and had given five millions to Harvard, does anybody suppose that either corporation would have the audacity to turn that money over to an-

other institution? Is it any more honorable to do so when he is dead?

If the plan which President Pritchett has published were really President Eliot's plan, then might Harvard men and the world sorrowfully accept it as an indication that President Eliot had reached the limit of his strength, and welcome the possibility of throwing part of the burden of governing Harvard on the shoulders of an alien institution. But, even if the calamity of old age should fall upon him, the governing boards of the University ought never to acquiesce in a project to give to a foreign body the control of a flourishing member of the University, and thereby to restrict Harvard's usefulness and prestige. If the task has become too heavy for President Eliot, then, with regret, must a younger man be found—one who will not think of surrendering one inch of Harvard's domain. We do not hear that Yale is trying to bribe some other institution to relieve her of the management of the Sheffield Scientific School, or that Columbia finds her School of Mines so burdensome that she would be glad to have the Stevens Institute run it for her.

Harvard men, when they understand the situation, and learn the methods by which this merger has been promoted, may be counted on to veto any proposal to cut off one of the vital organs of the University, to alienate the income of a fortune which will amount to $20,000,000 by the middle of the century, and to disregard, under any pretext, the wishes of the most liberal of Harvard's benefactors. HARVARD, A.B.

BOSTON, March 27, 1905.

GREEK AND HEBREW GENIUS.

TO THE EDITOR OF THE NATION:

SIR: May we say a word concerning the criticism in your last number on S. H. Butcher's 'Harvard Lectures on Greek Subjects'? The writer of the criticism suggests a comparison of Greek and Hebrew writings. Now we should very much like to see such a comparison, but we cannot feel that a good one is near at hand, for nothing amazes us more than the want of accurate knowledge that the classical scholar has of the Hebrew world, and vice versa. For example, in this criticism the writer speaks of Chateaubriand's comparison of Homer and the Bible, without, to our minds, quite holding up his hands enough in horror at the gross injustice of the comparison, for in Chateaubriand's work Homer, who sang somewhere near the beginning of Greek writings, is compared with the entire Bible. A bit is compared with a whole—and that whole, late as well as early. Or, to be more explicit, bits in the Odyssey are put beside bits in Job—that is, early Greek work beside late, full-blown Hebrew work. That really is not fair. If comparisons are to be made, let them be made between narratives of corresponding ages of culture. Let Homer be put beside the old Yahvistic narrative of Genesis (*c.* 800), let Abraham, as he appears in Y (not in P), be put beside Hector, let the craft-hero Odysseus be put beside the craft-hero Jacob; but do not put Odysseus's contemporaries beside Job. Really, somebody should write for scholars and clergymen a little book of dates, Greek and Hebrew, putting parallel writings opposite.

Again, may we enter a plea that writers should read the whole of the chapters from which they take their quotations, as Mr. Butcher, delicate Greek scholar that he is, certainly did not? For example, in his Harvard lecture, he quoted as an example of the more tender, evolved Hebrew spirit the first verse of Isaiah lxi.:

"The spirit of the Lord God is upon me; because the Lord hath anointed me to preach good tidings unto the meek; he hath sent me to bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound."

Where in Greece could we find such a sentiment? cried Mr. Butcher—meaning, apparently, such warm, tender, universal, brotherly-love ideals. Now, could Mr. Butcher have read that chapter as a whole, could any one read that chapter to its end, and find in it universal brotherhood? Plainly it has no thought beyond the Jews. They, not the world, are the broken-hearted. Certainly, it bears all the marks of having been written when the Jews were captive, probably in Babylon, waiting for a conqueror who, conquering Babylon, should allow the captive Jews to go home. He will come—Cyrus perhaps—and bring the year of Yahveh for which the Jews have so long been waiting, the year when Yahveh forgives, binds up the broken-hearted, looses the captives—but only the broken-hearted and captive Jews; for the very next verse says that the day of the vengeance of our God is at hand, and goes on to speak of the happiness in Zion (not in the world), when the Jews shall rebuild the waste cities, and in that day the Jew will no longer tend the stranger's flocks, but the stranger will have to tend his flocks.

"To proclaim the acceptable year of the Lord, and the day of vengeance of our God; to comfort all that mourn;

"To appoint unto them that mourn in Zion. . . .

"And they shall build the old wastes, they shall raise up the former desolations, and they shall repair the waste cities, the desolations of many generations.

"And strangers shall stand and feed your flocks, and the sons of the alien shall be your ploughmen and your vine-dressers."

It is a chapter of the tables turned; it never dreams of binding up the whole world, only of binding up its own wounds, for it goes on to tell of how the Jews shall eat the riches of the Gentiles, "and in their glory shall ye boast yourselves."

Certainly, it is a mistake to cite that chapter as an example of a superior and universal tenderness on the part of Israel for the sufferings of the whole world. Whether Israel had that tenderness, whether her God was a patriot or a universal lover of mankind, is another question; all we wish to enforce here is a plea that classical scholars will make a better study of the Hebrew world, and Hebrew scholars of the Greek world; that both will be more careful of the dates of the writings of those worlds, and certainly more careful to sense the chapters as a whole before drawing general conclusions from separate verses. Given these conditions, we should await with eagerness the suggestion of your excellent critic for a comparison between the Greek and Hebrew genius.

I am, sir, yours, etc., E. F. H.

CAMBRIDGE, March 26, 1905.

A LETTER OF JOHN BRIGHT.

TO THE EDITOR OF THE NATION:

SIR: I find among my papers a private letter written to me while in London by the late Right Hon. John Bright, which, with the consent of his daughter, Mrs. Clark, and his sister, Mrs. Duncan Maclaren, I conclude to publish. MONCURE D. CONWAY.

NEW YORK, 22 EAST 10TH ST. March 24, 1905.

ONE ASH, ROCHDALE, April 9, '85.

MY DEAR MR. CONWAY:

I am very sensible of the kindness of your letter. It is not likely that I shall visit your country—I am too far on in life for such an adventure.

As to the main purport of your letter I could write much, but shall only write little. I left the Government nearly three years ago, giving up what men prize greatly, and separating myself from Mr. Gladstone with whom I had acted for many years. This was my protest against the bombardment of Alexandria. I retired from the Government, and abstained from any further open condemnation of my late colleagues. The outrage at Alexandria has been followed by other blunders and other crimes. I have looked on with grief and shame—but in public I have said nothing or almost nothing.

When war is on, there is little use in protesting or condemning—I discovered that thirty years ago, during the Crimean war. If I could have done anything, it could only have been done by the overthrow of the Government—and their successors must have been those whose policy was and is worse than that of those they followed—a policy which, if insisted upon, would probably have involved a war with France. Viewing all the circumstances of the case, I have thought it was right for me to be silent. My position in regard to this unhappy business is peculiar, and I must follow such light as I have. I could not speak upon it without the use of language such as I am not willing to utter when dealing with the mistakes of my late colleagues, and of my personal friends. My language and purpose would be misunderstood, and wrong motives would be attributed to me. One member of the Government is my colleague in the representation of Birmingham; it would be painful for me to discuss the question before our Constituency, and I have spoken on other topics—partly on Foreign policy, but without direct reference to the Egyptian muddle.

You speak of the good people you know who ask why I am silent. I cannot now give them an answer—if they could trust me in so great a question, perhaps they will trust me even though I am silent when they would expect me to speak. If I have any influence with the Government it has not been withheld, but I have not appeared in public as their accuser. I believe, looking to the home interests of the Country, and to its foreign interests also, I have done what was my duty in this difficult case. We want a thorough change in our notions of foreign policy—when it will come I know not—perhaps some great catastrophe is approaching. I sometimes suspect it. Earthquakes come without noise of footstep. Europe is nearly ready for one, and its nations, we amongst them, may need a lesson.

Forgive this unsatisfactory reply to your very friendly letter. I feel sure you will not misunderstand me.

I am, very respectfully yours, JOHN BRIGHT.

MISS GUINEY'S FAITH.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to correct a slight error in your excellent review of Miss Guiney's book on Hurrell Froude? Miss Guiney is "an ardent Roman Catholic," but not a convert. She is of Irish descent on

both sides; her parents were both Catholic; she was educated at a Sacred Heart convent, and has known no other faith.

Yours truly, M. G. M.

SCITUATE, MASS., March 22, 1905.

Notes.

The publication for the current year of the Selden Society will be the third volume of the 'Year-Books of Edward II.,' edited by Professor Maitland. The next in this series will be issued in 1906 as a bonus volume, or in 1907 in due course. The second volume of 'Borough Custumals' is set down for 1906. The Society's secretary and treasurer in this country is Mr. Richard W. Hale, No. 60 State Street, Boston.

Dodd, Mead & Co. will publish in April 'The Trial of Jesus,' by Giovanni Rosadi, and a biography of Browning by Charles Harold Herford.

An ambitious collection of proverbs of all nations — 'Spruchwörterbuch: Sammlung Deutscher und Fremden Sinnsprüche,' etc. —is in process of publication in Berlin in twenty monthly parts (New York: Lemcke & Buechner). Its arrangement is alphabetical according to the leading word (German), and chronological as regards the examples, and classified when the material is superabundant. All foreign proverbs are both given textually and translated into German, and their source, when literary, indicated with as much precision as possible—even to the refinement, in the case of dramas, of mentioning the character in whose mouth the saying is placed.

The monumental critical reprint of Muratori's 'Rerum Italicarum Scriptores,' undertaken five years ago by the house of S. Lapi, Città di Castello (New York: Lemcke & Buechner), under the direction of G. Carducci and Vittorio Forini, is making steady progress. To the twenty-nine volumes projected will be added a series, beginning with volume xxx., of historical sources unknown to Muratori or which he was unable to include in his collection. What gives the edition a special superiority, apart from the improved texts, is the indexes supplied to every volume. No library can err in subscribing to this enterprise, which cannot, by the way, be shared piecemeal.

The fifth edition of Oscar Fay Adams's 'Dictionary of American Authors' (Houghton, Mifflin & Co.) is extended by a supplement more than equal to a quarter of the main work. So far as this portion embraces the names of living authors, it invites comparison with 'Who's Who in America.' We have examined the letter A, and find nine entries in Adams not in the other directory, but they are mainly unimportant. Prof. W. J. Ashley is no longer constructively an American author, having gone back to England for good. Slight differences of spelling occur under Albee (Mrs. Helen Ricker [Rickey]) and Alexander (James Waddel [Waddell]), Mr. Adams being certainly right in the latter case. For the rest, he does not pretend to such bibliographical fulness as 'Who's Who,' nor to indicate date of publication, at least regularly.

There are no more beautiful villages in England than those which nestle in the Cotswolds. Whether in Oxfordshire, Gloucestershire, or Worcestershire, it is among the low hills and fertile valleys of the Cotswolds that one finds the most picturesque farmhouses, of gray stone, mainly in the Jacobean style, the prettiest gardens, the greatest variety of wild flowers. Tourist-ridden Devonshire cannot compete with this region. In his 'Broadway' (E. P. Dutton), Mr. Algernon Gissing, brother of the novelist, undertakes to write a description of one of the finest of the Cotswolds villages. Since Mr. Abbey, the painter, had his studio there, and especially since Miss Mary Anderson, after she became Madame Navarro, settled in its main street, Broadway has been much frequented by Americans. For some weeks of the summer it has its American season, when the prices of lodgings and of old furniture in the small curiosity shops soar to giddy heights. But nothing can spoil Broadway. It is too far from a station to be known to the mere tripper, and the natives are fully conscious that to modernize its picturesqueness would be to ruin their market. Of this modern vogue of Broadway, of the literary and artistic celebrities who have transformed it into a sort of English Barbizon, Mr. Gissing gives not the slightest hint. His little book is strictly topographical, and he is plainly more interested in the setting of the village, the neighboring roads and the rolling country, the flowers, and birds, than in the actual houses which mark its history. The illustrations, by Mr. New, are of the decorative kind; that is to say, they are severe in outline, scorn detail, and make one wonder whether a good photograph would not be more effective and more generous to Broadway.

'Evesham' (E. P. Dutton), written as well as illustrated by Mr. E. H. New, belongs to the same series of Temple topographies. In this volume thorough justice is done to the buildings of a charming little Worcestershire town, with its two parish churches elbowing one another in the same yard, the single long thoroughfare, the river that encloses the town on three sides, the beautiful houses of the sixteenth and seventeenth centuries. The Vale of Evesham is one of the most fertile in England, a great market garden full of fruit trees, but saved from monotony by its setting of hills. King Charles shed tears over the loss of "strong-garrisoned Evesham," and the battle that was fought there was the single adventure of this quiet little country town, which is happy in escaping the railway, and thus preserving to a great extent its picturesque character.

Apropos of our recent notice of Creswell's 'Quantock Hills,' we may call attention to an interesting article on 'Wordsworth in Somerset,' in the February *Temple Bar*. Wholly in accord with our note, the writer, Ellen Hallam Moorhouse, emphasizes the need of considering Wordsworth's development more narrowly during his stay at Alfoxen, and his earlier, unclouded friendship with Coleridge. Her treatment is naturally somewhat popular; there is room for a searching dissertation on the subject. Perhaps M. Joseph Aynard, who has a doctoral thesis on Coleridge under way at Paris, will have something original to tell about the relations of the two poets in the first days of the 'Lyrical Ballads.' At present the bibliography on this part of their lives is not extensive. For those who may be interested, we add references to *Macmillan's Magazine* (vol. 46, p. 413), *Athenæum* (1893, I., p. 765, and 1896, I., p. 413). Nichol's 'The Quantocks and their Associations,' better known, perhaps, is not very satisfactory. Of course the main authorities are Mrs. Henry Sanford's 'Thomas Poole and his Friends' and Professor Legouis's 'Early Life of William Wordsworth.'

The quality of the reproductions in "Newnes's Art Library" (New York: Frederick Warne & Co.) is improving, to judge by the two latest issues, devoted to Van Dyck and G. F. Watts, though it has not yet attained a very high standard. As drawings are easier to reproduce properly than paintings, the result achieved in two books from the same publisher, but imported by the Scribners, is more satisfactory. They are similar in scope and manner to the "Art Library," but have a larger page and give us a number of the drawings of Dürer and of Burne-Jones in acceptable shape. A volume of Holbein's drawings is announced, and the field is so large and so fascinating that many more volumes of 'Drawings of the Great Masters' should follow these, and be sure of a welcome. What would not Dürer himself have given for such collections of the work of the masters as modern reproductions can place, for a few dollars, in the hands of every student?

The Langham Series of Art Monographs has already received notice in these columns in connection with the little book on Nuremberg. We have now the volume, by Selwyn Brinton, M.A., on 'The Eighteenth Century in English Caricature.' A most inadequate little colored print serves as frontispiece, and two, no better, are in the volume, but the dozen of black-and-white reproductions are sufficiently successful. These are taken from Hogarth, Bunbury, Gillray, and Rowlandson; much the greater part from the last named. It seems like an odd straining of a well-understood term to apply "caricature" to such pieces as Hogarth's "Distrest Poet" or the famous morning scene from "*Mariage à la Mode.*" That is not caricature; and yet there is no other title ready for the treatise which Mr. Brinton had in hand. Satirical and humorous representation and artistic record come to be classed under caricature, ill as that expression fits them. Rowlandson's drawings are caricatures—there is no doubt about that; and the selection here given will be thought sufficiently wide in its scope, unless, indeed, the student were to ask for some slight reminder that Rowlandson's work was not always hideous in its result. The text is very intelligent, showing much insight and a large sympathy with humorous design in all its forms. The chapter entitled "The Comedy of Vice" is very delicately touched, and that devoted to politics, being rather historical than critical, still tells the reader what he wants to know. The author pretends to no very elaborate range or minute study of the costume or surroundings of any particular epoch, but what is evident in the illustrations is intelligently discussed.

'Golden Chopsticks, and Other Japanese Children's Songs,' by Mrs. Maude Madden, an American lady in Sendai, Japan, is a praiseworthy attempt to render a few of the hundreds of known lullaby songs of mothers and nurses in "the Paradise of Babies" into English rhyme. Mr. Watanabe, an artist in this northern Nippon city, has illustrated

the attractive book of thirty pages, which contains musical scores in our notation, Japanese text, and a page or two of notes in English. Mr. Manjiro Takeda of Sendai is the publisher (price, postpaid, one dollar). It is a courageous attempt to put into so alien a speech as ours these nursery rhymes and delightful nonsense, both in many cases centuries old, though a few are modern kindergarten ditties. We recognize "The Song of the Nightingale," "The Monkey and the Moon," and "Urashima" as long-time favorites. The "Buddhist Children's Chant" recalls the priests and images of Jizo and Kuanon, which incarnate the ideas of pity and mercy. The onomatopoetic element is large, and the practical experience of a mother in the nursery has combined with the resources of the *ama's* memory in this creditable piece of work. From experience with the piano, we can declare most of the melodies reproducible with our own young folks.

The significant features of the Proceedings of the Massachusetts Historical Society for 1903-04, as displayed in its eighteenth volume, have been already commented on for our readers. We need only recall President Adams's paper on Queen Victoria and the Civil War, Mr. Worthington Ford's editing of Hamilton's Notes of Debates in the Federal Convention, and Col. Livermore on the Numbers in the Confederate Army. The memorial sketches embrace a number of useful, some eminent, citizens, and among these we remark one as admirable as it is belated of Edmund Quincy, by his kinsman, Josiah Phillips Quincy. Portraits accompany each sketch, and there is another—the frontispiece—of the youthful Edward Everett, in virtue of his autobiography in two fragments pieced together and eked out by his son, Dr. William Everett. The future editor of the *North American Review*, President of Harvard, Governor of Massachusetts, and Minister to St. James's, going abroad in 1815 to prepare himself for his Greek professorship at his alma mater, was in London when the battle of Waterloo was fought, and in the winter of 1818 visited the mother of Napoleon and others of the family resident in Rome. Lafayette, Byron, Scott, and Humboldt were also seen familiarly, and, strangest of all, he carried a letter of introduction from Byron to Ali Pasha at Yanina.

Of the forthcoming Proceedings we have an agreeable foretaste in some remarks by Dr. Samuel A. Green made last January concerning John Foster, the earliest engraver in New England. Foster was a native of Dorchester and a Harvard graduate, and passed from engraving to printing as his craft. His cut of Richard Mather in 1669 heads the list, and he probably engraved the first map published in America—of New England namely. He also executed something like an Indian horn-book for the Apostle Eliot. His gravestones are still standing, and his will, preserved in his own hand, refers to "carueing tools," no doubt his gravers.

The earliest painter and organ-builder in America was, according to the *Pennsylvania Magazine of History and Biography* for April, a Swede, Gustavus Hesselius, who accompanied an elder brother to this country in 1711, landing in Wilmington, and living first in Maryland and afterwards in Philadelphia. His portrait and his wife's are now owned by the Pennsylvania Historical Society, and are reproduced in the magazine.

Worthy of mention is a Bibliography of the Massachusetts House Journals, 1715-1776, compiled by Mr. W. C. Ford for the Publications of the Colonial Society of Massachusetts. Mr. Ford has pieced together a complete file, and indicates the several libraries where the component parts may be found.

We have received from the Carnegie Library of Pittsburgh parts 2, 3, 4, of its Classified Catalogue, part 1 being reserved for issue in a complete volume. These are issued at a very moderate price—15, 25, and 50 cents postpaid—and deal with Philosophy. Religion, Social Science and Philology, and Natural Science and Useful Arts respectively. Search for any particular work is facilitated by author-indexes.

We welcome the up-to-date Poole, issued monthly at 298 Broadway, the so-called *Library Index*, for the first quarter of the present year. It is a key to periodicals, of course, with author and subject titles, and distinction of current fiction by the use of italic type; but, furthermore, there is an index to dates of the principal events in the next preceding month, which will be of great service, and a list of leading publications of the month suggested for library purchase (with brief appreciations). Finally, many of the periodicals indexed advertise regularly their table of contents. This enterprise will be summed up in an annual supplement to the "Abridged Poole."

The Announcements of the Western Reserve University Library School for 1905-1906 contain for the first time detailed statements of the senior-year courses. While the studies of the junior year for the most part are of a practical nature, planned to lay a solid foundation of technical knowledge, either for immediate work of a subordinate character or as a basis for further study, those of the second year are more theoretical, and, as far as one may judge from the outline, advanced in reality as well as in name. The courses are presented in a more systematic form than in last year's Announcement, being arranged under the heads of Bibliographic Courses, Technical Courses, Administration, and Miscellaneous. The classification is on the whole satisfactory from a scientific as well as from a scholastic point of view, though it might be remarked that History of the Transmission of Learning, History of the Printed Book, and History of Education are not Library History; nor does the historical group fit in well under Administration, between the general subject of Library Organization and Administration and the minor one of Work with Children; it would seem that the Historical courses might deserve a more independent place in the curriculum.

The opening article of the *National Geographic Magazine* for March is upon the characteristics of the Japanese people, by Baron Kaneko, in which he maintains that his countrymen are not simply a race of imitators. Their faculty for imitation first, then of adaptation, and finally of origination he illustrates in their language, literature, religion, and government. He closes with the statement "that our national ambition is, by engrafting the Western culture and science upon our own institutions, to blend together and assimilate the two types of civilization—Oriental and Occidental—and by doing so to bring forth a new type of civilization, in which the culture and science of the two hemispheres will meet, not in conflict, but in harmony, so as to enable us to share the inheritance of Christian religion, Oriental philosophy, Greek art, Roman law, and modern science." The relation of the geographic names to the history of our country is shown by Mr. R. H. Whitbeck, in which he calls attention to the widespread preservation of the Indian names for lakes and streams, but not for mountains, bays, or islands. Mr. S. Paige describes life at Fairbanks, the centre of the Tanana gold fields, Alaska, and there is an illustrated sketch of the Government irrigation work in the West. A fund of $30,000,000 from the sale of public lands has accumulated during the last three and a half years, and work has begun in eight States which will result in making gardens of nearly one million acres. Dr. E. E. Hale contributes a characteristic note on his story 'The Man without a Country,' saying that he intended in his opening paragraph to place the wreck of the *Levant* on a spot high on the Andes. A proof-reader, probably thinking it an inaccuracy, changed the longitude to nearly that of the Marquesas Islands.

On February 4 the distinguished Orientalist, Dr. Edward William West, died at Watford, England, in the eighty-first year of his age. He completed his studies nearly half a century ago in India under the direction of Martin Haug, then superintendent of the Sanskrit Department in the Government College at Puna, and afterwards lived several years in Munich, Bavaria, where, in recognition of his scholarly achievements, the University conferred upon him the honorary degree of Ph.D. He was especially eminent for his thorough knowledge of the Pahlavi language and literature, from which he translated the 'Bundahish,' 'Bahman-Yasht,' and other important Parsi scriptures for Max Müller's 'Sacred Books of the East.' After the death in 1876 of Martin Haug, who had been called to the newly established professorship of Sanskrit and comparative philology in the University of Munich in 1868, Dr. West brought out a third, greatly enlarged and thoroughly revised, edition of his 'Essays on the Sacred Language, Writings, and Religion of the Parsis' (London: Trübner, 1884), with a biographical memoir of the author by Prof. E. P. Evans, also a pupil of Haug. On the first appearance of this work at Bombay in 1862, Max Müller wrote: "It is a volume of only three hundred and sixty-eight pages, and sells in England for one guinea. Nevertheless, to the student of Zend it is one of the cheapest books ever published." Dr. West possessed a frank and kindly nature, and was as remarkable for his modesty as for his learning.

A correspondent raises a question regarding the omission of John Quincy Adams, Hamilton Fish and William H. Seward from the list of Cabinet officers whose services equalled that of the present Secretary Wilson, published in the *Nation* of March 16. Seward did serve as long as Gideon Welles, whose case we cited. But Hamilton Fish, who was appointed Secretary of State on March 11, 1869, lacked just a week of eight years. As for Mr. Adams, who was Monroe's Secretary of State, the Biographical

Congressional Directory shows an entry, "Richard Rush of Pennsylvania (Attorney-General) *ad interim*, March 10, 1817," thus interrupting his service. Our correspondent cites Daniel Webster as another example of a Cabinet officer three times appointed, yet if his retention by President Tyler is counted as one, President Roosevelt's similar action should also be counted, thus giving Mr. Wilson the unique honor of having been four times appointed to the same Cabinet office.

—The hundredth number, completing the twenty-fifth volume, of the *American Journal of Philology*, has just appeared. In a retrospect the distinguished editor, Professor Gildersleeve of Johns Hopkins University, talks frankly to his hearers, "closing the twenty-fifth volume," as he says, "in cheerier mood" than he opened the first. In the conduct of the *Journal* he has had no associate, and every number has received his personal care. The project of such a periodical was indeed in the air a quarter of a century ago, and others might have undertaken the work if Dr. Gildersleeve had not, but now all scholars agree that under no other editor would the *Journal* have been so creditable to America. To say that he is beyond the ordinary philologist's praise for breadth and accuracy of scholarship, is to state only a part of his qualifications for editorial work. His watchfulness and critical acumen have made him dreaded as well as admired. At times he smiles at his oversights in proofreading, but he has detected far more slips in the work of others than any have found in his publications. It is curious that his chief reputation and so much of his work should be in the field of syntax, while his essays, and little touches on every page in his most technical publications, show him to have a very marked and picturesque style of his own. But indeed no other scholar has done so much to show the necessity of a careful study of syntax for the proper understanding of a classical writer's style.

—The *American Journal of Philology* has had more rivals than it expected. Dr. Gildersleeve enumerates the *American Journal of Archæology, Modern Language Notes, Hebraica*, the *Classical Review*, and the "long line of Studies and Bulletins, stretching now from Massachusetts Bay to the Golden Gate," as having entered the field for which the Transactions of the Oriental Society and of the Philological Association were the sole publications before the founding of the *American Journal of Philology*. Naturally, contributors as well as subscribers have been drawn from the more general to the more special publications. The philologists of the leading universities have not made to the *Journal* as many contributions as might have been expected. But it has not suffered for lack of good material, and it continues to be the one national periodical which covers the whole field of philology. While it is devoted principally to classical philology, it has enough papers on themes connected with work in Sanskrit, linguistics, and all modern languages and literatures, to stimulate the reader who is laboring in a neighboring department, and to acquaint him with the trend of modern discussions. The book-reviews and reports of periodicals, and the bibliography, are useful, and often excellent. Every reader turns first to the "Brief Mention," in which the editor speaks familiarly and entertainingly on philological topics. The chief complaint that American scholars bring against the *Journal* is that its care has kept its editor from publishing work of his own, which has been indefinitely postponed, but which we still hope may be given to the world. Dr. Gildersleeve, however, says that as to this he has no regrets. "I should doubtless have had more books to my credit or discredit, as the case may be, and I have had to renounce a number of projects that were near to my heart. But I do not know that I could have employed my time better."

—Dr. Josiah Strong introduces to the readers of the *Century* the Prince of the Veis, Momolu Massaquoi, of Ghendimah, West Africa, who makes a strong plea to Christendom to be let alone in the attempt to develop an independent African civilization among his people, on a Christian basis. The Prince was for a time a student in an American college, but returned to Africa to take the throne upon the death of his mother. A few years later he represented his people as a member of the Parliament of Religions and the Ethnological Congress during the Chicago Exposition. His plea, in brief, is simply to have a free hand to introduce among his people such of the blessings of civilization as they can assimilate without having its vices forced upon them by outside pressure at the same time. His country comes within the British protectorate of Sierra Leone. Such an appeal forms an excellent test of the sincerity of the claim that the Anglo-Saxon race enters such lands primarily on a benevolent mission. Melville E. Stone of the Associated Press tells of the reorganization which has been effected since the Spanish-American war in the method of securing and transmitting news from France, Germany, and Italy—not very successfully for the peninsula, we must remark. Other articles by Mr. Stone are to follow, the next on abolition of the Russian censorship on foreign news. The experiences of the American nurses who went to Japan are related by their leader, Mrs. Anita Newcomb McGee. In her opinion the recent rapid advance in Japanese civilization resembles an attempt to walk vigorously with one foot while the opposite limb is heavily bandaged. The men are trying to get forward, while the women are lagging behind.

—The great variety of country life in England is admirably set forth in 'Pages from a Country Diary,' by Percival Somers (London: Edwin Arnold; New York: Longmans). It is the journal, for a year, of an English country gentleman who does a little of everything that one can do in the charming counties and shires which lie to the south of London, even though one is not the owner of a great estate. A mere record of hunting, shooting, and fishing can be made interesting enough even when it appeals chiefly to the sportsman. Mr. Somers, however, pursues his sports not without philosophy; and the pages of his diary reflect the life of the country people and the eccentricities of his friends more often than the excitements of the chase. Still, there is hardly an English sport in which, in the course of the year, he does not take part. He has a good deal to say about the various sorts of rough shooting that he enjoys in all parts of England, but his heart is in fishing. He tells amusing tales of sundry country-house visits paid with his wife, Belinda, and there is a verisimilitude about these descriptions which the modern novelist of Mrs. Humphry Ward's pattern usually fails to achieve. His indictment of the food offered to the traveller in the hotels of English country-towns will be echoed by many an American who has explored cathedrals and made pilgrimages to the homes of authors on the most shocking diet that was ever devised, and at the most ruinous prices. One would think that the "motor-car" which you may now meet in every English lane would have introduced some improvements in provincial English food; but one has only to remember the stale and chilly provender that one has to face at every English railway "refreshment room" to realize that the Englishman travelling in England cares not what else he eats if only he can secure cold beef and mustard. One little touch we cannot omit. Once Mr. Somers encounters an American of what we may call the travelling class. This was a lady bicyclist, "a professor or teacher at a great American scholastic establishment for women. She was about twenty-three, had for years cast off parental control; and her curiously fashioned bicycling costume, the blue veil that protected her complexion, her nickel-plated courier's wallet, and her absurdly pointed shoes, sufficiently marked her nationality." She remarked, "through her charming little nose," "Waal, ef you caynt mend your machine, I guess I'll hev to mend it for you," which we are proud to say she did. When they parted, she electrified Mr. Somers by producing her card; on which he remarks: "Fancy an English school-teacher with a visiting-card!" In that ejaculation you may measure the Englishman's view of the dignity of the educational profession. There are a few excellent illustrations of English scenery in the book, and it can be confidently recommended to all who care for records of outdoor life flavored with the philosophy of a genial observer of men and animals.

—A useful book that seems to have escaped due notice as yet in this country is Mr. Basil Worsfold's edition of 'The Prelude,' in the King's Poets series (London: The De La More Press, 1904). Though the definitive edition of this poem has still to appear, Mr. Worsfold's is altogether the best thus far, since it brings together in compressed form practically all that is worth while in previous annotations, and also adds new material of considerable interest, such as the indications (pp. 381-383) of Wordsworth's familiarity with the writings of Gibbon. Nevertheless, it is observable that the editor has not followed his poet to any great depth in reading either the history or the geography current about the year 1800 or earlier. Wordsworth's serious study of travel literature and the like is, indeed, a matter that has not been fully grasped by his editors hitherto, though it bears directly on the composition of his *magnum opus*. Mr. Nowell Smith, who belongs to the future, being now engaged in tracing unidentified allusions throughout the poet's entire works, should not blink a large number of direct and indirect references to the travels of Hearne, Bartram, Carver, Bruce, and others, many of which

are to be found in 'The Prelude' and 'The Excursion.' In the way of more positive criticism, we may question the advantage of quoting (p. 387) from the French of M. Legouis's 'La Jeunesse de William Wordsworth,' when Mr. Worsfold knows (p. 421) of an excellent translation in English. Objection may be raised also to the opinion (p. 392) that the poet's "mental development on the lines of creative literature would have been stunted [at Cambridge] by close study in a branch of human knowledge so rigid in its processes of thought as mathematics." Mr. Worsfold is seemingly unaware of Wordsworth's later application to mathematics, about the time when 'The Prelude' was incipient. He should bethink himself of the rigorous processes of thought hinted at in the 'Ode to Duty' and the sonnet commencing "Nuns fret not at their convent's narrow room." He should also reflect on the nature of some of the studies of Plato, Dante, and Milton, before cherishing too warmly any belief so foreign to the genius of Wordsworth as that the imagination of pure science, however "rigid," is at all inimical to poetry.

—A rather laborious piece of archæological work in a small field has been well performed by Miss Caroline Ransom in her 'Couches and Beds of the Greeks, Etruscans, and Romans' (University of Chicago Press). Her investigation, in so far as it is original, depends upon an examination of monumental sources; from the literary she draws little, and that out of the usual handbooks. The volume, a fine quarto, is beautifully illustrated by many full-page plates and cuts, and the text shows evidence of a scholarly study of them, and, what is almost better, the application of much common sense. It is, for instance, laudable that Miss Ransom recognizes what so many have ignored, that wall paintings of Roman times cannot be taken as evidence for contemporary things, and that the shortness of the beds on Greek vases and in other forms of art is apt to be a mere arbitrary convention. Her enterprise in causing a furniture factory in Chicago to make a large working drawing from the odd-looking couch on a certain Greek vase is likewise commendable. The drawing clearly shows that the design on the vase is no mere artist's dream, but structurally practicable. We miss, however, any distinct statement of what Miss Ransom considers to have been the usual width of the dining couches on which the ancients reclined at meals, and this indeed is a common defect in the handbooks. The only instance in which Miss Ransom seems to have noted this point is in the case of a couch (wrongly restored as a seat), at Lyons, the width of which she gives as .98 cm. This seems almost impossibly narrow. The Boscoreale couch is 1.2 m. wide, and small enough at that. In any event, we may be thankful that the promiscuous custom of reclining at table, three on a couch, is a thing of the past. Modern dinner-parties are crowded enough, in all conscience. But the greater part of this book is devoted to considerations of materials, technique, and ornamentation, and here we have only to suggest that, on the necks of horses and mules which serve to support the couch head cushions, the collar which puzzles Miss Ransom seems to be about the same as that which appears on the mill-horses and mules in the two well-known Vatican reliefs.

A GERMAN VIEW OF ITALY.

Italy: A Popular Account of the Country, its People and its Institutions (including Malta and Sardinia). By Professor W. Deecke. With numerous maps and illustrations. Translated by H. A. Nesbitt, M. A. London: Swan Sonnenschein & Co.; New York: Macmillan. 1904.

This handsome volume contains an elaborate account of Italy, worked out with true German thoroughness by a German professor. It contains many illustrations, the subjects of which have been judiciously selected. It covers pretty nearly every aspect in which the land and its inhabitants can be regarded. Beginning with the boundaries of the country and the ancient attempts at geographical description, it proceeds to treat of the orography and general features of the surface, goes on to the geology and the climate, giving incidentally an account of the volcanic phenomena, and touching briefly on the animals and plants. The various elements of the population are then described, with a short sketch of the history, and a fuller account of products, trade and manufactures. Fifty pages are devoted to political institutions, including finance, internal communications, and education; fourteen pages to the Church, twenty-eight pages to art, language, and science. The rest of the book, about one hundred pages, is occupied by a topographical description of various parts of the peninsula and the adjoining isles. Sardinia comes properly into this description, as it belongs to Italy, both ethnologically, linguistically and politically. Corsica does not come in, though it is Italian in respect of history, and to a large extent of speech also, being no doubt omitted because it has for more than a century been attached to France. But with some inconsistency the isles of Malta and Gozo are included, though they have not had any political connection with Italy since the days of the Emperor Charles the Fifth, who granted them to the Knights of St. John. From the latter, as every one knows, they passed to the English, who still hold this little group. Italian is no doubt largely spoken by the educated class in Malta, but the native Maltese tongue is a corrupt dialect of Arabic, and the people are in no sense Italians, whereas the Corsicans are much more Italian than French.

Taking the book as a whole, it is a careful and intelligent piece of work, clearly and simply written, and generally accurate. We have noted a certain number of errors in fact, but none of great importance, though there are some errors in nomenclature, and some mistakes in the accounts given of particular places. The translator has now and then used German forms of expression which surprise us. For instance, he calls Styria "Styria mark," an odd way of rendering into English the German "Steyermark"; he speaks of the "Ligurian-Celtish" language; he refers to the Terglou as "Triglaue," a name under which American readers will hardly recognize the striking peak which they see from Venice on a clear morning in the far northeastern horizon. "Triglav" is no doubt the local Slavonic word, but it would have been better to use the well-established name. (Apropos of mountains, we should like to know what authority the author has for repeatedly referring to Monte Amiata in Tuscany as a volcano. Its summit is a mass of conglomerate rock). Among other mistakes in nomenclature (some, no doubt, due to the printer) we may note "Trepani" for Trapani (on p. 71), "Molye" for Motye (p. 443), "Stymæan" for Elymæan (p.444). The renderings of German terms do not always convey the true meaning in English; *e. g.*, the reference to the "precipice" of Achradina on page 438, where "plateau" would have better described the nature of the ground; the term "pedestal" applied to the steep ridge on which Girgenti stands, and "cone" for the rocky hill of Enna, also a ridge, with precipitous sides and a flat tabular top, but by no means a cone.

A book which amounts to an encyclopædic description of Italy from so many points of view cannot easily be dealt with from all or even most of those points, so we must be content to refer to a few only. The topographical part is really something between a gazetteer and a guide-book, fit to be used for reference rather than to be read continuously. The descriptions it contains are generally correct—we have noted a few inaccuracies, but of no great moment, in the historical references; and the summary accounts of Sardinia and Malta are well done, dwelling upon the points of most importance. On the other hand, the sketch of Italian history is somewhat superficial and meagre, nor is it always correct in details. To talk of "the pretended Donation of Pepin" is to dismiss a difficult question in a cavalier and misleading way. The Emperor Conrad III. did not "abandon" Italy; the expression "Romisher [*sic*] Kaiser der Deutschen Nation" is a great deal later than the Emperor Otto I., to whom it is attributed; the Emperor Frederick II. obtained the crown with the aid and not (as stated in the text) against the opposition of the Pope. The municipal republics of the Middle Ages are dealt with in a cursory and unsatisfactory way, nor is the brief narrative of the movement for unity and independence since the Napoleonic domination of Italy at all adequate. Cavour is barely referred to; Mazzini is not even mentioned; nothing is said of the Roman Republic of 1849 and its suppression by the French.

The account of the natural resources and products of Italy, her manufactures, commerce, and agriculture, is, on the other hand, very well executed, bringing together in a compact form a great deal of useful information. Dr. Deecke's figures are often very instructive as regards the effects upon trade and upon the condition of the people of a protective tariff, for they show how much industry, including agriculture, suffers by the imposition of duties which impoverish the masses and check the introduction of improvements. But he does not seem himself to draw the appropriate conclusions, being apparently, though extremely intelligent and well informed, himself under the dominion of protectionist notions, like so many of his German countrymen. He passes a rather too unqualified censure upon the scheme of *mezzeria*, or, as it is called in France, the *métayer* system—

that system in which there is a kind of partnership between landlord and tenant; the former giving the land, and the latter paying his rent in a share of the produce. The plan has its faults, but in some regions of Italy (as, for instance, in Romagna) we have seen it work in a fairly satisfactory way. And throughout this chapter the differences between the various parts of Italy are perhaps not quite sufficiently emphasized. As the historical antecedents of the provinces which belonged to the kingdom of Naples were more unfavorable even than those of the States of the Church, and the latter again worse than those of Tuscany or Lombardy or Piedmont, so both the economic and the moral conditions of Southern Italy and Sicily stand to-day far behind those of the northern half of the peninsula.

In the description of the government and politics of the country, our author, fond as he is of Italy, cannot conceal his Germanic distaste for forms which democracy has taken. His strictures on the selfishness and place-hunting and inconstancy and not infrequent corruption among the politicians are warranted by much that has happened during the last thirty years; but he scarcely makes sufficient allowance for the difficulties which the nation has had to encounter in the absence of all political experience and in the ignorance and superstition of the bulk of the population. He pronounces local government to be everywhere, except in some of the north Italian towns, tainted by intrigue and jobbery. It is, he declares, run by small cliques in their own interest, with no sense of responsibility to the community. The poor especially suffer, and to the discontent thus caused are due the occasional outbreaks of disorder in the southern provinces and Romagna. For this view there is too much foundation.

The chapter on Art, Language, and Science tells the ordinary reader pretty much what he will find in one of our popular cyclopædias, but very little more. As an historical review, it is superficial; as a presentation of recent achievements or present tendencies, it is incomplete. The survey of Italian philosophic literature does not mention Giambattista Vico; and, in reviewing the Italian science of to-day, nothing is said of the vigorous school of political economists which has recently arisen and which holds a respectable place among European students of this subject. Dr. Deecke's criticisms of modern Italian architecture, with its dull and yet pretentious monotony; of modern Italian sculpture, with its want of repose and dignity; of modern Italian painting, with its garish color and tendency towards sensationalism, are all of them justified. They are indeed quite familiar to those who know the streets, the interiors of public buildings, and the exhibitions of the country. He does not, however, although his work is historical as well as descriptive, attempt to account for these faults. To some extent, faults, similar if not quite the same, appear in the recent art of Germany and of England. But the phenomenon strikes one more in Italy, because the nation is one which has received from nature, as its achievements in the fourteenth, fifteenth, and sixteenth centuries prove, an exceptionally strong taste and talent for artistic production; and because the old susceptibility to sense impressions and to beauty is still evident, and indeed active, in the people. No peasantry in Europe makes upon the traveller who wanders alone among them the impression of so quick and so fine an intelligence as the Italian villagers possess. With all their slovenliness and the dirt they are willing to live in, they have a feeling for beauty and elegance. Why, then, is creative artistic talent at so low an ebb? This is a question which Dr. Deecke does not attempt to answer. Perhaps we ought not to expect an answer from him, for his treatise does not profess to be a philosophical inquiry, but only a description of actual facts; and, though he indicates the sources of political weakness in Italy, he is not bound to attempt the more difficult task of social and moral analysis.

Italy remains the most interesting of all European countries, not only by her art, but by her history and by her scenery. Nowhere else is there either so much natural beauty, or so many associations of nature with great events and remarkable persons. There is hardly a city (especially, of course, in Northern and Middle Italy and in Sicily) which has not got something of interest to show, be it a church or a castle or a palace or a picture or the arch of a Roman bridge. So much has happened in the long ages since history began to trace the struggles of Greeks and Latins, of Etruscans and Oscans and Gauls, that every few miles one passes a spot whose name suggests some well-remembered incident. Hence perhaps the interest which all civilized nations are obliged to take in the fortunes of Italy. She is a sort of second fatherland to every educated mind. It is the more natural that we should desire to see her free, prosperous, and happy because she excites no alarm in any other nation, having still so much leeway to make up that she cannot be formidable even to her nearest neighbors, much less to nations lying far away. Forty-five years have now passed since she became one State under the House of Savoy, and thirty-five since her capital was planted at Rome. The progress made in those years has been less than her friends in other countries had hoped for, and certainly less than her people themselves expected. There is still great economic depression in many rural districts, still great poverty and some discontent among the industrial workers. Politics are not on a high plane, and the generation to which Cavour, Mazzini, Manin, D'Azeglio, Aurelio Saffi, and Garibaldi belonged, or even that somewhat later generation which included Ricasoli and Minghetti and Terenzio Mamiani, is remembered as a race of heroes to whom no equals are found in the public life of to-day. Nevertheless, the prospects are on the whole encouraging. The finances of the country are better than they were some years ago, and taxation, though very heavy, does not threaten a further rise. Order has been established almost everywhere; it is only in Sicily and Sardinia that acts of brigandage, now quite exceptional, occur. Education makes rapid progress Moreover, the population has three remarkable elements of strength. It is prolific, showing an increase which enables it to send out a vast body of emigrants, many of whom might no doubt, under better administration, be kept in the country to develop the thinly peopled districts. It is industrious, for though one sees many lazy folk in the streets of Naples or Palermo, one sees also abundant proof of strenuous toil among the rural peasantry and among the operatives of the North. And, thirdly, it is (as already observed) highly intelligent, capable of excelling in all occupations that need skill and taste. There is therefore no reason to be despondent about the future of Italy; nor can she be fairly judged by some of the immigrants whom she sends to the United States. When one considers how serious and long-continued was the misgovernment from which two-thirds of the peninsula suffered down till 1859, and what economic and moral evils that misgovernment left behind it, one feels that the right way to judge her is not by a comparison with Germany, France, and England, but by noting how much better things are now than they were a century ago, when the dawn of a freer life was just beginning to break.

The Works of Geoffrey Chaucer and Others: Being a Reproduction in Facsimile of the First Collected Edition (1532) from the Copy in the British Museum. With an Introduction by Walter W. Skeat, [etc.]. Oxford University Press; New York: H. Frowde. 1905.

It is a far cry from Dryden's modernizations of Chaucer to the text now before us, but the process of restitution has been gradual and regular. In the seventeenth century, Chaucer's language was regarded as obsolete, his narrative as archaic, his verse as crippled, his reputation as departing. Kinaston, turning the "Troilus" into Latin in 1635, was praised for his "noble adventure" in translating a book "not tractable to every hand"; Waller deplored the lost glory of Chaucer's numbers, of which the sense alone remained; and Dryden, with genuine interest and affection prompting his efforts, won his contemporaries to approve of the substance of Chaucer only by spicing and dressing it to their taste. The eighteenth century goes two steps further: Urry's edition of 1721, barbarous as it is, starts from the assumption that Chaucer's verse was good if freed from the errors of the manuscripts; and the editions of Morell and of Tyrwhitt bring scholarship to the stage of endeavoring to find, by comparison of the manuscripts, what Chaucer actually wrote. Looking back at Tyrwhitt through the perspective of a century and a quarter, we recognize, whatever quarrel we have with his patchwork textual methods, that no saner or sounder scholar has yet essayed to interpret Chaucer to us, and, moreover, that no edition of the poet has since been offered us which marks an advance beyond Tyrwhitt's text so great that we can afford to disregard him. Materials for such an edition the nineteenth century accumulated in masses after the founding of the Chaucer Society by Furnivall in 1868. The text of Chaucer had been modernized to save it from oblivion; it had been respelled and revised to rescue it from undeserved censure; it had been edited from the manuscripts to demonstrate to the ear what it really was; and it was now printed diplomatically to prove to the eye how far all editions departed from the manuscripts. One more step remained, and we are taking it. A facsimile of the 1532 Chaucer lies before us; a facsimile of Caxton's print of Chaucer's "Anelida" is in

press; and a movement is on foot to reproduce in photogravure more of the manuscripts and early or scarce prints lying in foreign libraries beyond the reach of that increasing number of students whom no edition, however painstaking, can satisfy. This movement may or may not include further Chauceriana, but it is a reflection of the new spirit abroad, which Furnivall aroused—the desire for the truth, the whole truth, and nothing but the truth.

The scholarly may indeed ask, while looking at the noble facsimile before us, Why have the Delegates of the Oxford University Press thought it necessary to send out this work with so detailed and academic an introduction? What occasion is there for forcing into the same cover with the photographed pages a large-type reiteration of what we can all read in the notes and introductions to Professor Skeat's various textbooks and in his 'Chaucer Canon'? Without imitating the seventeenth-century lexicographers who always quoted Chaucer in blackletter, one may still prefer, when buying such a facsimile as this, to draw his profit and pleasure from pages undisturbed by echoes of the classroom, by that note of jocularity with which the way is beguiled for the drowsy or indifferent student, or by the exclamation-points, the "startling," "absurd," "comic," etc., with which Professor Skeat is wont, Prospero-like, to stimulate inattentive Mirandas.

Another and a less debatable supplement to Chaucer within these covers is the list of subscribers. One thousand copies of the facsimile have been printed, while the subscription-list comprises two hundred and fifty names or more. Some thirty-five of these are bookdealers, American and foreign, to whom the work is doubtless an investment. About twenty copies, judging from this list alone, come to America; and of these, two go to Boston, one to New York, three to Chicago, one to the Congressional Library, to Cornell, to Harvard, to the Peabody Institute at Baltimore, to Williams College, to Syracuse University, and to the State Universities of Iowa, Kansas, and Michigan. The positive evidence of this list and the negative are almost equally interesting—more interesting in the case of a Chaucer reprint than in that of the Shakspere First Folio—for a purchase of the Chaucer probably bespeaks an actual desire, while the Shakspere might be bought in folio on a principle similar to that which sometimes prompts the purchase in octavo, viz., that no gentlemanly University should be without it. Were it not that nothing can lie like figures, we should be tempted to infer that the Chaucerian interests of the Mississippi Valley were quite as keen as those of the New England States, and that the course of Chaucerian empire had not yet crossed the Rocky Mountains.

Upon the text itself no comment is necessary. The choice of this particular Chaucer, however, is a matter upon which some remark does not come amiss. Previous to 1532 there had been issues of various portions of Chaucer's works. Caxton printed the "Canterbury Tales" twice, and printed also, separately, several of the shorter poems, the translation of "Boethius," and the "Troilus and Cressida." His successors printed the "Canterbury Tales" a number of times, and in 1526 Richard Pynson issued a three-part work which included the "Canterbury Tales," the "Troilus," the "Parlement of Foules," the "House of Fame," and some poems not by Chaucer. The folio of 1532, compiled by William Thynne, clerk of the kitchen to Henry VIII., a man of means and an ardent admirer of Chaucer, was the first collection which claimed on its title-page to be the Works of Geoffrey Chaucer; and this it is which is here reproduced. As the First Folio, it possesses great bibliographical interest for us; as the fountain-head of the long current of corruption, textual, canonical, and biographical, which meandered through the two following centuries, it is also of moment. Five of its Chaucerian poems have been printed by the Chaucer Society; and of the many non-Chaucerian texts which Thynne included in the collection, some twelve have been used by Professor Skeat as basis for editing. It may be suggestive to advocates of facsimiles to learn that a comparison of this "Legend of Good Women" text with the Chaucer Society's diplomatic print shows, in the Prologue, five slight errors.

The work is much less expensive than was the Shakspere First Folio. With the duty, the volume costs the American subscriber about thirty-two dollars; the non-subscriber may procure it at the Oxford Press's New York branch by paying the fifty dollars at which the facsimile is priced in their circular. It is to be hoped that this publication marks a beginning, and that, along with the thoroughgoing revision of the chronology of Chaucer's works now approaching, the next generation of scholars will see their duty in the accumulation of such evidence as this, rather than in editing. The enormous labors of Dr. Furnivall have offered to every worker who can reach the Parallel-Texts the chance of assisting in uncovering the real Chaucer; but we have as yet in print only about one-eighth of the material for the "Canterbury Tales," to leave other needs unmentioned.

The Tragedies of Seneca. Rendered into English Verse by Ella Isabel Harris, Ph.D., Yale. H. Frowde. 1904.

As dramatic literature, these tragedies are by many competent judges deemed little better than rhetorical trash. They are perhaps the worst extant specimen of ancient belles-lettres, and probably owe their survival solely to Seneca's great reputation as a philosopher. He must be indeed an incorrigible lover of fustian who would wish to make, or read, a translation of them for their own sake; but Miss Harris justifies her work by the "constant allusion to the influence of Seneca upon the development of English tragedy." This seems a sufficient reason, and also justifies the acceptance of the certainly unauthentic "Octavia" and of the dubious "Hercules Œtæus" as part of Seneca's work, since they were doubtless so regarded by our early tragics. If the translator has chosen to put these plays into English blank verse, no one has a right to complain; though we can see no very good reason for attempting to adumbrate their ancient metrical form. If, however, we grant that it may be useful to clothe these poor plays in the robes of their betters, in order to make their influence seem more plausible, we must differ from Miss Harris as to the use of the same verse in the choruses. If anything pertaining to form needs to be preserved in translating the ancient drama, it is the distinction between the lyrical parts and the dialogue. What would become of the lyrics interspersed in Shakspere's plays if they were reduced to the metre of the dialogue? Nor can we believe Miss Harris's poetic powers unequal, as she declares, to the task, had she rightly conceived it. It was not necessary to attempt any close imitation of the metres: any unrhymed metre longer or shorter than her blank verse would have sufficed to distinguish them. Her easy blank verse shows that she could have handled unrhymed lyrics of the Spanish type sufficiently well.

We must also differ from her judgment in the matter of annotation. She writes for those who have "inadequate command of Latin," and presumably of Greek. It seems unreasonable to expect such readers to understand the endless multitude of far-fetched, pretentious, and too often fatuous allusions to mythology with which these plays are crammed; and it is clear that without this understanding such a reader must fail to grasp at least one important feature of their influence.

The translation is very unequal. That it fails in its purpose we certainly should not say; but, while many long passages may bravely challenge any fair and generous criticism, there are others in which the translator has not attained her usual level. It has seemed fairer to comment on a few such connected passages than to take up scattered errors. We number the verses doubly, the second number always that of the translation.

In the "Mad Hercules," v. 6 (7), the original mentions Arctos (Ursa Major); the translation gives us Arcturus, quite another constellation (Bootes). In v. 8 (8), speaking of Taurus, *laxatur dies recenti vere* is rendered "the day grows long"; but *laxo* here more probably means "to open," for the ancient vernal equinox lay between Aries and Taurus, and there the sun rose at the beginning of spring. The ancients certainly knew that the days begin to lengthen several months earlier. In v. 9 (10) *per undas* is a pro-adjective qualifying *vector*. The bull that shines in heaven as the constellation Taurus was the carrier of Europa "through the waves." The translator gives this qualification to the verb "shines." In vv. 14, 15 (15, 16), *hinc Tyndaridæ micant, quibusque natis mobilis tellus stetit*, the translation refers *quibus* to the Tyndaridæ—"for birth of these the floating land stood still"—which the added *que* forbids. Moreover, there is no such myth about the birth of Castor and Pollux; the reference is to that of Apollo and Diana, for whose sake the floating island Ortygia was finally anchored. In v. 25 (29), when, for the begetting of Hercules, the night was prolonged, Phœbus delayed to shine on the Eastern sea (*Eoo mari*). This is rendered "lit the Western sky," though *Eous*, from the Greek name of the dawn, never could mean "western." The sun was late, but certainly did not rise in the west. In v. 48 (55) the word *opima* is translated "wealth," as if it were *opes*. *Opima* stands, of course, for *spolia opima*, the spoils taken by a commander in single combat from the leader of the enemy. In v. 70 (84) *mundus* is translated "world"; but Hercules never bore the world on his shoulders, which, indeed, the laws of mechanics would seem to forbid. When he relieved Atlas, it was the vault of heaven

that he bore up. In v. 79 (95), if Miss Harris had remembered her Horace (Od. I., xv., 7, 8), she would not have translated *rumpere imperium Jovis* by "storm Jove's realm." The true meaning here is "dethrone." In v. 81 (97) Sicily is called *Doris tellus*, "that Dorian land," because it was colonized by Dorians; but from this to calling it "Doria," which is a part of Hellas, is a far cry.

Turning now to the "Medea," we find Medea in v. 3 invoking "Pallas, who taught the tamer of the seas [meaning Tiphys] to steer the *Argo*." This is based on the inferior reading *domitorem* in codex A. Now Tiphys was not yet the tamer of the sea, if he ever could be called so who did not live to complete the voyage. The better reading adopted by Leo, whose text is the basis of this version, is *domituram*, and applies to the ship, and not the pilot. In v. 12 (13) we read, "Persephone by better faith betrayed." How can one be *betrayed* by better faith, or by merely good faith? The original has *raptam*, "stolen" or "ravished." Pluto was faithful to her after he carried her off, while Jason, in like circumstances, betrayed Medea. In v. 40 (47, 48) "seek to find revenge through thine own bowels" (*viscera*) might, indeed, refer to Medea's murder of her own children; but *ipsa* does not mean "thy own," nor has Medea yet formed any purpose against her children. Not until verses 924, 925 (898, 899) does she decide on such a plan. The reference here is to the poisoned robe with which Jason's bride was to be destroyed when "the seeds of flame" were to "penetrate her very heart and veins." In v. 48 (54) *memoravi*, "I have rehearsed," is rendered, "I remember." What Medea really says is that her early crimes, which she has just *mentioned*, are mild in comparison with what she is about to do.

Again, in the "Phædra," v. 1156 (1212), "What fury animated thee and with what grief?" is a question not over-pregnant with meaning. The original has, "What madness incites thee moved with passion"? In v. 1158 (1214) the original pictures Phædra leaning over the corpse of Hippolytus and beating her breast (*planctus supra corpus invisum*). This picture is wholly lost in the translation, "Why beat thy bosom for such hated dead?" In v. 1161 (1217, 1218) the sea is called Tethys, the name of a marine goddess. After this it seems hardly the right thing to speak of "*its*" bosom. In v. 1164, 1165 (1221, 1222) the original makes Phædra address Theseus as "thou who didst never return, with safety to thine own," *i. e.*, "without peril or damage to thy kin," in allusion to the death of Ægeus and of Hippolytus. This is tamely and ambiguously turned into the statement "thou ne'er returnedst safely to thy home," which most readers would certainly take to mean that Theseus never got home safe. In verses 1166, 1167 (1224, 1225) the all-important word *coniugum*, which shows that Theseus brought death to his own through his love, or hatred, *of his wives* (love for Phædra and hatred of Ariadne), is entirely omitted, leaving the bare statement "through love or hate" which would naturally mean love or hate of his kindred. In v. 1169 (1227) the translation, "Did Sinis or Procrustes scatter thus thy members?" is an inept question from any point of view. The original has, "What Sinis or Procrustes, etc.," which is a not unnatural rhetorical question. In v. 1191 (1254) Phædra addresses Athens (Athenæ). The translation makes her address the goddess Athena. Lastly, in v. 1195 (1260), the powerful word *iacet*, "lies dead," is lost in the translation, "The youth is pure," though the idea might so easily have been at least suggested by saying, "This youth was pure."

Slips like these, even were they far more numerous than they are, would not seriously impair the usefulness of this work for those for whose benefit it was undertaken. It is no small affair to translate in verse some twelve thousand lines of such unnatural and stilted Latin as these plays are written in. We cannot wonder if the translator has sometimes nodded over her herculean task.

Thomas Moore. By Stephen Gwynn. (English Men of Letters Series.) The Macmillan Co. 1905.

Mr. John Morley's series continues to outgrow its title. It has already admitted three women and an American, and more than one Irishman besides Moore. But, in spite of his "Irish Melodies," and a sentimental interest in the fortunes of Ireland, Tom Moore was not a typical Irish poet. He was not one of those whom we picture setting their faces towards the west, turning their backs on the English oppressors, like Kathaleen Ny-Houlihan, the spirit of Ireland. One has only to remember Mangan, that despairing dreamer, the poet of "Dark Rosaleen," to realize that poets with the true Irish note wrote in Moore's own day the poetry of sorrow, haunted and grief-stricken:

> "In alien paths their tired feet bled;
> The laurel crowns that decked the head
> Were thorn-set underneath."

Irish poetry, even when written in English, expressed inevitably the griefs of exile, of famine, of oppression. We are not forgetting the inspiration that produced the "Wearin' of the Green" and the "Shan Van Vocht," which express the pride of the defeated and have more defiance in them than despair. They were born of the reaction, like the poetry of wild and reckless gaiety which for so long was regarded in England as typical of the Celtic temperament. But the truth is, that the Irish Celt is deeply serious and deeply melancholy. When he can no longer with justice express only the woes and the resentment of Ireland, he turns naturally to mysticism, like Mr. Yeats or Lionel Johnson, and fixes his eyes on interests remote from the material world. Now, Moore had no spark of Celtic magic or mystery, and his patriotism is always a little sentimental and unimpassioned:

> "Silent, oh Moyle, be the roar of thy water,
> Break not, ye breezes, your chain of repose,
> While murmuring mournfully, Lir's lonely daughter
> Tells to the night-star her tale of woes."

That is how an Anglicized Irishman writes of scenes which he has found decidedly less comfortable and less amusing than London. For true Irish pathos one must turn to another poet:

> "Wathers o' Moyle an' the white gulls flyin',
> Since I was near ye what have I seen?
> Deep great seas, an' a sthrong wind sighin'
> Night and day where the waves are green.
>
> . . . . . .
>
> Wathers o' Moyle, I hear ye callin'
> Clearer for half o' the world between.
> Antrim hills an' the wet rain fallin',
> Whiles ye are nearer than snowtops keen;
> Dreams o' the night an' a night wind callin',
> What is the half o' the world between?"

On the desolateness of Ireland, on her waste of waters, on the green bogs and "the same soft rain," Moore frankly turned his back. He loved the noise and lights and wealth of London, and there is hardly more poignancy of feeling in his Irish melodies than in the Persian ditties of "Lalla Rookh."

Not long after his death, Moore's 'Life' was written by his friend Lord John Russell, and to that biography in eight volumes there is little to add. Wherever one catches a glimpse of Moore, whether in Lord Byron's letters or in his own diary and correspondence, he shows no trace of what is often euphemistically called the artistic temperament. There is no complexity about his character, nothing to soften or explain away. Those who think, as a few thought in his own day, that a good deal of his poetry is too sensuous ("licentious" was the old-fashioned epithet used by his contemporaries), may take comfort from the fact that of all literary lives his was the most correct. He was a devoted son and brother, and was never ashamed of the small grocer's shop in Dublin which was his Irish home. When he could not induce his mother to receive Lord Lansdowne, who was with him in Dublin, he walked his distinguished friend past her window so that she might see and be seen. He married, young, a pretty actress, who was not, like himself, at home in every society; but he was a model husband and father. There is no opening for gossip in all his long intercourse with the rich and idle women who adored him and his poetry, and in his business relations he was honorable to the point of Quixotism. The biographer of this blameless, though worldly, poet is therefore reduced to writing a panegyric, but Mr. Gwynn has made his brief sketch interesting enough.

Moore's lyrics were written to be sung, and in such songs ideas are out of place. A succession of charming sentiments that will catch the attention easily, a smooth flow of simple words, he could turn off with a lightness and spirit that lifted even the British drawing-room song above itself. It would not be fair to compare such compositions with the poetry of Wordsworth and Shelley. They wrote for a later generation of readers. Moore wrote for the evening parties of his friends. It is hard for the reader of to-day, whose ear has been trained by the lyric metres of a virtuoso like Swinburne or Tennyson, to realize how original and varied were, for his generation, the metres of Moore. It was partly because he wrote for music that he had to range wider than the few hackneyed types of couplet and quatrain then in general use. Mr. Gwynn quotes

> "The dream of those days when first I sung thee is o'er,"

as a metrical effect wholly new in English. "The peculiarity of these metres—the dragging, wavering cadence that half balks the ear—is the distinctive characteristic of Irish verse. No English poet, so far as I know, has caught it" (p. 179). Surely, Swinburne caught it in

> "Who is this that sits by the way, the wild wayside?"

Moore did not know any Irish, and shared

the wish of O'Connell that it might die out, but he reproduced in English the rhythms of Irish folk-song, basing his work "on Irish tunes, composed in the primitive manner before music was divorced from poetry." Mr. Gwynn's last chapter of "General Appreciation" is well worth reading by students of English poetry, however little they may care for Tom Moore. An appendix contains a full bibliography of Moore's compositions.

Illustrations of Irish History and Topography. Mainly of the Seventeenth Century. By C. Litton Falkiner. Longmans, Green & Co.

Mr. Falkiner is well known as an industrious student of the history of Ireland from the fifteenth to the eighteenth century. The present volume consists of two separate parts, the first being a collection of original papers by the author previously published; the second containing contemporary accounts or descriptions of Ireland by travellers in the seventeenth century, some of which have not been hitherto printed, and others which do not exist in prints accessible to the general reader.

Mr. Falkiner, in his preface, disclaims any intention of discussing vexed questions connected with Irish economic, religious, and political problems, all of which, he says, date from the seventeenth century, when the battle between English and Irish ideas was decided, the tenure of land was established on a feudal basis, with the supremacy of English Protestantism, and a dependent Parliament modelled on that of England. His disclaimer was necessary, for he is not only an historian but a conservative pamphleteer, and contributor to the Tory press of articles on political and social questions. Continual references, however, to the uninterruptedly disturbed condition of Ireland cannot but make the reader ask why disturbance and discontent have been for eight hundred years the permanent condition of the unfortunate island. Evidently not because of a double dose of original sin in the "wild Irish," for the "English-Irish" were just as discontented and troublesome.

Part i. contains papers of no great interest except to persons in the locality of Dublin. The history of "his Majesty's Castle of Dublin," constructed in 1171 as a "Palace roofed with wattles, after the manner of the country," then fortified, rebuilt in stone, the royal seat of Government, containing the Record House, the courts of justice, the Parliament House, Treasury, Mint, and State prison, and now a gloomy structure of limestone and granite, the present seat of Irish misgovernment, is followed by a similar account of the gradual formation and enclosure of Phœnix Park. These and the stories of the origins of the Port and Docks Board, the Chambers of Commerce and other civic institutions, can hardly fix the attention of the general reader.

Part ii. will be more interesting to him. It contains extracts from Fynes Moryson's Itinerary, most of which was first published nearly three hundred years ago. A portion of the chapter on the Manners and Customs of Ireland, Mr. Falkiner says, has not been printed before. Moryson saw much of Ireland, but adds much that he only heard by report. At the date of his journey the country had become less populous, "after much blood spilt in the civil wars." The country he describes as

"uneven, mountainous, soft, watery, woody, open to winds and floods of rain, so fenny that it hath bogs on the very tops of the mountains; the coast covered with mists, the air unapt to ripen seeds, yet luxurious in yielding fair and sweet herbs, little troubled with thunderings, lightnings, or earthquakes; oft troubled with rebellions."

The great woods were full of deer, wolves, and "such plenty of pheasants that I have known 60 served at one feast." The cattle were small, "only the men and greyhounds of great stature." Fish were so plentiful in the lakes that "fishermen fear the breaking of their nets rather than want of fish." The great woods were destroyed, partly to clear the refuges of the "wild Irish," partly for use in smelting iron brought from England, partly for export of timber, mainly "pipestaves," to England. Arthur Young found the work of destruction completed. "The greatest part of the country," he says, "continues to exhibit a naked, bleak, dreary view for want of wood destroyed with the most thoughtless prodigality"; and Swift, one hundred years before Young, said: "There is not another example in Europe of such a prodigious quantity of excellent timber cut down in so short a time with so little advantage to the country either in shipping or building." The reason of this prodigality seems clear enough now. Many of the land owners were absentees, the tenure of others was uncertain in that age of confiscations. Every one made what he could out of his estate while he had it or could keep it.

Moryson's Itinerary is followed by a humorous account by Sir Josias Bodley of a Christmas week spent at Downpatrick with Sir Richard Morrison, governor of the district. This is translated from the quaint Latin in which Bodley wrote, the opening paragraphs of which are given in a note. Luke Gunn's 'Discourse of Ireland' has not hitherto been printed. Its probable date is 1620, when the author held the office of Second Justice of the Province of Munster, and resided at Limerick. The desolate condition of his district made it look, he says, "like the later end of a feast. Here lyeth an old ruyned castle like the remaynder of a venyson pasty, there a broken fort like a minced py half subiccted, and in another place an old abbey wth some turrets standing like the carcase of a goose broken up."

Of the people he says:

"The man of Ireland is of strong constitution, tall and bigg limbed, but seldome fatt, patiente of heate and colde, but impatient of labour. The women of Ireland are very comely creatures, tall slender and upright. Of complexion very fayre and cleare skinnd (but frecled), with tresses of bright yellow hayre. . . . They are not strait laced or plated in their youth, but suffred to grow at liberty so that you shall hardely see one crooked or deformed."

The dress of the women, the fare, and customs of entertainment at country houses, are minutely and graphically depicted.

"At Kilkenny," we are told, "they weare broad beaver hatts coloured, edged wth a gold lace, and faced wth velvett, wth a broad gould hatt band. At Waterford they weare cappes turned up wth furre and laced wth gold lace. At Lymericke they weare rolles of lynnen, each roll contayning twenty bandles of fyne lynnen cloth and made up in forme of a myter. In Connaught they weare rolles in forme of a cheese. In Thomond they weare kerchiefs hanging downe to the middle of theyr backe."

The travels of Sir William Brereton in Ireland in 1635 (reproduced from the Chetham Society's papers) were not printed until 1844. From Portpatrick in Scotland he arrived at Island Magee in Antrim, and thence travelled south to Waterford, but he does not appear to have visited either the middle or west of the island. Being a person of importance, he had the opportunity of meeting many notable men, among others Archbishop Usher, "a tall proper comely man who spends the whole day at his study except meal time." The country travelled through was then comparatively quiet, and, except a few "rebels" lurking in the woods, no mention is made of any disturbed condition of the country. The concluding paper is a description of Ireland after the Restoration by Jorevin de Rochefort, a Frenchman, who travelled for pleasure and instruction. He found Ireland "the richest of all Europe in things necessary for human life, but the poorest in money; in fine, a land of plenty." One is inclined to doubt the accuracy of his judgment when he describes Dublin as "one of the greatest and best-peopled towns in Europe," and estimates the Catholics as being only one-third of the Irish. The fifteen pages given by Mr. Falkiner are taken from De Rochefort's travels, which extended over most of Europe. They were printed at Paris, in three volumes, in 1672, and are now very rare. Mr. Falkiner has been successful in his choice of descriptions, determined by their rarity, representative character, and difficulty of procurement by the ordinary reader.

Democracy and Reaction. By L. T. Hobhouse. London: T. Fisher Unwin; New York: Putnams. 1904.

This book deals with a number of related topics bearing on the questions underlying democratic government, liberalism, the reaction against liberalism which has been gathering headway for a generation, and Socialism. The author is one of those Liberals who hope to see a new development of free government through Socialism, or radicalism; the field covered by his nine chapters is so wide that we can only select one or two points for criticism.

All the first part of the book, giving an account of the Reaction and its causes, is excellent. We do not remember to have seen anywhere, in so small a compass, a better analysis of the extraordinary changes in sentiment and opinion produced in the last thirty years. It contains, too, several original observations, as, for instance, the suggestion, confessedly paradoxical on its face, but nevertheless true, that the Imperial idea in England (the book deals almost wholly with English affairs) has roots, politically speaking, in the older Liberalism. The British empire as developed in the Victorian period meant, for the most part, the expansion of freedom of trade, of justice, of honest administration, of rigid impartiality as between religions and races, and semi-independent, self-governing colonies. Consequently, when the first appeal was made to Imperialism, Liberals felt it as an appeal to the highest aims in government, and were easily persuaded by Mr. Chamberlain (himself originally a Liberal and Radical) that an Imperial policy was the true source and spring of all these great political boons. It has really cost a consider-

able struggle and long debate to reawaken Liberals to the fact that Imperialism in itself is the eternal and deadly foe of all freedom, of all honest and responsible government, and of that very progress which had been forced upon it by the great reforms of the nineteenth century.

The author's chapters on "The Intellectual Reaction" and "Evolution and Sociology" deserve close attention. He brings out very clearly the fact that the political reaction (what he says here is equally true of this country and of all countries) is the expression of a far-reaching change in the temper of the time. Summed up in a word, he calls it a reaction against humanitarianism; but it has been curiously reinforced by an extraordinary misconception as to the bearing of the discoveries of modern science on political problems. Darwin's law of the "survival of the fittest" has borne fruit of which he never dreamed. It is used every day now, apparently with great success, as an argument in favor of the use of violence. In the animal kingdom, superior breeds are produced by natural selection working through a fierce struggle for existence. Consequently, any race or nation which can overcome any other, take away its freedom, and appropriate its property, is the fittest to enjoy the fruits of the struggle, and selected by the laws of nature to do so. It is not to Darwin or Huxley that we owe this wonderful misapplication of scientific method; it is to the Imperialist and Jingo, who thought they found in the phrase "survival of the fittest" and "struggle for existence" a justification for wars of expansion. The author points out very neatly that you cannot argue from biology to politics. What is "fittest" to survive in biology is merely that which does as a matter of fact survive; what is fittest to survive in the world of conscious political and social effort is that which we decide it is desirable should survive. Biologically, the germ of consumption is admirably fitted to struggle for existence in and survive the consumptive patient. But we try to preserve the patient.

As to the great body of Liberal doctrine, the author is on firm ground. Liberal principles must involve opposition to a policy of protection, of war, of great armaments, of restriction of the press and public meetings; there has been no change in these respects since Cobden's, or indeed since Jefferson's, time. But the rock ahead for Liberals is Socialism. There is a widespread belief in Socialism in the newly enfranchised electorate, and the question of the day is whether Liberals can, by adopting Socialism in whole or in part, overcome the force of the Reaction, and again make Liberalism a dominating force in the government of the world. Here the author does not strike us as clear. He seems to be of opinion that some such development is possible, but his discussion is to a considerable extent beside the point. Socialism, or Collectivism, or Populism, is bound up with the idea that the machinery of government may be used for the purpose of effecting an equitable distribution of wealth. "Aggregations of wealth *not acquired by labor service* are," he says, "regarded by the Collectivist as a kind of surplus from which the funds necessary to meet public responsibilities should in the first instance be drawn." Now the belief of conservative Liberals, in fact of every Liberal who adheres to the fundamental principles of political economy and individual freedom, is that this idea represents a monstrous delusion, and is, moreover, closely connected with the rankest paternalism. Without a system of espionage and confiscation for the like of which we should have to go back to the Rome of Nero, no inquiry into what wealth is acquired by "labor service," and no redistribution fit to "meet public responsibilities," is possible; and, if so, Liberals and Socialists will never long be found in the same boat. If this conservative economic view is correct, the Socialist is the real friend of the Imperialists, and has been such from the beginning of time.

Mr. Hobhouse gives a long array of radical measures which have been carried with the approval of Liberals—the Irish Land laws, the restriction of hours of labor, the municipalization of industries, factory inspection, etc.—and seems to infer from all this that, by adopting the rest of the Socialist programme, the Liberals may return to and develop new power. But if the old view is correct, the rest of the Socialist programme will mean the death of the Liberal principles which brought it about, and in the end an iron paternalism; at any rate, radicalism, or the use of the State machinery to cure specific evils by inspection, or revision and restriction of contracts, is no true Socialism, and to argue from Irish land reform to Collectivism is unpermissible. Here Mr. Hobhouse, we think, begs the question.

The Phase Rule and its Application. By Alex. Findlay. With an Introduction on the Study of Physical Chemistry, by Sir William Ramsay. Longmans, Green & Co. 1904.

There are numbers of highly successful men who have never been able to master elementary geometry or algebra. In the case of many of them, the defect is undoubtedly merely due to bad teaching. For others, there may be some peculiarity of metrical ideas which prevents these men from mastering them. But, with a third class, the truth probably is that there is a weakness of the understanding which causes all conceptions of the slightest intricacy to become confused. Now every man ought to endeavor to understand his own capacities; and the subject of the Phase Rule may serve as a touchstone to show him whether he belongs to the third class or not.

But what is this phase rule that has for so long set all the chemists agog? Take a number of materials, each either a pure chemical substance or a homogeneous mixture, but none of them such that any chemical reaction that could take place could produce it from the others, and (calling these the *components* of your system) put them into a tight cylinder in which a piston works, so that the aggregate can be subjected to varying pressure and temperature. Further, let there be some means of varying the proportions of the components present in the cylinder. Then, since the total quantity is a matter of indifference, there will be, as independently variable conditions, one for each of the components *minus* one, *plus* the pressure and the temperature; that is, on the whole, one more than the number of components. Now give your system time to come to a settled state of equilibrium while there is no change of the above conditions. This equilibrium must be *stable;* that is, if you vary those conditions a little and restore them, the state of the system must be restored. Now count the number of *phases,* that is, the number of substances or homogeneous mixtures separated from one another by surfaces like the surface between water and air. Then it will be found that the degrees of freedom—that is, the number of conditions (pressure, temperature, and the proportions of components) that can be independently varied *without altering the number of phases or destroying the equilibrium*—are equal to two more than the number of components less the number of phases. For example, can water, ice, and aqueous vapor exist together? Here there is only one component, and we suppose three phases separated by surfaces. By the rule, the degrees of freedom amount to zero. That is, if the temperature and pressure are both fixed right, such a state of things is possible. But when it exists, neither pressure nor temperature can possibly be varied, the equilibrium being preserved, for the least change will cause either the vapor, the water, or the ice to pass away entirely. Suppose, however, that air be added, so that now there are two components, and, for phases, first, air mixed with a little vapor; second, water containing a little air in solution; third, pure ice. There will now, according to the rule, be one degree of freedom, and the pressure may be changed so long as the temperature is correspondingly changed. Suppose we let the ice melt. There will then be two components and two phases, and consequently by the rule two degrees of freedom. That is, both pressure and temperature may be varied, but only on condition that the proportions of water to air in the vapor and in the solution are correspondingly changed at the same time.

Such is the phase rule. Its mathematical form is identical with that of Euler's topical theorem that the combined number of faces and summits of any polyhedron is two more than the number of its edges; and, like topical geometry, the phase rule has nothing to do with *measurement,* but only with *counting* three sets of things—components, phases, and degrees of freedom. Nor do the experiments for verifying it require any measures to be made, but only that more and less should be discriminated. Beyond that, there is no mathematics in the subject; but the chemical applications of the rule have a certain moderate degree of intricacy, not much less than that of elementary geometry and algebra. They will be beyond the powers of those who are unable to master those mathematical subjects owing to general weakness of the understanding, but will presumably (not certainly) be found to be just complicated enough to afford entertainment for other men.

The phase rule was discovered not by a chemist, but by Willard Gibbs, a mathematician, the ablest, in his particular line, of his day; the most unaffectedly modest man (for his strength) that search could find; the sort of man who is sure to be depreciated until, by the action of a sort of phase rule, the ice breaks up and men suddenly discover that it is best to laud him. For ten years and more the phase rule slumbered peacefully

in the Proceedings of the Connecticut Academy of Sciences until the chemists had grown up to it, till Roosebaum and others brushed the dust off the volumes and carried them into their laboratories. But Maxwell fully appreciated Gibbs long before the phase rule was discovered.

Dr. Findlay's illustrations from chemistry are as replete with interest as they are abundant, and each one detailed. Upon all that side the work is simply splendid. Its weakness is that the abstract definitions, and the possibilities which the phase rule leaves open, but which have not yet been met with in nature, are not forced upon the reader's attention in all their definiteness sufficiently to enable him to comprehend exactly what the phase rule does for him in each case. In short, the work presents a picture admirably rich in its coloring, but whose outlines are too soft for a scientific purpose—on rare occasions, quite indefinite or even wavering. The practicable remedy for this in a new edition would be an appendix to which the reader could always turn to find there the abstract parts of the subject defined with abstract precision. The reviewer must confess that, though the subject is not new to him, he has here and there in the perusal of the work found his ideas losing their definiteness; and this state of things was not remedied until he had drawn up for himself the sort of appendix that was needed. However, taking the book as it is, anybody who adds to a turn for the mode of thought a fondness for chemistry, will find the volume replete with matters of singular interest.

Sir William Ramsay's introduction contains a very good sketch of the history of physical chemistry without any such high merit as one would have expected. The language is that of a man who, when he thinks, imagines apparatus and experiments, and who has little training in the use of words. Thus, on page lxi, he finds fault with Julius Thomsen because, in 1854, he believed it possible to measure the force of chemical affinity by measuring the heat evolved in reactions; and his objection is simply that heat is not force, but energy, a quantity of different dimensionality. Now this is hypercritical in the extreme; for though the word *energy* had been proposed by Young, it was not at all in use, even in England, before Rankine's paper of 1853, and in Denmark was quite unheard of; the word "force" being much more loosely used than it now is.

The Lure of the Labrador Wild: The Story of the Exploring Expedition conducted by Leonidas Hubbard, jr. By Dillon Wallace. F. H. Revell Co. 1905. 8vo, pp. 339, ills, and maps.

Leonidas Hubbard, a Michigan farmer's son, become a newspaper reporter and later an editor of a magazine devoted to out-of-door life, at the age of twenty-nine had the ambition to explore unknown regions. Though obviously no expert woodcraftsman, he had made journeys in the Hudson Bay region and in southern Labrador. The project he finally decided on was to start from the Northwest River post of the Hudson Bay Company, ascend this stream to Lake Michikamau, the largest lake in eastern Labrador, where the Nascaupee Indians were said to meet in September the herds of caribou migrating from the interior to the coast, killing great numbers. Hubbard wished not only to report the features of the annual battue, but also to spend some time studying the very primitive natives, who are little known. From the northern end of the lake he then proposed to work across the country to the George River, which falls into Ungava Bay. The route he proposed to take was practically unexplored by white men, and the country was well known to afford comparatively little fish or game for sustenance, and to be terribly infested by black-flies and mosquitoes.

For the journey the services of George Elson, a half-breed Cree Indian from James Bay, were engaged, and the leader associated with himself his friend the author of this volume. Elson proved to be an excellent woodsman, faithful, able, and indefatigable, and to him the survivor of the party undoubtedly owes his life; but, like others of his kind, he was diffident in insisting on his own better judgment in cases where the leader of the party, though less competent, seemed to favor other counsels. The party in the main was well supplied with stores and an excellent canvas canoe, though some necessaries, like extra footgear, a gill net, and shotgun, were omitted, with disastrous results as the event proved. After various trying delays, the party arrived at the Northwest River post, and naturally found it difficult to get reliable geographical information about an unexplored district. On July 15, 1903, the party started from the post for the mouth of Nascaupee River, one of several streams emptying into the upper end of Hamilton Inlet, but neglected the precaution of taking a guide, passed the entrance without seeing it, and started up a smaller river, the Susan, which flows in the same general direction. This river soon gave out, and the party continued to make portages, struggling through the swamps, tormented by pestiferous insects, their single pairs of moccasins and much of their clothing reduced to rags, and their food rapidly dwindling. They had unusual luck in fishing, and made good use of their rifles and pistols, so that it was possible to continue in the direction of their goal until, from the top of a high peak, the waters of Michikamau were actually discerned by Hubbard, across miles of woodland—alas, too late!

Nearly out of food, it seemed impossible to go on, and the fact that the leader's health gave out, in spite of his marvellous courage and energy, settled the matter. They were obliged to return over the dreary road by which they had come, and even then might all have pulled through alive had it not been for a fatal error of judgment on Hubbard's part in electing, against the deferential advice of his companions, to leave a navigable stream, the Beaver, which they had reached, for the vastly more difficult route by which they originally came. After that the record is one of slow starvation and misery. With the advent of cold weather the fish ceased to bite, and the party had no net; their feet were bare, and they had no footgear. Struggle as they might, in spite of really heroic endurance, Hubbard at last gave out, on October 18, and was made as comfortable as possible in a tent, while his companions pushed on in search of food and help. A little further, Wallace, too, succumbed to the inevitable, and all hope depended upon Elson, who pushed on courageously and finally reached help. Kindly settlers found Wallace in time to save his life, but Hubbard's note-book showed that he had perished probably within twenty-four hours of the departure of his companions. Wallace's convalescence from starvation and frost-bite was slow, pathetically aided by, if not wholly due to, the ministrations of a young medical man, himself dying of consumption. Finally, the remains of the leader were rescued, and the journey toward home carried out against great difficulties by the devotion of Wallace and the kindly aid of the Labrador people.

It would be wrong to obscure the fact that the sufferings so well borne and the death so bravely met were largely due to insufficient knowledge both of how to conduct such an expedition and of his physical fitness for it on the part of the leader. But which of our failures and sufferings in this vale of tears may not be ascribed to analogous ignorance or weakness? It is certain that all three of the party met their calamities like men—as we love to say, however boastfully, like good Americans; and the lesson of their travail is twofold: first, know what is to be done and how to do it, if you would explore the wild; second, if misfortune comes upon you, face it without fear and with a manly heart, leaving the outcome with confidence to a higher power. In the second of these matters Hubbard and his comrades did not fail, and that is surely no meagre praise.

The Shu King, or, The Chinese Historical Classic: Being an Authentic Record of the Religion, Philosophy, Customs, and Government of the Chinese from the Earliest Times. Translated from the Ancient Text, with a Commentary, by Walter Gorn Old, M.R.A.S. 12mo. John Lane. 1904.

If a man sets to work to publish a book like this one, the preparation of which must cost him a good deal of time and labor, the first thing he has to do is to find out what work has been done before him in the same line. To all who intend to take in hand Chinese research of any kind or the compilation of books and papers on China, let it be said that there is no better method of being posted on this point than to glance at that excellent guide, Prof. Henri Cordier's 'Bibliotheca Sinica, Dictionnaire Bibliographique des Ouvrages relatifs à l'Empire Chinois,' the first edition of which, with its supplement (Paris: Leroux, 1881-1895), acquaints intending writers with every important book or paper published on Chinese and Central Asiatic subjects under the several classified heads. A new edition of this most useful work is just forthcoming (Paris: E. Guilmoto). The titles of papers and books which have appeared since the close of Cordier's bibliography, can be ascertained from Prof. Lucian Scherman's 'Orientalische Bibliographie,' published periodically (Berlin: Reuther & Reichard) in three or four instalments per annum. By referring to these indispensable helps, an author cannot easily fall into the trap in which the author of the above work was caught by neglecting to make inquiries about the existing literature before setting to work.

A book like the 'Shu King,' the oldest

historical classic of the Chinese, has, of course, received the attention of Chinese scholars ever since Chinese literature was studied in Europe. Mr. Old, in his introduction, duly quotes the labors of Gaubil, De Guignes, and W. H. Medhurst, and acknowledges his indebtedness to Medhurst's translation, which was published in 1846. Since then the venerable professor of Chinese at Oxford, Dr. James Legge, who died in 1897, has invested a lifetime in elucidating that vast field of Chinese classical literature. The eight stout volumes called 'The Chinese Classics,' which he published while a missionary in Hong Kong, might be called the alpha and omega of everything an author would say on the 'Shu King.' Legge not only furnishes a translation of standard value, but exhausts his subject by quoting and translating all the essential notes made by Chinese commentators; and his Prolegomena are the best introduction to the philological study of this remarkable work the reader could possibly lay his hands upon. A revised edition of Legge's translation appeared among Max Müller's "Sacred Books of the East," the volume containing the 'Shu King' being issued at the Clarendon Press in 1879 under the title, 'The Sacred Books of China, Part I.' It is matter of regret that the author of this new translation was not aware of the existence of Legge's exhaustive labors, which, he says in his preface, he has "unfortunately not had an opportunity of consulting before the present work was completed and in the hands of his publishers." "By this circumstance," he candidly confesses, "I fear the reader may be in advance of me," and he adds: "At all events, the reader will considerably improve his opportunities and simultaneously pay me a great compliment, if he will take the Doctor's translation in hand and make a cross-reading from the present version."

We readily fall in with this suggestion. Mr. Old's 'Shu King' is a handy little volume, and the translation as well as the notes reads well. Many a student who finds it too cumbersome to invest in the larger work, may wish to have this on the shelves of his library and gather a general idea of the contents of the book, reserving special inquiries for the comparative study of Legge's works, which ought to be found in every great public library.

A New Novel for Lovers of Literature by an Author of International Reputation.

AFTER THE DIVORCE

By Grazia Deledda. $1.50.

Probably the best story of this noteworthy authoress, whose work is esteemed both in Italian and French, and who has been the subject of laudatory articles in the Critic, Fortnightly Review, Revue Bleu, etc. It is a dramatic Sardinian tale, turning on a law that permits the wife of a convict to divorce him and remarry.

Henry Holt & Co.
29 W. 23D ST., NEW YORK.

ISLAND
For Sale on the Maine Coast

One of the most beautiful islands in Penobscot Bay; one night's journey from Boston and close to regular daily steamboat communication. This property is in the middle of the finest sailing grounds on the coast. The island is a mile in length, and is on an admirably sheltered harbor for yachts or boats, with deep water throughout and close in shore. It comprises nearly 250 acres of high land, a large part of which is finely wooded. There are numerous beaches, coves, and bold rocky shores at almost every point, and beautiful views of surrounding islands and mountains. The property must be disposed of this spring, and will be sold at a low price to settle an estate. Address JOHN L. DONAHUE, Executor, Rockland, Maine.

OSLER

Aequanimitas and Other Addresses

By WILLIAM OSLER, M.D.

Regius Professor of Medicine at Oxford University, England; Professor of Medicine, Johns Hopkins Hospital, Baltimore, Md.

A series of 18 master addresses.
12mo; 389 pages. Cloth, $2.00 *net.*

"Dr. William Osler, about to leave this country for the Regius Professorship of Medicine in the University of Oxford, has published a sort of valedictory volume, almost, if not quite, as interesting to the laity as to the profession of which he is a distinguished ornament. . . . We may almost say he has unconsciously written an autobiography —not the annals of his life, nor the story of the friends with whom he has been associated, but he has given his thoughts on education; on investigation; on the relation of physicians to patients, and to nurses; on ethics; guardedly, on religion, and fully, on the conduct of life."—THE NATION, NEW YORK.

Sent, postage prepaid, upon receipt of $2 by the publishers or may be ordered through any bookseller.

Neolithic Dew-Ponds and Cattle-Ways

By ARTHUR JOHN HUBBARD, M.D., and GEORGE HUBBARD, F.S.A., F.R.I.B.A. With 25 illustrations. Royal 8vo. $1.25 *net.* By mail, $1.35.

LONGMANS, GREEN & CO., New York

Democracy and Reaction

By L. T. HOBHOUSE
Author of "The Labour Movement," etc.

12mo, net $1.50.

"A deliberately reasoned contribution from an author who has proved himself acute, competent, thoroughly prepared and vigorous. . . . Mr. Hobhouse's treatise is not merely a vigorous satire and trenchant analysis, but it is based upon a true record. . . . His conclusions as to the nature of the reaction that has taken shape against the earlier Democratic ideals are thoroughly well thought out, and are entitled to full consideration on the part of thoughtful citizens."
—JOHN MORLEY
in *The Nineteenth Century.*

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.

$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

THE FAR EASTERN TROPICS
STUDIES IN THE ADMINISTRATION OF TROPICAL DEPENDENCIES.

By ALLEYNE IRELAND

"Mr. Ireland's extremely interesting and varied series of studies in tropical administration covers a very wide area and many different types of aspiration and achievement. He has visited the many shores which radiate round Singapore as their trade centre—the Malay Peninsula, French Indo-China, Java and Borneo. He has been as far westwards as Burma, and as far eastwards as the Philippines. Almost every possible variety of tropical government has presented itself to him as he has passed successively under the British, French, Dutch and American flags; and upon all he has brought to bear the keen insight of an experienced observer, rejecting the non-essential for the vital, and enriching his survey with a great fund of comparative information."—*London Times.*

With new map. Large crown 8vo, $2.00 *net.* Postage 14 cents.

WASPS, SOCIAL AND SOLITARY

By G. W. and E. G. PECKHAM

A popular book of research in a less familiar field of nature. Those who have read Maeterlinck's delightful treatise on bees will welcome this interesting narrative of the ways of wasps. In his introduction Mr. John Burroughs says: "I am free to confess that I have had more delight in reading this book than in reading any other nature book in a long time. It gives me pleasure to commend it to all nature-lovers." Illustrated. Crown 8vo, $1.50 *net.* Postage 12 cents.

ESSAYS IN PURITANISM

By ANDREW MACPHAIL

"These essays are not only remarkably interesting, but distinctly able—full of shrewd insight, strewn with sparkling raillery, thoroughly informed as well as appreciative. The book affords interesting reading from its beginning to its close. It is crisp and pointed in style, and very many of its aphorisms bear evidence that the author has a merry wit."—*Glasgow Herald.*

Crown, 8vo, $1.50 *net.* Postage 12 cents.

A MANUAL OF TREES

By CHARLES S. SARGENT

Brief descriptions of some 630 trees of North America (exclusive of Mexico), accompanied by a figure of the leaves, fruits and flowers of each tree. This work will fill a place similar to that long held by Gray's "Manual of Botany." Professor Sargent is the author of "The Silva of North America," "Trees and Shrubs," etc. With Illustrations by Charles Edward Faxon, Glossary of technical terms and Index. Octavo, $6.00 *net*, postpaid.

JOHN WHITE CHADWICK'S Later Poems

Presenting Mr. Chadwick as a poet in his most mature period, when his lines conveyed the most perfect expression of his deep thought and feeling. With portrait 12mo, $1.25 *net.* Postage 9 cents.

To be published during the month of April

LYMAN ABBOTT'S The Christian Ministry

A live discussion of the question: Why do people go to church? Crown 8vo, $1.50 *net.* Postage extra.

HUGO MÜNSTERBERG'S The Eternal Life

A valuable contribution to the discussion of immortality. 16mo, 85 cents *net.* Postage extra.

C. HANFORD HENDERSON'S The Children of Good Fortune

An essay in morals upon such questions as Human Conduct, The Moral Person, Social Welfare, etc. Crown, 8vo, $1.30 *net.* Postage extra.

ROARK'S ECONOMY IN EDUCATION

By **Rurie N. Roark,** Ph.D., Dean of the Department of Pedagogy, State College of Kentucky.

$1.00

THIS, the third book in Dr. Roark's pedagogical series, is a contribution to educational literature that is original in title, in purpose, and in contents. The first part of the work presents in new form all that was best in the old books on "school management," and adds much that is new and helpful. In the second part the problems of the administration of school systems are dealt with. In the third part are described the latest movements in the economical correlation of all the other educational forces of the community—the home, libraries, museums, art galleries, etc.—with the school. The book is not only invaluable to the individual teacher in any grade of work, but it is especially adapted for use as a text in normal schools, teachers' reading courses, and college departments of pedagogy.

HENRY B. HYDE
FOUNDER

J. W. ALEXANDER
PRESIDENT

STRONGEST IN THE WORLD

J. H. HYDE
VICE PRESIDENT

$2,500 A YEAR FOR LIFE.

The Equitable Life Assurance Society paid yesterday the claim on policy No. 996,674. This was one of the Society's new Continuous Instalment Policies; and under it the widow of the deceased is guaranteed $2,500 a year as long as she lives. As the widow is only about thirty-five years of age, it is probable that she will live to receive the income for thirty-five years, or even more.
—New York Tribune.

The assured under the above mentioned policy had only paid $7240 in premiums. In return for this amount, the Equitable must pay $50,000, and may pay $100,000 or even more.

If you would like full information regarding this new form of policy send coupon below, or write, for leaflet.

Splendid opportunities for men of character to act as representatives.
Write to GAGE E. TARBELL 2ND Vice President.

The Nation.

NEW YORK, THURSDAY, APRIL 6, 1905.

The Week.

President Roosevelt's latest header into Dominican troubled waters will not strengthen confidence in either his steadiness or his prudence. He is trying to do by indirection, and in a way doubtfully legal, what he endeavored in vain to persuade the Senate to give him power to do lawfully and directly. As in his seizure of Panama, he seems to aim at "creating a situation," during the recess of Congress, which Congress, when it meets, will have to accept even if it makes wry faces. His course will heighten the apprehensions which Secretary Hay's poor health and absence had already roused. The haste with which the President closed with the suspicious offer of Morales is not creditable to his caution. No inquiry into motives and conditions; no time (before going on a hunt) to await Minister Dawson's proposed coming to Washington, keeping the question "open" meanwhile, as that diplomat suggested, but a hurried decision on what is confessedly half-information. Not in such precipitate fashion should the foreign policy of a great nation be conducted. And where does Mr. Roosevelt find his authority for permitting "no change" in the situation in San Domingo? Acting Secretary of State Adee explains this to mean that the President of the United States will maintain the *status quo* in San Domingo. That is, he will put our ships and marines at the disposal of President Morales. He will allow no revolution to overthrow the Dominican President, even if it be supported by a majority of the people. For that, President Roosevelt has no more warrant in law than he would have to prevent the Czar of Russia from being dethroned by an uprising of the Russian nation.

President Morales is reported to be "greatly pleased," but at what? Not that the tangle of his country's finances is to be cut through, but that he himself is now, as he thinks, beyond danger of being turned out by a revolution. He will cheerfully turn all his revolutionists over to Uncle Sam. This his been his obvious aim throughout. He ardently desires to appoint Americans as collectors of Dominican customs, not because he knows or cares anything about their administrative ability, but because he firmly believes that they will be backed up by American guns. Nominally Dominican officials, Morales will regard them as Americans whom their Government is bound to protect at all hazards. Of course, it is highly probable, as it is highly desirable, that no revolutionists will try to oust them; but the risk is there, and it is one of the chances of trouble which Mr. Roosevelt is so fond of taking with a light heart. Doubtful of his legal warrant for what he may have to do, he simply clings to the larger hope that he will not have to do it. But he is evidently storing up new difficulties against the day when the Senate shall take up the Dominican treaty on its own merits.

If the French Government had appointed a Panama Commission with a great flourish of trumpets, and then cut their heads off a year later as a set of incompetents, scornful things would have been said by the American press. But when an American Administration does this, we know that it is proof of rare foresight, energy, and efficiency. In so far as the President's removal of the commissioners is based upon their bad organization as a working body, that is something which should have been perceived from the beginning. It appears, however, that his impatience with them is largely due to the fact that they have insisted upon making plans before executing them. This difficulty will persist, however, no matter what the reorganization or what the new personnel. An immense amount of preliminary study must yet be done on the canal if the whole project is not to be botched. So far as we know, no published report deals at all adequately with the changes in marine architecture as affecting the whole question of the depth of the canal and navigation through it. Yet that is a subject requiring the nicest attention. It would be a reproach to us to build a canal with a hurrah, only to find, as the Suez does to-day, that the latest types of steamer could not use it.

In selecting the new Panama Commission, the President has radically departed from the theory which guided him in choosing the first. For engineering experts, it is evident that he has determined to substitute driving men of business, yet the expert knowledge is to be supplied through a board of consulting engineers. Their first duty, as Secretary Taft states in his letter of instruction, will be to fix upon the true plan to be followed in building the canal. Then the executive Commission, with the army and navy to help, will be counted upon to put through the work. But the main thing is to elect the wisest plan. In spite of all the studies and projects already put forward, no satisfactory solution of all the problems involved has yet been hit upon. Another question carefully to be considered is whether the work shall be done by the Government itself, or by contract. If the former, every safeguard against jobbery that can be devised will be needed.

To those who recall the excited reception of the Government's estimate last December that the cotton crop would be 12,400,000 bales—exceeding by a million any previous record—a little surprise may be pardoned at the tame greeting given to the "ginning report" of the Census Bureau, on March 28, which marks up the December figure to 13,500,000 bales. It should be observed that the former estimate, prepared when the cotton harvest had hardly begun, was general, whereas the "ginning returns," giving the amount actually passed through the gin in preparation for market, are reasonably close to accuracy. It might have been supposed, therefore, that the dismay of the cotton community last December would now be redoubled—more particularly so since the price of cotton stands to-day exactly where it did on the eve of the earlier estimate. The fact is, however, that the cotton producer has now discovered certain compensating advantages in a "bumper" crop. A year ago, the entire South seemed to have made up its mind that its prosperity was pinned to cotton at 15 cents a pound. That such a prize was driving away consumers and killing the spinning industry at Manchester and Fall River, did not affect this sentiment in the least. The popular attitude resembled that of Wall Street in April, 1901, when skeptics who whispered that stocks were pretty high were angrily asked if they had lost faith in the United States.

This feeling expressed itself in the case of cotton somewhat amusingly. The experts of the Department of Agriculture, whose 9,900,000-bale estimate of a year before had been most kindly greeted, were denounced as jugglers and frauds, hauled before a special committee of Congress, and there publicly accused of manipulating the returns. Public-spirited planters emerged into view, at various Southern points, with eloquent appeals to burn up part of the "bumper" crop. Meanwhile, a community which had been foolishly speculating for the rise in cotton, had to sell its "options" for the best price obtainable. As with the Wall Street of 1901, completion of this unpleasant process left people with a clarified view of the situation, and the first thing that they saw was an instant revival in the world's cotton-goods trade at the lower prices. This is the secret both of the recovery in cotton prices to a remunerative though not

extravagant figure, in the face of the much higher "ginning estimate" of last week, and of its complacent reception. The outcome is highly satisfactory; not least so because it disposes, for a good while to come, of the profound distress of the "worrying" school of economists as to whether the world would hereafter grow enough cotton to clothe itself.

The plan for building a great modern immigrant station at New Orleans and attempting to divert part of the emigration from the countries of Southern Europe to that port, is of interest in connection with the efforts of some of the Southern States to secure white labor from abroad. Last year New Orleans ranked only eighth in the number of aliens admitted, its total being 4,946, or less than one-one hundred and twentieth of the corresponding figure for Ellis Island. Commissioner-General Sargent, anxious as he is to prevent the congestion of foreigners in the Eastern cities, has approved the plan for increased facilities for handling immigrants at New Orleans. The steamship companies, if they choose, can doubtless induce a larger proportion to land there. But that this will make them stay in the South is not certain. In the last fiscal year, only 95 arriving immigrants gave South Carolina as their destination, only 112 North Carolina, only 1,096 Alabama. Opportunity and not distance must, in the long run, be the controlling factor. Illinois, which is just about as far away as Alabama from this port, was the destination of 57,457 immigrants last year. It is perhaps true that the planters who have gone to the docks at New Orleans to engage men as soon as they landed, may have secured some who would otherwise have gone elsewhere, but if once the immigrants learn that their outlook is better in the South than in other sections, they are bound to go there, no matter what their port of entry.

Although Maryland will not vote on the negro-suffrage amendment for seven months, discussion is already spirited. The Baltimore *News*, answering a statement by Murray Vandiver, chairman of the Democratic State Central Committee, makes some telling points. It disposes of the argument that the existence of bi-partisan registration boards in every precinct would ensure just enforcement of the requirement that the voter "understand" the State Constitution. On the tens of thousands of doubtful cases, it points out, the registration boards would divide two to two. "Nobody with a grain of sense imagines that that feature of the law would be permitted to stand after the disfranchising amendments had got into operation." Inevitably, it would mean a return to the old system of 2 to 1 registration boards which "was the corner-stone of election frauds prior to 1895." Chairman Vandiver further stated that the "educational clause" was taken from the Virginia Constitution. While this is literally true, the Virginia provision was made to apply only to original registration under the act, while in Maryland it is proposed as a permanent condition. Since January 1, 1904, the educational test in Virginia has been simply the writing of name, age, residence, etc., in the presence of the registration officers. "That Maryland is not driven to the use of methods which, in States farther South, have been felt to be a deplorable necessity," says the *News*, "we need not here insist; the point we wish to make is, that what Vandiver says of Virginia is not true."

If the guests at the Missouri Society dinner last week expected to hear Gov. Folk lay down any novel principles of government or emit surprising views on politics, they were diappointed. But his career is doubly inspiring because of its lack of such things. "The Missouri idea," as he defined it in words at the dinner, and has still more clearly expressed it in his acts, "means the enforecement of law, and that if the law be bad, the remedy is to repeal, not to ignore it." Mr. Folk did not win fame by devising new laws or new machinery as safeguards against the wrongdoer; he did not try to extend his activities beyond the powers of the office in which the people had placed him. He simply did his sworn duty under the laws as he found them. The laws were not all they should have been, and he has since tried to supplement and improve them; but the work which made his name known to the country was done under statutes which any of his predecessors might have used had they had the same sense of public duty. As Lincoln said of Grant, he did not begin by asking for additional resources, and complaining that he could accomplish nothing without them. Unlike some of the "reform Governors" with whose names his is often coupled, Folk is no innovator, nor has he a panacea for the ills of the country; but he presents the most prominent example now before the country of what can be accomplished through fearless enforcement of the laws as they are.

Rhode Island politics being what is known, it has been something of an anomaly that the form of ballot used in that State is the one most in favor with reformers and best calculated to encourage independent voting. However, Gov. Utter and the present Legislature are bestirring themselves to see that this condition may no longer puzzle the publicist. A commission appointed by the Governor and Speaker, with Senator Elisha Dyer as chairman, has just recommended that the present pure Australian ballot be abandoned for one having the party column. Whereas at present even the voter of a straight ticket must examine and mark separately each candidate of his party, the commission proposes to introduce the "straight-ticket" circle. The type chosen is the one used in New Hampshire, Michigan, Utah, Wyoming, and Idaho. Under it the man who desires to vote for a Democrat for Governor and Republicans for all other offices may put his cross in the Republican circle, then *scratch out* the name of the Republican candidate for Governor and make a cross opposite the Democrat's name. Thus it is mechanically a little more difficult to vote a split ticket than here in New York, where the erasure is unnecessary, though decidedly easier than in Iowa, Kansas, or Indiana, where the form of ballot is the same but the law requires every name to be marked separately when a split ticket is voted. One of the commission's recommendations, that "no ballot shall be rejected for any technical error which does not make it impossible to determine the voter's choice," is doubtless a very proper provision in view of the long controversy over the official canvass last fall, but the disputes over alleged identification marks had nothing to do with the form of the ballot. The change is in the interest of nobody except the hidebound party man. For all that, the Providence *Journal* describes the recommendations as "reforms in the ballot laws."

By the strict party vote of 33 to 14, and obviously under the lash of the Republican caucus, the stock-transfer bill and the mortgage tax bill passed the New York Senate Monday night. The inequitable stock-transfer tax will, of course, affect the purely speculative branch of Stock Exchange business, but no more than would a similar tax affect sales of dry goods, iron, grain, or cotton. It will leave to the gambling speculator, moreover, the power to transfer his large transactions to the exchanges of other States—an expedient which the nature of his business makes easier for him than for the bona-fide investor. The mortgage tax bill has not received the public attention which it deserves. Indeed, a curious notion has been created, in some quarters, that the one-half of one per cent. tax proposed is the relatively unobjectionable "registration tax" projected and defeated at Albany a couple of years ago. Nothing could be further than this from the purposes of the pending measure. It imposes an annual tax—less in its percentage figure, to be sure, than that of the personalty tax in which mortgages have hitherto been included—but levied, unlike the personalty tax, on the entire and ascertained sum of capital invested in the mortgage. Considering that the interest rate

obtained on good mortgage loans, in this city, ranges from 4 to 5 per cent., this one-half per cent. tax would clearly amount to a tax of 10 to 12½ per cent. on all incomes procured from such investments. Whose are these incomes on which such a burden is to be imposed? Every one knows that investment in real-estate mortgages is the recourse of the thrifty citizen in moderate circumstances, of the small estate left as the sole support of a dependent family on the death of the bread-winner, or of the trust funds of institutions which, like the savings bank and the building and loan association, exist for the benefit of people of narrow means.

George C. Holden, the postal inspector who "borrowed" $1,100 from the Storey Cotton Company of Philadelphia, which he was investigating, had evidently learned his business from Beavers, Machen, and other prominent officers of the Department. The get-rich-quick concern of Philadelphia was known by every reputable cotton dealer in the country to be a fraud. Twice its swindling operations were exposed at length in the *Evening Post*. The charges were laid before the postal authorities, who for some mysterious reason refused to act against men who were notoriously using the mails to cheat small investors in every part of the United States. The total amount of money stolen is variously estimated at from one to four millions; the lowest sum is certainly large enough. These heavy losses fall chiefly upon clerks, school teachers, and other "lambs" who embarked their slender savings in this bottomless enterprise. Holden is a man who clearly belongs to the régime of Charles Emory Smith and Henry C. Payne; and Postmaster-General Cortelyou will, we trust, deal with him as he deserves. The incident has no moral except the old one:

> "Clap on a lock, keep watch and ward!
> But who the guards themselves shall guard?"

Unprecedentedly large are the orders being booked for anthracite coal. This is due only in part to the usual spring reduction in price. It is largely ascribed to the fear of another strike in the anthracite mines when the present truce between operators and men expires by limitation. The wise and prudent are foreseeing the evil, and stocking up with coal. The "war-chest policy" in public finance was long ago discarded by all nations except Germany, but the present rush for anthracite presents the picture of a curious revival of an analogous practice in the domain of industry. It yet remains an open question whether the anthracite settlement, or rather the anthracite compromise, effected through Mr. Roosevelt's mediation, will prove of lasting public advantage. Coal at any price is demanded by a shivering public; but the way the resumption of mining coal was secured has left many wary observers shivering even in warm weather, and two years in advance of the winter of 1906-7. It was doubtless possible for miner and operator to decide, at the instance of the chief executive, even though acting in a private capacity, in what proportions they would share the extra price to be imposed on the consumer. But who will go warranty for another easy agreement as to the division of the spoil?

The meaning of Mr. Balfour's decision to withdraw party support from resolutions on the Chamberlain plan was insufficiently brought out in the dispatches. The press reports make the matter clearer. Lord Hugh Cecil, in a remarkable speech, interpreted the action as a complete disclaimer of Chamberlainism, and Mr. Balfour allowed the gloss to stand undisputed. The theory that the Ainsworth motion, condemning duties on manufactures, was non-contentious, Lord Hugh Cecil treated with contempt. He recalled the fact that Cabinet Ministers had been driven out because of their hostility to the Chamberlain plan, and new appointments made with a view to the protectionist propaganda. He regretted that the Government had not maintained neutrality on the issue, and he took Mr. Balfour's flight before the motion as clear evidence that he had at last cast in his lot with the Unionist free-traders. The repudiation of the protectionist programme was, he held, complete. "After to-night," he said, "tariff reform would pass from being a heresy into being a laughing-stock." Mr. Balfour, his cousin explained, "had made it clear that the Conservative party was not a protectionist party, and that it had not been captured by the Tariff Reform League." The conclusion was only too obvious that Mr. Balfour had botched the whole matter of handling the Chamberlain agitation, and was now both deserting his former colleague and running away from the mess he himself had made. When flight is the only purposeful manœuvre a general ever makes, his military repute suffers. And Mr. Balfour, who receives indirect votes of censure every day or two now, will hardly get credit from trying to remedy initial vacillation by ultimate evasion.

One of the infallible signs of spring is the recrudescence of the Macedonian problem. The British Foreign Minister, speaking last week before the Lords, took the ground, first, that European control of the finances of the disturbed provinces is necessary, and that the initiative of reform must still remain with Austria and Russia. To a certain extent the two propositions are contradictory. At the present juncture no effective pressure can well be exerted by Russia, while Austria, too, suffers from internal discord. Any reforms they impose upon the Sultan are likely to prove as ineffective as that reorganization of the gendarmery so ambitiously planned in the Mürsteg convention. In spite of the appointment of a few Christian officers, the misgovernment of the three vilayets continues. One hears already of outrages by the Turkish troops and of reprisals by the revolutionary bands. The Porte has served the usual protest upon Bulgaria for fomenting the revolt across the border. Furthermore, the whole situation has grown much more difficult through the appearance of the Greeks in military guise. Formerly this nationality held its own by guile, and was impartially oppressed by Albanians, Bulgars, and Turks. Now we learn of Grecian partisans fighting against the Bulgar agitators. Thus a new racial complication becomes menacing in a situation already perilously mixed. One cannot share Lord Lansdowne's belief that the various remedial measures have been of any avail, or that there is any promise in further joint action by Russia and Austria. The redemption of the harassed vilayets seems the task of the most disinterested Powers—France and England. England, in particular, cannot evade the moral responsibility she incurred through curtailing Bulgarian territory by the Treaty of Berlin.

What the Kaiser said at Tangier is matter of some dispute, but it may be assumed that he used his characteristic outspokenness. Such, at any rate, was the tone in which Chancellor von Bülow discussed the open door in Morocco. On the same subject a statesman of a more reticent cast, M. Delcassé, made a reassuring utterance before the French Senate on Friday. As if to offset any disquieting effect from what Bülow had said and the Kaiser was sure to say, he declared that France had no territorial ambitions in Morocco, and meant to keep that country open on equal terms to the world's trade. Thus the Kaiser and the French Foreign Minister were almost simultaneously advocating the integrity of the Sultanate and the open door. The anti-German press sees a psychological moment of considerable menace: the Kaiser has taken advantage of the humiliation of France's ally, Russia, to proclaim an aggressive policy in the Mediterranean. But the support of Russia was almost valueless for Mediterranean purposes, while England is a really formidable contingent ally for France as against possible German designs on the Moorish coast. Furthermore, there is no reason to suppose that the German declarations are other than commercial in intent. Bülow is engaged in Mr. Hay's favorite occupation of demanding the open door, but with an unction possible only in a protectionist Minister.

THE DREAD OF DIRECT TAXES.

The taxation muddle at Albany is rather worse than usual this year. In vain do party caucuses, in vain does the Governor, plead for harmony and appeal for new revenue. Formidable objections are offered to every proposed additional tax, and the Legislature seems almost at its wits' end to know how to provide the money to meet the expenses which it has authorized. The surplus cannot be drawn upon indefinitely. Either more money must be put into the Treasury or the horrible alternative be faced of taking less out. Yet the mortgage tax is stoutly resisted, the stock-transfer tax is shown to be unsound, and which way shall the troubled tithingmen at Albany turn? When some hardy spirits ventured to whisper that it might be necessary to return to a direct tax, the suggestion excited acute alarm, and left both the Legislature and the Governor aghast.

The fear of direct taxes is getting to be common in this country. State after State aspires to the proud distinction of being able to say to its citizens: "You have to pay nothing for the expenses of your Government." New Jersey long ago began to make that boast. The cost of her general administration was fully met by corporation taxes. Whether the corporations did not immediately set up as tax collectors, and make the innocent and rejoicing citizens pay without knowing it, was a question which no patriotic Jerseyman would ever ask. "No State taxes" was a taking cry, and Governor Odell was soon raising it in New York. Here, however, the system of purely indirect taxes is breaking down under our eyes. The old ones are not adequate; new ones are almost impossible to find. Yet a kind of blank despair settles down upon the authorities when it is proposed to revert to the sure and simple expedient of a direct tax.

This only shows how far in folly we have travelled; how completely we have been drugged by sophisms about taxation; how entirely forgotten are the sound arguments, both economic and political, in favor of direct taxation. It is too much, no doubt, to ask our busy statesmen at Albany to read Professor Seligman's 'The Shifting and Incidence of Taxation,' but there ought to be some way of giving them simple lessons in the inevitable diffusion of taxes throughout the entire community. Happy-thought legislators suppose they have solved the whole problem by incorporation taxes or franchise taxes or mortgage taxes or stock-transfer taxes. A few, they imagine, will have to pay, and the other lucky dogs will escape. But as well think to exert pressure upon one portion of water in a pail without disturbing the rest. A tax, even when apparently most indirect, is the one of those "good things" which every man displays most unselfish eagerness to "pass on" to his neighbor.

That there is great popular misapprehension about this shifting of taxation is no reason why those who levy taxes should shut their eyes to the facts. Bucolic ignorance, even blissful, ought to be rudely disturbed. The farmer should have it made plain to him that a tax on mortgages, such as his innocent soul rejoices in because he thinks it is a good way to draw the fangs of money-lenders, really reflects itself in the higher rate of interest which he has to pay on every loan. But the political viciousness of indirect taxes is even more glaring than their economic. They are a direct temptation to extravagance. They cover up the truth, and lead credulous citizens to suppose that the Treasury is filled by a species of magic, instead of by draining their own pockets, and hence that wasteful schemes of public expenditure do not much matter, since nobody, except the hated corporations, has to foot the bill. What our indirect system of tariff taxation has done to debauch the political integrity of this country (quite apart from the outright corruption to which protectionists have resorted) is incalculable. All indirect taxes violate that canon of Adam Smith's which age cannot wither: "The tax which each individual is bound to pay ought to be certain. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor and to every other person."

The tax-gatherer is the chief of political schoolmasters. Others intimate or allege waste in carrying on government; he demonstrates it by figures which cannot lie. All the more desirable, is it, therefore, that he be allowed to go as straight as possible to every citizen with his wholesome lessons. He is the great reinforcer of the axioms of political morality. It is easy for theorists to assert, or deny, that war and preparations for it are a crushing economic burden; but there is no refuting the eloquence of the tax bills. They are the great check upon lavish government; they make Presidents and Governors and Congresses and Legislatures think twice before embarking upon grandiose projects. Hence it is of the highest importance, in the public interest, that every man be made to know precisely how much his rulers are taking from his earnings to support the Government. In this light, direct taxes are to be welcomed rather than dreaded. They tend to bring about that clear understanding of the situation which Voltaire expressed by writing that every time an individual applied for a pension or a Government grant of any kind, he really demanded so much money out of the pockets of his neighbors.

We have approved of Governor Higgins for insisting that the Legislature cut its coat according to its cloth; that it first provide money before voting it away. But this is not to approve a frightened clinging to a false system of taxation. Instead of moving heaven and earth to find some fresh and offensive form of indirect taxation, let there be a frank return to direct taxes. They will produce not only funds, but economy; will create not merely revenue, but possibly a political conscience under the ribs of death.

THE MAIN EQUITABLE QUESTION.

The report that James Hazen Hyde tried to shift upon the Equitable Life Assurance Society the cost of his expensive dinner to Ambassador Cambon, cannot be treated with contempt as an idle rumor. The integrity and the judgment by which a great insurance company is managed should be, like the chastity of a woman, above suspicion. This is a matter which involves more than the Equitable. Before the specific charges were made against the vice-president of the Society—the most serious of them, perhaps, openly made by President Alexander himself—the public mind had been inflamed by articles reflecting on the conduct of our great fiduciary institutions. Every fresh rumor and innuendo lends color to the old accusations of recklessness and unfaithfulness, and —if we may judge by press comment and private conversation—unsettle confidence in the insurance business generally. The time has come, then, for making a clean breast of it, for offering such detailed information as to this allegation and others of the kind that no fair-minded man can doubt that the huge funds which represent savings for wife and children are handled with skill and honesty.

There is danger that the real issue in the Equitable controversy be lost sight of in personal and factional squabbles. The latter bulk largest in the newspapers, but are not, we may be sure, the things which weigh most upon the minds of the millions of quiet people throughout the country who do not wish to see the security of their life-insurance policies in any way impaired. They are ready to cry plague upon both Hyde and Alexander, but they want the cloud lifted from a great fiduciary institution and from life-insurance methods in general. Thus the main question far transcends the quarrels between individuals or between interests. It is time that the officials concerned, and their lawyers, lifted their eyes from the ignoble and sordid bickerings upon which they have been too closely fastened, and looked at the large principles involved.

They cannot too soon make up their minds that here is no case for the arts of the compromiser. The thing has gone too far for any form of smug adjustment, with half the truth kept back. It was really so from the beginning. The president of the Equitable had said that

the vice-president was a reckless incompetent. The vice-president had replied that the president was a disloyal and selfish intriguer. How could an honorable truce be possibly patched up between the two? Of what earthly avail could Senator Depew's rose-water be in such a situation? High finance rivals politics in making strange bedfellows, but it was utterly impossible that one pair of blankets could again cover Alexander and Hyde. Even if they had agreed to embrace and be friends, and to say that their severe accusations against each other were intended to be compliments, the matter could not have rested there. Nor could it if the cliques within the directorate had composed their differences and announced that all was for the best in the best possible of companies. A vaster interest was involved, and its just demands had to be satisfied before there could be real peace.

What we mean, of course, is the interest of the 600,000 policy-holders of the Equitable, and of the ten times that number insured in other companies. Insurance officials are important, in their way, and their bitter disputes make good gossip, but, after all, it is the great body of plain folk, anxious to make provision for old age and death by insuring their lives, who are the chief parties in interest. Their confidence has been rudely shaken by the Equitable disclosures, recriminations, antagonisms, and dark hints of blacker mysteries all the while lying behind. Unless their doubts and fears can be dispelled, the effect upon the insurance business of all companies threatens to be disastrous. People will think twice before taking out policies, or even paying premiums on old ones. Why sink money in swelling a surplus which unscrupulous financiers are fighting over for speculative purposes? Such questions may be foolish; but they are in the minds, if not on the lips, of thousands, and to answer them is the instant duty of those who care for the stability and safe ongoing of the insurance business of the whole country more than for rows between scheming officers and struggling factions.

The first step should be full, free, and *public* investigation of the Equitable's affairs. It is of no importance whether Mr. Hyde "demands" this or not; the public good demands it. And the work must be thorough and above-board. Superintendent Hendricks ought to understand that he, too, has something at stake in this business. That the Equitable officials should have been allowed to go on as they have, is of itself a reflection upon his department and the thoroughness of its inspection. This time there must be no half-way probings, no blinds, no concealments. If there are, the Legislature should go over the Superintendent's head and throw open the doors with its own hand. To let in the light is the urgent thing. The accounts should be laid open and analyzed, every suspicious entry run down to the last item and voucher. No hidden scandal, if there be one, can be half so bad dragged to the day as left in the shadow. We want to know the exact truth, whether it be consoling or not. To attempt to cover up anything will only make the public believe that things are worse than they really may be. A clean breast of everything is now the only recourse.

The true point of view is that of complete detachment from the wretched personal controversies involved. It is of no consequence whether Hyde be less black than he paints himself, or Alexander be more pure than he claims, compared with the question whether life insurance is to be able to recover from the enormous injury already done it. Perfect fearlessness in investigation and entire frankness in making the facts public are the remedies for which the situation cries out. We want to discover where we stand. Every insured man is eager to know what his true security is. And for any official of the Equitable, or of any other company, to put a single straw in the path of a complete investigation, would be to heap folly upon scandal.

THE FRENCH AND THE ITALIANS IN NORTH AFRICA.

No phenomenon of our time is of more significance for the future than the simultaneous outflow of nearly all the civilized European peoples into new countries. We are familiar with the features, though we can but dimly foresee the results, of the immigration which has for the last seventy years been pouring itself, and latterly in a more and more turbid flood, into the North American Continent. But the same process is going on in other parts of the world. Italians and Germans are filling up the vast spaces of Argentina, Uruguay, and Southern Brazil. The English are still entering New Zealand. Russians have been spreading out over Siberia. German settlers establish themselves here and there in Syria; and it is believed that if and when, upon the break-up of Austria, the German Empire obtains possession of Trieste, a systematic attempt will be made to colonize Asia Minor. In all the European peoples but one, the population tends to increase, so that there is a surplus for emigration—a surplus which is greater or less according to the fertility of marriages and according to the economic conditions at home, for the less favorable these are, so much the larger is the outflow of emigration. The one stationary population is that of France. Her census returns show a very slight decennial increase; but this is due to a small immigration, chiefly of Italians. Were she left to herself—*i. e.*, did emigrants and immigrants exactly balance one another—there would probably be a slight decline.

This fact is a serious one for France in more than one aspect. Its military significance and its economic significance are obvious. It has, however, another bearing also. France resumed in the nineteenth century her old policy of colonization; and she has now acquired enormous non-European territories in equatorial Africa and in southeastern Asia. These are regions too hot to permit of settlement by white men, so the administration and exploitation of them will impose no serious drain upon old France; but she has also annexed Algeria, which has become legally a part of the Republic, returning members to the Legislature, and she has virtually annexed Tunisia, though the nominal sovereignty of the Bey is suffered to exist and the French Resident rules in the Bey's name. Now, Algeria and Tunisia, though hot, are temperate regions, where the Frenchman of the south could work in the open air as well as at in-door handicrafts, and where, therefore, a French population might grow up and ultimately fill the country. Both regions have plenty of good land; and Tunisia in particular, which was once the granary of the Roman Empire, might again produce enormous crops of cereals and olives. Most of it now lies waste, roved over by pastoral nomads. France, however, has not got the men to send out into these new dominions. Even the prospect of good land to be had cheaper than at home does not attract the sons of her unenterprising peasantry. Italy, on the other hand, has a surplus population. It is willing to emigrate, because it is ill off at home, and particularly in the south of the peninsula and in Sicily. So there has been for many years past a considerable influx into North Africa of Italian settlers. Most of them come from Sicily, which is only some ninety-five miles from the nearest point of the African coast; and though a certain number return, many more remain.

When France used a flimsy pretext to enter Tunis and set up a protectorate there in 1882, the Italians were much annoyed. They had looked upon the country as destined one day to be theirs. It lay near; its government was weak; it was thinly peopled, with plenty of room for their emigrants. It had been one of the earliest conquests of Rome, so that they felt as if they possessed some sort of historic right to it. Nevertheless, France seized it before they could attempt to stop her, even had they been strong enough to do so. They have tried to console themselves with hopes of eventually laying hands upon Tripoli, but as that is a less attractive, because a far more arid, region, the thought of Tunis has not entirely vanished. France knows that the Italians entertain this feeling, and, as they con-

tinue to pour into Tunis while Frenchmen do not, France is uneasy, and her publicists have been much occupied with discussing the proper policy to pursue.

A book recently published by M. Gaston Loth, professor at the French Lycée of Tunis, deals in a broad and intelligent manner with the subject, and opens up some questions of general political interest. He estimates the total population of Tunisia (all the figures are uncertain) at about 1,800,000 Musulmans and Jews (the Jews largely in the capital, and notable by their commercial activity rather than by their numbers), and 130,000 Europeans. Of these last there may be nearly 20,000 French, 80,000 to 90,000 Italians, and about 12,000 Maltese. Thus the Italians are fully four times as numerous as the French. (The Spaniards, a large element in Western Algeria, are comparatively few in Tunisia.) The Italians are nearly all poor people, field workers or artisans, wage-earners of the humbler sort. Three-fourths of them come from Sicily, the brief passage costing only about a dollar. The conditions of life for the Sicilian peasantry are so wretched that it is natural they should emigrate to a place where wages are rather higher and work is more abundant. Indeed, any one who sees how full of idle people are the impoverished towns of inland Sicily, such as Castrogiovanni, for instance, perched high on its rocky hill, with apparently no occupation for most of the inhabitants, may well wonder, not that so many quit the island, but that so many remain. There are in Algeria, according to M. Loth, about 40,000 Italians, but *there* they are in the presence of a French population nearly ten times larger (about 370,000); and as they do not form a compact block, they tend to become Gallicized, and, after a generation or two, are practically Frenchmen. In Algeria, therefore, neither the Spanish nor the much smaller Italian element gives concern to the French Republic. What troubles she may fear in Algeria will come from the Muslim natives of the interior. But in Tunis the prospect is more clouded. Should the Italian population go on increasing till it is six or seven or eight times the size of the French, which increases very little, and should the Italians retain their language and their sense of separation —and they may retain it all the more the larger their numbers become—the French Administration may find itself isolated in the midst not only of unfriendly Muslims, but of a civilized European race attached to the government of its own Motherland.

What, then, is the proper course for France to follow? This is the question which M. Loth discusses—a question not unlike that which faced the Transvaal Boers when they found the English streaming into their country after the discovery of the gold mines in 1885. France cannot well stop the Italian immigration, for not only would this be difficult and have a timorous air, but it would retard the development of Tunisia, which wants labor and could dispense with the Italians no more than Hawaii could dispense with her Portuguese and Japanese. Some French writers have raised an alarm, and have advocated a policy of suspicion, which should refuse naturalization to the immigrants, should suppress their organizations, should even perhaps try to get rid of their schools. M. Loth advises a different course, and one which will appear wiser to American eyes. He points out that the immigrants are ignorant people, with no strong national feeling for Italy, and that repressive measures might tend to create one. They have shown no disposition to embarrass the administration. Many have learned to speak French, the landowners and heads of industrial concerns being mostly Frenchmen. Naturalization *en bloc* is deemed dangerous, while even the automatic naturalization, as in Algeria, of children born in the country seems to him risky in face of the much greater number of Italians in Tunis than in Algeria. Accordingly, he holds that, while nothing should be done to interfere with their existing associations, which have had no political character, the Italians should be induced to apply individually for naturalization as French citizens, and that the process should be made cheap and easy. He suggests that three kinds of naturalization might be distinguished, the lowest carrying only private civil rights, the second to be granted to the sons of immigrants, carrying political rights also; the third, to be reserved for the grandsons of imgrants, to confer the right of eligibility to all public offices.

To make these three bites at the cherry seems fantastic, but the idea of facilitating naturalization is unquestionably right. The gift is more likely to turn the Italian into a Frenchman than to suggest to him a means of aggression against France. But, in M. Loth's view, the supreme remedy is to induce more Frenchmen to settle in Tunisia. He enumerates various schemes proposed for this purpose—free land grants, the creation of a public-works fund and offer of employment, loans to intending French immigrants, and so forth. But, unluckily, none of these seems likely to overcome the rooted unwillingness of the humbler classes in France to seek "terras alio sub sole jacentes." That very attachment to French surroundings and French ways of life which is so firm a buttress of French patriotism, keeps the Frenchman at home. Moreover, there is no surplus population to provide emigrants. It is therefore possible that Tunisia may, after all, become virtually an Italian country, for the native Mohammedan population shows no signs of asserting itself against European influences. When land grows scarcer in the world and food grows dearer, the fertile plains of North Africa, including, in the more distant future, even savage Morocco, will again be filled with an industrious population, and that population will be Europeanized. So much, natural laws will ensure; and the presence of millions of civilized men to the south of the Mediterranean, where there are now only a few hundred thousand, will be an important factor in history. But whether these millions will speak French or Italian, and whether the political strength and assimilative power of France will overcome the numerical preponderance of Italians in these rich territories, so prosperous under Carthage and afterwards under Rome—that is a question on which it will be time enough to speculate thirty or forty years hence.

THE ROWFANT BOOKS.

The capture of practically the whole of the famous Rowfant library by an enterprising American bibliopole is both a fact and a parable. The fact is that the collection on which Frederick Locker-Lampson spent so much time and money has been taken over in a lump; and the very incident serves as an apologue to show all men that in first editions as well as in pork our transactions are quick and wholesale. We can have no quarrel with the merchant who has added these rarities to his stock; he is bound to take the point of view of commerce. We feel less anger than sorrow for the millionaire who will jump at this bargain and keep the library intact. He would exhibit more than human fortitude if he let slip this chance to fill at a stroke five hundred gaps in his own collection. Nevertheless, he will miss the infinite exhilaration of five hundred separate triumphs of the chase; and he will deprive all his rivals of the thrill of following the trail with him. He will be like a man who swallows at a gulp a glass of some patiently compounded monastic cordial which he should have sipped for half an hour. If it be possible to disturb the serenity of souls in Paradise, the shade of Frederick Locker-Lampson cannot now be wholly happy, for he would doubtless have desired, with Edmond de Goncourt, that his books should be sold under the hammer of the auctioneer, so that the pleasure which the acquisition of each had given to him, might be given again, in each case, to some inheritor of his own tastes.

The transfer of many of the books to America was a thing which the original collector himself foresaw. In that witty volume of autobiography, 'My Confidences,' he says sadly, "Our most important possessions are gradually leaving the country, whether it be in the shape of a Rubens, a Botticelli, a choice

Caxton, or a unique Shakspere quarto. They find a home in Paris or Berlin or Chicago." The new owner of the Rowfant treasures, whether he be in Chicago or New York, will, we trust, re-read 'My Confidences,' that he may both fortify himself in the faith and help to spread through this land of dollars the gospel of the true collector; for the poems by Dobson and Lang and the other praises of the Rowfant books were tributes to the spirit in which Locker-Lampson went about his undertaking, or, as he terms it, his "amiable madness."

He was born and bred to a liking for art and literature. He began modestly by picking up "ancient furniture, Louis-Seize gimcracks, china, and curiosities; also a few pieces of old silver." This curio-hunting brought him into communication with all sorts of people of kindred mind—for instance, "a divine who had a taste for the halters with which the more notorious malefactors had been hanged." Locker-Lampson did not fly so high; but he turned naturally from curios to poetry. "I seem nearer to Shakspere," he writes, "when I have his volume of 'Sonnets' (edition 1609) open before me." He was blessed with a little money, abounding energy, kind friends, and lucky chances. Thus step by step he was drawn into the pursuit of old books —"little volumes of poetry and the drama from about 1590 to 1610." He haunted the second-hand bookshops in the by-streets of London. "I studied the catalogues," he confesses, "giving out my heart in usury to such pastime. I was often unsuccessful; at other times my success was qualified, for I had to pay ruinous prices. But sometimes I have been lucky, and these shabby-looking little fellows now form a limited but curiously rare and highly interesting library of imaginative literature—a dukedom large enough for poor me."

Like all who are sealed of his tribe, he found collecting "a perennial joy" in spite of the frequency with which he was "pierced by despair." He met the most delightful people; he had amusing adventures, and exciting trials of wit with wily dealers. Two anecdotes of the many he relates are enough for the present. He returned to Bedford, the great binder, a volume that did not shut properly; it gaped. To the protest against this grievous defect, Bedford's only defence was, "Why, bless me, sir, you've been *reading* it!" "The collector," continues Locker-Lampson, "seldom condescends to become a student. I had not been reading it, and I told him so; but I understood the reasonableness of his reproach." And then there was the case of Anthony Horneck, "an elderly clergyman who must have been mature in dulness from his tenderest years." This man secured at a wonderful bargain a beautiful specimen of the Pynson Press, 1510. Discovering that it was infested with worms, the clergyman took the prompt and effectual measure of burying the book in his garden—forever.

The pleasure of buying with discrimination was also Locker-Lampson's. Ample as were his means after his second marriage, he remained too shrewd to plunge recklessly. The narrowing of the market and steady rise in prices were a genuine grief to him. "What I once could secure for five pounds," he notes, "now costs five-and-twenty. Moreover, such books are rarely to be met with; so I am abandoning this pursuit also." He had, as years passed, the solid satisfaction of seeing his hoard increase in value. The knowledge that he was richer day by day was something; but nothing in comparison to the conviction—confirmed by all witnesses—that in an enterprise which demands unusual taste, skill, and judgment, he had come off brilliantly.

These are the delights of which your millionaire often deliberately robs himself. To send an auctioneer or bookseller a *carte blanche* order for first editions or Americana, to be rich enough to buy whatever attracts one's fancy, regardless of cost, must become very monotonous after a few years. When one is seldom pierced by despair over the loss of a bargain, one can easily become bored by constant strokes of good fortune. Malmsey is no better than water if you must drown in it. But it is useless to labor the point. Even from our brief notes of Locker-Lampson's career, a man of discernment may easily extract the whole philosophy of collecting, which is, in one aspect, the philosophy of living—to leave something to do and to enjoy to-morrow. The masters of the art have been those "whose motto evermore is *Spes*."

THE SITUATION IN MANTCHURIA.

OBERLIN, O., March 28, 1905.

There lies before me the tracing of a portion of the great Russo-Chinese map of Mantchuria, which I used four years ago to direct my journey from Tieling to Harbin, a distance of 300 miles, along the line that is now being pursued by the retreating Russian army. It is, I suppose, the same map which is used by the strategists of both armies in the field and by the central Governments of both Russia and Japan. Familiarity with this map and with the physical features embodied in it would be of great advantage to those who prepare the headlines for the war news in our daily journals—that is, if they cared to convey a correct impression to their readers. But that they are not anxious to do this is evident from a comparison of the "scareheads" with the printed text to which they usually call attention. An explanation of the character of the uniform announcements of Japanese victories, both actual and prospective, was given to me a short time ago by the editor of one of our leading dailies, who frankly said that such announcements were demanded by his readers, and he produced a letter just received from a disaffected subscriber, stopping his paper because it had not announced Japanese victories enough.

A candid and careful study of what has been accomplished by the Japanese, and what remains to be accomplished before their aspirations are realized, will lead to conclusions by no means so favorable to the Japanese as those which are popularly entertained in America. The truth is that the victories of Japan have been dearly bought, so that the strain upon her resources is approaching the limit of endurance. The Japanese are past masters in the art of concealing their losses and of exercising censorship over the correspondents, but there are many indications that the conscription is far from popular in Japan, while some of the bold attacks upon impregnable positions have been made by soldiers who had bayonets behind them as well as before them.

The financial strain is indicated by the fact that even this last loan which is being sold in this country, can be floated only by pledging the income from the tobacco monopoly of the Empire. At the same time a circular was issued a few weeks ago throughout this country, signed by a formidable list of eminent humanitarians and friends of Japan, soliciting contributions to relieve the distress among the people caused by the war. This circular asserts, on the best of authority, that 2,000 families in the city of Sendai, which is by no means one of the largest, are on the verge of starvation.

The facts, also, concerning the irreparable losses inflicted upon the Japanese fleet are far from reassuring. The fleet is less than it was a year ago by two first-class battleships, three and probably four cruisers, two gunboats, and sixteen destroyers and torpedo-boats. Through these losses (for a long time concealed from the outside world) its efficiency is reduced fully one-third. It is idle to suppose that these considerations are not weighing heavily upon the minds of the Japanese statesmen who are girding themselves for the struggle that is still before them, so that nothing but the immense interests at stake could induce them to run the risk of another campaign. But these interests are so immense, and stretch so far into the future, that, in the presence of existing conditions, we cannot expect the nation to pause and propose terms of peace at all favorable to the Russians.

So far as the prospects of immediate peace are concerned, the Russian situation is equally unpromising. The English and American public is mistaken in supposing that the war is not popular in Russia. From all indications, it is as popular as was the war of the Northern States against the Confederacy, and for much the same reason. In this case, as in that, a far-reaching principle, to which the people are strongly attached, is at stake. The North fought for the Union. The States of the Northwest fought that the traffic of the Mississippi River might forever flow unfettered to the sea. We little realize with what passionate devotion the Russian people cherish the idea that their great country is to have unobstructed access to the Pacific Ocean. This aspiration has all along been more ardently cherished by the people than it has been by the Government. For two hundred years a

large emigration of peasants has flowed from European Russia into the fertile region at the head of the Amur River east of Lake Baikal; and during the last fifty years a still larger emigration has flowed into the valley of the lower Amur and of the Ussuri River. Muravieff fifty years ago, and Alexieff at the present time, representing the interests of the people of that region, have been far more aggressive in securing Russian interests upon the Pacific Ocean than the home Government has been. This emigration of some 8,000,000 of people into Siberia has both given expression to, and kept alive, the loyalty of the mass of the Russian population to the general policy of the Government.

Nor is the Russian Government regarded by the masses of the Russian people with that aversion which is represented in the English and American press at the present time. The strength of the longings of the Slavic race for unity can be appreciated only by mingling with the people in the country districts or with the soldiers engaged in their country's defence. The Russian people have not forgotten, and cannot easily forget, the long centuries during which they were enslaved by Tartar hordes because of the petty jealousies of the numerous republics into which their own country was divided. With unerring instinct the people shrink, as from destruction itself, from a disintegration which would again expose them to successful attack from outside forces. United they may stand, divided they must fall. No other sorrow like that could come to the great Russian heart. It is the experience of those who have had most contact with the Russian army, that it is loyal to the core, and that it is animated by a clear conception of the ideal ends for which Russia is fighting in the East. They are not fighting for foreign colonies, but for a compact empire which would maintain its position upon the Pacific Ocean for the good of the large population already upon its borders, and for that of the untold millions of Slavs who are longing to escape from the crowded conditions in the older portions of the country to find scope for development in the Far East. Russia, therefore, is not likely to conclude a peace such as Japan would at present propose, without risking another Titanic struggle for the sake of maintaining her honor and the very integrity of her empire. She might give up Mantchuria if Japan would be content with that. But will Japan be content with that? Probably not.

But, from a military point of view, the situation is not so desperate as the headlines of our papers would lead us to suppose. For, in the deteriorated condition of the Japanese fleet, the presence of a still larger Russian fleet, with all its possibilities, even though 2,000 miles away, will keep a large portion of the Japanese cruisers and men-of-war a good way from home, to watch the movements of the Russian admiral, while her own commerce will be more and more jeoparded as the season shall advance. From the headlines one would suppose that it was a holiday task for the Japanese to move from Tieling to Harbin and surround the Russian army; but the distance is 300 miles in a direct line, and it will take many weeks for the Japanese to establish a base in the interior from which they can safely advance long distances inland. In following the Russians, they find their way obstructed by the destruction of all bridges, so that, to make any use of the railroad, it must be practically built anew, and provided with rolling-stock. On the east, towards Kirin, the Russians are protected by a vast mountain system, which makes approach impossible except along the very line of the Russian retreat. On the west, where small Japanese flanking movements are being made, the country grows more and more inhospitable toward the north, and the railroad connecting Harbin with Siberia is 500 miles distant, being 200 miles beyond the Nomi River. The Japanese will find it impossible to make any strong effective flanking movement on the west without attenuating their line of communication so much as to make such a movement extremely perilous.

It should be noted, also, that Harbin is not wholly dependent upon the railroad. A great fleet of steamers plies upon the Amur and Sungari Rivers, which will be employed this coming season to its utmost capacity. Hundreds of barges, loaded with soldiers and military supplies, will float down the Amur River, when navigation is opened, and their contents be distributed to Harbin and Vladivostok as occasion may require; so that, even if the Japanese should turn their attention to isolating Vladivostok by advancing from Possiet Bay, they will have two campaigns on hand, as they had during the siege of Port Arthur, with this disadvantage: that Vladivostok is reached by two railroads, and would not suffer greatly if the road to Harbin through a mountainous country were intercepted. Furthermore, the Japanese have against them during this coming campaign the intolerable condition of the roads over which they must haul their supplies for 300 or 400 miles.

With such conditions favoring them, Russian statesmen will probably not be in haste to conclude peace. It is doubtful if the time has come for that true compromise which shall properly respect the interests of both countries upon the Pacific. Japan is pretty sure to make another supreme effort to humiliate the Russian army, while the Russian army has so many chances in its favor that it cannot afford to confess itself defeated until it has pressed its present advantages to the utmost.

Something, however, should also be said respecting the internal commotions in Russia. In the midst of the conflicting reports we are inclined to forget several things. In the first place, the strikes in Russia have seemed to be shorter-lived than those which we have had in our own country in times of financial depression. We seem to have forgotten the slaughter of miners a few years ago in the anthracite region, the burning of the railroad buildings in Pittsburgh, the vigorous use of United States troops in Chicago, and the reign of terror in the anthracite region again two years ago, and that in Colorado a year ago. We seem also to have forgotten the extent of the opposition to the war which showed itself in the riots in New York city in 1863, when Governor Seymour parleyed with the rioters until extreme measures had to be used, and more than 300 were shot down in the streets of New York, and more than 1,000 wounded; when Governor Andrew's first reply to the rioters who advanced upon the armory in Boston was a volley of grape-shot, which mowed down an unknown number of victims; when, in Ohio, fortified positions were established in the centre of the State by men who were determined to resist the draft; and, again, in 1864, when such prominent men as Benjamin F. Wade of Ohio and H. Winter Davis of Maryland, with a large following, were, from grievances of their own, violently assailing Lincoln's policy, and Generals Cochran and Frémont, with another large following, were heading a political campaign against him, and Horace Greeley was coquetting with the Confederate Government to bring peace at almost any price, and the platform of the great Democratic party was declaring the war a failure.

With such memories to confront us, we may well be modest in forming offhand judgments about the real sentiment of the Russian people with regard to the close of the present war. Russia is a great country, and if one will notice the sections from which the reports of disturbances come, he will see that these are relatively very limited in extent, and that for the most part they are brought about by conditions which are of local character. Propositions of peace from Japan unusually generous in tone might possibly meet with acquiescence, but, under existing conditions, propositions looking to the entire frustration of Russia's plans for the development of her empire upon the Pacific will be sure to unite the Russian people for the continuance of the war, just as similar unreasonable propositions from the Confederacy solidified the North and encouraged it to carry on the struggle to the end.

G. Frederick Wright.

IRISH AFFAIRS.

Dublin, March 23, 1905.

The fall, resignation, or dismissal, as it is variously described, of Chief Secretary Wyndham is a principal topic of political interest in both England and Ireland. When taking office, Mr. Wyndham invited the aid and coöperation of Sir Antony MacDonnell, an Irishman, a Catholic, and, if not a Home Ruler, at least a strong Liberal, with sympathetic opinions for Ireland and an earnest desire to do what he could for his native country. MacDonnell had held several important governorships in India, and had refused the governorship of Bombay with a salary of £10,000 to take the undersecretaryship in Ireland, on the express terms that he was to have a free hand, and to be a colleague rather than a subordinate of the Chief Secretary. Reform of the land system, of education, of taxation, of the administrative and unrepresentative boards through which Ireland is governed, were the subjects to which he was to address his mind. With the knowledge and assent of both the Lord Lieutenant and the Chief Secretary, MacDonnell conferred with the representatives of the landlords, the Catholic bishops, the obstructive Orange faction, the Nationalists—in fact, with all whose advice or opposition was likely to help or hinder reform. Prime Minister Balfour had been an assenter to the terms of MacDonnell's appointment and cognizant of his actions; but when MacDonnell's conduct was questioned in Parliament, both Prime Minister and Chief Secretary first denied, then

equivocated, and finally said that they and the whole Cabinet had censured MacDonnell for his indefensible conduct.

"You may as well tell the truth before it is dragged out of you," said John Redmond at an early stage in these debates, and finally it was told and confirmed by a frank letter from the Lord Lieutenant. The Chief Secretary resigned, and has been absent from Parliament, seriously ill from derangement of his nerves, but the Cabinet censure of MacDonnell has not been withdrawn or explained. The Prime Minister, daily heckled in Parliament as to MacDonnell's present position and powers, continues to shuffle, or refuses to answer plain questions. The irreconcilable Ulster Orange faction, headed by Lord Londonderry, still call for MacDonnell's dismissal. In their eyes it is intolerable that a Catholic and a man suspected of Nationalist sympathies should hold an important post in the Irish administration. Many members of the official hierarchy would like to see MacDonnell ousted on any grounds. He is a determined, in fact an obstinate, man, and one of his duties was to have been coördination and reform of the many boards through which England governs Ireland. In India, MacDonnell is said to have been unpopular with many of his subordinates, for the very sufficient reason that he expected them to do the work they were paid for. If he applies such a principle to Irish officials, abolishes sinecures, and can get competency made a reason for official appointments, instead of having a "pull" at the Castle, he will have an army of place-holders and hunters against him.

With the best intentions it would be impossible for any one in MacDonnell's position to introduce efficiency into and effect any real economies in the present extravagant system of government in Ireland. There can be no real economy in administration until the people of Ireland have the raising and expenditure of taxes under their own control. At present, no one wants economy, because, if money is saved in one direction, it is misspent in another. The revenue raised in Ireland goes into the English Exchequer, and funds expressly assigned for approved and useful purposes have been and are continually diverted from such purposes to other and objectionable ones in spite of the protests of the Irish members. As the money for Irish purposes, good or bad, useful or useless, is voted in Parliament at Westminster, English people generally, and some Irish, think every grant to Ireland is a gift to Ireland, an act of generosity; this, in spite of the report of the Royal Commission on the financial relations of England and Ireland that Ireland was contributing to the English Exchequer three millions sterling a year more than her fair and just proportion. Since that report was made in 1894, the excess of Ireland's contribution to the Imperial Exchequer has risen from three to five millions sterling. Every interest and industry in the country is neglected, education is starved, drainage, piers, harbors, transit facilities are neglected. Every national want and grievance is freely admitted by the English statesmen who rule us, but the stereotyped reply is, there is no money.

In finance, all that is asked by Irishmen is that, subject to a fair contribution to really imperial purposes, Ireland shall have the spending of her own revenue, which is now wasted in the most extravagant administration in Europe. Chief Secretaries may come or go, but the methods of Government remain unchanged. The Prime Minister has declared that it would be contrary to all principles of Unionism that the Irish people should have the management of their own affairs. He echoed the behests of a dozen Orange representatives, five of them being placeholders under the Government, and the remainder expectants of place, whose voices prevail over those of the eighty Nationalist members. Unofficial and unexpectant Unionists openly avow their approval of the Irish amendment to the address moved by John Redmond. This declared "that the present system of government in Ireland is in opposition to the will of the Irish people, gives them no voice in the management of their own affairs, is ineffective and extravagantly costly, does not enjoy the confidence of any section of the population, and is productive of universal discontent and unrest; and that it has proved to be incapable of satisfactorily promoting the material and intellectual progress of the people."

Ireland is not really governed by the Chief Secretaries and Lord Lieutenants, who are mere birds of passage. Before they understand their environment, they return to their own country. During their short terms of office they are in the hands and under the influence of a small and noisy faction calling themselves "loyalists," and of the permanent officials mainly recruited from that faction. To these it is intolerable that the post of permanent under-secretary should be held by a Catholic, a suspected Home Ruler, and a man who has the reputation of being an opponent of jobbery. One of the charges made against Sir Antony MacDonnell is that, in the matter of public appointments, he is likely to favor the Catholics. No act of the kind can be alleged against him, unless it be the appointment of Mr. Finucane, one of the three Estates' Commissioners. Mr. Finucane was a distinguished Indian administrator, a well-known authority on Indian land tenures, and, like Sir Antony, gave up brilliant prospects in India to take a comparatively inferior post in Ireland. He is not likely to become what is known in Ireland as a "tame Catholic."

It is the rule in India that, in making native official appointments, regard shall be had to the religion of the inhabitants. If a Mahommedan is appointed in a Hindu district, the person making such an appointment must give his reasons for the choice, and, similarly, if a Hindu official is appointed in a Mahommedan district. How is it in this respect in Ireland, where the Catholics constitute 74 per cent. of the population? The Lord Lieutenant must by law be a Protestant. There has never been a Catholic Chief Secretary. Of 60 privy councillors, 4 are Catholics; of 13 judges, 3 are Catholics; of 21 county court judges, 7 are Catholics; of 65 paid magistrates, 15 are Catholics; the head of the police is a Protestant, and out of 36 police county inspectors, 1 is a Catholic; of 170 district inspectors, 10 are Catholics. Out of 17 commissioners of national education, 5 are Catholics; of 60 land subcommissioners, 11 are Catholics. The same proportion prevails through all the better-paid appointments. In my (non-Catholic) opinion, Catholics do not sufficiently resent this very evident discrimination against their co-religionists, and the question is seldom raised except when the Ascendancy faction protest against Catholic appointments, as in MacDonnell's case.

Mr. Wyndham's resignation is to be regretted mainly because, being the minister responsible for the Land Act of 1903, he was interested in its successful operation. He was master of the art of evading awkward questions, and persistently refused to give information except when it suited him; but his successor has now the excuse to allege that he is not responsible for the Land Act or the expectations held out by the late Chief Secretary. Irish members of Parliament are entitled to know how the revenue of the country is spent, but the policy of the Irish Government is to disclose as little as they can, or to defer necessary disclosures until the information is useless for the purposes of Parliamentary criticism. The Land Act provides that the commissioners administering it are to act under the general instructions of the Lord Lieutenant—in reality of the Chief Secretary and the law officers of the Crown. It is well known that instructions have been given from time to time in the shape of opinions by the law officers on disputable points, and direct injunctions from the Chief Secretary, who promised, when passing the act, that all such instructions should be laid before Parliament. After much evasion and equivocation it has at last been admitted that instructions have been given to the Estates Commissioners, but, on the feeble plea that the instructions were "informal," Government has refused to make them public. It promises to do so when reduced to a "formal" shape—that is, when they have revised them to suit their purpose, and when too late to be used by the Irish members who have one day only in the session for the discussion and criticism of the Land Commission vote, and that day is already past. A very undue proportion of precious Parliamentary time is spent in questions being asked by Irish members, who have no other means of ascertaining what the Government is doing with the Irish revenue, for the proper expenditure of which the Irish members are, after the Government, responsible to their constituents. But evasion, equivocation, and refusal to answer or give information to which the public is reasonably entitled have become more and more common under the Balfour and Wyndham régime.

In the absence of official information, it is believed, and is probably the case, that sales between landlords and tenants have been agreed on to the value of not less than twelve millions sterling in the last two years; but the money to complete these sales—that is, the advances on loan to the tenants repayable in sixty years—has not yet been provided by the Treasury, and the result is that sales only to the amount of four or five millions have been completed. Naturally, buyers and sellers are annoyed at and inconvenienced by the delay. Others are reluctant to enter into agreements whose fulfilment must be a matter of uncertainty. The financial clauses of the Land Act were intended to enhance prices in these sales, and have been in this respect even more successful than was anticipated. The money is raised by Government at 3, and is lent at 2¾ per cent., the loss being cast on

the Irish taxpayers, who have also to provide a bonus of 12 per cent. on all purchase moneys. Sellers not only ask and get higher prices than have ever been prevalent, but in many cases compel acceptance of their terms by threats of eviction or proceedings to recover long-accrued arrears of rent. The term over which repayment is spread, sixty-nine to seventy years, is so long that buyers cannot feel the stimulus of ownership that they had under the earlier purchase acts; and where the prices are abnormally high, the ability to repay and the security for the loans are doubtful.

This year, in the poorer parts of the west and south, acute distress prevails, owing to failure of potato and corn crops last season. Harrying such tenants by eviction and processes for rent leaves them without stock and capital to work their farms; and in succeeding seasons, even if good, but little can be made out of the land in the circumstances of the periodical raids for rents which in the best of seasons can barely be realized from these poor farms.

No Irish reforms can be expected from the present Government, which is now like a tottering wall and a broken hedge. If the Liberals come in with a large majority independent of the Irish vote, and a radical Cabinet is formed, Irish reform may be crowded out by the pressure for English legislation. If the majority is dependent for office on the Irish vote, the House of Lords has to be reckoned with. Meanwhile, there is a growing conviction among all classes that the methods of government in Ireland are profoundly inefficient and unsatisfactory. George Jacob Holyoake expressed what is now felt by many Englishmen when, writing of his visit to New York in 1882, he said:

"Then I realized the fatuity of the anti-Irish policy which drives the ablest Irishmen into exile, and maintains a body of unappeasable enemies of England wherever they go. Then I saw what crazy statesmanship it was in the English to deny self-government to the Irish people, and spend ten millions a year to prevent them taking care of themselves."

THE HARVARD-TECHNOLOGY MERGER.

TO THE EDITOR OF THE NATION:

SIR: The letter of "Harvard A.B." should be read with an understanding of the history of the situation. Thirty years ago President Eliot tried to obtain a union of the University and the Institute of Technology, when William Barton Rogers, the founder, was its president. A similar attempt met with a similar rejection during the administration of General Walker. Technology men are strongly persuaded that the real initiative came from the same direction in the present effort for a merger. Last summer nine-tenths of the faculty of the Institute were opposed to a union. A larger proportion of the Technology alumni were outspoken in opposition to the negotiations. They believe a great factor in any success it has attained during its forty years of poverty is that independence from the control of a body of scholarly, well-meaning gentlemen whose point of view is from the old as opposed to the "New Education." The Institute was founded with a high ideal. Its faculty and alumni believe that ideal and spirit worth more than the McKay millions. Five years ago the present president came to the school a stranger. A "Harvard Instructor" writes to the Boston *Herald* that under no conditions would he serve under such an exponent of "educational hustle." The activities of an expert politician of the McKinley school are no more harmonious with that spirit of earnest devotion to duty and laborious persistence after truth which has been the practice and become the tradition of the Massachusetts Institute of Technology.

TECHNOLOGY S. B.

BOSTON, April 1, 1905.

HONOR TO WHOM HONOR.

TO THE EDITOR OF THE NATION:

SIR: On page 34 of a pamphlet entitled 'Proposed International Phonetic Conference' and issued by the College of Liberal Arts, Boston University, there is a reference to the report of "The Joint Committee on a Phonetic English Alphabet." It is this: "The report of the committee, in the preparation of which Prof. Hempl is said to have 'pulled the stroke oar,' appeared on September 1, 1904."

I feel it my duty to disclaim the honor implied. Had the statement been made as to Professor Calvin Thomas, it would have been correct. The report owes far more to him than to any other one man. At the time that it was being prepared, I was so situated that I could devote far less time and attention to the matter than it deserved.

GEORGE HEMPL.

UNIVERSITY OF MICHIGAN, March 27, 1905.

WALPOLE'S LETTERS.

TO THE EDITOR OF THE NATION:

SIR: In your very interesting and suggestive review of Mrs. Paget Toynbee's new edition of the Letters of Horace Walpole, the following passage seems somewhat open to question:

"We hear from himself [Walpole] of an equally regrettable loss: 'On Mr. Chute's death his executor sent me a bundle of letters he had kept of mine for above thirty years. I took the trouble to read them over, and I bless my stars that they were as silly, insipid things as ever I don't desire to see again.' He must have destroyed them, for the two or three letters to Chute that exist in his correspondence belong to a much later period."

The first four volumes of Mrs. Paget-Toynbee's edition—all that I have access to at present—contain *eighteen* letters to Chute, of which the first was written in 1743, thirty-two years before Chute's death, the second in 1749, and all before 1760. Naturally, this does not disprove the statement of your reviewer; but it seems to me to throw some doubt upon it.

The interest of the point lies in the fact that it was so exactly like Walpole to decry his letters—and then keep them. We must not forget that this was the man, or the boy, who, when he was eighteen years old, wrote to Montagu: "You have made me a very unreasonable request, which I will answer with another as extraordinary: you desire I would burn your letters; *I desire you would keep mine.*"

GAMALIEL BRADFORD, JR.

WELLESLEY HILLS, MASS., March 28, 1905.

Notes.

'China in Law and Commerce,' by T. R. Jernigan; 'Readings in Descriptive and Historical Sociology,' by Prof. Franklin H. Giddings; and 'Primitive Traits in Religious Revivals,' by Prof. Frederick Morgan Davenport, are among the late spring and June issues of Macmillan Co.

Messrs. Harper announce 'The Courtship of a Careful Man,' short stories by E. S. Martin.

Fresh Oxford Press announcements are 'Specimens of the Elizabethan Drama from Lyly to Shirley (1580-1642),' edited by Prof. W. H. Williams; 'The Dream of the Rood,' an Old English poem attributed to Cynewulf, edited from the MS. in the chapter library of the Cathedral of Vercelli, by Prof. Albert S. Cook; 'The Administration of the Sacrament and Other Rites of the Armenian Church, etc.,' edited from the oldest MSS. by F. C. Conybeare; 'The East Syrian Epiphany Rites,' translated by the Rev. A. J. Maclean; 'The Faroes and Iceland,' by Nelson Annandale; and 'Origines Islandicæ,' edited by Profs. Vigfusson and York Powell.

N. W. Ayer & Son, Philadelphia, send us the twenty-fifth issue of their 'American Newspaper Annual,' which closely approaches 1,300 pages in bulk, albeit the County List has been dropped for the sake of compression. The economy thus made has been availed of for some useful lists, as of all continuous daily newspapers in the United States and Canada, arranged geographically; and of certain monthly and weekly publications of general circulation. Notoriously, this standard work subserves the secondary purpose of census and gazetteer, resulting in a convenient table of all places in the United States and Canada having at least 3,000 population, and in the numerous State maps.

Charles Mulford Robinson's excellent 'Modern Civic Art' has reached a second edition (Putnams), a fact indicative of widespread interest in its subject. So active is the movement for the improvement of our towns and cities that societies are everywhere springing up in support of it. Over twelve hundred local improvement societies are now to be found in the United States alone. This book is a systematic study of the city's plan and its development. An introduction treats the question of what is Civic Art, a question sufficiently abstract, although abstractness is by no means the distinctive character of the book. To deal generously with the main facts of the problem as presented, not in any particular city, yet as illustrated by examples from all great cities, is Mr. Robinson's aim, in which he succeeds by a definite attack upon the branches of the subject in detail. Thus, the city's focal points are first dealt with, as, its approach by water or by land, and its administrative or business centres. Afterward, residential sections, with the many ways of treating their streets and avenues, are considered, and in this connection the tenement problem does not escape examination. Discussion of comprehensive systems of planning, and the merits and demerits of several such systems, with a consideration of the vastly important subject of parks and parkways, closes the volume. The author's analysis is exhaustive, and his treatment is as com-

plete and authoritative as our present knowledge of the subject makes possible.

'Super Flumina; or, Angling Observations of a Coarse Fisherman' (John Lane), is a book to irritate the curious rather than to please the well-informed or to instruct the ignorant. It irritates one to search in vain for some other motive than vanity for the parading of so many bits of recondite information by one so modest as to withhold his name. Tidbits of biographical material thrown in here and there tempt to an effort to supply the name, were it not for a lurking suspicion that this is just the kind of a rise the anonymous irritator is angling after. As the references to the persons who either did or did not say something about angling in the literature of the past is so remarkably comprehensive, it strikes us as an unpardonable deficiency that there is no mention of the apt figurative allusion to the art in the "Phormio" of Terence, or of the piscivorous appetite of Ergasilus in the "Captivi" of Plautus. Surely, the grumpy chapter "In Dispraise of the Latins" was based on insufficient reading. We miss, too, that brilliant sally of Randolph of Roanoke in characterization of a famous legislative colleague who, "like a rotten mackerel in the moonlight, shone and stank." These would be trifling omissions in any author who had before him a less ambitious idea than the putting of *all* the lore of his subject between two covers. We fear they are fatal in this case. A little Ohio village once elected its curbstone philosopher to the office of mayor. After setting up his first message to the Council, the village type-setter was heard to remark, "I don't like to see a man say everything he knows in one article." There was wisdom in the remark. The true angler wants but a moderate catch in his creel, whether the catch be ichthyological or literary in its makeup. But we do not wish to be altogether condemnatory. There is a great deal in this book that the learned angler (the appeal is to no other) may enjoy in spite of its overload of learning. The worst we can say of the author as an angler is that he sees no infraction of the ethics of true sportsmanship in the use of those murderous multiple gangs of hooks, which have no more place in the right-thinking angler's outfit than a cat-o'-nine-tails in a kindergarten.

'Through Town and Jungle,' by William H. Workman and Fanny B. Workman (Charles Scribner's Sons), is the record of a bicycle trip of fourteen thousand miles over the Indian plain. The two hundred and two illustrations light the way of the travellers through India, though the reader must regret the loss of the original plates, which would doubtless have filled this interesting volume with less conventional views. As it chances, the unfortunate wheelers lost their photographic all at the end of the journey, and the present liberal supply of pictures is a substitute for what should have been a unique photographic record. The travellers' purpose was to visit the artistic and architectural remains which lie scattered over India "from Cape Comorin to the Himalayas and beyond." Besides a few thousand miles by rail, steamboat, tonga, tum-tum, bullock-cart, palki, and on foot, their cyclometers registered 14,000 miles awheel, a journey of "three cold weathers." The incidents and excitements, as well as the studious results, of this trip are well told. Occasionally the authors are delightfully naïve. On one occasion they found that a lordly patrician, though ready to help them in their extremity, took great care not to defile himself by touching anything belonging to the travelled barbarians. They record this (common) experience, and remark that it gives a Christian a queer sensation to find the feeling of superiority and contempt with which he is accustomed to regard the heathen returned in kind by these heathen. It "shows him that the sentiment in question is not a monopoly of the Christian." The descriptions are sufficiently realistic to remind one who has been over the same ground of much that has passed into semi-oblivion. It may comfort the intrepid but not uncomplaining authors to know that one traveller at least was worse off than they in the wretched bungalow near Ajanta. On objecting to rats and other more odorous vermin, he was gravely told that this was of no consequence, as the bungalow servants expected during the night to be visited by brigands and have their noses cut off.

Those contemplating a trip to India will find a convenient supplement to Murray's Handbook in E. B. Havell's 'Handbook to Agra and the Taj' (Longmans, Green & Co.). The author is the Principal at the Calcutta Government School of Art, and is well equipped for his task. A slight historical introduction is followed by a description, piece by piece, of buildings in and about Agra, including Sikandra and Fatehpur Sikri. The illustrations are chiefly the usual photographs of the Taj and other well-known objects. In discussing the exquisite marble screen-work, the author fails to note the resemblance between this Moslem form and the similar work on Rajput territory, as seen in the lovely lake-buildings at Oodeypore.

The new catalogue of 'Paintings in the Metropolitan Museum of Art,' by Mr. George H. Story, curator of paintings, is the first serious revision that the earlier hand-lists have undergone. The arrangement is alphabetical by masters, though a succinct tabulation of pictures by rooms is retained; in many cases the signatures of artists are reproduced, and there are upwards of fifty half-tone cuts of fair execution. In all these respects the new catalogue is an improvement on its predecessors. It would be pleasant to say that the execution of it was as good as the plan—in which we note nothing amiss except the absence of a list of illustrations—but, as a matter of fact, the revision is of the slightest. That the rectification of false attributions might go much further will be evident to all who know the collections in a scholarly way. Everywhere is complete absence of point of view. It is never quite certain whether a hand-list is being compiled or a scientific catalogue. The inserted illustrations have been chosen absolutely from the popular point of view—a defensible procedure, though one would welcome reproductions of some of the important canvases like the Moroni; and the inclusion of that unhappy possession of the museum, "The Storm," by Cot, is reprehensible on any principle. Reproductions after Turner, Hals (three capital examples), Van Dyck, Reynolds, and Manet bring masterpieces within reach of narrow purses. In fine, people generally will buy the new catalogue for the pictures, and scholars will still hopefully await a catalogue really worthy of this great museum.

A work of great historic interest has just issued from the Library of Congress, 'Copyright in Congress, 1789-1904.' In this octavo volume of 468 pages, the Register of Copyrights, Mr. Thorvald Solberg, has compacted "a bibliography and chronological record of all proceedings in Congress in relation to Copyright from April 15, 1789, to April 28, 1904"—and even to January 27, 1905, by taking advantage of the delay in printing. Thus, bills introduced in the last Congress and still pending when the work was given to the printer are recorded in full, with their accompanying reports. The index suggests many profitable lines of comparison. For instance, under the head, "Presidents' Messages," between Washington and Tyler there is a complete hiatus. With Cleveland, the Bern convention for international copyright looms up. The sociological revolution is revealed in the rubrics relating to petitions from various unions—pressmen's, lithographers', stereotypers', typographers', etc., etc. Names of scholars and institutions of learning figure in the same guise. Mr. Solberg enters an earnest plea for "one consistent, liberal, and adequate statute," in place of the present obscure, inefficient, and temporizing provisions. He asks for the appointment of a commission to prepare a draft, and something like this has been undertaken by the Senate Committee on Patents. Mr. Solberg's volume will be invaluable for such a reform.

The new volume of the Swedish book-trade bibliography, 'Svensk Bokkatalog,' is a quinquennial, covering the years 1896-1900, while its three nearest predecessors were decennial volumes. Its bulk is not much less than the volume for 1886-95, and it has taken nearly as long a time to prepare. Translations from foreign languages have always formed a large part of the output of the Swedish printing-press, and the period covered in the volume before us has been no exception to the rule. German, French, Russian, and English authors are well represented; not so the American. James Fenimore Cooper is still a favorite, to judge from the fact that during these five years seven of his works have been published, one of them in two editions; most of them seem to be abridgments for juvenile readers. There are two books by Bret Harte, four by Mark Twain, three by Beatrice Harraden, fourteen (!) by Archibald Clavering Gunther. Outside of fiction and purely devotional literature there is little from America: a volume of lectures by Phillips Brooks, a psychological monograph by Prof. William James, the authorized Life of Dwight L. Moody, James Freeman Clarke's lectures on Physical, Intellectual, Moral, and Mental Education. Among books relating to America we notice 'Canada as the Goal of Emigrants from Northern Europe,' by K. Zilliacus, a Finlander who spent some years during the early nineties on this continent; a sketch of a 'Vacation Trip to Montezuma's Land,' by the late A. H. Edgren; an anonymous Life of Henry George, 'The Prophet from San Francisco'; 'Cuba and its War for Liberty,' by J. af Klercker. The volume is published by the Swedish Publishers' Association in Stockholm; it is printed in clear type on good

paper, but the bookbinder's work could hardly have been poorer.

The *Zentralblatt für Bibliothekwesen* recently published an interesting test it had made of the merits and demerits of the new *Gesamtkatalog* (in progress) of all the libraries in the kingdom of Prussia, the case selected being that of Ernst Moritz Arndt, a North German to the core. All his writings were published in North Germany, and hence should be found in Prussian libraries if anywhere. The new catalogue recorded 140 of his publications, but an inquiry by the *Zentralblatt* of 80 of the larger libraries in Southern Germany revealed the fact that the latter had no less than 62 of Arndt's publications not to be found in the Prussian collections, and of these only 24 could be secured by purchase. The journal in question declares that the new venture of the Prussian Government will be anything but satisfactory bibliographical work, and asks that it be expanded to a "Gesamtkatalog der deutschen Bibliotheken"—for the entire Empire—as being the only way to make the list complete. The technical and financial difficulties of such an undertaking would, in its opinion, be readily met by the willingness of the libraries and the different State Governments to coöperate.

"Hand-Atlas," as is well known, does not connote in German what it does in English; hence 'Meyer's Hand-Atlas' (Leipzig: Bibliographisches Institut; New York: Lemcke & Buechner) "in handlicher Form"—*i. e.*, in size corresponding to 'Meyer's Conversations-Lexikon'—was a great hit. Renewing itself like the Lexikon, it has now begun to appear in a third, enlarged edition, brought down to date. The first instalment comprises a new map of the inner city of Berlin, on a scale sufficient to show the public buildings and monuments (*Denkmal Beethoven, Mozart und Haydn*, etc.), and accompanied by an index; maps of world trade-routes, of Bavaria, of Bosnia and Montenegro, and (a veritable war-map) German Southwest Africa, with indication of the camps of the insurgent Hereros and of the scene of engagements. The maps are clear, even if the lettering is neces sarily small, and the work commends itself by its adaptability to the ordinary shelf.

The way in which the public library is the pulse of the town is shown in the current annual report of the St. Louis Public Library. Its registration for 1904, we read, bears "striking evidence of the growth of the city towards the west. The three wards that have the largest registration lie entirely west of Grand Avenue, the city limit of twenty-eight years ago," and the ward having considerably the most readers "*begins* at Forty-third Street, three miles or more from the library, and a mile beyond the former western limit of the city." The distractions of the Exposition were felt, as was anticipated, in diminished gain in circulation; just as "Christmas occupations make December a lighter month than November," and school and season preparations make September "usually the lightest month of the year." Steady reading sets in only after January 1, with March for culmination. "How great the drop may be in April, depends on the weather. If St. Louis were in the latitude of St. Paul, at least ten, probably twenty, possibly thirty per cent. more books would be read."

The organization of a Classical Association for the Middle West and South, on the initiative of the classical department of the University of Missouri, is to be undertaken on the grounds of the University of Chicago on May 5 and 6. Those who desire to become members should address Prof. W. G. Manly, Columbia, Mo.

It was announced last month that the movement to have "Les Charmettes," the famous home, for a brief period, of J.-J. Rousseau, at Chambéry in Savoy, taken over by the State and preserved as a national monument, had prevailed. Already, though in private hands, to some extent a Rousseau museum, the place will become essentially such. The acquisition and the dedication we owe to the glamour thrown around "Les Charmettes" in the 'Confessions'—to what is called the idyll of the country-seat of Mme. de Warens. Yet, as M. François Mugnier flatly declares, with proof, in his 'Mme. de Warens et J.-J. Rousseau,' this idyll never existed. Rousseau misdated his stay at 'Les Charmettes,' and was really an occupant in exile, receiving rare visits from his mistress, who was pleased to have him out of the way, while she prosecuted her business and other enterprises with Wintzinried in Chambéry (1738-1740). When she and her latest paramour were ready for their own idyll, Rousseau was dislodged—to Lyons, to Paris. "Les Charmettes" deserves its nationalization, however, by reason of Rousseau's having employed his solitude there to make his first literary essays. There he composed his system of musical notation which was to be his passport to Paris and to fame as one of the foremost of French writers.

The celebration of the centenary of Schiller's death on May 9, 1905, lends a peculiar interest to the Biography of Johann Gottfried Seume, by Oscar Planer and Camillo Reissner, first published in 1898, and now issued in a new edition by Göschen in Leipzig. Seume was born January 29, 1763, and died June 13, 1810; his disposition was rather impetuous and versatile, and his life full of remarkable adventures. At first he studied theology in the University of Leipzig, but, unable to accept its teachings, he changed his purpose and went to Paris. Pressed into the Hessian service, he was forced to fight for the English against the American revolutionists, escaped, however, and returned to Germany, where he fell into the hands of Prussian recruiting officers, and was again obliged to serve as a common soldier in the war against the French revolutionists. He deserted twice, but was captured, most brutally treated, and would have been shot but for the intervention of influential persons who secured his release and finally his discharge. As the secretary of a Russian general in Warsaw, he became involved in the conflict which arose out of Kosciusko's armed opposition to the division of Poland, and was for some time a Polish prisoner. It seems a strange fatality that this man, whose ardent love of liberty finds full and fiery expression in the preface to his book, 'Mein Sommer im Jahre 1805,' an interesting record of travels from Petersburg and Moscow through Finland to Sweden, should have been compelled three times to combat the champions of freedom with whom he heartily sympathized. It was during this journey, while the guest of the distinguished philologist and historian, Christian Beck, at Petersburg, that Max Klinger rushed into the room with the sad tidings of Schiller's death. In the book just mentioned he also gives an account of an interesting conversation with the Czarina, who, like himself, was an enthusiastic admirer of the deecased poet, and desirous of obtaining from authentic sources information concerning his private life and personality. Seume was employed for some time as proofreader in Göschen's printing-office, whence Schiller's works issued.

—Dr. Waldstein sets forth briefly, but very effectively, in *Harper's*, the reasons for his movement to secure a thorough excavation of the site of Herculaneum. Here is the one presumably rich treasure-store of ancient art from which the hand of the destroyer, whether barbarian or religious fanatic, has ever been barred. The excavation of one villa, one hundred and fifty years ago, yielded treasures fairly comparable in value to all other treasures of Greek art above ground. It is known, of course, that many other wealthy Romans had their villas at Herculaneum. None may have equalled this one in its art collections, but it is unthinkable to any one who knows the habits of the wealthy nobles of the time that many of these villas were not richly supplied. Herculaneum was overwhelmed, not with lava, but with a torrent of mud, ashes, and cinders mingled with water. Hence the remarkable preservation of the objects found in the villa already mentioned, and hence the reasonable hope of an equal state of preservation in what is still to be laid bare. There is good reason to hope that many portions of the lost treasures of Greek and Roman literature, as well as of art, are here awaiting discovery. Dr. Waldstein's plan to have the work done under the direction of an international committee, with the King of Italy at its head, Italian laws to be scrupulously respected and all objects discovered to remain in a museum on the spot, is thoroughly sensible and practical. Surely there will be no long delay in securing the money required. Mr. Russell Sturgis, in *Scribner's*, also presents the matter, and urges the reasons for hearty coöperation with Dr. Waldstein in this great enterprise.

—Paternalism and nationalism receive consideration in Mr. Vanderlip's European studies in this month's *Scribner's*. In the German system of workingmen's insurance he finds many things to commend—primarily, the thorough honesty of its administration, and the small cost as compared with the administration of life-insurance funds in this country. Again, the insurance against accident aims not simply to indemnify when accident occurs, but to forestall its occurrence, and the aim is largely attained. Insurance against sickness, too, has led to such effective measures for its prevention that the effect on the general health has been highly beneficial. A better understanding between capital and labor Mr. Vanderlip regards as one of the growing results of the system. He also notes the use—shall we not rather call it the abuse?—of the idea of nationalism to pave the way for increasing tariff exactions, that funds may be available for increased military and naval expenditures. Richard Harding Davis, in a paper on "Kits and Outfits," illustrates admirably how the travelling journalist may turn even his

deprivations into a profitable portion of his stock in trade. At so much per word the very lack of a bed may soon be made to buy a bed. We have just mentioned Mr. Sturgis's plea for aid for Dr. Waldstein's project to excavate the site of Herculaneum. There is also in this number a plea for another worthy cause of historical interest—the adequate financial support of the University of Virginia. Thomas Nelson Page presents its needs, closing very appropriately with the words of Jefferson himself: "It is from posterity we are to expect remuneration for the sacrifices we are making for this service, and I fear not the appeal."

—The fifth volume of Gaillard Hunt's 'Writings of James Madison' (Putnams) is still largely concerned with the history of the Constitution. That instrument of government was now before the people, and in convention in each State the people must accept or reject it. Madison was deeply interested in its fate, and his correspondence in the years 1787 and 1788 reflects this interest, with his anxieties for the issue. He kept in touch with the doubtful States, and held the confidence of the leading Federalists in the contests which were waged before and during these local meetings. He was liberal with the good intelligence he obtained, and kept Washington, Jefferson, and Randolph informed of the different phases of the situation. From no single writer can so much be learned of the manœuvres of the opposition in Virginia; and the writer's intimacy with men like Hamilton, Jay and King gives authority to his statements and breadth to his opinions. Mr. Hunt has included some of Madison's speeches in the Virginia convention and in the first Congress, with the idea of developing his constitutional doctrines. Madison was already falling more under the influence of Jefferson, and in a short time would be in opposition to the men with whom he stood in these years of constitution making. It is a disagreeable task to criticise a volume which shows so much care and intelligent arrangement, but there is evidence of some hasty proofreading, or perhaps of slovenly copying. *Time* is printed for *tide* on page 242; a sentence on page 249 is deprived of meaning by omitting the word *influenced*; and the name *Calonui* on page 101 must be intended for *Calonne*. Why did the editor omit the very important letter from Madison to G. Thompson on direct taxation, printed in the *Nation* (No. 1556)? Against such faults may be set the great improvement upon the editions of Gilpin and Rives, and the gain of closely following the text of the originals. The indication of cipher writing lends force and interest to the letters, and much has been added which the former editors thought proper to omit. The characterization of Moustier and the Marchioness of Brehan (p. 312) is new and valuable, although Madison later came to esteem both. Mr. Hunt has also done a service to investigators in printing so liberal extracts from letters addressed to Madison by his more important correspondents. They not only give additional information, but reveal the skill with which Madison used the facts in preparing his summaries for Jefferson or Washington. The editor accepts the latest distribution of the authorship of the "Federalist," without seeking to supply any fresh investigation. The notes are full and judicious.

—Those who were interested in 'Sally Wister's Journal' will welcome the charming volume by the same editor, Mr. Albert Cook Myers, entitled 'Hannah Logan's Courtship' (Philadelphia: Ferris & Leach). This is a diary some thirty years older than that of Sally Wister, and written in the seventeen-forties by John Smith of Philadelphia, a prominent Friend and successful business man. The diary itself, in eight small volumes of MS., was presented to the Philadelphia Library by John Smith's grandson, the late John Jay Smith, who died in 1881. The interest of the journal centres about James Logan, who came over to Pennsylvania as William Penn's secretary in 1699 and became a conspicuous and honored citizen of the province. On the voyage "their ship was chased by an armed vessel, supposed to be an enemy. Their captain prepared for defence; but told Penn and his company of Quakers that he did not expect their assistance, and that they might retire into the cabin; which they did, except James Logan, who chose to stay upon deck, and was quartered to a gun. The supposed enemy proved a friend. . . . When the secretary went down to communicate the intelligence, Penn rebuked him severely for staying upon deck, . . . contrary to the principles of Friends. . . . This reprimand, being before all the company, piqued the secretary, who answered: 'I, being thy servant, why did thee not order me to come down? But thee was willing enough that I should stay and help to fight the ship when thee thought there was danger.'" James Logan built the mansion of Stenton, in Germantown, in 1728, and it is still in the hands of the Logan family, a model of colonial architecture. There John Smith, "one of the Burlington Smiths," came to woo, riding over from his own plantation on the Delaware, or "waiting on" Hannah Logan from the Friends' Meeting, of which both were devoted members. The Diary is not only a charming and perfectly un-self-conscious record of a courtship of those days; it is worth much as a picture of the manners and daily life of the Quakers of "the Province." No life could be more simple or honorable than that of John Smith and his friends. There was a great deal of quiet tea-drinking and "waiting on the Agreeable Fair sex." A French privateer would now and again swoop down on one of the lover's ships that traded with the West Indies, and an epidemic of yellow fever in 1741 caused some anxiety. But to John Smith these occurrences only afforded "Room for Reflection on the Unstability of Terrestrial Affairs," and he turned to a comedy of Steele or a novel of Fielding (such was the light literature of the Friends), or to the society of "my Charmer," to whom he was married in 1748. All the eminent Philadelphians of the day were his friends, including Benjamin Franklin, from whom he used to buy books. Not the least attractive part of the book is the portraits of these colonial dignitaries, which are numerous and beautifully reproduced. There is a good index, and Mr. Myers has written a biographical footnote to every name of any importance. The whole volume is a treasure-house for the writer of colonial novels.

—Prof. Fullerton's 'System of Metaphysics' (Macmillan) exhibits a laudable avoidance of needless technicalities, and spreads itself out in leisurely fashion over more than six hundred pages of print. It produces the impression of having grown out of a college course in "systematic" philosophy; but such a course of lectures does not become a system of philosophy merely by being printed. To deserve this name, there is needed something like a distinctive method, together with a central doctrine ramifying into subsidiary inferences and cohering with them in an artistic whole; there is needed a fairly complete survey of the field of thought, and, as the outcome of the whole attempt, a fairly definite attitude towards the vital problems of life. But if any of these things are contained in Prof. Fullerton's book, he has not succeeded in rendering the fact apparent. As regards method, there is a plentiful lack of definitions, a reliance on what is vaguely called "analysis," and a habit of curtly dismissing inconvenient doctrines as repugnant to the common sense of the plain man. As regards doctrine, Prof. Fullerton must apparently be classed as a realist, and a parallelist (of sorts); but his convictions are nowhere stated in a concise and systematic way. Nor does the generous bulk of the volume afford any guarantee of completeness. Not all questions are discussed; nor in those which are, are the alternatives given fully and adequately. Thus, though a couple of hundred pages are spent on the relations of mind and body, there is no mention of James's important "transmission" theory, the chief objections to determinism are passed over in silence, and the arguments for freedom are stated with a surprising inadequacy. It is hard to believe that some of these defects would not have been remedied by the author himself if he had lengthened his work by providing his reader with an analysis of his argument; the critic may even venture to think that in consequence the book would have been shortened by more than half, and would have gained immensely in force and symmetry.

—"The Conquest of the Southwest,' by Cyrus Townsend Brady, is the sixth volume of Appletons' "Expansion of the Republic" series. Mr. Brady is already known as the author of numerous works, biographical and romantic-historical, but making little claim to excellence from the point of view of genuine scholarship. The present volume is a fair statement of the main events that led to the acquisition by the United States of Texas, New Mexico, and California. Mr. Brady says that he has ransacked a vast number of books and documents "published and unpublished," yet the references he promises to give us are too well-known and in the main easily accessible secondary accounts, particularly the Statesmen Series, which is characterized as of "great value," but not "widely known." There is obviously considerable printed material which the author has not used; and if he has examined unpublished documents, the result hardly justifies his having done so. Mr. Brady is most at home in personal and in military history, which together, indeed, make up the greater part of the volume. In dealing with the larger relations of his theme, he is sometimes naïf, often commonplace, and always without a very firm grasp of the subject. As often happens,

Mr. Brady is occasionally right in spite of the evidence at his command, which, if properly used, would lead him astray. A case in point is his assertion that the Polk Administration deliberately set itself to acquire California, "if not by one means, then by another." Mr. Brady seems unaware that this question is important—that it is not a mere detail. He is nevertheless satisfied with an unverified statement in Elson's 'History of the United States,' confirmed by a letter from the latter to the effect that "Mr. Bancroft gave the information to Mr. Schouler long after the occurrence" (p. 147). The careful historian would reject the charge if it rested merely on this; but then the careful historian would also have read Polk's Diary.

—It is highly in place that a book with the title, 'The Shade of the Balkans' (London: David Nutt), should be of polyglottal and polynational origin and most multifarious contents. In the present, Pencho Slaveikoff, the Bulgarian poet; Mr. Henry Bernard, Dr. E. J. Dillon, and divers unnamed translators from Bulgarian into German, have had part. To say nothing of the many tongues which Mr. Dillon commands and quotes, there are passages also from a Catalan study of Bulgarian popular poetry. The contents are, first, an introduction by Mr. Bernard, telling with elaborated phrase and recondite allusion how he met Slaveikoff in Sofia and planned this book; secondly, Slaveikoff himself on the folk-song of the Bulgars, an excellent essay, enlivened by the discovery that they, too, have had their Chatterton and Macpherson, and that Carmen Sylva's 'Bard of the Dimbovitza' is for him "a fabrication of the Merry Wives of Bucharest." On this, the foreigner may safely hesitate to speak. The blood between the Rumanians and Bulgarians is far from good, and Slaveikoff was evidently pained by Mr. Bernard's queries, "Is there nothing more beautiful? Have you no songs like the Rumanians?" Third, then, come these Bulgarian folk-songs, one hundred and one in all. These are plainly what they are called; and if any modern hand has touched them, it has been as utterly in their own spirit as Scott may have refashioned the ballad of "Kinmont Willie." Then another hundred and one of proverbs, all to the point, especially the last, "Death speaks the truth" ("Sol nella morte è il vero," as the Italian poet has it). Finally, there is Dr. Dillon's contribution, an essay on the origin and language of the primitive Bulgars, which does not stand in very necessary relationship to the rest of the book. In it he follows Dr. Shishmanov, but does not reach any great lucidity in handling what is admittedly a most perplexed and uncertain subject. Undoubtedly the kernel of this book is the songs and Slaveikoff's introduction. They give a phase of Bulgaria and the Balkans hitherto lacking in English.

ANDREW D. WHITE.

Autobiography of Andrew Dickson White. With portraits. The Century Co. 1905. 2 vols. Pp. 601, 606.

The life of Andrew D. White has been long and brilliant, and his retrospections, now that he is a septuagenarian retired from official station, are a most interesting contribution to the recent history of this country. He has had two careers, academic and political, and in both has attained remarkable distinction. Born to be a teacher, with strong proclivities for public service, he became a lover of books and a servant of his fellow-men, and has woven into the web of his life two threads, the silver and the golden, Politics and Education. Happily interwoven, these threads are distinctly to be traced in the memoirs before us. In double allegiance to the cloister and the forum, he does not stand alone among Americans. Witherspoon served the College of New Jersey, and, while still its president, became one of the signers of the Declaration. John Quincy Adams was a professor in Harvard before he became President of the United States. Edward Everett's versatile services are well known. Lowell was called from the Smith professorship in Cambridge to the diplomatic service in Madrid and London. There are other college men, still active, whose careers are similar—President Angell, for example.

Let us follow each of the threads in the life of Mr. White. Before he went to college, in Syracuse, a focus of agitation, he was thoroughly imbued with the anti-slavery spirit; and the compromise measures of 1850, which were adopted while he was an undergraduate in Yale, filled him with the gravest apprehensions, noteworthy in one so young. At that time, his essays and speeches showed him to be a man of independent thought and strong convictions. It now appears from his confessions that the living teachings of Woolsey and Bacon did more for him than the dead instructions which he received from Tacitus and Thucydides. An acquaintance with the Democratic Governor of Connecticut, T. H. Seymour, took him to St. Petersburg, in 1853, as an attaché to the American legation, and although the political views of these two men were antagonistic and pronounced, their friendship was never broken. This foretaste of diplomatic life and of "practical" politics gave zest to Mr. White's historical studies during a prolonged residence in St. Petersburg, Berlin, and Paris. At the age of twenty-five he began his life-work as a professor of history in the University of Michigan. During the period leading up to the civil war, he was, of course, an earnest and outspoken defender of the Union. He rendered special services to his country by a vigorous answer to the letters of Dr. W. H. Russell, correspondent of the London *Times*.

While still holding a professorship in Ann Arbor, he was unexpectedly called into political service by his neighbors in Syracuse (where he had maintained a residence), and was sent to the Senate of New York at the age of thirty-two. During the four years in which he held this office, he came into close relations with Ezra Cornell, Charles J. Folger, Thurlow Weed, Horatio Seymour, Roscoe Conkling, and other well-known leaders. Almost as a matter of course, he was an unflinching Republican, but his services as a State senator were not those of a party leader. He was pre-eminently efficient in the incorporation of Cornell University, in helping on other educational and philanthropic measures, and in advancing municipal reforms in the city of New York. Then began the great work of his life. He was made president of Cornell University, and the perplexities of this post absorbed his energies for the next few years; but he did not consider that his position as the head of a university should preclude him from political or even from party activity. Here, as in many other ways, he broke away from the conservative traditions of New Haven, in which he had been trained. He wrote and made speeches and took part in conventions, and kept up an active correspondence with men in public life, so that in the State of New York he was a recognized political leader, though never an aspirant for office. With two important political measures he was identified—the promotion of civil-service reform (in which he stood hand-in-hand with George William Curtis and Carl Schurz), and opposition to fiat money and the greenback craze. His masterly and oft-repeated exposition of the ruinous results of French assignats was a persuasive object-lesson to all who heard him.

From his chair in Cornell, President Grant asked him to go, with Senator B. F. Wade and Dr. Samuel G. Howe, to San Domingo, to inquire into the conditions of that country. In view of the fiscal inquiries recently instituted by the Administration, this reconnaissance should again be brought to notice. The chapter devoted by Mr. White to his experiences as Commissioner throws light upon the controversy between Grant and Sumner and upon the differences between the youngest commissioner and his two experienced associates. They wished to make "recommendations," but White pointed out to them the fact that Congress had asked, not for recommendations, but for facts; and he stated that if the general report contained recommendations, he must be allowed to present one simply containing facts. The result was that his views prevailed, and the report of "facts" to which many experts made their contributions, is still an important geographical treatise.

Then came successively three diplomatic appointments, for each one of which the President of Cornell was particularly fitted—first, as Minister to Germany (at the call of President Hayes), afterwards to Russia (on the nomination of President Harrison), and finally as Ambassador to Germany (by the appointment of President McKinley). Two other opportunities were opened to him. He served on the Venezuelan Commission of President Cleveland, and he was the head of the American delegation to the famous Peace Conference at The Hague. He was urged to become a Representative in Congress, was often spoken of as a possible candidate for Governor, and came very near to succeeding Hamilton Fish as Secretary of State under Gen. Grant.

In the educational field, Mr. White began with what he regards as the happiest work of his life, the teaching of history in the University of Michigan. This chapter in his autobiography is a delightful record of the enthusiasm of a young teacher, studying hard all the while, using books as physicists use their apparatus, writing elaborate lectures on special topics, and stimulating his pupils to researches of their own upon obscure and controverted themes. The volumes before us do not include any chapter more characteristic of the author or more instructive to young professors than this in which his experience as a teacher is recorded.

The creation of Cornell University at the close of the civil war could not have been foretold by anybody. A curious conjunction of stellar forces made it possible. To his great surprise, the young Senator in New York found himself the organizing head of the new foundation. Here, as in many other situations, he proved to be a path-breaker. Mr. White had two tendencies—one, an appreciation of the past, the lessons, the examples, the books of his inheritance; the other, a love of freedom, independence in thought, plans, methods. He builded better than he knew, and the extraordinary development of Cornell University, under his guidance, has influenced every subsequent university foundation (for example, in Baltimore, Chicago, and California), and has modified those that were antecedent. The difficulties which he mastered, and the obstacles of ignorance, bigotry, and prejudice which he overcame, will never again be encountered in this country. He has been known to laugh when others announced as accepted tenets, requiring no proof, the principles for which he had fought and bled. His earliest experiences gave him an inside view of the demoralizing influence of a small country college, nominally religious, but actually without discipline; and his life in New Haven, when Yale was beginning to cover the field of a university, showed him what advantages there might be in a new and independent foundation. To the history of the modern American universities no one has yet added a record so suggestive, so entertaining, and so inspiring as that which depicts the origin of Cornell, its perils, its purposes, its embarrassments and its success.

During the distraction of official responsibilities and his long residences abroad, Mr. White never lost control of his pen, and never forsook the companionship of his books. Thanks to a liberal inheritance, he collected a superb library, which, by his gift is now, for the most part, included in the University Library at Ithaca. It is rich in many departments of history, politics, literature, and biography, but especially in books pertaining to the history of the French Revolution, and in those which illustrate the progress of modern thought. A lecture which he gave on the conflicts between theology and science, entitled the "Warfare of Science," originally delivered in 1876, attracted much attention, and led the author to continued investigations in the same field, resulting in two extended volumes that have been widely read. Many uninformed and timid critics were alarmed by these books. It is interesting, therefore, to be reminded that so learned and so devout a man as President Woolsey, after hearing White's lecture, thoroughly supported White's positions and bade him godspeed.

Next to the author's services in Ithaca, his relations to the Hague Conference are memorable. It is true that the progress of international arbitration is slow, far slower than expected, but there can be no doubt that a great impulse was given to the peaceful solution of national controversies by this conference. White's speech, when the American Government caused a silver wreath to be placed on the grave of Grotius at Delft, and all the incidents of that occasion, mark an epoch never to be forgotten in the annals of International Law.

Mr. White's success has been largely due to his unselfish and life-long devotion to the service of his fellow-men. Free from ambition to hold public office, he has never declined the duties imposed upon him; free from the pecuniary limitations which fetter many scholars, and sometimes lead them to accept positions for the sake of the loaves and fishes, he has used all that he possessed—books, income, stations, opportunities, influence—for the good of others. It is not a surprise to those who know him best that he closes his chapter on his religious opinions with the words of "the first and great commandment, and the second which is like unto it." An unusual gentleness of disposition inherited from his mother, and an equal firmness of conviction inherited from his father, have made Mr. White serviceable as a supporter, and acceptable as a friend in all the steps of his career. He could be controversial without bitterness, critical without censure, and resolute without harshness. Now and then he shows his temper, and reveals the powers of satire which were usually controlled; here and there, a few sentences might well be omitted from his narrative. It should not be forgotten that the author's memoirs were prepared chiefly for his children and grandchildren, and that in this familiar narrative he has inserted some of his more elaborate essays.

Even to those who know the author well, and to whom the incidents of his career have become familiar by the charming facility of his table-talk, these volumes will be a surprise. The number of noteworthy characters whom he has met, his accurate remembrance of their conversations, and his kindly appreciation of their best qualities, give an unexpected charm and variety to his reminiscences. Everywhere it is the public servant, and not the private friend, that he portrays. However absorbed by official stations, it is evident that men of science, letters and art are among his dearest friends. The character sketches which are found in these pages are often miniatures—like those of the Presidents that he knew—sometimes only outlines; but now and then he draws a character with a free hand; Pobiedonostzeff is one example; the Emperor William another, and far more pleasing, portrait; Bismarck is very good. The countrymen of Franklin have often taken to autobiography. By the side of the recent contributions of Hoar, Stillman, Newcomb, Dwight, Le Conte, Villard, and Conway, the autobiography of White will hold an honored place.

A GEOGRAPHICAL APOCALYPSE.

As to one who stands at Darjeeling may suddenly appear Mt. Everest and as suddenly disappear again more thickly girt with clouds, so the veiled city of Tibet has suddenly shown itself and disappeared again. According to the judgment of the two capable witnesses who have recently described the Younghusband expedition, Lhasa has already become more impenetrable than ever; the veil has been withdrawn only to be wrapped more closely about the forbidden city. This is probably true, at least until it becomes necessary to send another expedition into Tibet to secure the payment of the indemnity of £500,000, which the inhabitants are expected to contribute toward the expenses of the last British raid (or "mission," in diplomatic language); but until then a peculiar value will attach to the records of these two witnesses, Edmund Candler, who has just published 'The Unveiling of Lhasa' (London: Edward Arnold; New York: Longmans, Green & Co.), and Perceval Landon, who simultaneously presents us with his own rendering of the same theme under the title 'The Opening of Tibet,' the American edition of which (Doubleday, Page & Co.) is dedicated to W. W. Rockhill, America's "foremost representative in the field of Tibetan explorations." These two writers were the correspondents of the *Daily Mail* and the London *Times* respectively, and the present volumes are the outcome of their share in the mission to Lhasa. As between the two, one cannot help feeling great sympathy with Mr. Candler, who got knocked in the head in the first bout with the Tibetans and had to call upon a friend, Henry Newman, Reuter's correspondent, to write for him two chapters of his description—which work, admirably as it has been performed, the author would doubtless have preferred to do himself. He was, however, "in at the death," and gives a vivid description of the earlier and closing scenes of the campaign. There is in his pages a breezy personal element, which lends the charm of reality to all he sees and does. His descriptions are brief, and his summing up of the results of the mission clear and forcible.

Perceval Landon's book is much more ambitious in its scope. The author intimates that he hopes to make of it the standard work on Tibet, or, as he modestly puts it, "a work of Tibetan reference," and the work is conceived on broader lines, historically and philosophically, than the rival volume of Mr. Candler. Thus, we have a special chapter on "Religion; Manners and Customs; Art," another on "Lamaism," a very exhaustive description of the Potala, and a long historical introduction, "Former Explorations of Tibet"; all of these subjects being treated by Mr. Candler as well, but more briefly and skimmingly, if the expression do not say too much (for what Mr. Candler has done is well done). Not to make invidious or at least misleading comparisons, one may say that the two books will please different readers. The leisurely reader will revel in Landon's beautiful book; the rapid reader will enjoy Mr. Candler's stirring tale. Both volumes are profusely illustrated; Mr. Candler's has a map, which ought to have a counterpart in Mr. Landon's; and neither has an index!

The same ground covered by both correspondents will not call for separate analyses, but the combined picture offers much that is worthy of regard. What caused the unveiling of Lhasa; who is responsible for the brutal slaughter of the brave and simple peasants? "They were brave and simple," says Candler (p. 217), and "here was all the brutality of war and none of its glory and incentive." Further, what good has been accomplished and what is the present state of affairs? These will be the first questions the reader of either history will want to have answered, and the answer is practically the same in both. The unveiling of Lhasa was due to the fact that the British were afraid of Russian influence in Tibet. They took advantage of the truculent attitude of the Tibetans, who had a mind to attend to their own affairs, and "accepted

the chip" which the Dalai Lama dared them to knock off his shoulder. The real reason and the alleged reason for the mission were quite different. Failure to keep the terms of a treaty which Tibet had declared was not properly drawn, interference with trade, invasion of the border—these were the reasons given; fear of Russia was the reason not given. The terms which Col. Younghusband was instructed to demand from the Tibetans included the demand that no concession for railways should be granted without British consent, and that "foreign political influence should be totally excluded from Tibet." What Russia had effected by means of secret embassies and the political intrigue of the Russian Lama Dorjieff (a Mongolian by birth, a Russian by nationality) was to be undone, and England was to accomplish by violence what Russia had attempted by stealth. Mr. Landon frankly says that "it is a deplorable thing" that India has no Dorjieffs: "If these men were to be found, I fancy we should have used them willingly long ago." As it was, not being able to counteract Russian diplomacy, England resorted to "excuses for interference." Certain "insults" had to serve as a *casus belli*. But (to cite again from the *Times* correspondent, p. 26), "these insults would never have given rise to the dispatch of an expedition if the Tibetans had not added injury to them by their dalliance with Russia." So Mr. Candler (p. 16): "We had all the best cards in our hands. . . . We could go to Lhasa, apparently without a thought of Russia, and yet undo all the effect of scheming there. . . . Needless to say, the discovery of Russian designs was the real and prime cause. [Other things] were convenient as ostensible motives."

It is a great pity that governments cannot or will not be as frank as this. The expedition would have been much less expensive in life and money if England had simply said, "We intend to dictate to you and eventually to place a Resident in Lhasa." Grant that England's first duty to India is to see that Russia is ousted from Lhasa and kept out: her way of doing it was clumsy and entailed much needless slaughter. There would have been less slaughter in the end if she had marched straight to Lhasa and stayed there without any humbug about insults. Incidentally, the slaughter seems, from the descriptions, to have been unnecessary in many cases. A man running away is wounded; his "brave and simple" comrade stops to pick him up; both are past fighting, fleeing like sheep; and both are shot down. The rule was to kill all those who ran away as well as those who continued to fight. Another scene: Fifty Tibetans could easily have escaped, "but they chose a braver part." Armed only with swords, they stood in a courtyard huddled together. But the Gurkhas, their superiors in arms and numbers, emptied their magazines into the mob. "Within a minute all the fifty were either dead or mortally wounded." Even the English sightseer says it was "pitiable." In the very first action of this sanguinary mission, the Tibetans appear to have been slaughtered needlessly after all resistance was over.

To turn to more cheerful themes, Russia has been set aside. China's influence in Lhasa is reduced to nothing. The Tibetans have been left to their own devices, provided they will not interfere with British plans. Amusing incidents enliven the scene. Plenary indulgence was granted some of the Tibetan troops for all sins past and future if they would take the field against the English. This they did; but then they returned and looted the Dalai Lama's own temples, secure in his divine forgiveness for all sins. Negotiations result only in endless talk. The Lama's highest university degree is Rabsjampa, "verbally overflowing without end," as literally translated. Hence to quit talking is a sign of inferior mental capacity; to disgrace, as it were, the honored degree. A reincarnation of Queen Victoria is Paldenlhamo, "a dark-blue lady with three eyes." If one drinks tea native fashion, here is the receipt: Churn boiling water, tea-leaves, and a large lump of salt together; when well churned, add a pound of rancid butter; churn one minute more, and serve as soup.

Curious, if not amusing, are *white* rainbows; rivers which, through an optical delusion, run up-hill; and a few linguistic facts. Among the last, some metaphors are noteworthy. To "awaken" is "murder sleep"; "bribery" is "a secret push." To express "height" the Tibetan says "high-low"; "temperature" is "cold-warm," etc. Curious, too, is the record of the way in which the Lama in Kublai Khan's day got the better of the Christian. Kublai Khan was a liberal monarch. He desired truth irrespective of creed. The test was a miracle. Christian and Buddhist were to try to get a wine-cup to rise of itself to the Emperor's lips. The Christians accepted the gage of battle, and their failure to prove themselves equal to the Lamas in jugglery "put the coping-stone to the strength of Buddhism in Central Asia."

There have been many travellers in Tibet, more in the past than is usually supposed; but none has opened a richer store of knowledge than has Mr. Landon in the descriptive parts of his work. The political control, centred in the Church, is admirably described in Appendix C by Captain W. F. T. O'Connor. There is an assembly of national character, four ministers, and a chief Lama, who rarely survives. The present Dalai Lama succeeded in escaping the usual fate, but he has now disappeared. Usually the regent sees to it that the Dalai Lama disappears much earlier. The descriptions of scenery in both these volumes are a revelation. They must be read if one would appreciate what richness of color and wealth of vegetation are to be found on the road to the "Plain of Milk," a name, by the way, suggestive of the Hindu "Sea of Milk," across which was to be found the quasi-monotheism of later Hinduism. In Lhasa itself there are two things to be admired—the outside of the Potala and the inside of the Cathedral. All else is filth, vermin, and ignorance. Typically barbaric, yet containing rather the rotting core of Buddhism than the rough germ of newer life, Lhasa represents the result of submerging a lofty but selfish creed in a sea of superstition. The environment was too much for the transplanted growth. It did not die, but it became transformed into devil-worship.

FATHER DE SMET.

Life, Letters and Travels of Father Pierre Jean De Smet, S. J., 1801-1873. By Hiram Martin Chittenden, Major Corps of Engineers, United States Army, and Alfred Talbot Richardson. New York: Francis P. Harper. 1905. In four volumes. With sixteen full-page illustrations and one map.

This work bears every mark of having been, on the part of the authors and compilers, a labor of love, in which they have been ably seconded by the publisher. The four handsome volumes are paged consecutively, and there is a good index. The illustrations are very well chosen, and the map showing the routes of travel of the celebrated missionary is fully adequate and in harmony with the plates.

To one who never heard of Father De Smet, it might seem strange that so many bulky volumes could be profitably filled with the biography and writings of a simple Catholic priest who devoted his life to the irksome task of doing good to Indians. Perusal, however, will very soon convince him that the subject is well worth the labor and display. Father De Smet is, if not perhaps the grandest, at all events one of the grandest, figures among Catholic missionaries of the nineteenth century, and may fitly be ranked among the most conspicuous Catholic teachers to primitive peoples. To compare him with the apostles of the Indies or of China in the sixteenth and seventeenth centuries would be out of place, although he was their equal in honest zeal as well as in endurance, but the respective fields of labor were totally distinct. Much less justifiable is a comparison with Las Casas, such as was made in the obituary address (volume iv., page 1597). To call the injudicious and extravagant, constantly storming and frequently almost raving zealot a "Father De Smet" of early times, is a sorry compliment to the memory of the latter. Every religious fraternity has in a measure a field of its own and methods of its own, and to assign superiority to any is as impossible, from a general point of view, as it is impossible to compare the labors of St. Francis Xavier in eastern Asia with those of the early Dominicans in Guatemala, or those of the Franciscans in northern Mexico. To find a parallel to Father De Smet's labors among the North American Indians one must turn to the Jesuit missions in the Amazon region, where the career of Father Samuel Fritz, for example, might offer some analogy; and yet the times were so different that even in this case the parallel is not fully justified. Perhaps the most concise and most characteristic appreciation of Father De Smet's work, apart from its religious significance, is given in the passport issued to him by General Sherman on April 20, 1866: "He has always been noted for his strict fidelity to the interests of our Government, for indefatigable industry, and an enthusiastic love for the Indians under his charge." The narrative of Major Crittenden and Mr. Taylor, and the many writtings of Father De Smet published by them, abundantly prove the truth of General Sherman's testimony.

It is only after one has perused his voluminous correspondence that one becomes really conscious of the importance of Father De Smet in and for his time. That he stood very high in his own church was most natural; he was, during his lifetime, its foremost missionary. Significant of this was the manner in which he was received by Pope Gregory, who cast aside the time-honored

etiquette for the sake of displaying just admiration for the great missionary presented to him. Twice the honors of an episcopal see were sought to be thrust upon him, and he not only refused, but forestalled the prospective nomination by a definitive reminder that he would never accept any other position than that of an itinerant preacher and teacher to the least prepossessing of his species, under conditions full of danger. Never, it may safely be asserted, did he seek prominence. Modest and unassuming, mindful of his task, but seldom of himself, Father De Smet became, step by step and unconsciously, an important personage. To the Government of this country he was invaluable in its relations with the aborigines. As his letters abundantly prove, he was deeply and sincerely attached to this country, and did in its service what his position and primary obligations would humanely allow him to perform. Nobody more than he deplored the civil war and sympathized with the attempts to preserve the Union. Through his long career among the Western Indians, during which he mostly played the part of a peacemaker, he acquired the confidence of the Government to such a degree that he was at one time entrusted with an important confidential mission abroad. It is undeniable that the Catholic missions in Oregon were the most successful. Others rather helped the settlement of the country by the whites, irrespective of the future of the Indian. Says a Protestant missionary of distinction (p. 27): "I have no doubt our greatest work is to be to aid the white settlement of this country and help to found its religious institutions." The aim of Catholic missions has always been to aid the Indian and lead him on the path to civilization as a helpmate to the whites. But what was predicted by Dr. Whitman for the Oregon missions—"it cannot be hoped that time will be allowed to mature the work of Christianization or civilization before white settlers will demand the soil and the removal of both the Indians and the missions"—has come to pass. Catholic missions, like those founded by De Smet, have lasted the longer, but are equally doomed.

The Jesuit, when he seems to be fitted for mission work, receives as much of what may be called liberal instruction as the scope of seminarial teaching will permit. Hence a knowledge of the branches of natural history, physics, chemistry, etc., forms part of his outfit. If his inclinations lead him to enter deeper into the study of any of these branches, he is welcome to do so, provided he does not neglect his sacerdotal duties. Father De Smet enjoyed a general preparation, but was not drawn towards any specialization. From his letters we gather that he had a very lively perception of natural beauty; he frequently refers to the aspects of nature in the form of vivid general pictures—dissection of the elements of the picture was not his forte. To him the paramount study was that of man, to whose moral improvement he devoted himself; hence what science mostly reaps from his few books and from his extensive correspondence is much information of an ethnographic nature concerning the tribes of the Western plains and adjacent regions. In many respects this falls below that nowadays obtainable. In respect to detail of ceremonies, for instance, it has not the elaborateness of material secured with the aid of funds specially given for the purpose, of costly pictorial apparatus and other adequate equipment. In his time, and with his official duties, observation of the Indian entailed much greater hardships and was much more difficult. Hence his data are comparatively brief, but they have the merit of dating from a period when contact with the whites had not become so frequent. In his narrative of the Pottowatomi traditions, for example, we recognize a leaning towards finding traces of Biblical lore in Indian folk-tales, and explaining them as survivals from some ancient and very remote connection with the Old World. This leaning is common to all Catholic missionaries, from the time of Columbus down. Still, Father De Smet sees further, and concedes to the teachings of modern missions its proper influence on Indian tradition. On page 1084 we find the remarkable statement (Letter to the Provincial of the Jesuits, 1847): "If the early Jesuits or other Christian travellers had never been among these people, or if the Indians had never visited a Christian community, one might infer that they are in some sort direct descendants of Noah, and that they have preserved the tradition of the universal deluge, although obscured, altered and become fabulous in the long succession of ages." There is in this a recognition of the modifications which Indian lore so easily undergoes as soon as vivid impressions take hold of the Indian mind. Fragments of Christian teachings (particularly cosmologic and historic tales) are quickly absorbed by the Indian, and assimilated to his own mythology so as to become sometimes almost indistinguishable from the rest of his folk-tales.

On page 1004 there is a definition of the so-called "Great Spirit" that should not be overlooked:

"All these Indians believe in the existence of a Great Spirit, the Creator of all things, and this appears to be an inherent, original, and inborn idea. They do not, however, embody it; it is a spirit. The name of this spirit is Wakan Tankah or Great Medicine. The word 'medicine' in this case has no reference to the use of drugs, but means all that is incomprehensible, supernatural, all-powerful, everything that cannot be explained by ordinary means, or that is above their comprehension. They think this great medicine pervades all air, earth, and sky; that it is omnipresent, omnipotent, but subject to be changed and enlisted on their side in any undertaking if the proper ceremonies and sacrifices are made, etc., etc."

This definition hardly needs comment, except that it admirably corresponds to the substance of Indian creed and belief all over the American continent.

Abundant material regarding the manners and customs of the Indians of the Northwest prior to 1873, the date of Father De Smet's death, is disseminated through these volumes. To refer to it in anything like detail is, of course, out of the question. However it may compare with recent investigations, the earnest and conscientious student will always consult with profit the records of the experience and observations of our missionary. That he was not an inconsiderate admirer of the Indians, an Indian worshipper, is perfectly clear from his writings. He foresaw and foretold their inevitable fate within the United States. This only served to animate him to do his utmost for their welfare. In conclusion, we strongly recommend this valuable work to all who are interested in the history of the North American West and in its aborigines. Also, and particularly, to those interested in missions. Some minor flaws might be pointed out, but these vanish when the general excellence is considered.

The Reminiscences of Sir Henry Hawkins, Baron Brampton. Edited by Richard Harris, K.C. With portraits. 2 vols. Longmans, Green & Co. 1904.

These reminiscences of a celebrated lawyer and judge are open to the charge of garrulity, and have often the air of detached parts of conversations; the editor, indeed, says explicitly that they are "the outcome of many conversations," as well as of "innumerable manuscript notes." They are full of stories which, told *viva voce*, with all of "Orkins' " vivacity and humor, were no doubt very good, but which in a literary form often seem to lose their point, or become a little flat. This makes the book rather long, and detracts from the main interest of the narrative, which lies in the picture of the professional character and success of a remarkable man. It is a book rather for lawyers than for laymen, and contains some really valuable reflections on the administration of the criminal law.

Sir Henry Hawkins had the reputation of being the sharpest man of his time at the criminal bar, and afterwards the severest judge on the criminal bench. It was he who finished the career of the Tichborne claimant, and he will probably be longer remembered for his management of the prosecution for perjury of that impostor than for anything else in his career. An account of the trial is given in volume i., chapters xxxv. and xxxvi., with an excellent specimen of his cross-examination, and an amusing, even if invented, criticism by the Claimant himself, who is reported to have said, on seeing Toole, the comedian, come into court: "There's Toole, come to learn actin' from 'Arry Orkins." Hawkins, like every great advocate, was also an actor.

As a cross-examiner, he had the very highest skill. Keen, with a keenness far above that of a born rogue, he saw through all the disguises of rogues, and exposed the truth or falsehood behind, without the least touch of the cross-examiner's favorite failing—a tendency to self-parade. As an example, we may refer to the cross-examination of Bogle in the Tichborne case, on the subject of the tattoo-marks on Roger Tichborne's arm, and the "punctual flea."

If Sir Henry Hawkins had not been a great lawyer, his talents would have led him into the sporting or theatrical world. He loved a fight (in his early days he was amateur of the P. R.), a dog, a horse, a bet, and the stage, and in these pages we like him none the less for his confession of it. A character of first importance in the book is his fox-terrier, "Jack," who shared the bench with him. From such beginnings Hawkins developed into a judge who was a terror to evil-doers. He had not for half a life-time unmasked pretence in the witness-box for nothing; he continued to do it on the bench. But it is evidently a mistake to suppose that he was one of the old line of harsh judges. He was distinctly of an opposite and modern type. He gives an account of his system

of measuring the punishment so as to fit all the circumstances of a conviction, which distinctly shows him a humane and considerate man:

"The course I adopted in practice was this: My first care was never to pass any sentence inconsistent with any other sentence passed under similar circumstances for another though similar offence. Then I proceeded to fix in my own mind what ought to be the outside sentence that should be awarded for that particular offence had it stood alone; and from that I deducted every circumstance of mitigation, provocation, etc.; the balance representing the sentence I finally awarded."

How many judges in any country are as careful as this? As a matter of fact, his humanity led to a suspicion that he sometimes warped the law to suit a hard case. A French parody of the procedure of "Le Juge Hawkins" (no doubt written in England, but published in France) represents him as letting off a man who has stolen a loaf to save himself and his family from starvation, and as sending the baker who brought the charge to prison for a day, under "une loi édictée par la reine Élisabeth," for having left his shop for the purpose.

For innumerable anecdotes of uneven merit, we must refer the reader to the book itself. The first volume prejudices the reader against the *raconteur;* the second reconciles him to a very poor and colloquial method, and leaves him with an impression of a different sort—a great liking for the subject of the reminiscences, and a regret that they could not have been better revised. But even this may be a mistake. A better revision might have effaced some of the character. Baron Brampton (a name by which he will never be remembered) was essentially a self-made man, who rose by sheer cleverness and character, without being helped forward by adventitious aids. His book is a self-made book, and must not be judged as a literary performance. The editor evidently preferred to leave it, as far as possible, as it came to his hands.

The Story of the Congo Free State: Social, Political, and Economic Aspects of the Belgian System of Government in Central Africa. By Henry Wellington Wack. With 125 Illustrations and Maps. G. P. Putnam's Sons. 1905. Pp. xv., 634, 8vo.

This is not so much a history of the Free State (as the title might seem to imply), as a defence of its government against the charges of cruelty to the natives and denial of freedom of trade in the Basin of the Congo. The author states that a sense of duty moved him to write his book, the materials of which he obtained in the archives of the administration at Brussels, but for which he holds himself entirely responsible. The historical part consists of a brief sketch of the foundation of the State, the international conferences at which it was recognized and its powers and duties defined, and the campaigns for the suppression of the slave-trade. The methods of administration and the various civilizing measures instituted are described at some length. The latter half of the volume contains the statement of the Belgian case, together with a considerable number of official documents bearing upon it. The charge of administrative cruelty to the natives is denied, though individual cases of maltreatment are acknowledged, and considerable space is given to the favorable testimony of travellers and missionaries as to the contentment of the Congolese and their progress in civilization. The right of the Government to appropriate unoccupied land and to restrict the sale of its natural products to its own agents, and to tax the natives, is affirmed as one exercised by all the Powers having colonial possessions.

Mr. Wack's statement of the Belgian case would have made a better impression if, in his frequent references to those who disagree with him, he had used less discourteous language. The efforts of the Aborigines' Protective Society and others interested in the natives' welfare to draw attention to their condition is styled a "campaign of calumny" (p. 96) and "the organized campaign of slander" (p. 157). Again, he refers to "the Liverpool and Boston custom of attributing villainy to the officers of the Congo State Government" (p. 341). He believes that the action of the British Government in taking official notice of these charges was due to the influence of a few Liverpool rubber merchants, and he hints at a remote desire to annex the Congo territory to England's East African possessions. Apparently he wholly ignores the fact that, by the express terms of the General Act of the Berlin Conference of 1885, the signatory Powers "*bind* themselves to watch over the preservation of the native tribes, and to care for the improvement of the conditions of their moral and material well-being, and to help in suppressing slavery, and especially the Slave Trade" (p. 534). He also seems to endorse the extraordinary position taken by the Free State Government in regard to the statements of Protestant missionaries. In the official answer to the report of the British consul, Mr. Casement, it is asserted that, as he was assisted by the missionaries, travelling on their steamer, and frequently being their guest, "it was inevitable that he should be considered by the native as the antagonist of the established authorities" (p. 595).

The numerous references to the State as a colonizing success almost unequalled either show great ignorance of modern colonial history or are simply to be taken as the hyperbole of the advocate. Mr. Wack gives tables of statistics to show the prosperity, but he does not draw attention to the fact that the exports are almost exclusively of natural products. The rubber and ivory exported in 1903 were valued at $12,000,000, the cultivated products at less than $70,000; the total value being $12,791,080. These figures do not say much for the development in eighteen years of a vast region admirably adapted for the cultivation of cotton, cocoa, coffee, etc. The contention that the Free State Government only followed the example of all the Powers having colonial possessions in appropriating unoccupied land is correct, but we doubt if any Power, after declaring immense tracts to be public domain, deprived the natives of the right of selling its native products to any but Government agents and at a fixed price, and punished foreign traders for buying from the natives. Extravagant language is used in regard to the righteous motives of King Leopold; his one aim being to suppress the slave trade and to civilize the African. Much is said of the contributions from his private funds to meet the expenses of the State, but nothing of his receipts as a shareholder in some of the concessionary rubber companies. One of these is reported to have paid a dividend of 90 per cent. in 1901, and another repaid in two years the amount of capital invested.

The most interesting as well as the most trustworthy feature of the book is its profuse photographic illustration. The plates show the great progress made in building Government stations, churches, and schools. There is even a public library at Matadi, the terminus of the railway. Very few, however, indicate any general improvement in the native mode of life. The African is still the nude gatherer of rubber. Mr. Wack owes an apology to the Belgian Minister to this country, Baron Moncheur, for the assertion (on p. 389) that, because the Belgian reply to the Liverpool memorial sent to President Roosevelt on October 3, 1904, did not receive the same attention in the press as the anti-Congolese resolutions of the Boston Peace Conference, he was "quite indifferent to that campaign of publicity which the enemies of the Congo Free State began in England and now continue in America." The Baron published a statement of the Belgian case in the *North American Review* for October, 1904.

British Economics in 1904. By W. R. Lawson. W. Blackwood & Sons.

Were British Economics fairly represented in this essay, the civilized world might well despair. It is not clear whether the title means the science of political economy, or the economic conditions prevailing in the British Isles; but it makes no difference. If this is political economy, the dark ages have returned; and if the people of England are as decadent as Mr. Lawson declares them to be, there is little hope for them. Certainly there is none in the remedies here advised.

To be sure, the case is not superficially alarming. Wealth has increased, the author informs us, although he grudgingly calls it "wealth of a sort." "Fortunes can be quickly made in various ways without much effort; work of all kind is better paid than it ever was before; workmen get more and spend more than ever." This would seem to describe prosperity, but it only disquiets Mr. Lawson. To him the status of the Hindu laborer is ideal. Industry for its own sake, and not for the sake of its products, is his gospel. The popular idea that cheap food and cheap clothing are the most important of economic aims must be discarded. The Germans are wiser. They are more concerned about the extension of their industries than about cheap food. This truth, we may remind our readers, has been recognized by Professor Sumner in his classical epigram concerning the protection of the sugar industry in Germany: The Germans have the industry, and the English have the sugar.

It is not surprising that Mr. Lawson regards the industrial equipment of England as out of date, its commercial methods behind the time, its railways an incubus on trade instead of a help to it, and its Parliament the most helpless anomaly of all. We must say, however, that he appears quite incompetent to discuss such problems, and that most of his assertions do not de-

serve atttention. We shall only observe that the main ground of his complaint is that the English import much of their food instead of producing it at home. He calculates that if all the money paid for imported food were spent in England, it would give permanent employment to nearly 4,000,000 farm laborers at a pound a week. A number of calculations of this stupefying character are presented to the reader, and he is invited to be impressed with "the overwhelming gravity of the facts."

"The Englishman of to-day," Mr. Lawson observes, "eats more, plays more, and works less than he did sixty years ago." It does not admit of question that, if there is a return to protective taxes, the Englishman of to-morrow will eat less, play less, and work more than he does now. That the English people should deliberately accept such a change as an improvement is incredible; and the arguments advanced in favor of the change should not impose upon even the wayfaring man.

The United States 1607-1904

A History of Three Centuries of Progress in Population, Politics, Industry, Commerce and Civilization.

By William Estabrook Chancellor and Fletcher Willis Hewes

To be in 10 volumes, 8vo, containing numerous diagrams and tables, showing industrial and financial development, and comprehensive maps. Each volume covers a distinct period and is fully indexed. Sold Separately. Each $3.50 net.

Volume I.—Colonization, 1607-1697
Volume II.—Colonial Union, 1698-1774 } **Ready.**

What the Critics Say of Volume I:

The London Academy:—
"Arrests attention by its thorough scholarship, its breadth of treatment, and its lucidity of style. Its literary qualities are most evident. . . . Vivid. . . . Clear. . . . Concise."

Journal of Education:
"A wealth of information in a delightful literary setting."

Congregationalist:
"A brilliant, easy-flowing narrative. Strong in the brief biographies. The single page on Magellan is a wonderful monograph. A sturdy common-sense which inspires confidence."

The Newark News:—
"A striking success. . . . A dramatic way of presenting events which animates even the dullest and most prosaic facts. Especially should be commended the critical estimates of the great men who figure in the story. A valuable feature is the numerous supply of maps, charts, and diagrams."

Indianapolis News:—
"Something of Macaulay's glowing and discursive style. . . . The interesting passages are too numerous to quote."

ISLAND

For Sale on the Maine Coast

One of the most beautiful islands in Penobscot Bay; one night's journey from Boston and close to regular daily steamboat communication. This property is in the middle of the finest sailing grounds on the coast. The island is a mile in length, and is on an admirably sheltered harbor for yachts or boats, with deep water throughout and close in shore. It comprises nearly 250 acres of high land, a large part of which is finely wooded. There are numerous beaches, coves, and bold rocky shores at almost every point, and beautiful views of surrounding islands and mountains. The property must be disposed of this spring, and will be sold at a low price to settle an estate. Address JOHN L. DONAHUE, Executor, Rockland, Maine.

TREES AND SHRUBS OF CENTRAL PARK

By LOUIS HARMAN PEET.

This book brings within easy reach of the non-technical nature lover a knowledge of the botanical treasures of this stately park. It has long been needed, and is fully adequate, identifying the trees and shrubs by location and text descriptions. It consists of about 370 pp., covers the Park with 16 maps, on which are located about two thousand trees and shrubs. These are described in the text. An index gives handy reference to each tree or shrub described. In addition, there are half-tone illustrations of the important trees and shrubs. Cloth, 12mo. Price $2.00. (Postage 12 cents extra). Address the author, 755 Ocean Ave., Brooklyn, N. Y.

Spring Educational Numbers

The usual Spring Educational Numbers of THE NATION will be issued this year on April 13th and April 20th, and will reach the professors and teachers in all the leading Colleges and Academic Institutions in the country. Four thousand extra copies of each issue will be sent to persons interested in educational affairs in addition to those sent to regular subscribers, and as there will be different lists for each of the special issues, advertisements should be inserted in both of them in order to reach the entire list.

Copy for the first of these numbers should be received by Tuesday, April 11th, and for the second by April 18th.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.

$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

The Nation

VOL. LXXX—NO. 2076. THURSDAY, APRIL 13, 1905. PRICE TEN CENTS.

"The Messrs. McClurg are doing a great service to historical students by the publication of their series of reprints of Americana. In this series we have already had the pleasure of noticing the beautiful editions of the 'Journals of Lewis and Clark,' in many ways superior to the edition at ten times the cost now being issued by a New York publisher. In it are also Father Hennepin's 'A New Discovery' and Gass's 'Journal of the Lewis and Clark Expedition.' The makeup of these volumes is of high character in paper, printing, and binding, the work leaves nothing to be desired, and the manner of their editing calls forth large praise from those versed in the subject of early American history. The series deserves a place in every library, and will without doubt receive universal acceptance."—*Baltimore Sun.*

McCLURG'S LIBRARY REPRINTS OF AMERICANA

Seldom has the perfection of modern bookmaking, as evidenced by noble and dignified simplicity, been so nearly attained as in these beautiful volumes. The four titles so far issued, uniform in style, makeup, and binding, are published in two forms. The regular edition in cloth, and the large paper edition on Brown's hand-made paper with illustrations on Japan vellum, and bound in boards, with vellum backs stamped in gold.

The Expedition of Lewis and Clark

Reprinted from the edition of 1814. In two volumes, with introduction by James K. Hosmer, LL.D., an analytical Index, new portraits, and facsimile maps. Limited edition. $15.00 *net.* Library edition, $5.00 *net.*

Hennepin's "A New Discovery"

An exact reprint of the edition of 1698. In two volumes with an Introduction, Notes, and an analytical Index by Reuben Gold Thwaites, LL.D., facsimiles of the original title-pages, maps, and illustrations. Limited edition, $18.00 *net.* Library edition, $6.00 *net.*

Gass's Journal of the Lewis and Clark Expedition

Reprinted from the edition of 1811. In one volume, with an Introduction by James K. Hosmer, LL.D., an analytical Index, facsimiles of the original illustrations, and a rare portrait. Limited Edition $9.00 *net.* Library edition, $3.50 *net.*

Lahontan's "New Voyages to North America"

An exact reprint of the English edition of 1703. In two volumes, with Introduction, Notes, and analytical Index, by Reuben Gold Thwaites, LL.D., bibliography by Victor Hugo Paltsits, and facsimile maps and illustrations Limited edition, $18.00 *net.* Library edition, $6.00 *net.*

Important New Text-Books

Revised Edition of Rolfe's Shakespeare

Price, 56 cents per volume

The volumes of this new edition have been entirely revised and reset, and appear with every possible mechanical improvement. The books are smaller and more convenient in shape, and plentifully supplied with attractive illustrations. The changes made in revision reflect the results of the editor's studies and the experience gained by the use of the first edition.

Earle's Medea of Euripides

$1.25

In this edition of the Medea, special attention has been given to the reconstruction of the Greek text, in which the best authenticated conjectural readings have been incorporated. These changes, and other matters of textual criticism, are exhaustively treated in the appendices. An extended and scholarly introduction fully discusses the life and works of Euripides.

Keller's Bilder aus der Deutschen Litteratur

Revised Edition, $1.00

In the present edition of this popular book there have been added 134 pages, which contain longer selections from the principal German authors, rendering the work as much a book for reading as for study. The author gives, in twenty-one chapters, a survey of the German language and literature during the most important epochs.

An illustrated descriptive catalogue of High School and College Text-Books will be sent to any address on request. Correspondence is cordially invited and will receive prompt and careful attention.

Gateway Series of English Texts

General Editor, HENRY VAN DYKE

A series of eighteen volumes, which includes all the college entrance requirements in English. The books are convenient in form, attractively and substantially bound, and printed from clear type. The editing of these volumes is carefully and judiciously done, the actual needs and capacities of young people having been borne in mind.

Spieker's Greek Prose Composition

$1.30

Intended for use in college classes, this book gives for the ordinary course one hundred and twenty exercises, followed by twenty-five based especially upon Demosthenes and Plato. The introduction does not try to take the place of grammar, but gives merely the main points which will be of special assistance to the student.

Kayser and Monteser's Brief German Course

$1.20

This introductory German Course provides careful drill upon pronunciation; memorizing and frequent repetition of easy colloquial sentences; drill upon the rudiments of grammar; exercises in word formation; and the reading of graded and connected selections in prose and poetry.

Publish the BERCY, DU CROQUET, SAUVEUR, and other standard methods for teaching
FRENCH AND OTHER FOREIGN LANGUAGES

The French and German methods are modern and are used in many of the most progressive schools and colleges throughout the country. The general stock of imported books is very large, for we supply not only our own publications but those of *all* publishers at home and abroad. Our *Romans Choisis, Contes Choisis*, and other series, tastefully printed and low priced, contain masterpieces of French, Spanish and Italian authors. They are used extensively for class reading, many having notes in English. A complete catalog of all publications, also of imported books, will be sent when requested.

SOME RECENT PUBLICATIONS.

The Complete Pocket Guide to Europe. Edited by EDMUND CLARENCE STEDMAN and THOMAS L. STEDMAN. Revised Edition for 1905. Besides giving the best routes, select hotels, many maps, etc., of Europe, it gives advice as to: Arrangements for the Journey—Steamships—Ocean Journey—Money, etc.—Hotel Expenses—Railway Travel—Golfing—Cycling—Customs Regulations—Health Resorts—Diplomatic and Consular Agents of the United States—Travel Phrases in Four Languages—Travelers' Telegraphic Code, etc. It is handy, concise and accurate, and has stood the test of years, and is revised from year to year. It gives just the information needed on the spur of the moment. The authoritative wealth of information contained in it has saved travelers many times the price of the book. No one need fear extortionate demands of the foreign purveyor if he adheres to the advice given. Size: small enough for one's pocket or muff. One volume, 537 pages, size 3½ x 5 in., full leather binding, $1.25 *net*.

MISCELLANEOUS—Simple Rules for Bridge. By K. N. STEELE. 2d edition revised. It is by an acknowledged "Bridge" authority. Size 4⅛x5¾, paper, 25 cents *net*.

FRENCH—L'Abbe Daniel. By, ANDRE THEURIET. Edited with notes in English by C. Fontaine, B.L. L.D., No. 26 Roman Choisis, 12mo cloth, 85 cents; paper, 60 cents.

Le Verre d'Eau ou Les Effets et Les Causes. By EUGENE SCRIBE. Edited with introduction and notes by F. G. G. Schmidt, Ph.D., Professor of Modern Languages, State University of Oregon, No. 21 Theatre Contemporain. 12mo, paper, 25 cents.

Carte de Lecture Francaise. By Misses GAY and GARBER. 20 French reading charts, 36x24 inches each printed in large type and profusely illustrated. Price $5.00.

SPANISH—El Cautivo de Dona Mencia. By DON JUAN VALERA, edited with explanatory notes in English by R. Diez de la Cortina, B.A., No. 5 Cuentos Selectos. Size 6⅛x4⅜, cloth, 50 cents; paper, 35 cents.

Los Puritanos y Otros Cuentos. By ARMANDO PALACIO VALDES, edited with introduction and explanatory notes in English by W. T. Faulkner, A.M., of the Columbian University. 12mo, cloth, 75 cents-paper, 50 cents.

Disunion Sentiment in Congress in 1794

A CONFIDENTIAL MEMORANDUM
HITHERTO UNPUBLISHED.

Written by JOHN TAYLOR of Caroline
(Senator from Virginia) for James Madison.

Edited, with an Introduction, by GAILLARD HUNT.
Author of the Life of James Madison. Editor of the Writings of James Madison.

4to, 23 pages, with facsimile of the original manuscript, handsomely printed.

Edition Limited to 300 copies. $2.00 net.

This manuscript was not included in the files of Madison's papers which he prepared for posterity and which the Government bought, nor was it among those which Mr. J. C. McGuire collected, but was kept separate by him and after his death by his wife. Upon Mrs. Madison's death it fell into the hands of her nephew, the late James Madison Cutts, from whose widow it was recently purchased by the publishers of this work. The careful and close custody of the manuscript for so many years shows it was considered of the highest importance by Madison, and historical students will welcome its present publication as throwing much new light on a subject of great interest, and as giving particulars of an episode concerning which the historians of the period have been hitherto uninformed.

The Humble Request

Of the Governour and the Company Late Gone to New England

TO THE REST OF THEIR BRETHREN OF THE

CHURCH OF ENGLAND

London, 1630

New Edition, in Facsimile of the Rare Original, with a Bibliographical Note by

WILBERFORCE EAMES

and an Historical Introduction by

JOHN L. EWELL

Small 4to, 22 pages. Edition limited to 100 copies. Net $2.00.

This tract signed on the eve of their departure for the New World by the leaders of the Winthrop Colony, in 1630, is of great importance as showing the ardent friendly feeling of the colonists to the Established Church of England, and the great rarity of the original edition (of which only three copies are known) should make this facsimile reprint desired by those interested in early New England history.

THE UNIVERSITY OF CHICAGO PRESS

The Progress of Hellenism in Alexander's Empire

By JOHN P. MAHAFFY, Sometime Professor of Ancient History at the University of Dublin.

Professor Mahaffy has in this book epitomized the results of his studies, extending over more than twenty years and covering all the known records of Greek influence in Alexander's empire. The book is thus a compendium of rare value: to the student it presents an accurate summary of a most brilliant culture epoch; to the casual reader it offers an outline for more extended reading.

$1.00 net, prepaid $1.10

The Messianic Hope in the New Testament

By SHAILER MATHEWS,
Professor of New Testament History in the University of Chicago.

New Testament study along historical lines and embodying the latest results of critical work in popular form is extremely rare in America. This book is an example of such study. It subjects the narrative to a searching criticism and seeks to determine which of the concepts common to the writers are of local application and contemporary, and which are applicable under all circumstances of time and place. The messianic hope forms the main theme of the discussion.

Studies in General Physiology

(In two volumes.)

By JACQUES LOEB,
Head of the Department of Physiology in the University of California.

Professor Loeb has long been endeavoring to ascertain the laws controlling physical life phenomena, and especially those involved in reproduction. He has finally succeeded in artificially fertilizing ova, and has been able to develop the ova thus treated. The experiments have not been elsewhere recorded, so that these volumes possess a special value to physicians and other students of biology. For many years Professor Loeb's results will form the point of departure in similar investigations.

The Place of Industries in Elementary Education

By KATHARINE E. DOPP,
Instructor in the University of Chicago.

This book recognizes the relation between the periods of growth in the child and the stages or ages of industrial development in the race. It is pointed out that better results in primary education can be attained only by assigning to the industries a much larger place in the curriculum than heretofore. A recent revision has enlarged the volume by some seventy pages of text and sixteen full-page illustrations.

$1.00 net, prepaid $1.11

The Psychology of Child Development

By IRVING KING,
Professor of Psychology in Pratt Institute, Brooklyn.

This book is the first attempt to apply the functional point of view to child psychology, and it promises to transform the study from a dreary catalogue of "facts" for which none but a few enthusiasts care, to a really illuminating and scientific account of child-life. To those teachers who have felt the stimulus of Dr. Dewey's educational thought this application of his method will be welcome and inspiring.

A History of Matrimonial Institutions (in three volumes)

By GEORGE E. HOWARD, Professor of Institutional History in the Unversity of Nebraska.

Professor Howard has given in these volumes the most complete study yet published on the history of marriage and divorce. The work is in three parts. In the first the author fixes the sociological basis for the discussion; the second treats of the development of marriage in England; the third is devoted to marriage and divorce in the United States. Every one following the widespread discussion of the marriage and divorce problem should have access to this work.

$10.00 net, prepaid $10.72.

The Trend in Higher Education

By WILLIAM RAINEY HARPER,
President of the University of Chicago.

Here, within the limits of a single book, President Harper gives the gist of his addresses and papers upon the general subject of higher education. It goes without saying that the volume is meeting a hearty welcome from that large class of readers who are interested in the development of our educational system; especially those actively engaged in perfecting the organization of the high schools, the colleges, and the universities.

$1.50 net, prepaid $1.66

Religion and the Higher Life

By WILLIAM RAINEY HARPER,
President of the University of Chicago.

In this book President Harper attempts to suggest a solution for the religious problems which confront men and women during the periods of late youth and early manhood or womanhood. The book has its message for all who are honestly and earnestly striving to answer the questions which inevitably arise in connection with the religious life; it is also a faithful index of religious conditions in our colleges and universities.

WHAT THE CRITICS SAY:

The London Academy (Eng.):—"Arrests attention by its thorough scholarship, its breadth of treatment, and its lucidity of style. Its literary qualities are most evident. The authors recognize the solidarity of history. . . . Vivid. . . . Clear. . . Concise."

Journal of Education:—"A wealth of information in a delightful literary setting."

Congregationalist:—"A brilliant, easy flowing narrative. Strong in the brief biographies. The single page on Magellan is a wonderful monograph. A sturdy common-sense which inspires confidence."

Education:—"This history will meet with the approval of thoughtful people and take a permanent place among the popular histories of our country."

LONGMANS, GREEN, & CO.'S NEW BOOKS

CUBA
and the Intervention

BY

ALBERT G. ROBINSON

("A. G. R.")

Crown 8vo, Cloth, Net $1.80. By mail, $1.92

"A book which is destined long to figure among the most valuable materials for a comprehension of Cuba's history at a critical conjuncture. . . . The author was an eyewitness of the events that he describes, and he brought to his task a mind qualified by education and experience for the work of observation."
—*N. Y. Sun.*

"A work which should at once take rank as a valuable record of one of the most remarkable international episodes in the history of civilization."—*Washington Star.*

"A book which gives one an excellent idea from the Cuban point of view of the first steps toward the formation of the present republic.

From documents and reports, but better than all from personal investigation, the author has collected material of the greatest value for the future historian, for the statesman, and for the general observer of events. There are interesting chapters on the first year of intervention, on the military occupation, on the Platt amendment, and the struggle for tariff concessions."
—*Chicago Tribune.*

The United States and Porto Rico

With Special Reference to the Problems Arising out of our Contact with the Spanish American Civilization

By LEO S. ROWE, Ph.D., Professor of Political Science in the University of Pennsylvania, President of the American Academy of Political and Social Science, Member of the Commission to Revise and Compile the Laws of Porto Rico (1900-1901), Chairman of the Porto Rican Commission (1901-1902). Crown 8vo. Pp. 280. Price, $1.30 net; by mail, $1.40.

The Burden of the Balkans

By M. EDITH DURHAM, author of "Through the Lands of the Serb." With Illustrations and Map. 8vo. $4.00 net. By mail, $4.16.

In this story of her sixth visit to the Balkan Peninsula, Miss Durham, after an historical survey of the causes of of the present state of affairs, gives an account of her work as relief agent for the Balkan Committee, and finally describes Albania and the Albanian, "the root of all the Balkan difficulties." The book contains a number of illustrations from sketches by the author.

"Miss Durham, who has made six journeys through the peninsula, has executed her task with singular force and vivacity. She presents an unconventional view of the situation. . . . Hers is one of the most entertaining books that the season has produced. It is more than entertaining—it has genuine value as a picture of a group of peoples who still belong to the Middle Ages."—*N. Y. Tribune.*

The Crisis of the Confederacy

A HISTORY OF GETTYSBURG AND THE WILDERNESS

By CECIL BATTINE, Captain Fifteenth King's Hussars. With a Colored Illustration of the Battle-Flags of the Confederacy and 6 Maps. 8vo. $5.00.

"We have not space at command to follow Captain Battine's excellently lucid narrative, but must be content with generally commending it to our readers. They can hardly find a more satisfactory narrative, with so much matter in so moderate a space. The story of years of serious fighting is compressed into something less than four hundred pages. Then comes a chapter in which the lessons of the war are drawn in a very instructive way."
—*Spectator, London.*

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, APRIL 13, 1905.

The Week.

The President's prophecy, spoken to his Indian Territory audiences, that that Territory will soon become a State, "probably in conjunction with Oklahoma," will, we trust, be fulfilled. But enough uncertainty exists to add zest to whatever single Statehood campaign he chooses to instigate. In Oklahoma a movement of significance has been started looking to the immediate setting up of that Territory as a separate State. A call for a Constitutional convention, to be held this summer, has been sent out, and is understood to have the backing of Gov. Ferguson, ex-Delegate Flynn, and the Republicans in control. From Delegate Maguire's accepted organ, the Enid *Eagle*, comes a protest against waiting upon the settlement of tribal affairs of Indian Territory before admitting Oklahoma. At least 75 per cent. of Oklahoma's population, it is estimated, will back up a protest against the reënactment of the Hamilton bill, which provides for single Statehood. But it would be unfortunate if Oklahoma's impatience for the dignity of two Senators should result in splitting a logical commonwealth in two, or in making necessary the patching on of Indian Territory later.

The Senators who deformed the Hay-Bond treaty had fair warning that Newfoundland would retaliate, though the extent of the reprisals was probably not foreseen. As a matter of fact, she is planning to cripple our fisheries on that coast. By prohibiting the catching or buying of bait along shore, the banks fleet can be seriously embarrassed. The imposition of an export duty equal to our import duty will effectually put a stop to the traffic in frozen herring, now furthered by evading our customs. Graver yet, the embargo will mean that the formerly liberal policy of Newfoundland has been relinquished, and that a period of petty international tempests in the fishpots will begin. The reopening of the fisheries dispute will bring about contraband fishing and baiting by enterprising fishermen, with the constant chance of acts of violence. Perhaps those who defeated the treaty in order to encourage the Gloucester fleet as a "nursery of the American navy" may regard such minor broils as an excellent preparation for possible war, but our State Department will hardly take that view when its dealings reassume the fishy and most vexatious complexion of some twenty years ago.

The reciprocity treaty with Cuba has now been in force for two-thirds of a year. Our exports to Cuba during that time have been 42 per cent. more than during the corresponding period of 1903-1904, while our total imports from the island have increased by only 16 per cent. The latter increase is chiefly in the single item of sugar, which rose from $24,666,517 to $29,848,042. Our exports, however, increased in many lines: cars and carriages, beween 10 and 25 per cent.; flour, cattle, lumber, and corn, between 25 and 40; mineral oils, bacon, and furniture, between 40 and 50; while in cotton cloths our exports to Cuba have considerably more than doubled. It is worth noting that the early results of Cuban reciprocity under the McKinley act were nearly the reverse of this. Our exports to Cuba in 1892 were only about 6 per cent. more than in 1890, while our imports from Cuba increased in the same time by more than 40 per cent. The differences in the two arrangements explain this. Instead of free sugar merely, we grant Cuba now a 20 per cent. reduction from all the Dingley rates, while, on our side of the bargain, we receive concessions running in many cases as high as 40 per cent.

Error may be lucky for a day, but truth wins at the last. This is likely to be one's reflection on reading the recent address of Rear-Admiral George W. Melville, retired, before the American Academy of Political and Social Science at Philadelphia. Admiral Melville focuses attention on the fact that our Philippine possessions are a heritage of enormous naval weakness—a position no one but a degraded Anti-Imperialist, least of all a conspicuous naval officer, would have dared to assume four or five years ago. Our triple expansion policy of policing the Philippines, digging the Panama Canal, and assuming the office of receiver-general of bankrupt and recalcitrant South and Central American States gives this naval expert the most serious apprehension. The anticipated military success of Japan will soon put "the fighting man of the East" on our Pacific frontier. The French, Danish, and British West Indian possessions "menace" from a dozen military standpoints our control of the Isthmian Canal. To remedy this in part, Admiral Melville advocates first of all "the immediate abandonment, at the slightest possible financial loss, of every distant possession that is likely to require a fleet to defend it." Our immunity from foreign aggression so long as we maintained unimpaired our continental solidarity and minded our own business, we have senselessly given up for the sorry spectacular rôle of posing as a world power.

The news of the desertion of 600 men from Rear-Admiral Evans's great fleet at Pensacola comes hard on the heels of the publication of the views on this subject of the Bureau of Navigation. It was carefully explained by the chief of the bureau, Rear-Admiral Converse, that, of an enlisted force of 30,066, "only" 10.7 per cent. ran away last year. Among the seamen the desertions were 7.97 per cent., while 17.10 per cent. of the engine-room force violated its pledges. The heaviest percentage was among the mess men, nearly one-quarter of whom, or 23.15 per cent., "jumped" the service. The latter fact the Bureau sought to explain on the ground that there were many foreigners among these messmen, and that the servant question is, after all, "one which is not wholly confined to the naval service." In the engine rooms, too, there would seem to be a good many foreign-born Americans, for five of the six men of the *Iowa* who were given medals of honor ten days ago for bravery in connection with a boiler accident bore the following names: Johannes J. Johannesen, Patrick F. Bresnahan, Heinrich Behnice, Frederick Behne, and Demetri Corahorgi. The truth is, that neither alien birth nor the servant question offers the proper solution. There is something radically wrong either with the official treatment of our men or with the men themselves. The native American seems to resent being "cabined, cribbed, confined" by superior authority as inconsistent with American democratic ideals, and, "first-class fightin' man" that he is, does not care to serve long in time of peace. Our Jingoes must reckon with this temper in their plans for a navy with 80,000 or 90,000 enlisted men.

"Administrative entity," a phrase somewhat ill-understood in Mr. Hay's circular note in behalf of Chinese neutrality, is now fully accounted for as of German origin. It was the Kaiser who prompted the appeal to the Powers; in diplomatic correspondence just published he thanks the President for his "initiative and *coöperation*" in matters Chinese. This explains the dubious phrase, which must be simply the translation of *entité administrative*—a Gallic metamorphosis, for diplomatic purposes, of some still more metaphysical Teutonism whose determination we leave to philosophical philologers. Mr. Hay, apparently, no more knew what it meant than Lord Lansdowne, who frankly asked. But the thing to be explained is not the formula supplied from Berlin, but the motive that ruled at that time in the Wilhelmstrasse. Into this one should not inquire too curiously. It might be surmised, for example, that

Germany knew that strict observance of Chinese neutrality was more favorable to Russia than to Japan, and prompted Secretary Hay to his old pursuit in order to aid Russia. To such a view the fact that the only outrageous breach of Chinese neutrality, in the *Ryeshitelni* case, was committed by Japan, lends a certain color of truth. Yet it seems more likely that Germany was merely grasping the first opportunity to associate herself actively with Mr. Hay's campaign for the open door. As a great trading nation, she might take such ground without suspicion of ulterior political motives.

This view of the case is confirmed by Germany's present overtures at Washington in behalf of equal commercial privileges in Morocco. In the light of this remarkable initiative, the Kaiser's recent visit and speech to Tangier must be read. It may pique him personally that the Western Mediterranean question was settled without reference to Germany, whose trade with Morocco is considerable and growing; and, so far as his ostentatious cruise was a reminder that Germany has Mediterranean aspirations, its bearings were political. In the main, however, the calm tone of the French press is evidence that Germany's designs in Morocco are regarded as purely commercial, and of a kind that France is disposed to allow cheerfully to all nations. Finally, the most interesting feature of the situation is the overture for a diplomatico-commercial *rapprochement* between ourselves and Germany, a possibility fraught with vast importance.

The stiffening of the moral backbone of St. Louis, accomplished while Gov. Folk occupied the Circuit Attorney's office, has apparently sufficed to reëlect Rolla Wells, the Democratic "business Mayor." He has given the city an administration notable chiefly for its "respectability," as contrasted with the "good-fellow" rule of his predecessor, "Uncle Henry" Ziegenheim. In the ordinary course of events, Wells would have been succeeded by another "liberal" Republican. The early returns, from the dock and slum wards, showed the expected plurality for Judge Talty, the Republican candidate, who was understood to favor a "wide-open" town, but the "white shirt and collar" wards remembered Folk and his teaching. Mayor Wells was backed not only by the Folk faction, but by the followers of Harry Hawes and the Jefferson Club of odorous memory. It is an interesting commentary on the practical efficacy of the Folk idea that the so-called Jefferson Club "Indians," under Hawes's leadership, should have been swung to the support of a candidate who, it was complained, was stiff and unapproachable by "the boys." The enthusiasm for the "business Mayor," however, was not great enough to carry through a proposed bond issue of $9,000,000 for municipal improvements. The public-ownership candidate, Lee Meriwether, received trifling support—a strong contrast to the result in Chicago.

The real traction question in Chicago will come up, now that the Mayoralty election is over. Judge Dunne, the successful Democratic candidate, favored a line of policy which, while more radical than that of Mr. Harlan, the Republican, is at the same time much harder to carry out. Harlan offered a plan which was safe and economical, and would give the city a chance ultimately to try public operation of street cars, if it chose, under the most favorable auspices. But the people of Chicago agreed with Judge Dunne that it was better to run some risks and begin to take up the lines at once. If the city refuses to grant any new franchises or renew old ones, the companies have left—to quote one of Dunne's converts—"(1) a second-hand plant for which a second-hand price will be paid; (2) the right to operate for some fifty years over what Mayor Harrison has called 'a maimed and crippled system of streets, with but 50 per cent. of the entrances in the downtown district.'" The Democratic orators contended that the prices for the companies' securities—which remained fairly stable throughout the campaign—were based partly on the expectation of new franchises, and, with that hope gone, would fall to a figure commensurate with the real value of the companies' property. None the less, if the price paid by the city for the lines taken over is to be based on stock quotations, the incentive for keeping prices at an artificially high figure is greater than ever since Dunne's election.

In spite of the all but unanimous protests of the Philadelphia newspapers, the Legislature of Pennsylvania on Thursday put through the three so-called "ripper" bills, taking from the Mayor of Philadelphia the power to appoint directors of the several departments, and giving it to the City Council. Unless Gov. Pennypacker decides to veto the measures, Philadelphia will, on the first Monday in April, 1907, when the bills take effect, revert to a system of divided responsibility that has nothing to justify it except the desire of the Republican "machine" to insure its control. The advocates of these "ripper" bills explain that, under the Bullitt law, passed in 1885, the heads of departments in Philadelphia are little better than clerks. They propose to relieve the Mayor of the power to appoint the Director of the Department of Public Safety (the police commissioner), the Director of the Department of Supplies, and the Director of the Department of Public Health and Charities. The City Council, elected yearly, shall then choose these officials for a term of three years each. The only real argument for this change advanced by the "machine's" backers is that the law that has served the city for twenty years is un-American, and tends to the establishment of a one-man power.

The influence of trades unions upon immigrants is the subject upon which Carroll D. Wright tried to secure information in a recent investigation of the Chicago stock yards. His finding is that the unions are helpful in Americanizing and bettering the conditions of the Poles, Bohemians, Lithuanians, and Slovaks, who form so large a percentage of the laborers. Before the unions were organized, each race kept closely to itself. It had its own church, its own schools, is own benevolent associations, its own social life. It attempted, when the unions were started, to organize these also on race lines. The leaders, however, objected, and, for the first time, Irishmen, Germans, Poles, Bohemians, and the rest were forced to mingle—to hold common meetings, to learn a common tongue, and to take common action. To a certain extent, also, the unions have been educators in political science. Here the Eastern immigrant first learns the value of his vote, and gets some vague notion of his relation to the State. Again, through the union he seeks to improve his condition. Better wages, shorter hours, better homes, better clothes, larger opportunities for himself and children—these, according to Mr. Wright, are the staple subjects of talk at the union meetings. Pushed to the extreme, these ideas may have unfortunate results; but in general the lesson is a valuable one. Similar influences, Mr. Wright would discover, are operating in New York, especially in the clothing trades. The Jewish workmen do not take naturally to the trades-union idea. They join in large numbers when some prominent issue, like the open shop or a wage increase, is at stake; and then, after the crisis is passed, drop out. In the quiet season the unions, with decreased membership, do exist, but usually as social organizations and debating societies. With the temperate Hebrew they often take the place of the saloon as the poor man's club. In this field the activity of the unions is admittedly wholesome.

The sale of thirty-one obsolete warships by the British Government for less than one-twentieth of their original cost is a surprising transaction, but nothing could better illustrate the rapidity with which modern fighting machinery becomes worthless. The casual reader is likely to imagine that these vessels be-

longed to the elder day of sea fighting —that they were of the type whose decks were trod by Marryat's heroes. No such thing. The *Galatea* was completed in 1889 at a cost of £258,390, the *Warspite* and the *Australia* in 1888, costing £529,332 and £259,390 respectively, and the *Northampton* in 1878 at a cost of £395,804. Thus three of the cruisers now sold for junk, with the requirement that they be broken up at once, were brand new and up-to-date only sixteen or seventeen years ago. The young girls who smashed champagne bottles over their bows at the launchings are not yet middle-aged. In even less time, the progress of invention may make the ships launched this year equally worthless. This is the nature of a Government's investment in naval armaments, and it is one of the things to be kept in mind when the Jingoes are urging still larger budgets.

There is much in Mr. Austen Chamberlain's Budget of public revenue and tax expedients for the new British fiscal year, submitted to Parliament on Monday, which should be highly gratifying to the British people; there are some provisions which in certain quarters will arouse resentment. The mere fact that a $15,000,000 surplus revenue is reported, for the twelve months ending March 31, is a matter of encouragement—the more so since it exceeds by nearly $12,000,000 the estimates framed by the Chancellor of the Exchequer a year ago, and since the unlooked-for increment has come from an increased import trade—a sign of reviving English prosperity. On the other hand, the well-to-do classes, which have been bearing, ever since the South African war ended, an income tax larger than any imposed in time of peace for fifty years, had looked with much confidence for some remission, and will certainly be chagrined at the news that none is to be made. One shilling in the pound is not, as American ideas of taxes go, a very oppressive burden. Amounting as it does to 5 per cent., it is heavier than the Federal income tax imposed by Congress during 1894, and later declared unconstitutional, but it is probably lighter than the burden placed on incomes by the property tax of New York State. The pending mortgage-tax bill, in so far as that affects aggregate incomes, calls for a tax of 10 per cent. or thereabouts. So of the tax on other forms of property, which, if collected to the last farthing, might easily take for the State 20 or 25 per cent. of income other than salaries or wages. Nevertheless, the fact that the shilling figure has, for half a century or more, been synonymous with a British war-tax, is reasonably sure to render those who must continue to bear the burden angry and resentful, and it may in that way affect the fortunes of the Ministry. For the rest of the voting public, the Ministry proposes a reduction of the tea duty, so that what favor the budget loses in one direction it may gain in another and possibly more politically useful quarter.

The marked decline in the consumption of alcoholic spirits in Great Britain proved to be the significant sociological feature of Mr. Austen Chamberlain's Budget speech. In the fiscal year ending March 31, 1905, the drink duties indicate the smallest consumption of beer and spirits in fifteen years. The noticeable decline in this source of imperial revenue has gone steadily on since 1900. The young Chancellor of the Exchequer was well advised in not following the lead of cynical financiers who have argued, as did the author of The Fable of the Bees, that private vices are public benefits. However great the loss in revenue from excises on spirits, the gain in general productive power which lessened consumption of alcohol implies is tantamount to an enhanced ability to pay other taxes. Austen Chamberlain ascribes the decline in drink duties to the changing habits of the people, who are spending more on outdoor excursions and recreations and less in the taverns of Gin Lane. The reproach which Englishmen have themselves heaped upon their countrymen of being "a drunken nation" shows signs of losing its significance—a most encouraging omen.

The defeat of a member of the Government in the stalwart Unionist constituency of Brighton is the severest rebuff Mr. Balfour has received in a score of electoral mishaps. Mr. Gerald Loder, recently appointed Junior Lord of the Treasury, was beaten chiefly on the fiscal issue. Thus Brighton adds to that of many other constituencies formerly Unionist its verdict of distrust of Mr. Chamberlain's protectionism and of disgust with Mr. Balfour's shilly-shallying. The loss of a seat contested by a minor member of the Government is not necessarily a signal for the resignation of the Ministry. On the other hand, the present Parliamentary position of Mr. Balfour's Government is hardly compatible with self-respect. While Mr. Balfour is running away from all manner of resolutions opposing not only the Chamberlain plan, but also his own policy of retaliation, the constituencies are enthusiastically voting against both. That is, the people are deciding Parliamentary elections upon an issue which Mr. Balfour has abandoned in Parliament as of no importance. Evidently, this sharp difference between a self-governing people and its Government cannot be of long duration, and while Mr. Balfour seems to have as many political lives as a cat, he can hardly avoid an appeal to the country after the budget has been approved.

When even the cholera is made a peg on which to hang a demand for political reforms, the Czar might well believe that his autocracy is slipping away from him. Here are thirteen hundred doctors gathered together in Moscow, ostensibly to take measures to protect the physical health of the poor; instead, they find themselves called upon to prescribe first for the diseased body politic. They have merely pointed out again that the welfare of the people is best preserved by good government. These physicians find it of little use to suggest medical reforms when the carrying out must be intrusted to corrupt and autocratic officials. If they have perhaps veiled their true feelings under an avowed fear of the ignorant population, they have plainly joined the lawyers, the students, the teachers, the scientists, and the other learned professions in their intellectual revolt against the existing state of affairs. Of what use is it, when men like these speak out, to talk of danger from the peasants or the anarchists, or to attempt to suppress the open agitators and protestants? We cannot believe the authorities blind to this consideration.

The Cabinet kaleidoscope in Italy has taken a fresh turn since our correspondent's narrative (on another page) was concluded. Tittoni's "exposition" unexpectedly obtained a majority of 121, and it was supposed that the Cabinet would at once proceed to business. On the contrary, the next day Signor Tittoni gave out that the whole Cabinet had resigned; the Deputies were dismissed, and it was announced that Tittoni and Fortis were entrusted with the formation of the new Ministry, with the result that Luzzatti is replaced by Carcano, Ronchetti, Minister of Justice, and Orlando, Minister of Public Instruction, are also retired. Ferraris, who succeeds Tedesco as Minister of Public Works, was reporter of the committee chosen to draw up the railway bill, and is supposed to be a competent authority on the burning question of the day. Tittoni remains at the Foreign Office. Fortis, President of the Council, assumes the Home Department. If names denote anything nowadays, the Cabinet may be said to be half "Right," half "Left." All seem agreed that the railway men shall be prevented from striking or obstructing, but whether the 71st and 72d articles of the railway bill will be adopted is not known. The press freely prophesies that the Ministry will be of short duration, but if the majority is divided into sects and groups, the minority is far from homogeneous. The 160 who voted against the Ministry embraced members of the Centre, of Sonnino's Opposition, of the Right (all conservatives, including the clerical Cameroni), of the old historical Left, of the Radicals, Republicans, and Socialists.

PRESIDENT HADLEY ON RAILWAYS.

Nothing is more absurd, said Macaulay, than the British public in one of its periodical fits of morality. Whether absurd or not, the American public is given to periodical outbursts on railway regulation. The present is such a period. The members of the House of Representatives preferred not to face their constituents until they had passed the Esch-Townsend bill. The more leisurely Senate, concluding that some vent must be given to pent-up public opinion, has constituted a committee of inquiry whose hearings will doubtless occupy a good part of the summer. At this juncture President Hadley's deliverance on "The Public vs. Railways," which appeared in the Boston *Evening Transcript* of April 1, is timely. Testimony in this matter from one who is both well-informed and impartial is "like a light shining in a dark place," to which we do well to take heed.

The frenzied advocates of drastic rate regulation, as well as the reactionary railroad men who urge the repeal of all Federal transportation statutes, will both be disappointed to find that President Hadley gives to immediate legislation a place decidedly subordinate. The issues which he puts in the foreground are the service which our railroads on the whole render the public, and the present tendencies in management. It is the second of these issues that is the most serious. The threatening tendency, according to President Hadley, is the growing ossification, the decay of initiative, in railway enterprise. Twenty years ago railroading offered a career to talent. To-day the field of opportunity is narrowing. Stereotyped methods are displacing the almost reckless experimentation under which our transportation system was built up. Though it is admitted that there "are still splendidly strong men as presidents and general managers," these survivors, it is alleged, are the first to confirm the truth that "there are only a few of us left." The decadence of vigor is attributed in large measure to a divided allegiance. The employee now attempts to serve both the union and the company; and the manager, to compromise between the dominant banking interests on the directorate and the actual needs of transportation service. Either because of these impediments or because German railroads have enjoyed advantages denied to ours, the superiority of our transportation system to that of Germany, so indisputable in 1885, has now become uncertain. If the facts be as President Hadley asserts, his deduction that we cannot "look at the future in a spirit of complacent optimism" is unnecessarily guarded.

The lesser counts urged against our railroads are dismissed in general as not well substantiated. Monopoly in transportation is conceded, but is declared to be inevitable. The remarkable increase in railroad net earnings, from $327,505,716 in 1895 to $592,508,512 in 1903, is regarded by President Hadley as only a reasonable offset for the lean years from 1893 to 1898. The increase of only 5 per cent. in the rates per passenger mile and freight mile, between 1899 and 1903, when all other prices concurrently advanced from 10 to 40 per cent., he pronounces "virtually a tremendous and gratifying decrease." On the recent car shortage he comments with some severity, but the shortage of locomotive power he allows to pass unchallenged on the ground that electricity will shortly displace steam. In short, on the allegations of excessive profits, exorbitant charges, inadequate service, or increasing discrimination, the roads are let off with a verdict of "Not guilty." It doubtless requires the rule of averages to reach a conclusion in matters of this kind, but the professed ability to reduce the heterogeneous to a common measure reminds one of the judge returned from circuit who averred that, while in some cases innocent parties had been convicted, and in some cases guilty parties had been acquitted, *on the whole* justice was done.

Coming to the matter of proposed changes in Federal law affecting interstate commerce, President Hadley favors a special Federal railroad court, coordinate in authority with the circuit courts. The present Interstate Commerce Commission he would transform into a board of experts made up of practical railroad men, three from the traffic department, and one each from the operating and financial departments. The Commission's function would then be to ascertain matters of fact on which the court might base its decisions. Evidently, he entertains the hope that a regular judicial tribunal so constituted might eventually set aside unreasonable rates at the instance of a complainant, and even advance to the point of indicating clearly "how much rates would have to be reduced in order to be reasonable."

One may concur in the verdict that the present Interstate Commerce Commission has fallen between two stools in attempting to exercise at one and the same time the functions of traffic manager and judge, without assenting *in toto* to President Hadley's scheme. In the first place, competent authorities have seen difficulties in the plan of devising a Federal court whose jurisdiction is to be determined, not by territorial limits, but by the subject-matter involved in litigation. Judge Grosscup, however, in a recent address, advocates just such a special tribunal. In the second place, if a bureau of transportation experts is to be created for the purpose of obtaining information, it would seem better to make it a bureau of the Department of Justice, or of some other executive department, rather than to impose on a court the duty of supervising such an expert detective force. Indeed, Judge Grosscup insists that this board of inquiry should be an active branch of the Executive. In the third place, if a court can be induced even by indirection to set prices for transportation services, it will be more hardy than courts in English-speaking countries have hitherto been. The intent of our law at present is to do away with discrimination. If there are loopholes in the statute they should be stopped up. But until an honest and vigorous attempt has been made to enforce our present law against discrimination with our present system of Federal courts, and to employ criminal prosecution when the law authorizes it, we shall do well to go slow in the creation of a special kind of circuit court with an attendant commission of expert industrial inquisitors.

THE CANADIAN SCHOOL QUESTION.

The relation of state to religious education, which has sorely disturbed France and England of recent years now becomes an urgent issue in Canada. The western territories of Saskatchewan and Alberta are to be erected into self-governing provinces, and Sir Wilfrid Laurier seeks so to frame their organic law that sectarian schools shall permanently have a right to support from the public funds. Sir Wilfrid, it will be recalled, was the author of the famous Manitoba compromise, which nine years ago put an end to a bitter sectarian strife by secularizing state education, allowing, however, the representatives of any sect half an hour a day for religious instruction in the schoolhouse. In view of the eminent success of this agreement, it baffles comprehension that Sir Wilfrid should now wish to saddle sectarian schools upon the entire Northwest. For this *volte-face* two explanations are given: First, that the Premier finds himself bound by the Constitution to perpetuate separate schools; next, that the peculiar conditions of the new provinces make a mixed system expedient.

As for the constitutional plea, the British North America Act, the school clauses of which were framed with respect to the conflicting claims of Protestant Ontario and Catholic Quebec, stipulates that, when a province is admitted to the Dominion, its religious schools shall retain all rights enjoyed at the time of admission. How far Alberta and Saskatchewan, not even geographical names at the promulgation of the British North America Act in 1867, are to be regarded as provinces, is clearly a problem for Canadian legists. There is plausibility, however, in the view that the school clause applied only to provinces actually in being when the organic law was drawn. Much is to be said also for

the common-sense argument that it is folly to bind an autonomous province perpetually to any form of education. In short, the common sense of Canada will regret that Sir Wilfrid has given the benefit of the doubt not to generous ideals of provincial independence, but to a very contestable and possibly obsolete clause of the Constitution.

But, unluckily, common sense may have rather little to do with the matter one way or the other. While Protestants are trying to starve out existing Catholic schools, Catholics are seeking to secure an inalienable lien upon the public purse. The political atmosphere is surcharged with suspicion. We were told that the Premier had struck hands with the Papal Ablegate, Mgr. Sbaretti, to restore the separate school system in Manitoba. It was charged that the extension of that province to Hudson Bay, most eagerly desired by its inhabitants, was to be made conditional upon abolishing the secular public schools. Sir Wilfrid denied the charges of collusion *in toto;* Mgr. Sbaretti admitted overtures to the Manitoba Government. These rumors suggest the heat with which the reopening of the old quarrel has been accompanied.

Now the picture of Sir Wilfrid hiding under the cassock of the Ablegate of the Holy See was frankly incredible. The Premier is emphatically his own man, and when he both belies his own record and fathers a most unpopular policy, he unquestionably does so for his own reasons. Obscure these reasons certainly are, but it may fairly be assumed that they are political. There are no peculiar social conditions in the great wheat-growing territories which make a separate school system imperative. In fact, the influx of Protestant settlers from the United States is so great that the vested interests of the Roman Catholic schools would soon be intolerably burdensome. Evidently, Sir Wilfrid's eye was less on the territory of the dispute than on the general political status of the Dominion. It is possible that he sees in an avowedly pro-Catholic policy a means of repairing the disorganization caused in the Liberal stronghold, Quebec, by the resignation of the Parent Ministry, and of pressing the advantage recently gained in Ontario through the overthrow of the Ross government. But if such be his hope, we believe it will be disappointed. There has been no more jealous advocate of self-government in the past than Sir Wilfrid Laurier. His famous solution of the Manitoba school contest rested upon that theory; only recently he has claimed for Canada greater powers of diplomatic negotiation than Great Britain allows her. For him now to regulate in perpetuity the school affairs of autonomous provinces must excite as great dismay among his real friends as bitterness among his enemies.

In fact, the successive amendments of the clauses requiring separate schools show that the Government is by no means sure of its ground. Attempts have been made to attenuate the measure, which stands, however, in its present, more offensive than in its original form. At first, the principle of separate religious schools was explicitly imposed; now a sort of local option is proposed, but any sect which believes itself aggrieved in its own locality has especial facilities of appeal to the Government at Ottawa. This is as much as to say to the infant provinces, "You are absolutely free until we see fit to twitch the leading strings." In the long run the good sense of Canada, whether affected to the Protestant or Catholic faith, will be against superfluous leading-strings; and whatever the immediate fate of Sir Wilfrid's measure, which he may very well succeed in passing by a strictly partisan vote, he can hardly be absolved from having handled a great problem in statesmanship under some not very clear consideration of temporary political expediency.

ROZHESTVENSKY IN THE EAST.

Admiral Rozhestvensky has successfully passed the Straits of Malacca. A Japanese scouting squadron, it will be remembered, touched at Singapore as far back as December 22, and proceeded into the Indian Ocean. On the 18th of March a strong Japanese squadron touched at Labuan, north of Borneo, only a few days' steaming from Singapore. Togo himself rejoined his fleet after a brief rest at Tokio fully two months ago, and long before that time the Japanese navy department was preparing a very considerable fleet of auxiliary cruisers and torpedo-boat destroyers for service against Rozhestvensky. To assume that the Russians completely fooled Togo by sending some colliers in one direction and themselves proceeding along the most frequented and direct route, is to ascribe to Togo a mental simplicity quite inconsistent with his achievements hitherto. It has long seemed the best policy for Togo to allow Rozhestvensky to reach Formosan waters, which are far enough away from the Yellow Sea to permit traffic with Port Arthur to go on undisturbed, and at the same time give the Japanese accessible ports for repairs and refitting, and for harboring prizes. For the Russians, Hongkong or Amoy would be the nearest places of refuge, with prompt internment staring them in the face.

Whatever the Japanese strategy, the fact remains that Togo must in some manner hold in check the Vladivostok cruisers, destroy or turn back Rozhestvensky's armada, and still preserve enough vessels to defeat Niebogatoff's small squadron now in the Red Sea, and such other ships as may yet be resurrected from the Russian naval cemetery in the Baltic. The perseverance of Rozhestvensky has once more altered the entire aspect of the war, for even if he sinks only a couple of Togo's battleships, the Japanese may yet make peace on far different terms than the evacuation of Mantchuria and the payment of a war indemnity of $500,000,000, which they are now thought to have in mind. On the other hand, the result of a Japanese victory is obvious.

Any one would be rash who should in advance pick either fleet as the winner. Rozhestvensky has the advantage in heavy ships; Togo in cruisers and in torpedo vessels. The Japanese crews have shown their indifference to death and their mastery of their business; the Russians stand convicted of firing on harmless fishermen and on each other during a veritable panic on the night of October 22 last. If they have reached a battle-temper and attained a creditable accuracy of marksmanship, it is only because of incessant drilling during their long stay in Madagascar waters—a training naturally far inferior to that of Togo's men during their year of war. Again, of the seven Russian battleships, four are modern and homogeneous vessels, while the cruisers are an extraordinary assortment of vessels of all ages, sizes, and speeds, many of them similar to the discarded ships England last week sold at auction. The fastest vessels are undoubtedly the converted German merchant steamers, which, to the number of four or five, accompany the warships. But a fleet has at best only the speed of the slowest member; moreover, the difficulty of coaling and the months which have elapsed since the vessels were docked and cleaned, make it obvious that the speed obtainable in an emergency cannot be much more than ten knots an hour. Superior speed is to modern naval combatants what the windward position was to the men who fought the *Constitution* and her contemporaries. Togo possessed it in the battle of August 15, and could, therefore, pick his own position and maintain it and pound his enemy at will with his superior long-range cannon.

It will be remembered that when nightfall put an end to that contest, Togo drew off his heavy ships and signalled to his torpedo boats to close in, without the latter achieving any results. Indeed, since the beginning of the war only a single vessel has been definitively put out of action by torpedo-boats, and that was the *Sevastopol*, at anchor and undermanned. To place much faith in Togo's superiority in scouts of this class is therefore unwarranted. Nor would it avail now to enter into a careful comparison of the fleet ship by ship, to show, for instance, that Japan's six good armored cruisers offset to a large degree Rozhestvensky's preponderance in battleships. The truth is that no

one outside of the Japanese Navy Department knows just what forces Togo can muster—whether, for instance, the Japanese battleship *Mikasa*, which was terribly pounded in the last fight, has yet been able to take the sea, and whether the old monitor which is sometimes reckoned with Togo's battleships can really take a place in the line of battle. Nor has any writer here or in Europe any idea just how many merchantmen like the *America Maru* and the *Yawata Maru* have been added to the fleet cruising in the South China Sea.

From the most trustworthy calculations which have yet been made, the Japanese would seem to have a slight preponderance in the amount of metal the rival vessels will be able to discharge at one time. But, after all, an accident at the outset may more than even matters up, and so would a failure on Togo's part to concentrate every available vessel at the hour of combat. We have heard a great deal about the great lesson of this war being the need of battleships. Too little weight has been laid upon the temper of the men who man them. A dozen battleships would not have given Spain the victory at Santiago, and we may yet have a demonstration of how even an unprotected cruiser, well handled, may irretrievably injure towering structures of armor plates and turrets. Only so much may be said: If the spirit which pervades Rozhesvensky's fleet is no better than that which actuated the Port Arthur vessels, the Japanese will go into action with the paper superiority of the Russians more than discounted.

HISTORY AT OXFORD.

Confirmatory rumors aside, it may be gathered from a passage in Mr. Firth's preface to the pamphlet edition of his inaugural lecture (H. Frowde) that Oxford circles have been somewhat fluttered by the first deliverance of York Powell's successor. "I learn with regret," says the new Regius Professor, "that a passage on page 28 has been construed by some of the teachers of modern history as if it were a personal reflection upon themselves. It was not so intended, and had I thought it could be so taken I should have expressed myself differently." The passage in question is probably this: "I cannot infer from anything I have seen that the possession of a proper professional training for the study of history is one of the requisites held necessary for teaching it." The people here referred to are the college tutors, and by some of them at least Mr. Firth's inaugural lecture seems to have been thought an unduly severe onslaught upon existing conditions.

The establishment of the History School at Oxford and the success which has marked its efforts are notable facts in the life of that university during the past generation. Mr. Firth, however, is far from satisfied with the progress already made, and comes forward with a counsel of perfection at the very moment of taking his chair. The existing state of things with its shortcomings is thus set forth:

> "Our Modern History School was never so large and so flourishing as it now is. Last summer there were some 215 candidates, men and women, and there must be now 400 or 500 persons reading for it. From my point of view it has one great defect. It does not train men capable of adding to knowledge. It produces very few historians. I have gone through the class list for the last twenty years with great care, and it is surprising to note how rarely one finds there the name of a man who has since published historical work of any kind, still less historical work of any value. An historian seems to be merely an accidental by-product of the school, and not one of the natural results of our elaborate system of teaching."

A statement like this takes one back immediately to first principles. What does Oxford intend to do for the hundreds of students who are giving themselves up to Modern History? Bent as she long has been on producing statesmen rather than scholars, it may be doubted whether she cares to make pure erudition the goal of the History School. Mr. Firth's quarrel with the present system is that under it history is made an instrument and not an object. All that the course attempts to do, he says, "is to give men who do not wish to study classics, or mathematics, or science, a sort of general education through history." As the result of existing theory and practice, well-informed politicians, journalists, and civil servants are turned out, but no true grounding is given in methods of original research, nor is provision made for the technical training, in special branches like palæography and diplomatic, which the graduate in honors should have. Mr. Firth's assault upon the present programme likewise includes a criticism of the rule which assigns almost exclusive attention to politics and institutions. The provision that "candidates will be expected to make themselves acquainted with the social and literary history of their period" is, as he says, a dead letter; while, apart from this neglect to read outside the field of politics, everything is done to crowd the memory at the expense of the understanding.

Such strictures on the established order could hardly be hailed with delight by the college tutors, nor is it by any means certain that Mr. Firth will be able to effect a radical change without their support. At present, he maintains, no scheme of advanced historical instruction or post-graduate study in history is apt to succeed; and, as an example, he appeals to the experience of his predecessors in the chair. "I have seen the experiment made twice; once by Professor Freeman and once by Professor York Powell. In each case it failed. Both may have made mistakes in the execution of their schemes; but neither diligence, nor skill, nor learning could succeed under the conditions with which they had to struggle." For the present, he urges in conclusion, "the question is not whether I personally am to be enabled to teach my subject effectively, but whether any efficient and successful scheme for the higher teaching of history is to be established here."

The considerations to which Mr. Firth appeals are undoubtedly strong, but a history tutor in defending the present arrangements would not be left altogether without a case. It does seem hard that the Englishman who takes up the study of history with professional intent should be unable to get the grounding he requires at a great seat of learning like Oxford. Mr. Firth appeals to his own experience, and states that it has cost him much labor to learn imperfectly in later life what, under other circumstances, he might have learned from a specialist while he was still in the junior stages of his preparation. "Since our future historian cannot obtain the special training he needs in the Modern History School, the question arises, where is he to obtain it? Is he to get it in Oxford at all, or must he go to Paris or the Universities of Germany to find it? Now though it is desirable that some should go abroad to get this training, it is not possible for all to do so, and therefore it is necessary to supply it here." Beginning with his own class, Mr. Firth proposes to take up the printed and manuscript authorities for English history between 1605 and 1714, "showing what the materials for writing that history are and where they are to be found."

The discipline to be gained by students following this course will undoubtedly be most valuable for those who enter upon it at all. But the Regius Professor has never, when he meant to do anything serious, attracted a large number of students. As soon as the need of intensive research is suggested at Oxford, some one objects that the Modern History School "is not meant to give a professional, but a general training." Upon this ground the college tutor would take his stand in combating Mr. Firth's demand for a more thorough knowledge of professional method, even though the change of system entailed some sacrifice on the side of general information. If there are four or five hundred persons reading in the Modern History School at the present moment, no one can expect that, under any scheme, more than a tenth of the number will give themselves up to the professional study of history in after life. Considered from a broad educational standpoint, the interests of the nine-tenths would have to come before those of the saving remnant, assuming that there need be a clash of educational interest at all. Of course, some go so far as to recommend the ad-

mission of undergraduates to seminary courses of a technical character, believing the disciplinary value of such courses to be of the highest order. On the other hand, the view is maintained with much force that the undergraduate should not be set at work of specialization until he has gained a good deal of historical information—enough, at least, to carry with it some sense of historical perspective.

Accordingly, when Mr. Firth comes forward with a sharp criticism of the History School at Oxford, he not only lays his finger upon a local shortcoming, but enters, more or less consciously, the field of educational theory. With his desire to provide means for the professional training of English historians in England, or indeed at Oxford, every one must sympathize, but if his lecture meant the entering wedge of an attack upon the main conception of the Modern History School, as now constituted, he must expect to find himself opposed by a good many who recognize to the full the worth of professional attainments.

The discussion thus started is all the more interesting in the light of a new foundation at Oxford. Mr. Firth refers more than once to the new chair of Colonial History, as when he says, in connection with his projected course on the seventeenth century, "For the Colonial and American section I hope for help from the future Professor of Colonial History." Some of those who are concerned with the establishment of this new chair feel, we may presume, a stronger interest in political propaganda than they do in pure erudition. If the new Professor of Colonial History is to give courses on the primary authorities, he is likely, even though he be not an enthusiastic lover of cartography, to have a small class. Now that a few specialists only should sit under the lecturer on things colonial, is not part, we imagine, of Mr. Beit's programme. How the new chair is to be filled, how its objects are to be defined, we do not yet know, but our curiosity in the matter is considerably heightened by the perusal of Mr. Firth's lecture.

Of this deliverance itself we must speak with warm praise. Mr. Firth is an eminent scholar who expresses his convictions in the most direct and forcible terms. That he looks for the triumph of the professional ideal over the conception which now holds sway at Oxford, may be judged from his concluding words: "The difficulties are not natural difficulties which beset the teaching of history everywhere; they are local difficulties arising out of defects in our academic organization, difficulties of our own creation, which it is in our power to remove if we have the will. I am confident that we shall remove them." Such is his own aspiration. The best witness he summons in support of his general position is Stubbs. "Since Creighton left," says Stubbs in a letter to Freeman (1885), "and even he was scarcely to be regarded as free from the tutorial bias, the historical teaching of history has been practically left out in favor of the class-getting system of training." Mr. Firth quotes the latter part of this sentence, but it means more when given in full.

PARLIAMENTARY DECADENCE IN ITALY.

FLORENCE, March 22, 1905.

Parliamentary government in Italy, throughout Europe, is everywhere on trial. Even in its birthplace it is far from satisfying the manifold needs and requisitions of modern times. In France it has never succeeded; in Hungary it was never more than a *modus vivendi*, and has come to a deadlock. Germany is, in reality, a despotism; Spain is past praying for; and now Italy offers a spectacle that grieves her friends and rejoices her enemies.

After the elections last autumn Giolitti appeared to be supported by an immense majority; and when—despite the fact that, though his majority was two-thirds composed of clerical conservatives, he still maintained his position as head of a Liberal Government—he presented the ultra-Radical Marcora as his candidate for the Speakership of the Chamber, his nominee was duly elected by a large majority. The fact was that the country and the Chambers were willing to support any ministry that would maintain order and prevent a recurrence of the disorders of last September. Another victory was gained by Giolitti when the law for the civil list was presented. Many are the opponents of the grant of sixteen millions by a country so poor as Italy, but Giolitti succeeded in renewing it without much opposition. Finally, on February 23, the bill for the resumption by the State of the railways operated for the last twenty years by private companies was presented. The first fifty-three articles designate the methods of the State operation, which is to be exercised by an autonomist administration. Other eighteen articles relate exclusively to the personnel of the railways; only the last seven, and especially the last two, gave rise at once to adverse comments and finally to violent opposition—to obstruction with the threat of a general railway strike.

Articles 68, 69, 70 have no special bearing on the question of compulsory arbitration, and, had the bill ended there, it might have passed after considerable amendment. But (owing, it seems, to pressure from Luzzatti) Giolitti and Tedesco, Ministers of the Interior and of Public Works, were persuaded to introduce two articles which would have been justifiable in a general law for the regulation of the duties and rights of the employees in the service of the public, but which, intruded into this bill transferring the railways from private companies to the State, were regarded and resented—not only by the railway men and their special champions, but by impartial outsiders—as a direct provocation and menace to a special class of proletaries who, it should be remembered, notwithstanding their exorbitant and unjust pretensions, did not take part in the general strike of September. Article 71 provides that the chiefs, promoters and organizers of any concert between three or more persons, even if these be extraneous to the administration of the State railways, whose object is to cause suspension, interruption, or damage to the service, shall be punished with imprisonment. If their object be attained, the imprisonment may last from six months to a year; meanwhile they will be struck from the rolls of service, with the loss of all right to pension or assistance. The accomplices may also be dropped from the rolls, with loss of all right to pension or to assistance; or if the Council think right to retain them in the service, they may be punished by diminution of pay or of the right to normal increase. The forfeits will be assigned to the institutions of assistance according to article 56. The dispositions of article 71 will apply to the railroads conceded to private companies, if such companies agree to accord just treatment to their employees and to accept compulsory arbitration. The last article (72) relates to certain branches of railroads which it is proposed to relinquish to private companies, at least for a time.

Giolitti, who had been absent for some days on account of illness, was present while his colleague Tedesco presented his bill. The latter suggested the examination of it by the committee which had completed the study of the railway question prior to the general elections, but the House declined the proposal, as the studies were complete and the time limited, but agreed to another suggestion, viz., that each of the nine offices destined to examine and report on all bills should name each a single member, and these, united in a committee, should duly report. Giolitti, who was looking extremely ill and weary, took no part in the discussion, and withdrew from the House as soon as the question of reference was decided.

Meanwhile, the railway organizations convoked the central committee of forty-five members, protesting that the whole bill was disastrous to their interests; that the pledges given by the Minister of Public Works in the last interview had not been fulfilled, and that the articles denying the right to strike were a violation of the established law of the realm. The Socialists in the House determined at once on opposition; three of them were summoned to the conference of the "forty-five" held with closed doors—the entire press (including the *Avanti*) being excluded. It was soon known, however, that two distinct tendencies were manifest; one inclining to Parliamentary efforts for the withdrawal of the obnoxious articles, the other, to an immediate and general strike—the delegates from the southern provinces unanimously insisting on the latter measure. The three Deputies exerted themselves to the utmost to nip this fatal project, insisting that its only result would be the return to the "conventions" and draconian measures against the whole body of railway servants, which would be sanctioned by the general public, exasperated by the pretensions of one section of workingmen to sacrifice the interests of the entire nation to their exorbitant exactions. All that they could obtain was the substitution of general obstruction for that of a general strike. This system was first applied materially at Genoa last year, and consisted in the

scrupulous application, by the custom-house servants, of the regulations, the whole regulations, and nothing but the regulations. They triumphed, and the railway servants bethought themselves to repeat the experiment. Their regulations amount to several hundred, none of which, even the most necessary, are in general observance. Thus, by rule, passengers must present themselves with the exact sum for the purchase of their tickets, but hitherto change has always been given. Now, the regulation was enforced; the ticket purchaser had to go out and get change or lose his train. The luggage, registered, has to be locked, sealed, and corded, so that no thief can extract articles from the portmanteau or trunk, but few attend to the rule; now, all luggage had to be sealed and corded afresh. The personal baggage taken into the carriage ought not to exceed a certain size and a certain weight, but a good fee to a porter insured the entrance of any amount, so that often a later comer could find no room for a handbag or hat-box. Now, every bag or packet was measured and weighed. Deputies, who travel gratis, should have certificates in their pockets, and, if requested, sign their names. Hitherto, it has sufficed to show their medals; now, they were requested to produce their certificates and sign their names. By regulation all the carriages must be cleaned and the lamps polished, the windows cleaned, the hot-water tins filled with boiling water. Travellers can attest to the filthy state of the carriages, to the stone-cold tins, smoking and stinking lamps, broken windows, carriage tops letting in rain, wind, and snow. Now, all was to be perfection. Vainly, the station masters, the train conductor, hurried on the men. They were obeying the "regulations"; their superiors could not demur. Hence, delays in passenger trains of from one hour to twelve. Sixty-four trains were suspended at Rome, passengers to Frascati, to Albano, etc., had to charter carriages, and the old diligences reappeared. As for the goods traffic, that had ceased entirely, and the post-office authorities gave notice that they could not be responsible for parcels-post deliveries. Here, in the market, fish, fresh vegetables, and fruit arrived too late for sale.

The public, patient and often amused for the first day or so, gradually became restive, clamorous, finally furious; many of the railway men, such as porters, were deprived of their daily bread, which depends on the tips of the passengers, who ceased to visit Florence, Rome, and other cities where obstruction obtained. Appeals to the Government from all the commercial and industrial classes dependent on visitors were made in vain. Giolitti kept silence, and, being Minister of the Interior, was held responsible for the situation. "He was too ill to present himself to the House." There and in the Senate the Minister of Public Works had to reply to the protests and the interpellations. He declared that he had no intention to withdraw the obnoxious articles; that the Home Minister had no intention of using force against the obstructionists, but that they would use means to compel the responsible companies to fulfil their duties and comply with the terms of their contract. How? The "superiors" could not compel their "inferiors" to disobey the regulations; they might be compelled to pay fines for delays for non-transmission of goods, but that would not bring the trains in on time or deliver the goods stalled at the depots.

Meanwhile the obstructionists were growing weary of their long hours of labor, and were shamed by the reproaches of their companions who were injured by their tactics—specially the engine-drivers of the suppressed trains, who were paid by the mile. In short, the proverbial patience of the Latin race was giving way. The Deputies, not only Socialists, but Radicals and Republicans, well-wishers, advised the men to yield, reminding them that the bill was in the hands of the committee, that they were fighting no longer private companies, but the national Parliament. Pantano, their most zealous champion, made an eloquent appeal both to their own interests and to their position among the proletaries. Colajanni lashed them right and left as a selfish, arrogant, unreasonable crew, who, having decent wages and the certainty of constant employment with a pension for themselves and widows, were damaging the whole of the starving and semi-starving proletaries, assuring them that while they might continue so to do, they would in the end ruin themselves. In short, between weariness and shame, they had resolved to put an end to obstruction as soon as they could induce the rebellious southerners to submission.

Then, like a bolt from the blue, in the middle of a debate in the House and Senate, Tedesco announced the resignation of Giolitti, Premier and Home Minister, on the plea of illness, and the King's acceptance of his resignation. "Flight the fourth," said his enemies; and in fact this is the fourth time that Giolitti has withdrawn suddenly from the Ministry without any vote of want of confidence in the House. His friends and supporters, instead, maintained that he had remained at his post only too long, and that another forty-eight hours might have proved fatal. In either case, his withdrawal from the scene of action saved the *amour propre* of the obstructionists, who instantly ceased their manœuvres, and ordered all the railway men on the continent and in the islands to celebrate their victory by returning to their "non-obedience to the regulations," as their tactics had compelled the Minister to take flight—the *Ministry*, they might have added, as the entire Cabinet resigned on the same evening.

Here was a curious situation for the King, who, if he had been well advised, would have accepted the retirement of Giolitti alone on the plea of ill-health, retaining the other ministers bound to his programme, supported by his majority in the House. Then the King would only have had to name a President and Minister *ad interim*, following the precedent of old Piedmont in 1864. At the commencement of that year, poor Farini gave signs not only of failing health, but of mental derangement. King Victor Emanuel, after seeing that he was duly cared for, named Minghetti, hitherto Minister of Finance, Minister of the Interior in his stead, and the Cabinet continued its business without interruption. As Giolitti resigned solely on account of illness, why should not the King have named one of the Ministers in his place? Why, indeed? Such, it seems, was his intention, but the divisions and jealousies among the Ministers themselves and the pretensions of the various groups rendered this impossible. Tittoni, Minister for Foreign Affairs, had a considerable party, and to him, as it now turns out, the King inclined, but the opposition was such that he was compelled to summon an outsider, and this, by Giolitti's advice, was Alexander Fortis, who, as the whole Ministry had resigned, set to work to form a new one, excluding *à priori* Tedesco, Minister of Public Works (as Fortis, though favorable to the State working of the railroads, did not intend to endorse the famous articles relating to the railway men, reserving for a separate bill the question of strikes by the employees of public services), and Orlando, the Minister of Public Instruction, who has given great offence to the clerical-conservative majority by siding with the partisans for the exclusion of religious instruction from the elementary schools, and has also given great offence to certain "people of importance" who consider that public instruction was instituted in the interests of professors and teachers rather than in that of scholars and students.

From the first moment the Opposition batteries assailed Fortis in front, on flank, and rear. Fortis was from a lad an ardent Mazzinian, and one of Garibaldi's bravest soldiers, but he joined Crispi's Ministry from 1887 to 1891. Moreover, as an advocate, he was mixed up with the Tanlongo banking scandals, and so is dubbed "immoral." The Republicans and Socialists will none of him; and Sonnino, head of "his Majesty's Opposition," told him point-blank that the attempt to solve the crisis was unconstitutional, that he would not assist in its solution in this fashion, and that he would oppose the new Ministry if formed. The Zanardellians were also hostile, and Fortis could not find a single competent person willing to assume the difficult department of Public Works or that of Public Instruction. The days drew on to ten, and at last Fortis decided to present the whole Ministry as it existed at the time of Giolitti's retirement. But here he met with a refusal from Tedesco and Orlando, who declined to return to posts "which had been put up at auction," and only reoffered to them because no bidders appeared. So Fortis had to resign the mandate, well aware who was the *deus ex machina* that put spoke after spoke into his wheels, and that hoped to be summoned by the King on his failure. But the young King was not inclined to satisfy Luzzatti, especially as he had come to grief with the Minister of War, and summoned instead Tittoni, Minister of the Foreign Office, naming him Premier and Minister of the Interior, bidding him present himself with all the old members of the late Ministry to the House, and to demand explicitly a vote of confidence. This is the state of affairs at the present moment, and a more disgraceful one can scarcely be imagined.

March 23.

The first sitting of the House, with more than 400 Deputies present, listened to Tittoni's "exposition" in ironical silence. The brilliant orator of the Radicals, Barzilai (the first of seventeen members listed to speak), ridiculed the presentation of phantoms evoked from their tombs, blamed Giolitti for his sudden withdrawal from the scene of action when, had he remained at his post for another day, the railway obstruction would have been ended, blamed his colleagues for following his example, which acts put them

"out of court." He affirmed the necessity of rendering railway strikes impossible, as they signify public disaster and cut the main arteries of the life of the State. Face to face with the right to strike stands the right of citizens to legitimate protection, the right of the State to legitimate defence. But the seventy-first and seventy-second articles are inapplicable; the penal code contains an arsenal of effectual measures. Other orators followed, but the House was impatient, and cries of "Closure!" were heard. To-morrow, possibly, the vote may be taken, but it will decide only the acceptance or the non-acceptance of the old Ministry.

J. W. M.

HOUSSAYE'S '1815.'

PARIS, March 22, 1905.

M Henry Houssaye has published in one volume his very dramatic studies on the events of the close of the year 1815, in the series forming a sequel to his '1814,' which has had a very rapid and well-deserved success (it has already attained a forty-sixth edition). The new volume is the third part of '1815.' The first had for sub-title "The First Restoration—The Return from the Island of Elba—The Hundred Days"; the second was entirely devoted to Waterloo (these two parts have likewise attained a forty-fifth edition). This popular success shows that M. Henry Houssaye has struck a sensitive chord in public opinion. The people have always worshipped heroes, and in this respect such men as Carlyle and Emerson have felt like the people. The great prevailing curiosity on the subject of Napoleon does not prove that the Bonapartist party is in the ascendant: it might almost be said that this curiosity is purely historical and sentimental. The Empire is a thing of the past, and is treated as such with the spirit in which we approach distant events surrounded with a poetical halo. There is no party spirit in the judgments that are formed on the Napoleonic era; the popular mind is forcibly drawn towards the figure of Napoleon as in other times it was drawn towards Charlemagne and his *preux;* few, if any, hope or desire new Napoleonic chapters in our history, as we cannot forget the end of such chapters—Waterloo and Sedan.

We can quite understand the violence of the passions which followed the second Restoration. The *émigrés* had hardly enjoyed a moment the reëstablishment of the old régime when they were wakened from their dreams by the return of the Emperor from Elba. The King fled to Ghent. It is easy to imagine with what feelings he returned to the Tuileries after Waterloo. To do him justice, he maintained a calm and composure not shared by the royalists. We must admire the conduct of the Duke de Richelieu, who was charged with the difficult mission of ending the diplomatic relations with the Allies. Richelieu enjoyed the personal friendship of the Czar, but Alexander was obliged to make allowance for the feelings of his Allies. The peace preliminaries were signed on the 1st of October, and the treaty of peace on the 20th of November. France had to cede four fortresses—Landau, Sarrelouis, Philippeville, Marienbourg, and a territory of 395 square leagues, to demolish the fortifications of Hüningen; she was to be occupied along the frontier for a period of three to five years by an army of 150,000 men, paid and fed by her, and was to pay an indemnity of 700 millions.

"After Richelieu put his trembling hand to the preliminaries, he returned to the Council. He was as pale as death. He had contained himself before the foreigners; now he burst out: 'I am dishonored. Having consented, I should bring my head to the scaffold. . . . Could I do otherwise? What resistance can France make in the state she is now in? Why did I return to my unfortunate country? It would have been better for me to remain in Asia.' "

The pacification of France was no easy matter; the King had to sign an ordinance for examining the conduct of the officers of all ranks who had taken service during what was called the usurpation. The new Chamber was animated with the most ardent passions; it was afterwards called, on account of its violence, "la Chambre introuvable."

The most famous incident of this period was the trial of Marshal Ney. It came at the moment when Murat was shot in Calabria. Murat, after his dethronement, repaired to a villa in the neighborhood of Toulon till the end of July. Learning that the royalists were going to arrest him, he took flight and embarked for Corsica on the 21st of August. He for some time found there a refuge in the house of Gen. Franceschelli, at Vescovato. He sent an emissary to Metternich to obtain a safe-conduct; receiving no answer, he took a desperate step, and tried to reënter the Kingdom of Naples, hoping to meet with the enthusiasm which Napoleon had encountered on his return from Elba. He embarked with ten officers and 200 soldiers in several boats. They were separated by a storm, and Murat arrived at Pizzo with twenty-six officers and men only. It was a Sunday; the population, with the help of some gendarmes, took Murat and his followers to the prison of the fortress. The order came from Naples to try Murat, and he was executed on the 14th of October.

The same fate awaited Marshal Ney. He left Paris on the 6th of July, with passports under the names of Falize and of Neubourg. He learned at Lyons that the roads to Switzerland were guarded by the Austrians; he returned in the direction of Paris, and, after some hesitation, took refuge in the château of Bessonies, which belonged to a relation of his wife, the Princess de la Moskova. He was recognized on the way, and reported to the prefect. His arrest took place on the 3d of August. "It will be a great example," said Talleyrand, when he heard the news. The Prince de la Moskova was conducted to Paris and confined in the Conciergerie on the 19th of August, the day of the execution of La Bédoyère. A council of war was formed, composed, among others, of Marshals Moncey, Masséna, Augereau, Mortier. Masséna excused himself on the plea of ill-health, so did Augereau; Moncey also alleged ill-health, being determined not to become the judge of Ney, and wrote to Louis XVIII. a letter in which he said: "Can I be the judge of an accused man to whom our laws give the right to object to me, since he cannot be ignorant that I was the first to put in the hands of your Majesty the material proof of his defection, and to manifest my indignation at it?" The answer of Louis XVIII. was short: "Marshal Moncey is cashiered; he will be imprisoned for three months."

The trial began after a long instruction. Ney's lawyers pleaded the incompetence of the Council of War, and the members of the Council declared themselves incompetent. The case had to be brought before the House of Peers. It clearly resulted from the examination of witnesses that Ney had acted without premeditation. When he left Paris, he had firmly resolved to arrest Napoleon; in the strongest language he had promised the King to do so.

"He had done," writes M. Houssaye, "everything for five days to maintain his feeble army corps in obedience, and to gain the flank of the Bonapartist column. But, seeing the national revolution swelling round him—the people in the cities and in the country—seeing the national flag floating on every church spire, half of his troops in march to join the Emperor, and the other half all ready to mutiny, he lost his head and threw himself into the current. Ney clearly was wrong; he ought not to have accepted the mission of marching against Napoleon, or, having done so, he ought not to have remained at the head of his army corps when it prepared to join Napoleon."

Condemnation was just and inevitable, in the opinion of the lawyers who undertook his defence (Berryer and Dupin). They defended their client solely on the plea that he was screened by an article of the convention of Saint-Cloud, signed by the Allies, in virtue of which "all the individuals who were at the time in Paris could not be prosecuted for their functions, their conduct, or their opinions." There was much discussion about this convention, which in reality was purely military; but Ney and his defenders had many illusions on this point. The convention had an equivocal text; when Berryer tried to invoke it, the Chancellor intervened and said: "In virtue of my discretionary power, I forbid discussion of a treaty in which the King had no participation." Ney was born at Sarrelouis, which had ceased to be French. The lawyers used this as an argument; upon which Ney rose and said loudly: "I am French, I will die a Frenchman. Thus far my defence has seemed to be free; I see that it is no longer so. . . . I am accused against the faith of the Treaties, and I do not wish them to be invoked. I will do as Moreau did, and make my appeal to Europe and posterity."

When the vote was taken on the question submitted to the court, "Did Marshal Ney make an attempt on the security of the State?" Lanjuinais said, "Yes; but he was covered by the terms of the capitulation of Paris." A single peer said "Nay." He was the youngest of the House, a Royalist by tradition and sentiment. His father died on the guillotine under the Terror. This was Victor de Broglie, and he gave the reasons for his verdict:

"There is no crime without a criminal intention. I see in the facts with which Marshal Ney is justly reproached neither premeditation nor intention to betray. At the last moment, he succumbed to an *entraînement* which seemed to him general, and which was only too much so. It was a weakness which history will judge severely, but which does not fall, in the present case, under the definition of the law. There are events which soar above human justice."

The details of the last days of Ney and of his execution are dramatically told by M. Houssaye. This execution was one of the great blunders of the Restoration. The country did not forgive it. Ney remained in its eyes what Napoleon had once called him, "the bravest of the brave." A few

years afterwards, when M. de Ségur wrote his book on the Russian campaign and retreat—a retreat which Ney made on foot, among the soldiers—the Duchess of Angoulême, hearing this chapter of the retreat read aloud, exclaimed: "Oh, if we had only known!" Alas! party spirit is often blind, and sometimes wilfully blind. How many times in the history of a nation might these words be spoken: "If we had only known!"

Correspondence.

THE PRESIDENT AND JUDGE KOHLSAAT.

To the Editor of The Nation:

Sir: Your comments on the promotion of Christian C. Kohlsaat from district judge to United States circuit judge in Illinois are based, of course, on the formal charges against him as they appeared in the public prints. As is usually the case, these are only the surface indications of conditions which make this appointment a reproach to the appointing power, and a cause of deep regret to those who have hoped for a higher standard of action in President Roosevelt in filling judicial offices.

As is well known, Judge Kohlsaat's original appointment was made to pay an accumulation of indebtedness, political and financial, from Mr. McKinley to H. H. Kohlsaat, Judge Kohlsaat's brother. The unfitness of the appointee has been daily demonstrated since. He is not supposed to be corrupt, but not only is he without legal attainments or ability—his stupidity is both moral and mental. It may well be assumed that he was not fully conscious of the impropriety of the appointments which placed about him a band of vicious self-seekers to gather the profits from the vast aggregate of bankrupt estates which crowd the threshold of his court. They were his son and his brother-in-law, and his faithful attendant, Whitney. It was well understood at the bar that the naming of the right man for receiver or trustee was a condition precedent to the progress of a cause. The estimate of his quality by the bar is well enough evidenced by the fact that such written opinions as were delivered by him were universally attributed to the brain and hand of another, a confidential employee.

The means by which he secured his recent promotion is a proper sequel to the history of his original appointment, and is to the last degree discreditable to the President, for the facts were all before him. Senator Hopkins, whose primary use for political position is the opportunity it affords for his personal benefit, and whose political and moral standards are not unswerving, has a son who, after one unsuccessful effort, was admitted to the bar at twenty-five. He has never taken life seriously, and some of his habits may have caused the Senator apprehensions for his future. A regard for the usefulness and dignity of the courts or the welfare of suitors could not have prompted his demand that Judge Kohlsaat appoint this immature youth to the responsible position of master in chancery. He may have looked for a development, in this office, of the young man's mental and moral nature. In exchange for the proposed obsession of the judicial function, he had to offer to Judge Kohlsaat a promotion to a higher place yet to be created. The Bar Association of Chicago by a unanimous vote protested against the appointment, and appointed a committee to procure, if possible, its retraction. The facts were all before the President. The appointment was a conscious subordination by him of the public welfare and the usefulness of the bench to indefensible political considerations. It has confirmed in the minds of many supporters and admirers of Theodore Roosevelt the growing conviction that the protection of the bench from the lowest political influences will receive no consideration at his hands. In fact, there were other candidates for the three judgeships which were filled by him at the same time, much superior to any of those whom he appointed. These appointments are often referred to as a complete answer to the advocacy of an appointive judiciary as against an elective one. The average of the three is distinctly below the average of judges on the local bench in Chicago.

John A. Woodruff.

Chicago, April 3, 1905.

[Is President Roosevelt's solemn pledge to carry on the policy of McKinley of no avail here by way of extenuation? Let the Canton Monument answer.—Ed. Nation.]

THE CHICAGO OBSESSION.

To the Editor of The Nation:

Sir: The touching, childlike, popular obsession that, in some way not clearly understood but firmly believed in, any and every government possesses miraculous powers, transcending all ordinary human knowledge, and defying the ordinary rules of logic derived from human experience, was illustrated recently by the municipal elections in Chicago. The street-car service being undeniably bad, it was voted that the public authorities of the city should take it over and administer it, presumably on the supposition that, by such change from private to public administration, the service would be bettered. The long vista of possible patronage and delectable pickings is undoubtedly attractive to the hungry horde who now administer public affairs extravagantly and inefficiently; but the willingness of the public to put more powers and responsibilities into the hands of unfaithful and incompetent servants is explicable, not on grounds of common sense and business principles, but by that curious survival in free and enlightened and democratic America of what was once known as the divine right of kings. Scrofula used to be cured by the King's touch; the traction question will be cured by the Mayor's touch. Any man of good, rugged sense, with a pair of eyes in his head, would say that the city had reached its limits in the way of surface street railways, and that a subway, like those of similar cities, was needed. Not so in Chicago! All that is necessary here is to select a gentleman of the legal profession—a man wholly without experience in the field of traction—elect him to a high public office, and set him on the throne, with his proper regalia, and, thus endowed with transcendent miraculous powers, he will touch the knotty problem with his magic wand, and presto! 'tis done.

Query: In writing political and economic history, where will future historians mark the end of the Middle Ages? M.

RESTRICT THE SUFFRAGE.

To the Editor of The Nation:

Sir: It is really cheering in these days of ultra democracy—or, still better, "mob-democracy"—to read such bold words as those of Mr. E. L. C. Morse in the last number of the *Nation*. What the whole country needs is better suffrage rather than more suffrage. The North may possibly fear to curtail its "blocks of five" lest the South say *Tu quoque*. The South had to protect itself, and restricted suffrage in various ways. The North thinks the negroes are wronged by their loss of voting power. What the negroes have lost is the power to do themselves and others harm. While they had the vote, they were the pliant tools of the unscrupulous. Were they to receive the unrestricted power to vote again, they would at once fall into the hands of the unscrupulous. The white man, by the bestowal of suffrage on the black man, would do the black man no good, but would do himself a wrong. It would give the professional politician an opportunity of adding one more to the vices of the poor black, the corruption of his vote.

Were the whole country to restrict the suffrage, no wrong would be done to those deprived, but a power of wrong-doing to others would be withdrawn. A democracy is very liable to be dominated by mere words. Suffrage, manhood suffrage, sounds so kind, so generous, and withal so logical, that any restriction must have its Nemesis, when, in reality, the Nemesis is being invoked by this very logic. Unrestricted suffrage at the present time, in this country, when the North is flooded with the *hoi polloi* of Europe and Asia, and the South is largely African, is neither kindness nor generosity, but a striking symptom of insanity.

For a democracy to be undemocratic may be illogical, but there can be worse things than bad logic, such as conduct with bad and subverting tendencies. The next thing to doing good is to take away the power of doing ill. That this is a time for the negative virtues is obvious to the dullest observer, but the laborers in the vineyard are few and their efforts feeble.

J. A. Bartholomew.

Naples, N. Y.

[Our correspondent may fancy himself standing on Mr. Morse's platform, but there is (or we are mistaken) an "open door" between them. Is this defender of the South's "restriction" of negro suffrage prepared to restrict (in the same section, of course) white suffrage on the same terms honestly applied? Is he prepared to defend and help maintain—and does he really desire—a negro's fulfilment of the conditions laid down? Or is he, in short, in favor of a white oligarchy in perpetuity? —Ed. Nation.]

WACK AND BOULGER.

To the Editor of The Nation:

Sir: The first part of Mr. Henry Wellington Wack's 'The Story of the Congo Free State,' reviewed in your No. 2,075, is so strikingly like an earlier work by Mr. Demetrius C. Boulger, 'The Congo State' (London, 1898), that the resemblance can hardly be accidental. The similarity begins with the chapter headings, viz.:

WACK.	BOULGER.
II. Leopold's Conception of the Congo Free State.	I. The Conception of the Congo State.
III. The Founding of the Free State.	III. The Founding of the State.
IV. Early Belgian Expeditions.	II. The First Belgian Expeditions.
V. The Waterways of the Congo.	IV. The Congo and its Affluents.
VII. The Horrors of the Arab Slave Trade.	V. The Slave-trade and its Horrors.
XI. The Second Brussels Conference.	VIII. The Second Brussels Conference and the King's Will.
XII. The Congo bequeathed to Belgium.	
XIII. The Tribes of the Congo Free State.	XVIII. The Peoples of the Congo State.
XIV. The Congo Public Force.	XIII. The Congo Public Force.
XV. Belgian Campaigns against the Arabs.	IX. The Arab Campaign.
XVII. The Suppression of Slavery.	XI. The Extinction of Slavery.
XX. The Mutinies of the Batetela Tribe.	XIV. The Batetela Mutinies.

The similarity does not rest with the chapter headlines. Mr. Wack is good enough to be independent in the first four pages of his book. He then paraphrases Boulger, using much of the same phraseology and the same sequence of thought, so that his pages 4 to 16 will be found to correspond to Boulger's pages 3 to 18. This method is continued through the first half of the book as follows: Wack's pages 4-16; 19-28; 32-41; 42-58; 92-103; 134-144; 145-150; 164-170; 177-185; 189-196; and 216-219, will be found to correspond respectively to the following pages of Boulger: 3-18; 41-58; 20-30; 75-85; 57-70; 146-153; 154-159; 225-235; 161-169; 175-181; 242-246. In other words, about 94 pages of Mr. Wack's book are paraphrased from 105 of Boulger's.

One paragraph taken at random will show Mr. Wack's method:

WACK (page 40).	BOULGER (page 28.)
"The first station to be founded was Vivi, and six months were spent in fortifying it. Then came the construction of a road from Vivi to Isanghila—fifty miles higher up the river—required for the conveyance of the steamers in section, stores, merchandise, etc. This proved a formidable task, and took a whole year to accomplish. But Stanley and his men proved equal to it, and another station was founded at Isanghila. At that station, fortunately, the Congo was found to be navigable, and Stanley pushed on to Manyanga by boat, where he founded a third station. It was while at Manyanga that Stanley first learned of M. de Brazza's having set up the French flag on the northern shore of Stanley Pool, and calling it Brazzaville."	"The next task proved to be more onuous. It consisted of constructing a cart-road from Vivi to Isanghila, over fifty miles higher up the river. It required twelve months' incessant labor to construct the road and to convey along it the steamers in sections and the merchandise and stores of the expedition. . . . At Isanghila Stanley founded another station similar to that of Vivi, and, availing himself of the short section of navigable river between that place and Manyanga, he floated two of his steamers and reached Manyanga by water. There he founded a third station. . . . Stanley soon attained striking evidence of the perils of any delay, by learning that M. de Brazza, the French traveller, had appeared on the north shores of Stanley Pool, and founded Brazzaville in the name and under the flag of France."

Very respectfully yours,

Jesse S. Reeves.

Richmond, Indiana, April 7, 1905.

THE CHEAP PROFESSOR.

To the Editor of The Nation:

Sir: We college professors are made to feel in many ways the estimation in which we are held by most people not closely connected with academic pursuits. At the outset we are commonly angered by it; afterwards it drives us to woe; finally we learn to see its sadly humorous aspects—the sadness doubtless due to the consciousness that we to some extent are guilty as charged.

As some of my fellow-professors are said not to read fiction, permit me to use your columns to call their attention, in this connection, to the gist of a story, entitled "The Spirit of Partnership," which has just appeared in the April number of *Harper's Magazine*. No slur at the story, as such, is intended, for it is quite up to the usual magazine level, but I have never seen in print anywhere a more delicious expression of this general estimation of us than it gives.

Mrs. Rogers has again been made president of the "Business Woman's Club," so the story runs, "which had grown under her hands from a small Woman's Exchange to an institution with many departments." To the office is to be attached hereafter a small salary (sum not mentioned). She sits down to think it over in the presence of the furniture, now worn and shabby, which her father gave her at her marriage some thirty years ago. Just then her husband comes in, "a deprecating little figure." "He had worked at one desk, on one salary, ever since she had known him." Even when they married, it was inadequate (sum not mentioned). Moreover, he has long cherished a desire to write a learned book which she, though his wife, feels sure would be a failure. Now he comes to tell her that he has been discharged and can find no other job. After this humiliating confession he finds a letter, delivered in his absence, which gives him an electric shock. In his desperation he had written to a friend at the State University to know whether his "ancient languages and history hadn't some chance for usefulness." The answer is an offer of the chair (evidently more of a settee than a chair) at a smaller salary (sum not mentioned) than he has been getting, "but a house with ground enough for a garden goes with it, and living in Barville won't cost——."

I pass by the ethical, or social, or economic (I am really at a loss for the proper adjective here) question whether a woman who has just been elected president of the Business Woman's Club of a city, with a small salary, has the right to follow her husband to the State University at Barville, at a still smaller salary. Besides, two other matters interest me more: (1) The State University at Barville, which gives its professorships to discharged and none too efficient bookkeepers of over fifty. (2) The wives of the professors of the State University at Barville after the arrival of Mrs. Rogers—for, of course, she sacrifices herself for her husband.

W. R.

FOLK-LORE COINAGE.

To the Editor of The Nation:

Sir: Having had occasion of late to investigate a certain phase of (American) Indian folk-lore, I spent a few hours over a volume entitled 'Legends of the Ozarks,' published in 1880 at St. Louis. In the introduction, the author makes this statement:

"The writer has succeeded in recovering from the musty relics of the past some of the most interesting legends having their origin with the Indians and the famous Hot Springs of Arkansas, and now seeks to preserve them by issuing this little book, containing the stories illustrative of the exquisite imagination and veneration of the ancient tribes of America."

Small as is the volume, there is enough in it to excite suspicion, and it may serve others if I state that I now hold in my hands the written confession of the author that the tales in question "have no historical value whatever, being coinages of the imagination, my imagination." In view of this frank confession, I will neither parade the author's name, nor discuss the ethics of his forgery; but it is only right that the student of folk-lore should be in possession of the facts. A good many volumes of Indian folk-lore have been published within the last few years. How many may be due to the imagination of the Yankee more than to that of the Redskin, seems to me a question deserving of attention.

Yours sincerely,

E. Washburn Hopkins.

New Haven, Conn., April 6, 1905.

Notes.

Sport in England has at last its 'Who's Who.' Two-thirds of A. Wallis Myers's 'Sportsman's Year-book' for 1905 (London: Newnes; New York: Scribners) is taken up with biographies of champions and ex-champions, of motorists, jockeys, even club secretaries—on a principle of inclusion not strictly defined by the editor, who hints at enlargement, upon the requisite support. Richard Croker is here to be met beside a son of Francis Darwin, distinguished at golf. Women occur more sparingly, of course, but are devotees of hockey, golf, tennis, croquet; own breeding kennels, or hunt the pack with their harriers. The fore part of the Year-book is occupied by readable summary statistical reviews of the several lines of sport during 1904. Many illustrations of man and beast adorn the uncommonly attractive volume, typographically considered.

From C. Mitchell & Co., London, we receive the sixtieth issue ("diamond jubilee") of their 'Newspaper Press Directory.' Decidedly the most interesting thing about this work (confined to the United Kingdom and the British Isles) is Mr. Walter Wellsman's modest statement that he assisted the founder with the first issue, in 1846; in 1857 became sub-editor; in 1859, upon Mr. Mitchell's death, chief editor, which he still remains. This is a gazetteer in its way. Of maps it gives but one, from which we perceive that even in the Orkneys two newspapers are published in a single town, Kirkwall. Among unexpected contributed matter is an article on 'The Australian Labor Party and the Empire,' by the Hon. W. P. Reeves, Agent-General for New Zealand.

From Messrs. Scribner we have the fourth issue of 'Baedeker's Northern France,' the field bounded by Dunkirk, Antwerp, Cologne, Strassburg, Basel, Blois, Le Mans, Alençon,

and Havre; exclusive of Paris. There is, besides this proper map, a larger map of northwestern France from below the Loire, together with the customary detailed sections, charts, plans of cities, etc., inserted amid the itinerary.

In a handsome quarto volume, 'The History of the Victoria Cross' (London: Archibald Constable & Co.; New York: Dutton), Philip Wilkins relates the 520 conspicuous acts of bravery which have called for as many bestowals of the decoration, instituted in 1856 and made retroactive for the Crimean war. These plain tales are accompanied by a remarkably large number (392) of portraits of the recipients; by statutory and narrative appendices; by a table of awards of the cross by branches of the service; and by a personal index. The scheme has been very carefully and soberly carried out, and as many of the decorated attained high rank in army or navy, the portrait gallery is decidedly valuable, as well as interesting to the student of physiognomy. The first award was for picking up a live shell dropped on the deck of H. M. S. *Hecla* in 1859 by Mate (now Rear-Admiral, retired) Charles Davis Lucas; the latest is Lieut. (now Capt.) Wallace Duffield Wright's standing off in Nigeria 1,000 cavalry and 2,000 infantry with only one officer and forty men, and finally putting the enemy to flight, in 1903.

Mr. William L. Scruggs's new edition of his 'Colombian and Venezuelan Republics' (Boston: Little, Brown & Co.) is mainly a revision; it contains, however, a new chapter on "Panama Canal Projects," which brings the history of the canal very nearly down to the present time, and gives an outline of the facts connected with the birth of the Republic of Panama. Mr. Scruggs's book is almost entirely descriptive and historical. In his Panama chapter there is nothing of any critical value. The operation by which we ousted Colombia and substituted Panama is represented by him to have been justifiable, in the interests of "civilization," though he admits that there have been, and possibly still are, some differences of opinion about it. But the people "have endorsed the action of the President, and, moreover, what has been done is an accomplished fact, and cannot now be undone, even if that were desirable." The author represented this country in Colombia and Venezuela for many years, and had excellent opportunities for observation and study. He writes generally with fairness, but superficially. In his chapter on Curaçao he describes the local *patois* as "a curious jargon made up of corrupted Dutch, Spanish, and English words, quite unintelligible to foreigners." This is a very insufficient if not misleading account of a philologically interesting phenomenon. Owing to the separation of Curaçao from the fortunes of the mainland, and the vicissitudes of its history, a genuine local language was developed, of which there is a regular grammar, and in which newspapers are or were recently published, and business carried on. It might be called a *lingua franca*, but to go out of the way to notice it as an unintelligible jargon, seems in an old resident of Carácas to argue a kind of ineptitude for critical observation. The book contains several illustrations and maps.

The extraordinary output of Nature Books of one kind or another we owe doubtless to the greatly improved methods of preparing illustrations by photographic processes. Many of these processes are well-nigh perfect, and can be criticised unfavorably only by those who deplore the inevitable decline of wood-engraving. Among the most insistent, and perhaps the most attractive, of these nature-books are the wild-flower and the garden series of all sorts. We had occasion lately to notice an excellent practical work on the Iris. This has been followed by a small book on the Lily, 'The Book of the Lily,' by W. Goldring (John Lane). The author gives a clear general statement in regard to the cultivable species, hybrids, and varieties, and illustrates the handy treatise by exquisite pictures of a few of the best kinds and their most artistic setting. Few persons realize, until they see concrete examples, how much beauty can be brought within the compass of a group of hardy plants. The gem of the collection in this book is the "white lily growing among rosemary at Sandhurst"—a lovely scene, in which "the lilies had not been disturbed for ten years."

Readers who understand that economics is a science rather than a branch of polite literature, Prof. T. N. Carver explains, are those to whom his treatise, 'The Distribution of Wealth' (Macmillan), is offered. To read it requires as much mental effort as to read a treatise on physics, chemistry, or biology. We do not need to say that Professor Carver is well known to this select audience, and that they will appreciate his careful study of a very difficult subject. As to the practical use of developing theories based on purely hypothetical examples, opinions may differ. It is hard to get back to the concrete unless you start from it; but there is no question about the disciplinary value of such exercitations as this.

The revival of protectionism in England has led Mr. Sampson S. Lloyd to translate Friedrich List's work, 'The National System of Political Economy' (Longmans). Prof. J. S. Nicholson writes an introductory chapter, in which he points out that the particular opinions of List are altogether inapplicable to present conditions, but that his principles and fundamental ideas are of real value. "These ideas are always to be reckoned with; they suggest questions which the statesman must answer, whatever the change in conditions." It seems hardly necessary to go back to List for a statement of these ideas, for they have been stated clearly enough in recent times. But we must remember that List impressed his theories on our Philadelphia school of economists, and that our tariffs have been usually made under the influence of this school. There is some rather grim amusement to be derived from comparing the practical results which have been brought about with the precepts laid down by List. He would be infuriated by the excesses of those who call themselves his disciples.

The history of an institution which has had great results is given in 'The Workingmen's College' (Macmillan). The records of the College, and the recollections of many of those who have been connected with it, are here arranged and edited by the Rev. J. Llewelyn Davies, and he has embellished his work with fine portraits of Maurice, Hughes, and many another of the noble men who threw their hearts into this truly philanthropical undertaking. The College has always had slender pecuniary support—perhaps gaining for this reason in the quality of its teachers; but it is now in position to indulge itself in a commodious building in Crowndale Road, St. Pancras, erected with its own funds.

Mr. G. Horner's edition of the 'Coptic Version of the New Testament' in the Northern (Bohairic) dialect has now been completed by the publication of vols. iii. and iv., containing the Pauline and Catholic Epistles, Acts, and the Apocalypse (Oxford: Clarendon Press; New York: H. Frowde). The critical apparatus, as in the first two volumes noticed in these columns seven years ago, is carefully prepared and conveniently arranged. For the Epistles and Acts, the text of MS. "Oriental 424" of the British Museum has been followed, and for the Apocalypse that of the Curzon MS. The collation of other MSS. seems to be exhaustive. The translation (given on the page facing the text) attempts complete literalness, often at the expense of English idiom. The Greek words that are transliterated in the Coptic are printed in italics in the English—a convenient method of indicating the extent and character of the borrowing. Every page bristles with loan words, which include a number of particles and almost the whole of the religious vocabulary except the terms "faith," "love," "wisdom," and a few others. Mr. Horner has done good service in thus bringing out a critical Bohairic text of the New Testament in full. He does not attempt comparison of the Coptic with the Greek, but he has furnished trustworthy material for such comparison. Whatever the date of the Bohairic version (a question still under discussion), it is a valuable witness for the original text of the New Testament, and it is to be hoped that this new edition may aid in the determination of the relation between the Egyptian versions and the great Greek uncials.

To the ninth volume of the 'Jewish Encyclopædia'—Morawczyk-Philippson—(Funk & Wagnalls Co.) applies in general the estimate given here of those which have preceded. The standard cannot be said to be rising; the proportion of staff-written articles seems to be on the increase. Still, if only for its wealth of biography, especially English and American, the book is indispensable for reference. There is a distinctly good article on Music, and the list of Periodicals is very full. Numismatics and Palæography are also good; Peshitta is strangely behind the times. Benzinger's Palestine is, naturally, satisfactory. The illustrations are often of considerable interest, but commonplace photographs of modern buildings are still too numerous.

The second edition of Willmore's 'Spoken Arabic of Egypt' (London: David Nutt) calls for a word only of notice. It is revised throughout, equipped with an armed preface in answer to critics, and is undoubtedly the fullest recent introduction to its subject.

In Professors Gottheil and Jastrow's "Semitic Study Series" two new parts have appeared (Leyden: Late E. J. Brill), one, the Abu Habba Cylinder of Nabuna'id, edited by Prof. J. D. Prince and autographed by Mr. R. J. Lau; the other, a forty-page extract from the 'Prolegomena' of Ibn Khaldun, edited by Prof. D. B. Macdonald. Both have glossaries in English and Ger-

man. The series is excellent in plan, and will undoubtedly meet a sensible want.

The eminent Romance philologist Adolfo Mussafia, having reached the age limit for service in Austrian universities, has given up his work at the University of Vienna. On February 15, his seventieth birthday was celebrated by the presentation to him in Florence of a handsome volume of 760 pages, prepared in his honor by some sixty contributors, and entitled 'Bausteine zur Romanischen Philologie: Festgabe für Adolfo Mussafia' (Halle: Max Niemeyer). As is usually the case in these memorial volumes, which it has become the fashion in Europe to dedicate to eminent scholars, there is considerable variety in the contributions, which come from various countries and are printed in various languages. One proceeds from America, 'Old Portuguese Songs,' by Prof. H. R. Lang of Yale, and contains the original text and an English translation of nine songs, with notes. The volume includes a bibliography of the writings of Mussafia himself, 336 in number, prepared by his colleague, E. Maddalena. A native of Spalato in Dalmatia, Mussafia is at home in many languages, and has written both in German and in Italian. The best known of his publications is his Italian grammar for Germans, first issued in 1860, which has gone through twenty-seven editions, and is still widely used.

The *Dante minuscolo*, recently issued by the enterprising Milanese publisher, Ulrico Hoepli, shows once more that, in the mechanical part of bookmaking, Italy can at least hold her own with any country. Although the six hundred pages and the binding together are barely half an inch in thickness, the paper is of such excellent quality that the print does not show through. The type is unusually distinct. The size of the charming little volume is about three inches by five, and the weight is less than three ounces. In addition to the complete text of the 'Divine Comedy,' there are some twenty pages of introduction, and also admirably complete but condensed footnotes by Prof. Raffaello Fornaciari. This highly competent editor has naturally avoided controversy, and in general has followed the traditional reading and interpretation. One could not wish a more satisfactory pocket edition of Dante, and the price is exceedingly moderate.

It was inevitable that some one should draw 'Who's Who' upon Dr. Osler. Possibly many have done so, but the first really heavy shot from this ever-loaded gun seems to have been fired by Prof. Edwin G. Dexter of the University of Illinois in the April *Popular Science Monthly*. Of twenty-five different classes of men, aggregating nearly seven thousand, only sixteen per cent. attained the dignity of admission under forty. Of course, 'Who's Who' does not show directly how many of the older "Whos" became so under forty, but, by the ingenious application of mortality tables to the facts which are available from its pages, we are brought logically to the conclusion that more than fifty per cent. of the entire number arrived at the assumed degree of eminence necessary to constitute one a "Who" after the fortieth milestone had been passed. By the way, the records under the name of Dr. William Osler in this same volume are interesting. He was born in 1849, and took his position at the Johns Hopkins University when he had just completed his fortieth year. The medical works by which he is so widely known have come from the press at various intervals since that date, and thus represent only the comparatively feeble efforts of his declining years. In the interests of the general health, one might wish that many other medical writers would leave their work for a similar decline.

Dr. W. H. Workman's account of his Himalayan explorations in 1902-'03 is the feature of the March number of the *Geographical Journal*. Though largely occupied with the scientific description of an immense glacier, it is full of graphic touches and incidents, such as the fall of an avalanche half a mile wide. One of the greatest causes of suffering at the highest altitudes reached was the heat, which at noon with fresh snow became intolerable, the reflected heat being harder to bear than the direct rays. The highest sun temperature registered was 204° Fahrenheit at an altitude of 17,322 feet, the maximum sun temperature in 1903 for a place near Calcutta being 161.9° Fahrenheit. A large number of photographs add much to the interest of the article, as is also the case with Capt. Crosthwait's narrative of a journey in Patagonia. The seventh of the papers giving the results of the Scotch Lake Survey deals with the lochs of the Shiel district. Mr. A. J. Herbertson discusses the possibility of dividing the lands into great natural regions—that is, the development of a systematic geography, especially adapted for technical education.

Petermann's Mitteilungen, number one, is largely devoted to Dr. E. Wagner's report on the Eighth International Geographic Congress in Washington. As regards its scientific work and its significance in the future, he holds it to have fallen below the level of the previous congresses. This was owing to the lack of a subject of absorbing interest, like the Antarctic Exploration at the Berlin Congress, to the vastly too great number (270) of papers presented, and to the excursions. He also says that the recognition accorded the Congress by our officers of state was far less than in the European countries where the previous congresses have been held. A. F. Stahl describes a recent journey in Persia, an interesting episode of which was a visit to the tombs of Esther and Mordecai at Hamadan. This is still a sacred spot, and a lamp is kept burning before them. Dr. F. Nansen discusses the three causes of ocean currents —the interior heat of the earth, the attraction of the moon and sun, and the heat of the sun's rays, which he considers the principal cause. In number two the editor, Dr. Supan, gives an appreciative notice of our Government reports on the island of Guam, reproducing the map which accompanies them. We mention further a statistical description of the natives of the Carolines and Marianne Islands, together with the second and concluding parts of the articles of Nansen and Stahl. The latter calls attention to the recent growth of Tabriz, which is now a city of 300,000 inhabitants and with a large commerce.

—The April *Atlantic* is noticeable for two strong articles of protest against present national tendencies, one on the Cost of War, by Prof. Charles J. Bullock of the Department of Economics in Harvard University; the other, on the Right and Wrong of the Monroe Doctrine, by Charles F. Dole. While Prof. Bullock's article has mostly to do with that part of military expenditure which is measured in dollars and cents, he gives also a very forcible summary of the enormous cost of war in the moral and political degeneracy sure to accompany its progress and to survive its nominal cessation. Mr. Dole shows very effectively the folly of the constant appeals to prejudice in the name of the Monroe Doctrine, in view of the fact that the dangers which justified the original declaration can by no stretch of the imagination be supposed to exist at the present time. With the South American countries in their present condition, no possible colonization schemes of any existing European power can be supposed either to threaten a despotism over the native inhabitants or to be inimical to our own interests, granting that it is not to our own interests to make conquest of these countries for ourselves. On the one hand, then, the Monroe Doctrine is not needed, and, on the other, the constant appeal to unreasoning prejudice which is possible under cover of it drives us into the support of an enormous burden of utterly unnecessary military and naval expenditure. On the purely literary side an appreciation of Henry James, by W. C. Brownell, is the chief attraction. Whether the reader will rise from Mr. Brownell's forty-five columns with entire clearness of mind regarding Mr. James is doubtful, for we have here one over-subtle mind analyzing another. But as we go along we find steady enjoyment, at least, and occasional very just discrimination.

—A small volume entitled 'English Architecture' comes from E. P. Dutton & Co. Its author is Thomas Dinham Atkinson, architect, and it has 200 very small illustrations. It is, perhaps, not surprising that each one of the numerous little handbooks devoted to this subject should improve upon its predecessors; but this book is notably sensible in its historical and critical remarks. Its illustrations, too, however unattractive, are perfectly well chosen and are intelligible. The constant recurrence of the first person plural, the author identifying himself with his fellow-countrymen and speaking of "us" and "our art," is, of course, vexatious. But, in spite of this fault, the tone is critical, and we should like to quote the summing-up which is to be found on page 181. A sentence or two may be given: "Right or wrong, we remain intensely insular. It is perhaps our strength and our weakness that our aims were always characteristically modest and even humble. Under the influence of the Norman we laid down immense buildings. We never surpassed them. . . . The interior of the nave of Durham, the western transept of Ely, both inside and out, the central tower of St. Albans—these are rough-hewn epics which dwarf the efforts of later days." This, we think, is novel. It is impressive as showing an observation of the Gothic churches of England, of early and of later times, which is more than mere national self-glorification. The analysis, two or three pages long, which follows this, is always suggestive and more than suggestive, going on to the close of the time of Wren, and touching each epoch and each important event with singular firmness and ease. It would be well for any student advanced enough to understand the wording

to learn those four or five pages by heart. The book is divided into history and analysis without express statement of that fact. Chapter i. deals with Romanesque, chapter ii. with Gothic, chapter iii. with Renaissance art, then chapter iv. seems to begin again with "Churches" and a study of the pagan basilica, chapter v. deals with Monasteries, chapter vi. with Houses; in every case, beginning with the earliest vestiges and coming down to the eighteenth century. Chapter vii., entitled "Conclusion," deals with French influence upon England at the time of the beginnings of Gothic art, and also with the English resisting power which prevented French influence from carrying everything before it, as it was doing in western Germany and in northern Spain and the Low Countries. In spite of the strong interest which every English architect of insight must needs feel in mediæval art, this book deals with seventeenth-century and even eighteenth-century building with equal fairness and completeness; and what it has to say about Inigo Jones as the first "architect" in England, about the character of his design and of his influence, and about certain examples of buildings dating from 1650 to the close of the eighteenth century, is all intelligent quite beyond the custom of such essays.

—Robert Stephen Hawker (1803-75), Vicar of Morwenstow, has long been a picturesque and familiar figure. Shortly after his death, two rival memoirs appeared. That by Dr. F. G. Lee, who shared his subject's "advanced" views and Romeward tendency, is little known, and was largely polemic. The other, by Mr. S. Baring-Gould (who did not consult the family), had more charm but less authenticity; it was twice revised and reprinted, and did much to spread the fame of Hawker's eccentricities, virtues, and abilities. His "Cornish Ballads" (1868), as Froude wrote him, "belong to a kind which cultivation can no more create than it can create a living flower or tree"; his poems, as collected in 1879, called forth a kindly response from Longfellow and a pension to the widow. His Trelawney ballad (1824) is well known, and a brief hymn of his had been confounded with one long previously used. And now his 'Life and Letters,' by his son-in-law, C. E. Byles (John Lane), leaves nothing to be desired. The large volume is enriched by numerous quaint portraits and sketches of Cornish buildings and monuments; the text deals frankly with the vicar's excitability, extravagance, generosity, hospitality, humor, etc., and has plenty of personal and local color and no lack of anecdote. Thus, when a tourist asked for his "views and opinions," the host led him to a window, and pointed out "the highest cliff on this coast, on the right; the church on the left; the Atlantic Ocean in the middle. These are my views. My opinions I keep to myself." He thought the air full of spirits, and the lower animals sharers in a future life; he cited Origen to show that "He who careth for cattle hath appointed a spiritual guardian for them each in its rank." In 1863, vexed at the failure of punishment for Colenso's heresies, he wrote, "Ours is a Church of deportment without dogma or discipline"; in the spring of 1875, "My mind—it is gone." On August 14, the evening before his death, he was received into the Church of Rome. Long before this he had worn a medal celebrating Pope Pius IX. and the Immaculate Conception.

—Since Italian literature began, the question of the language has always been a burning one in Italy. In spite of voluminous dialect literature, periodic reversions to Latin, and occasional attempts to snub the Florentines as a lot of pedantic purists, the melodious and highly idiomatic speech of Tuscany has been the foundation of the literary language from Dante's day to the present. Dante's own works fixed it securely in this position, even though he himself denied that either the Tuscan or any other dialect was suitable for literary use. So universally is it recognized that the Tuscans have as their birthright the ideal form of Italian speech, that writers from other parts of the peninsula—men like Ariosto, Alfieri, and Manzoni—have done their best to assimilate their style to that of Florence. And now the most popular of living Italian writers, who was born and lives in the North, Edmondo De Amicis, has published a book in defence of the Tuscan vernacular, 'L'Idioma Gentile' (Milan: Fratelli Treves). It is not a systematic treatise on grammar or rhetoric, but a collection of notes, sketches, and discussions, connected by their common purpose of stirring up the easy-going Tuscan to an appreciation of the beauty and nobility of his native speech, and of inducing other Italians to improve theirs. De Amicis's books sell by the hundred thousand, without the artificial stimulus that sometimes produces a demand for large editions, and his influence is wholly good. He believes that a common language is a potent means of attaining the unification of Italy. His own numerous works are notable examples of good taste and purity in writing; and, in spite of his Northern birth, he has so far mastered the Tuscan speech that the most captious Florentine academician rarely catches him in a word or phrase that is not of the purest Tuscan. His new book is full of instruction and interest; it cannot fail to be valuable to every one, foreigner and native alike, who wishes to perfect himself in the understanding and use of the *lingua di sì*. And withal, it is fascinating reading. It has already created a sensation in Italy.

—While Danish literature is fairly well provided with books dealing with America and American life—notable among which is Cavling's 'Fra Amerika'—Norwegian literature has been comparatively poorly off; only the last year or two has produced any at all readable works in this line. We refer to 'Om Chicago,' by Peter Daae, and 'Det Norske Amerika,' by Thoralf Klaveness, both published by Cammermeyer in Christiania. The author of the former work has for a good many years been a resident of Chicago, working on the staff of a Norwegian paper published there, and is accordingly familiar enough with the several phases of life in the Western metropolis, which he describes as "America's most American city, and the third largest Norwegian city in the world." His aim is, in 150 pages, to acquaint the Norwegian reading public with Chicago and its institutions, its population, its criminals and its courts, its theatres, literature, etc., and at the same time, so far as Chicago may be said to be typical of America, with American life as a whole. Errors and misstatements are fewer than in most foreign books describing American life, and become apparent chiefly where a more general and comprehensive view or a more detailed and specialized study is required for the understanding of some institution. The absence of illustrations is to be regretted, and the author's language bears plain witness to his long stay in Chicago. The other book above mentioned is more ambitious in its character. Mr. Klaveness is the editor of a provincial paper, who spent some months in the United States at the expense of the Norwegian Government, with a so-called journalist's scholarship. His 260 richly illustrated pages (with no apparent connection between illustrations and text, however) purpose to give an account of the life of Norwegian emigrants to the United States, with casual reference to American life in general. The book naturally contains a good many enlightening remarks, but also abounds in errors and misstatements, and the author evidently takes himself rather more seriously than most of his readers will feel inclined to do. An introductory autograph letter from Björnson praises the work highly, particularly the style. The latter may, in fact, be said to be a clumsy imitation of Björnson's own.

—Gustav Kruell's new engraving of Franklin, in size, in technique, and in authority, takes its place securely among the foremost of his triumphs on the wood block; and for connoisseurs this statement is all-sufficient. The Japan proof before us belongs in this artist's later series for color, and displays his power to produce a solid and coherent personality—a portrait in which every things "hangs together" and there is no fumbling. For his original, Mr. Kruell resorted to the Duplessis pastel of 1778 now in the possession of the Philadelphia Academy of Fine Arts, and leaving much to be desired on the score of distinctness and detail, as is so often the case with this vehicle. Unlike the more senile pastel of 1783 by the same Frenchman, owned by Mr. John Bigelow and engraved on steel as the frontispiece to his 'Life of Franklin from his Works,' this presentment looks to the left. It is again distinguished by a fur collar; but, above all, the mouth is a line of singular subtlety, by which it would almost be as proper to characterize this remarkable print as to identify the work of the old painters by a chair or other accessory. It is the first thing to fix the attention. The flesh, the flowing hair, the several components of the dress, are executed with the customary mastery; indeed, the way in which the bust is handled, with its diversity of stuffs and folds, is delightful to study, while this and the background are both subordinated to the face and ever lead us back to it. Clearly, the hand which successfully delineated Lincoln and Webster and Beethoven and all the great subjects between, has lost none of its cunning or its patience. Mr. Kruell's address is No. 102 Sussex Avenue, East Orange, N. J.

RECENT POETRY.

In the six ornate but rather ill-printed volumes of the collected edition of Mr. Swinburne's poems (Harpers), we have, in some respects at least, the most important body of poetry by a living writer. About

the only wholly new offering in the set is a dedicatory epistle of twenty-five pages addressed to Theodore Watts-Dunton, in which the poet, in some highly characteristic prose, endeavors to forestall both "the purblind scrutiny of prepossession" and "the squint-eyed inspection of malignity," of which he has had some experience in the past. The epistle is in the main a somewhat grandiloquent synopsis of the succession of fervid moods which Mr. Swinburne has voiced in his verse, with repeated assurances of their sincerity. Not all of its asseverations are quite verified in the poetry that follows. "My first if not my strongest ambition," he says, "was to do something worth doing, and not utterly unworthy of a young countryman of Marlowe the teacher, and Webster the pupil, of Shakspere, in the line of work which those three poets had left as a possibly unattainable example for ambitious Englishmen." Despite this *ex-cathedra* pronouncement, it seems to us, in reading all the six volumes, that the striking thing about the poetry of Mr. Swinburne is that it is not essentially, in form and spirit, English poetry at all; that it is rather the work of a spiritual countryman of Hugo and Baudelaire. The characteristic marks of great English poetry we do not find in it very plentifully. If we mistake not, there has never been an English poet of the first rank who did not show the native English gift for terse and gnomic expression—the ability to throw an apothegm into a line of verse. In English poetry, in the very turbulence of passion there has always been a certain moderation and reserve approaching almost to curtness. Hence, even in English poets of the second rank, the fine, closely-packed single line has been more in evidence than in any other poetry outside of Dante and Virgil. Yet nowhere beneath the swirling, Strauss-like measures of Mr. Swinburne's resounding poems, with their celebration of "panic" and "nympholepsy," do we find much trace of this gift of terse wisdom; and memorable single lines are few. Perhaps the most English thing in him is his deep love of the sea in all the phases which he enumerates in a clause of the epistle, which, isolated, strangely echoes the cadence of his most characteristic lines—

"The revels and the terrors and the glories of the sea."

But if Mr. Swinburne's ample collected achievement lacks that last element of poetic permanence which comes from a deep national quality, it is clearly of a larger and more momentous volume than it has always been possible to recognize. No modern poet except his master, Hugo, has been more constantly capable of a certain kind of music: the echo, as Hugo said of his own verse in the notable Preface to 'Les Voix Intérieures,' "bien confus et bien affaibli, sans doute, mais fidèle, l'auteur le croit, de ce chant qui répond en nous au chant que nous entendons hors de nous." No living poet has studied the intricate cadences of Greek choruses more minutely and imitated them more successfully. No living poet has taken a more unwavering stand as the singer of human rights, even if he has envisaged them from the angle rather of a Continental revolutionary than of a poet of the isles where Freedom broadens slowly down from precedent to precedent. And, finally, no living poet has drunk more deeply of the old wells of poesy in literature. As he says in a heightened passage of the dedicatory epistle, which would make exemplary reading both for our parlor performers in poetry and for those slighter members of the Tribe of Walt who are so dissident from the apostolic succession of poets:

"The half-brained creature to whom books are other than living things, may see with the eyes of a bat, and draw with the fingers of a mole, his dullard distinction between books and life; those who live the fuller life of a higher animal than he, know that books are to poets as much a part of that life as pictures are to painters or as music is to musicians, dead matter though they may be to the spiritual still-born children of dirt and dulness who find it possible and natural to live while dead in heart and brain. Marlowe and Shakspere, Æschylus and Sappho do not for us live only on the dusty shelves of libraries."

An uncommonly masculine volume is that of the 'Selected Poems' of John Davidson (John Lane). Mr. Davidson has drawn from his seven earlier volumes with a shrewd critical sense. He has shown an evident velleity in the selection to play up, so to say, a single phase of his talent. As that phase, however, is his most characteristic, the volume is, as a matter of fact, pretty adequately representative. That gift of haunting song which readers of his other volumes remember, is not very much in evidence here; but this has never been more than a passing interest in his wilful work. His unusual mastery of narrative construction in verse, his energy of conception and readiness in the fundamental mind-work of poetry, are all shown here at their best in the "Ballads," which make the bulk of the book. Mr. Davidson envisages life with a deep tragic sense. He sees it steadily, yet he does not see it quite whole—suicide and seduction do not play quite that chief part in the world which they do in Mr. Davidson's poetry; yet, for all the grimness of Mr. Davidson's habitual mood, the vigor and color of his poetic speech are marvellously refreshing. How vividly startling is the conclusion of his "Ballad of Hell," where the lady who has been betrayed into killing herself for love escapes from the pit:

"Across the weltering deep she ran;
A stranger thing was never seen:
The damned stood silent to a man;
They saw the great gulf set between.

"To her it seemed a meadow fair;
And flowers sprang up about her feet.
She entered Heaven; she climbed the stair
And knelt down at the mercy-seat.

"Seraphs and saints with one great voice
Welcomed that soul that knew not fear;
Amazed to find it could rejoice,
Hell raised a hoarse, half-human cheer."

In his 'Musa Verticordia' (John Lane) Mr. Francis Coutts shows a similar endeavor after sincerity and directness. At times this mood seems to partake of a certian prosaic hardness of view, of phrase, and of versification, that gives to a poem the effect rather of a tersely turned paragraph of prose than of musical and memorable verse; but Mr. Coutts is always thoughtful and always sensitive to the imaginative import of his ideas, so that sometimes, when a true poetic glow is imparted to him by the energy of his subject, his writing is, to adopt an overworked but useful word, suggestive. His "Bayreuth: An Antithesis" presents him at his best. The first member of the antithesis is Parsifal:

"Deep in the forest's moist, malarious gloom,
Dungeoned in terror of the world, they lie,
Knights of the Grail; as in a sick man's room,
The air is faint with languid agony.

"There is no man in all their spectral host,
There is no woman in old Klingsor's crew;
Sir Parsifal is tempted by a ghost,
Half ghost himself; since love he never knew."

So the verse runs on, in an admirable presentation of the wan mediæval mood of morbid fervor. The second member of the antithesis is "Die Meistersinger," which presents, as Mr. Coutts sees it, an honester view of life:

"Released from that miasmic spell
And commune with sad souls half dead,
With him who cobbled and sang as well
High on the hills of life we tread.

"Well met, Hans Sachs! We grasp your hand,
We look you full in the face and feel
That men who in the sunshine stand
Need never in the darkness kneel."

'The Twin Immortalities, and Other Poems,' by Charles E. Russell (The Hammersmark Publishing Co.), is avowedly an attempt to further that *Andersstreben* of the arts of music and poetry, of the wisdom of which we have in these columns been constrained to express a certain skepticism. In the titular poem of the volume we have a sonorous rhapsody of that heaven of song where the masters of poetry and music together go:

"There dwell forever now the souls
Whose strains remembered bring the stars to earth.
There mighty Bach by Milton strolls;
Made one by springtime's mirth.
Bartholdi walks by Suckling's side;
Great-browed and pondering,
Or in vision after vision wandering,
Brahms seeks the ways untried.
Schumann and Shelley through the sunniest lands
Or past deep hills hold thoughtful pace;
Beethoven close by Hugo stands
With solemn, tender face;
And kindly like the sun in fall
The splendid light of Shakspere shines on all."

In other poems in the volume Mr. Russell has made a set attempt to follow the structure of a classical sonata. We have, for example, in a fine poem on Graubünden, that cradle of democracy, four movements: Andante cantabile—Allegro risoluto, Adagio, Allegro con brio, and Rondo. Mr. Russell has made in these poems an uncommonly intelligent but not quite convincing experiment. In any concerted poem a close analysis of the succession of moods is likely to reveal something of essential musical structure. Even writers of prose in the least imaginative must sometimes have been vaguely aware of a similar constraining principle in the ordonnance of their paragraphs. The trouble is, however, that the music of poetry can never be a matter of pure sound, for its material is words, which have the awkward characteristic of embodying ideas, concepts, and notions. Readers of poetry through some thousands of years have come to expect these ideas, concepts, and notions, and they are pretty sure to come away from the reading of the poetry which is written with set musical intent with a certain sense of frustration, and a feeling that they have been defrauded of an essential part of true poetic pleasure.

We like Mr. Russell better in those poems where his musical structure is only implicit. He has an admirable gift of phrase, which at its best is alive to its finger tips. He would do well, however, to consider the

modicum of truth which is in Poe's dictum that a long lyric is a contradiction in terms; for his poetic impulse is so unflagging, and his mind so full of remembered cadences and colors, that too many of his pieces come to be a little overdrawn. Yet it is not often that one finds a volume of verse more fulfilled of the true poetic unction, more fervent with the old dream of human brotherhood. Some of the least ambitious pieces are best of all—witness this picturesque rowing song:

"Sweep—sweep—sweep—
By winding shore and willowy screen,
Sweep—sweep—sweep—
Across tree-shadows gray or green,
By shelving beach of crinkling sand,
And deeps where drowsing cattle stand;
By white vine-scented cottage trim,
And where the red vine clusters peep,
Sweep—sweep—sweep—
And the strong white eddies leap
Where the broad blades run in the burning sun
With their sweep—sweep—sweep—

"By mouldering pier-heads that still keep
Their watch and ward on silent streams,
By grand-dams in wide doors asleep
And dreaming who shall say what dreams.
And further in cool breaths of pine
That taste like some old-vintage wine,
Where scarce one ray of the saffron day
Through the arch of the incense shrine makes way,
Where the shadowy walls an echo make
To the sweep—sweep—sweep—
And the dancing globes in my wake
Of tree-top line and gold-leaf shine
The tinted image take.

"Sweep—sweep—sweep—
Now where great domes of cloudland drift,
Sweep—sweep—sweep—
Now where long shafts of sunlight shift
Through blue and white and golden brown,
Where sloping fields of wheat come down,
Where through burnt fumes of summer bloom
The slender village steeples loom
Or broken in the bow-wave's curl,
Sweep—sweep—sweep—
And the face of a country girl
Round-eyed and brown from the bridge looks down
To watch the foam-wreaths whirl.

"Sweep—sweep—sweep—
The oar rings true like a crystal bell;
Sweep—sweep—sweep—
The rushes lisp in the tiny swell;
And the treble tinkling of the song
Up where the keen prow shears along
Keeps tune and time with the plashing chime,
Keeps note for note with the sterner rhyme
Of the grumbling gear of the sliding seat.
Sweep—sweep—sweep—
And beneath the hard-pressed feet
The ripples rise, the slim bow flies
To the song of the sliding seat."

'The Garden of Years, and Other Poems,' by the late Guy Wetmore Carryl (Putnams), is a sorrowful volume in its indication of defeated promise. It shows Mr. Carryl just working out of the Byronic mood, with foregleams of a sincerity and eloquence in verse which, coupled with his exceptional mastery of the long rolling line and of the largo movement, might have carried him far. His quality can be no more fitly shown than in the verses entitled "On the Prow," which, with something of a Tennysonian color, recall, without imitating, a familiar poem of Clough's:

"Strange, silent East! Across the solemn calm
The slender ship outward and onward strives,
Bearing to odorous shores of date and palm
The burden of a hundred little lives.

"On a light course drift I toward the verge
Beyond which lies what now I may not know;
Yet my heart whispers, 'These gray wastes of surge
Stretch whither it is good for me to go.'

"Youth like the speeding sun left far behind—
Unanswered questions mutely sent before—
O great, dim East, what welcome shall I find
When thy wide arms unveil the distant shore?

"The prow knows not the harbor that it nears.
Nor I if thou shalt bring the seeker rest—
Yet the strong hand the fragile ship that steers
Will guide her to the haven that is best."

Mr. Robert Loveman, in his 'Songs from a Georgia Garden' (Lippincott), proves himself again one of the verse writers whose gift is for the thumbnail sketch rather than for the large canvas. His range is slender, and a certain eccentric slightness and fragility is his habitual quality. Sometimes, however, his little unnamed poems are very individual and right—a kind of poetic pin-prick, pleasantly provocative, as in this:

"What! I fear death?
Believe me, no;
Out of a mystery we come,
Into the light we go.

"What! I fear death?
I swear to thee
My chiefest thought is one
Of curiosity."

A similar gift for terse poetic expression, with a considerably greater burden of thought and feeling, is seen in 'Cassia, and Other Poems,' by Edith M. Thomas (Badger). In Miss Thomas's verse there is, however, always something of a struggle between a native endowment of song and the disposition to ratiocinate, that sometimes results in crabbed verse.

The best of the poems which Mrs. Florence Earle Coates has brought together in 'Mine and Thine' (Houghton, Mifflin & Co.) are those which deal with persons, ranging from Socrates to William B. Yeats. These are always sympathetic to the essential quality of the man. Sometimes they are excellent examples of sonnet eloquence, like this, of Jean François Millet:

"Not far from Paris, in fair Fontainebleau,
A lovely, memory-haunted hamlet lies,
Whose tender spell makes captive, and defies
Forgetfulness. The peasants come and go—
Their backs too used to stoop—and patient sow
The harvest which their narrow need supplies;
Even as when, earth's pathos in his eyes,
Millet dwelt here, companion of their woe,

Loved Barbizon! with thorns, not laurels, crowned,
He looked thy sorrows in the face, and found—
Vital as seed warm nestled in the sod—
The hidden sweetness at the heart of pain;
Trusting thy sun and dew, thy wind and rain,
At home with nature, and at one with God."

In the 'Poems' of Hildegarde Hawthorne (Badger) a graceful lyric gift, a vein of pretty fancy, and a habitual mood of ideality are very little inconvenienced by disturbing mental processes. The volume contains several songs as tuneful as this:

"Sing me a sweet, low song of night
Before the moon is risen,
A song that tells of the stars' delight
Escaped from the day's bright prison;
A song that croons with the cricket's voice,
That sleeps with the shadowed trees;
A song that should bid my heart rejoice
At its tender mysteries!

"And then when the song is ended, love,
Bend down your head unto me,
Whisper the word that was born above
Ere the moon had swayed the sea;
Ere the brightest star began to shine
Or the farthest sun to burn,
The oldest of words, O heart of mine,
Yet newest, and sweet to learn."

'A Pageant of Life,' by Gamaliel Bradford, jr. (Badger), is the intelligent verse of a scholarly man of fine sensibilities, who has meditated the literary history of the world long and minutely. This history is poetically presented in a series of sonnets. It begins with one on Heraclitus, touches in passing on such subjects as "Alexander's Empire," "Lucretius," "Saint Anthony," "Cervantes," and "Kant," and ends with one on "Democracy," wherein we have a rather pessimistic picture of modern man, who

"chants with might and main,
In penny sheets, self-laudatory hymns—
Monster, with arms, legs, belly, and no brain."

Besides the "Pageant of Life" there are some gracefully turned songs and a few admirably close and sympathetic translations from Leopardi. For a reader of bookish tastes this is a pleasant volume.

For the vast unconsidered remainder of what may be called by the generic name of Badger poets, Mr. Philip Green Wright may stand as fairly representative. In a "foreword" to Mr. Wright's 'Dial of the Heart,' Mr. Charles A. Sandburg says:

"Of the making of verses, doggerel, yawps, and blats, there is no end. Rare is the one who has approached his task, saying: 'I want to make something fine, something that will show the best and truest of myself, something that will be a gratification to the highest and strongest in me.' Yet that is the spirit in which I believe Philip Green Wright has written out these pieces of poetry. Are they to be classic? Not all of them. But there are passages that so accurately, so sincerely, and with such heart-stir reflect what every thinking, feeling man and woman knows, that they will live a long time."

Revolving the work of Badger poets as a class, the salient and essential quality of all is seen to be this trait which Mr. Sandburg has so memorably named *heart-stir*. A single specimen of it from the writings of Mr. Wright will perhaps be adequate. It is a "Quatrain":

"Oh, to throw off the incubus!
Oh, to laugh long and free as though I had blond, curly hair!
Not to care a damn for men or fate,
To feel myself an elemental force, one with rain, sunshine, and wind."

Heart-stir being thus rife in the land, we might expect that the momentous events of present years would find some expression in song. This is, indeed, the case. 'The Senator: A Threnody,' by the Rev. Henry Carver McCook (George W. Jacobs), is a memorial poem of 171 pages, dealing with the life and political activity of the late Marcus A. Hanna. The fourth canto of the poem is "A Plea for Immortality," and the fifth contains some description of the life beyond, all conducted with a skill evidencing considerable homiletic experience.

Another poem for the times is "An Inaugural Ode," by Mr. Alexander Blair Thaw (Nelson, N. H.: The Monadnock Press), which presents the conventional emotions of a thoughtful and well-read man on Inauguration day, with considerable metrical facility.

A considerable fervor of feeling, accompanied by an easy command of poetic rhetoric, gives at first reading to Mr. Frederic Lawrence Knowles's 'Love Triumphant' (Dana Estes & Co.) a pleasant individuality. Despite a good deal of straining after the "modern note," the poetry of Mr. Knowles is markedly reminiscent. In weaving the variations about the old theme of yester years he is particularly skilful. In the

first and title poem of the volume we have the fine, if somewhat loosely imaged lines:

"Helen's lips are drifting dust;
Ilion is consumed with rust;
All the galleons of Greece
Drink the ocean's dreamless peace," etc.,

and so on to the lesson of the perdurability of love. In the next poem, the same theme is handled in a pretty new measure:

"Lovers kissed and parted,
Eyes were moist and blue,
In the Midian meadows
Moses knew.

Cheeks were wet with weeping,
Brows were hot with fire,
Ere the hand of Homer
Swept the lyre.

And this masque of midnight
And the moon's white face
Looked on Nile and Jordan
Thebes and Thrace,"

and so on to the end:

"Press thy lips to mine, dear,
Thus—and thus—and thus—
Space and time shall perish
Slain by us.

All the lands of wonder,
Years of pain and bliss,
We will taste together
In that kiss!"

This is all rather pleasant in its warm fluency, but, as one reads on through the book and re-reads, the rhetorical virtuosity becomes more obvious and the poetry less. Mr. Knowles's writing would gain by a more rigorous selection, by the unsparing pruning of the pieces selected, and by a more laborious study to replace the specious loud rhetorical phrase by the inevitable word of poetry.

VÁMBÉRY'S MEMOIRS.

The Story of My Struggles: The Memoirs of Arminius Vámbéry. E. P. Dutton & Co. 1904. 2 vols. Pp. 492.

There have been few autobiographies at once so outspoken and so evidently truthful as this. Dr. Vámbéry, without question, knows himself, and he has here communicated that knowledge without reserve. The details of his life, from his unrecorded birth of unknown date, to his residence now at Budapest as an authority of the first rank on the politics of Europe and Asia, are set forth clearly. Equally clear are the analysis and statement of his motives, beliefs, and ideals, his whole inner life. His estimate, too, of his opportunities, powers, and achievements is of evident soundness. Ruling out the inevitable blind spot, not many men have seen themselves so steadily and so wholly as they are, as has this Hungarian Jew.

It is the life of a linguist, not of a scholar; of a looker-on of Oriental politics, not of an official nor even of a politician; of a Jew-cosmopolitan, not of a Hebrew; of an amateur in religions and a disciple of Voltaire and Strauss; of a man of one great journey, not of a man with wandering in his blood. There is a deep pathos, too, in it all. His country calls him a Jew, and a Jew is not a Hungarian; he would not call himself a Hebrew, and the synagogue will have none of him. His attitude towards religion in general is that of the over and done eighteenth and early nineteenth centuries—an attitude which sees priestcraft only, and holds that Europe leads the world in spite of Christianity. He has done better work for England than many English statesmen, and yet is almost without a country, so out of touch in race, religion, and country he is and has been with all his environment. But there is another side. The place of these primary garments of existence has been taken for him by the broadest spirit of humanity. Not simply to see men and cities, nor even to survey mankind in philosophic leisure, has been his life. But to merge himself in every race and in every kind and condition of men—to lose his mother-tongue and to know none as such save the tongue of the hour—to act a part with all the histrionic genius of the Hebrew race, until (following the command of Muhammad, "Weep when you read the Qur'an, and if you cannot weep, feign weeping; in time you will weep") these mimic words and actions became his own—to turn cosmopolite, in no cold, detached sense, but by taking the world (at least, the Orient world) to his heart—this has been for him the substance of his life, and its own exceeding great reward. And so, at the last, he looks back to the sneering advice of his clerical teacher in the gymnasium, "Moshele, why dost thou study? It would be better for thee to be a butcher," and knows that it was well to study and that his life has been worth living.

So it was from the very beginning. Lame, poor, half-starved, contemned, an irrepressible vitality, loquacity, industry kept him moving steadily on a course which was in essentials that of all his life to come. His religious beliefs dropped away from him without a struggle. They simply vanished, and he went on without them. They had never interpreted or vitalized the world to him, and, when they were gone, the world was still as of old—very good and needing no interpretation. His Catholic instructors used him as acolyte at the Mass; he served very calmly, just as he was to take part thereafter in Dervish *dhikrs*. He was a good student, but ordered study with its certificates and regular promotions did not interest him. Languages, for him, were everything, and these he learned for use, not discipline. He talked if need be to himself; he read, above all, poetry and imaginative literature. He learned, too, to depend upon himself, and to take short views into the future. He felt secure that he would come through somehow, although starvation seemed round the next corner. An iron industry at the things which he liked, an unquenchable hopefulness, and a power of making things turn up carried him along.

Then came the first journey to the East, begun on some scanty savings as a private tutor. At Constantinople, Vámbéry finally found himself. His savings soon gave out, but, as a tutor in languages, a reciter of poetry in cafés, and finally as an accepted member of Turkish households, known as Reshid Efendi and as good as a Muslim, with no questions asked on either side, he slipped into the smooth, easy-going current of Oriental life. It was now that he learned to know the East on the inside. He had long heard it calling, and recognized that it was a career. Libraries, too, opened to him; MSS became accessible, Chagataic texts raised again for him the problem of the origins of the Hungarian race. These last saved him, too, from the fatal spell of Oriental sloth. Commissioned by the Magyar Academy to investigate in Central Asia the relationships of the Magyar language, and furnished by them with scanty funds and a magniloquent Latin letter of safe conduct, he left Budapest in 1861 on his great journey.

But little good for that lay in these European helps. It was to Constantinople that his real success was due. When he left there in turn, it was as Reshid Efendi, with official passport and letters of commendation to the Turkish Minister at Teheran. He was to be a real Turk thereafter, and a dervish dependent on alms, and journeying to the sacred shrines of Bukhara. In Persia, it is true, he was, as a Turk, a Sunnite heretic; but religious details sat easily upon him, and a dervish has a large latitude allowed and taken. At Teheran a fresh start was made, and this time in Sunnite Central Asia the Turkish commendations had full weight. Added to this, and more weighty than all, was a solemn passport from the Turkish Ambassador, giving him the title of Hajji. This, above all else, carried him through, but it may be a subject of meditation how much lying, first and last, the use of it must have involved. Burton, it may be remarked, held that no one who had not actually been through a pilgrimage could maintain such a title. The knowledge required could be gained at first hand only.

Into this great journey there is no need to enter here. By it Vámbéry became known and remains known; he never made another. His knowledge of the East he had practically gained before, but this spectacular feat gave him the ear of Europe. And yet, as he says himself, there was nothing in it so different from his early life. The experiences of the young Jew, despised and mocked, hungry and weary, had been much those of the mendicant dervish in the terrors, physical and mental, of the steppes of Asia. All his life he had been playing parts until they had become a reality for him. Further, it was not accident which now led him to England and made him the champion of England against the world. To his own country he was a very dubious Jew; though he writes himself to this day a Hungarian, in Hungary no theatre existed then for his public appearance. The two powers to which he might naturally turn were the Eastern rivals, England and Russia. But with Russia, plainly, he could have no part. He and his race and his country knew Russia too well. The Jewish people and the oppressed nationalities of Eastern Europe had no question where friendship for freedom might be found. So to London he went with his book, and discovered how England receives the man who has done something—above all, has been where no one else has been, and who knows something bearing on the moment and can tell it clearly. His future was thus fixed. He was to be a political Orientalist, a writer of books, magazine articles, newspaper letters, and paragraphs bearing on living situations.

To this part of his life Professor Vámbéry gives his second volume as a whole, It is marked throughout by the same keen insight into others as into himself, the same absolute frankness and truthfulness. His characterizations are full of good-humored appreciation. Of his own little vanities he makes no secret, and of how flattering and pleasant he found the attentions of (for ex-

ample) both Victoria and Edward VII.—how wounded, too, he was by the long neglect which he met with in his own country, and how unquenchable has been his love of distinction and fame. A childlike naïveness that disarms criticism runs through all this. The pictures, moreover, which he puts before us are so bright and telling; the atmosphere of the whole is so garrulously attractive; the spirit is so transparently honest, and the ideals for the liberty and progress of the world are so uncompromising, that it would take the most pronounced anti-Britisher to be irritated by his vision of the destinies of England. Nor is there at any point a touch of bitterness; even Mr. Gladstone is dealt with playfully. Few choices, indeed, have been so speedily and completely vindicated by events as his between the two great Oriental Powers. With every day, at present, the difference which he saw is becoming clearer to the most prejudiced.

The same holds true of his judgments on the present condition of Persia and Turkey. The pages which tell of his intercourse with the present Sultan and with the late Nasredin Shah are among the most weighty in his book. No European has known the Sultan as he; certainly none has published his estimate so fully and frankly. What is said here is evidently meant to mark the close of a long and difficult acquaintance, and is practically a confession of failure to solve that problem in character. Yet some points are made absolutely clear: one, that Abdul Hamid still regards the Turkish empire as the personal property of himself and his dynasty; and another, that the Armenian massacres, with or without cause, were deliberately planned by him. A "box on the ear" he called them to Vámbéry, when incautiously speaking of his purpose.

It is characteristic for the linguist in the strict sense that two passages (pp. 127, 365) are quoted in hopelessly bad Arabic, and ascribed to the Koran, where they assuredly do not occur. More strange, for one more of a Turk than the Turks, is the definition (p. 373) of a "Khaliph," as "a lawful descendant of Muhammad." Professor Vámbéry must write with a very running pen indeed. But there can be no question of the truth of his colors; and that, here, is the main thing.

A Gardener's Year. By H. Rider Haggard. With plan and twenty-five illustrations. Longmans, Green & Co. 1905.

A great charm of all honestly written books on gardening resides in the frankness with which disappointments and mistakes are recorded. Such records are instructive and attractive just in proportion to the openness of the confessions. Mr. Haggard has much literary skill, and he knows how to turn to best account the history of his errors. The errors and failures serve as the most admirable background to bring out into strong relief the successes and peaceful triumphs. The successes in this well-managed garden have been many, and the mistakes are relatively few.

There are, in truth, two gardens under description, one by the easternmost shore of Suffolk, in England, where the author has waged a vigorous battle with the encroaching sea; the other, a diversified estate of about three acres, with six glass-houses, is the main subject of the present book. The record runs through a varied year from January, 1903, and comes to a close in December, with comments of satisfaction that the months have been, on the whole, well spent, and that the garden is in better condition than when the year began. An American must remember, as he reads this pleasant book, that English skies are not like ours, and, secondly, that the writer of the record has passed much of his active life in a country where the climatic extremes are not wholly unlike those which try our souls. Mr. Haggard evinces a patience under the trials of English weather which has been evolved from climatic conditions in the south of Africa. The sudden and unwelcome changes of weather, in both the large garden and that near the shore, appear to have been borne by the writer with admirable equanimity and even taken as a matter of course. There is not much that can be quoted from the book to illustrate its agreeable style or to indicate the large amount of sound information which it contains, but attention must be called to one statement which shows the good courage that characterized the efforts of this lover of plants.

At the author's place, in Kessingland, in Suffolk, the cliffs and sandy shore are swept by fierce winds from the northeast. Under the steady beating of the wind and sea, great encroachments were being made upon the sandy beach. To protect in a measure this treacherous and shifting barrier, the writer planted a beach-grass (*Ammophila arenaria*) in considerable quantity, and left the plants to struggle for a foothold. Seawalls are worthless as defenders—they are costly and unsatisfactory; but, after five years of Marum grass, the beach had risen about twelve feet in height, in some places coming over the grass itself. In all the high tides not a single clump has been washed away, and the extreme limit of the sea seems to have been pushed back more than twenty yards. Some of the strongly entrenched tussocks of the Marum plants are now three feet through, and hold the shifting particles together firmly, binding them into a band of steel instead of a rope of sand. Along our exposed coast from the elbow of Cape Cod to its finger-tips at Provincetown, there are many places where sand-stays have been tried, but at times with only indifferent success, and they have been used ineffectually on our doomed Sable Island off the coast of Nova Scotia. It would seem as if the good results obtained by Mr. Haggard should again brace up our courage to a renewal of the fight against the sea.

It may be well to call attention also to the excellent judgment shown by Mr. Haggard in his indulgence to his laborers. On his place of three acres, where there were all sorts of plants cultivated, he had a head gardener, an assistant of twenty-one, an old man of seventy, and a general workman. The old man was of little use except to look after an oil-engine and attend to jobs around the house; the general workman came only when he was specially needed. Therefore, the staff consisted of two active men. But the relations which existed between the master and men were so amicable that both employees were loyal in the highest degree. Every now and then the head-gardener, Mason, *would* have his way, and that is as it should be. Nothing does a lover of a garden so much real good as to be now and then sharply headed off in his plans by a skilled workman who is devoted to his craft, loyal to his special garden, and faithful to his master. And nothing does the master more permanent good than to keep his temper during these struggles for supremacy. Mr. Haggard has, in his garden, an even temper, and appears to be a good judge of men. He is certainly, too, an excellent amateur gardener.

The Long Ago and the Later On; or, Recollections of Eighty Years. By George Tisdale Bromley. San Francisco: A. W. Robertson. 1904. Pp. 289.

"Uncle George," eighty-eight years old, who now for the first time ventures upon the field of authorship, is a prince in Bohemia—not in the province of which Prague is the capital, nor in that boundless province whose leaders are found in London, Paris, and New York, but in that limited and reserved Bohemia which maintains a club in San Francisco, famous for its promotion of wit, merriment, and friendship, to say nothing of its contributions to art, letters, and music.

In the outside world, Mr. Bromley has held several positions which might give him title to grateful remembrance upon the Pacific Coast, but doubtless that which would give him most pleasure is "Uncle George of Bohemia." Like his brother Isaac, well known in the newspaper world of New York, he is prodigal in humor, unpremeditated and genuine; much of it, however, so effervescent that its sparkle vanishes at the sight of pen and ink. He is a blend of New England Puritanism and of California freedom. Never unmindful of the lessons of his younger days, he has always been ready for adventure, goodfellowship, and fun. If he had devoted himself to the pen, he might have won a place with John Phœnix, Bret Harte, Mark Twain, and other humorists of California. He has their keen appreciation of droll situations, and their readiness for unexpected sallies, their love of local color, but he has not their command of written speech. At "high Jinks" and "low Jinks," at an after-dinner speech, at an unexpected call in any assembly, he was sure to bring down the house. His healthy frame, his pleasant manners, his overflowing good nature, his spontaneity, his unexpectedness, made him welcome in Tokio, Tientsin, and Pekin, as well as in San Francisco and New York, in the mining camps, on shipboard, or in the more restricted circles where propriety is installed. For example, he was called upon offhand to make a speech at an alumni meeting in Berkeley, where he recognized among the dignitaries on the dais a younger townsman of his, and forthwith volunteered a chapter of comparative biography, which aroused shouts of laughter from the assembled graduates:

"We have known each other long and well. The same lovely New England town that can boast of being his birthplace, I also honored by having been born there; we have flown our kites by the same east-nor'west wind, swam in the same river, skated on the same pond; and, although he was a Congregationalist and I was a Baptist, it did not prevent us from attending the same circus—a yielding of doctrinal points exceedingly rare in those days. I remember well when he left the old roof-tree to plunge into the mysteries and miseries of a Yale college career, and I went whaling; he to consume the midnight oil, and I to furnish the supply. And now here, in this far-away land, we find our oc-

cupations running parallel. He is here in Berkeley, teaching the young to go forth and fight the battle of life, while I am in San Francisco, caring for the understandings of the people by running a street-sweeping machine."

Any one who wishes for an inside view of the Bohemian Club has only to run his eye over these pages. One of the best chapters describes the reception of Henry Irving.

Mr. Bromley's life has not all been spent in Bohemia. In his youth he was a sailor, looking for seals on the coast of Africa; in later days he took an active part in local politics. In an impecunious stage of his experience, an unsolicited opportunity came to him. A Senator in Washington telegraphed: "Sir: You are appointed United States consul at Tientsin. Hope you will accept." This appointment took him to China and Japan, where he had many lively adventures. In later years Uncle George has been the pet of his Bohemian friends; and the verses which they have addressed to him, if not of the finest poetry, are full of the finest appreciation of a capital comrade, born to make life merrier and to relieve its burdens and anxieties by good spirits and good will.

Sydney Smith. By George W. E. Russell. (English Men of Letters Series.) Macmillan. 1905.

Sydney Smith was born in 1771, "of the most numerous and most respectable family in England," as he used to say of the whole tribe of Smiths. When some one asked him about his grandfather, he replied with becoming gravity: "He disappeared about the time of the assizes, and we asked no questions." He was forced into the Church, as so many Englishmen have been, because his father could not afford the Army or the Bar, and he always thought himself a great lawyer *manqué*. He was a born reformer. If he had been a lawyer he would have tried to reform the Bar, but there was plenty of room for his activity in the Church. He was the managing type of ecclesiastic, who, when he has given a genial and uncritical assent to the Church's doctrines, turns with zest to the business side. He could never forbear a joke at the expense of his profession; but, as he looked back on the social changes that he had lived through, he saw that there had been a real improvement in the morale of the clergy. "Whenever you meet a clergyman of my age," he said to Gladstone, in 1835, "you may be quite sure he is a bad clergyman."

In theology he took little interest, and there are anecdotes to prove that his acquaintance with the Bible was somewhat superficial, that he had to be reminded by a neighboring squire of the names of Job's daughters, and could not tell you offhand whether certain famous passages were in the New Testament or the Old. He was not the sort of parson who becomes a bishop, and he could not tolerate interference from one of these dignitaries. One of his most trenchant reforming articles is called "Persecuting Bishops," and it is no wonder that bishops themselves are apt to read the substantive in that title as an accusative.

A man with a taste for reform could not in the last half of George the Third's reign keep his hands off politics. The question of Catholic Emancipation was the theme of Sydney Smith's famous 'Letters' written under the pseudonym of "Peter Plymley." Canning and Perceval, who were opposed to Emancipation, he could not endure, and some of the bitterest personalities in the 'Letters' are directed against them. From Catholics it was a short step to Irish Catholics and their peculiar grievances:

"The moment the name of Ireland is mentioned, the English seem to bid adieu to common feeling, common prudence, and common sense, and to act with the barbarity of tyrants and the fatuity of idiots. Whatever your opinion may be of the follies of the Roman Catholic religion, remember they are the follies of four millions of human beings, increasing rapidly in numbers, wealth and intelligence, who, if once wrested from their alliance with England, would in three years render its existence as an independent nation impossible."

Conciliate Ireland and all will be well.

What one observes in all these vigorous and amusing 'Letters' is that Sydney Smith has little to say about abstract justice. He can make a better argument by appealing to expediency, and it is in the name of the expedient that he calls for the fair treatment of Irish Catholics. This leads him into reasoning that comes oddly from a clergyman:

"If a rich young Catholic were in Parliament he would belong to White's and to Brookes's; would keep race-horses; would walk up and down Pall Mall; be exonerated of his ready money and his constitution; become as totally devoid of morality, honesty, knowledge and civility, as Protestant loungers in Pall Mall, and return home with a supreme contempt for Father O'Leary and Father O'Callaghan. . . . The true receipt for preserving the Roman Catholic religion is Mr. Perceval's receipt for destroying it: it is to deprive every rich Catholic of all the objects of secular ambition, to separate him from the Protestants, and to shut him up in his castle with priests and relics."

These 'Letters' were often compared on their publication with the 'Provincial Letters' of Pascal, and Macaulay said of them that they proved Sydney Smith to be "a great reasoner, and the greatest master of ridicule that has appeared amongst us since Swift."

Sydney Smith dearly loved London, and grasped at any preferment that would allow him to live there. He passed from an obscure curacy in a Wiltshire village to a private tutorship in Edinburgh, where with Jeffrey, Murray, and Brougham he founded the *Edinburgh Review*. He stayed only long enough to edit the first number, and then left it in the hands of Jeffrey. But the *Review* was always to him not only a useful source of income (he received forty-five guineas a sheet for his countless reviews), but, what he cared for even more, a good outlet for his vigorous opinions.

At the age of thirty-three we find him settled in London, gradually accumulating odd clerical jobs and giving crowded public lectures on Moral Philosophy. He soon became the fashion, and was presented to a living in Yorkshire. But, like all epicures, he cared nothing for the country and pined for society. The happiest period of his life was that spent in his house at Amen Corner as Canon of St. Paul's. By this time he was about sixty, and was content to leave reform to others. "I love liberty, but hope it can be so managed that I shall have soft beds, good dinners, fine linen, etc., for the rest of my life." In spite of his rural exile, he had never lost touch of London society and the Holland House circle, where he was the most brilliant of all the wits, and allowed unusual license by Lady Holland. If there is any fault to be found with Mr. Russell's book, it is that he does not dwell long enough on the purely social side of Sydney Smith. We have page after page of quotations from his militant writings, but few witticisms. The fact is, however, that his wit was of the kind that is hard to take out of the context. It was perfectly spontaneous and well in hand, so that he never found it in the least fatiguing that he was regularly expected to be witty. The bloom is off the fragments now, and the best way to enjoy its quality is to watch for the occasional flashes reported in the memoirs and correspondence of the famous men of his day. His prose style is simple and excellent, and we cannot do better than conclude with a specimen, the *locus classicus* for Mrs. Partington:

"The attempt of the Lords to stop the progress of reform reminds me very forcibly of the great storm at Sidmouth and of the conduct of the excellent Mrs. Partington on that occasion. In the winter of 1824 there set in a great flood upon that town—the tide rose to an incredible height—the waves rushed in upon the houses, and everything was threatened with destruction. In the midst of this sublime and terrible storm, Dame Partington, who lived upon the beach, was seen at the door of her house with mop and pattens, trundling her mop, squeezing out the sea-water, and vigorously pushing away the Atlantic Ocean. The Atlantic was roused; Mrs. Partington's spirit was up; but I need not tell you that the contest was unequal. The Atlantic Ocean beat Mrs. Partington. She was excellent at a slop or a puddle, but she should not have meddled with a tempest."

Mr. Russell's brief but interesting biography is well indexed, and provides such copious extracts from Sydney Smith's writings on all possible subjects that it is not a bad substitute for his 'Works,' which are not easily accessible to the general reader.

Babel und Bibel: Dritter (Schluss-) Vortrag von Friedrich Delitzsch. Stuttgart: Deutsche Verlags-Anstalt; New York: Lemcke & Buechner. 1905. Pp. 69.

The German Emperor is greatly interested in Oriental explorations. He is a patron of the Orient Gesellschaft. Recently he gave 23,000 marks towards the excavations now in progress at Megiddo, in Palestine. He has acquired some of the most valuable archæological remains in the Turkish empire, through his personal relations to the Sultan, notably the façade of the extraordinary building at Mesheytta, east of the Jordan, which was recently removed to Berlin. This interest in Oriental research induced him, in 1902, to accord to Prof. Friedrich Delitzsch the honor of delivering a lecture before the court, which, at the Emperor's wish, was later repeated in the palace at Berlin. Delitzsch chose for his topic "Babel und Bibel." His treatment of the subject raised a storm among the orthodox theologians of Germany; and, by way of answer, a second lecture on the same topic was delivered before the Orient Gesellschaft, in the presence of the Emperor, in January of the following year. These two lectures, translated, with notes answering the strictures called forth by their contents, were published in book form in this country and in England in 1903. Delitzsch has now completed the series by this third and last lecture.

The reader used to modern discussion of

the relations of Assyrian, Egyptian, and other Oriental research to the Bible is somewhat perplexed by the excitement aroused by these lectures. They present no original discoveries. Indeed, it is not in popular books of this sort that the author would undertake to present new discoveries. It is to be presumed that the circumstances of the delivery of the first lectures, and the Emperor's connection with their delivery, seeming to give to their contents the approval of the head of the German State and the Prussian State and Church, had much to do with the sensation which they aroused.

The last lecture, now before us, may be described as a sort of *apologia* for the religion of the Babylonians. Delitzsch writes as an apologist, defending the Babylonian religion against the accusations of idolatry and immorality which have been made against it from the time of the Hebrew prophets onward. His defence against the charge of idolatry is that the images used in worship merely served to indicate the presence of the god represented by them. He maintains, in fact, that their use was the same as the use of images by the most highly cultivated Roman Catholics. This part of his volume is a rather amusing case of special pleading. The writer deals only with selected expressions of the highest thinkers, not with the actual practical religion of the people.

As formerly, he points out the close dependence of very much in Hebrew literature and religion upon the Babylonian; in this lecture especially in the matter of the Psalms. He is concerned, however, only with resemblances and dependences. His presentation gives one, on that account, an impression of undue dependence. There is no recognition of that which differentiates Hebrew religion and literature from the Babylonian; which is of vastly greater importance in the end than that which unites them with one another. The closing part of the lecture deals with the difference between the Sumerian religion and the Babylonian, which replaced it. In the latter, he finds a peculiarly Semitic tendency towards the development of human gods as over against the nature worship of the Sumerians. According to him, the Semitic idea was everywhere one god for one people—an idea developed to its highest degree in Judaism and Islam. Out of the relations to one another of various peoples and cities and their gods was developed, according to him, Semitic polytheism.

The book is written in an attractive style; in parts it is eloquent; it is always interesting, and it is spiritual in tone. It is illustrated by numerous cuts from Assyrian-Babylonian monuments. There are a few notes of a somewhat more technically scientific character than the text, and, as an appendix, a translation of the Psalm of Ishtar.

William Caxton. By E. Gordon Duff. Chicago: The Caxton Club. 1905.

The Caxton Club has celebrated its tenth anniversary by publishing a bibliographical monograph on William Caxton, written by the well-known English bibliographer, E. Gordon Duff. It is a handsome quarto volume of 118 pages, beautifully printed on American handmade paper, with 25 facsimile plates, chiefly of pages in books printed by Caxton, all reproduced in the exact size of the originals. The edition numbers only 250 copies, three of which are printed on Japanese vellum. Each of 148 copies, including those on vellum, is accompanied by "a leaf from an imperfect copy of the first edition of Chaucer's 'Canterbury Tales,' printed by William Caxton, and formerly in Lord Ashburnham's library, having been purchased for this purpose by the Caxton Club." Lord Ashburnham possessed four copies, which were sold at the sale of his library in 1897 and 1898; one was very nearly perfect, the other three had from one-half to three-quarters of the 372 leaves which go to make up a complete copy. Only nine copies of this edition are known to exist, and Mr. Duff states that this first edition is "so rare that it is believed that no genuine perfect copy is in existence." Under the circumstances it is well-nigh incredible that a club of book-lovers could have deliberately destroyed one copy, even though very imperfect, of this first printed edition of one of the earliest classics of English literature.

The author lays much emphasis on Caxton's great interest in English literature; instead of printing Greek and Roman classics, or learned works on theology and law, as did most of the early printers of Italy, France, and Germany, Caxton "gave the people the classics of their own land, and, at a time when the character of our literary tongue was being settled, did more than any other man before or since has done to establish the English language." The scarcity of Caxton's books is a clear evidence that this was good business. Caxton was a successful business man before he became a printer, and presumably did not cease to be a business man when he altered his occupation, though Ten Brink and H. Morley may have insisted too much on this aspect of him. Mr. Duff has not much to say on this question, but stoutly contests Gibbon's and Isaac Disraeli's low opinion of Caxton as "a printer without erudition," who "was reduced to comply with the vicious taste of his readers"—a fight against windmills, it would seem. The earlier bibliographers, such as Ames and Dibdin, are occasionally quoted, and frequent references are, of course, made to Blades's standard 'Life and Typography,' but more recent writers are ignored; not even Dziatzko's important study, 'Warum Caxton Buchdrucker wurde,' is mentioned, though in all important particulars Mr. Duff has reached the same conclusion as that writer.

The complete absence of bibliographical references must be regretted; perhaps the club may supply that omission hereafter. Mr. Duff's book is evidently intended for the collector rather than for the critical student. He describes the several Caxton books with all reasonable fulness, in a pleasant, smoothly flowing style, void of technicalities. In most cases he tells of the whereabouts of the copies known to be in public collections, and gives the number of copies in private hands. It is always carefully stated how many leaves a complete copy should have, including blank leaves, and especial emphasis is laid on the fact that a copy made up of fragments of two or more copies is not genuinely "complete." An appendix gives an alphabetical list of the books printed by Caxton, and after his death with his types, with full collations; the list of plates states in each case with which type the book in question was printed, using Blades's numbering of Caxton's types. This information is supplied in a general way in the text, but the reader is in each case compelled to look either back in the text or at the list of plates, or even forward to the appendix, in order to get all his facts relating to a certain book; and even then he is not able to tell the exact size, either of letterpress or paper, unless the book is represented among the plates. It would seem that a catalogue, arranged chronologically, giving in one place, and in uniform, even if in more technical, terms, the description, collation, and history of each book, would have been more practically useful to both the collector and the student.

A little more care in proofreading would have removed such an inconsistency as the reference to the printer of Caxton's Sarum Missal as "Maynial" in the text, "Maynyal" in the appendix, and "Maynial, or Maynyal" in the index. Though the book bears the imprint 1905, the author's preface is dated May, 1902, which explains a curiously out-of-date reference to the invention of printing. The index is very full; as a curiosity it may be mentioned that the books printed by Caxton are entered under their titles, with references from the names of the authors.

Dante's Divina Commedia. Translated into English Prose by the Rev. H. F. Tozer, M.A. Oxford: Clarendon Press; New York: H. Frowde. 1904.

That any one under the spell of the Odyssey or the Æneid or the Divine Comedy should persist in the Sisyphean attempt to make an English metrical translation of it, is conceivable; but there seems to be no good reason for the multiplication of prose versions, for the qualities to be desired in a prose version are limited in number, and, if they have once been attained, why should the work be done over again? In the case of the Divine Comedy, we believe that Prof. C. E. Norton's translation is so generally excellent—in spirit, in phrase, in style—as to make almost superfluous the new version by the Rev. H. F. Tozer. We say this, although we fully recognize Mr. Tozer's merits. His work seems as satisfactory as that of Mr. Butler, unless it may be urged that Mr. Butler surpasses him in literalness. The most obvious quality of Mr. Tozer's translation is its readableness; its inferiority to Mr. Norton's lies in a less profound Dante scholarship, and in a certain looseness of style which springs now from a tendency to paraphrase, and now from the use of inappropriate words. A few examples will serve, better than much writing, to illustrate these points.

Take, first, the opening lines of the eleventh canto of "Hell":

> "In su l'estremità d'un' alta ripa
> Che facevan gran pietre rotte in cerchio,
> Venimmo sopra più crudele stipa"—

which Mr. Tozer renders thus: "On the edge of a lofty bank formed by huge rocks broken all around we reached a point overlooking a throng of more woful sufferers." Mr. Norton's version is: "Upon the edge of a high bank which great rocks broken in a circle made, we came above a more cruel pen." Evidently, Mr. Tozer's "throng of more woful sufferers" is a loose para-

phrase for "più crudele stipa"; moreover, it is a paraphrase of a dangerous sort, for it represents neither the letter nor the spirit of the original.

As a second example, chosen likewise at random, turn to "Purgatory," vii., 85-89:

" 'Prima che il poco sole omai s'annidi,' "
Cominciò 'l mantovan che ci avea vôlti,
'Tra color non vogliate ch'io vi guidi.
Da questo balzo meglio gli atti e i volti
Conoscerete voi di tutti quanti,
Che nella lama giù tra essi accolti.' "

Mr. Tozer translates this: " 'Until the sun who is sinking attains his rest'—thus began the Mantuan who had directed us—'desire not that I should lead you among that company. From this ridge ye will better observe the mien and the countenances of them all, than if ye were received in their midst in the level below.' " Mr. Norton's version runs as follows: " 'Before the now diminished sun sink to his nest,' began the Mantuan who had turned us thither, 'do not desire that I guide you among these. From this bank ye will better discern the acts and countenances of each and all, than when received among them on the level below.' " Here Mr. Tozer has not only changed the figure of the sun sinking into its nest for a very commonplace substitute, but he has also added unnecessary words, besides the questionable phrase, of which he is fond, "in their midst."

A final specimen we quote from 'Paradise,' xvii., 118-120:

"E s' io al vero son timido amico,
Temo di perder viver tra coloro
Che questo tempo chiameranno antico."

Mr. Tozer: "Yet, if I am faint-hearted in advocating the truth, I fear lest I should cease to live in the memory of those who will call our time the days of old." Mr. Norton: "And if I am a timid friend to the truth, I fear to lose life among those who will call this time ancient." Mr. Tozer not merely paraphrases but dilutes Dante's monumental lines; it is as if he had substituted putty for granite.

The quality of readableness is not to be underrated, but to our ears Mr. Norton has it quite as abundantly as Mr. Tozer; and he has the compression, imagination, and severity of phrase which truly represent those characteristics in Dante's original, but which we too seldom find in Mr. Tozer. It would not be fair, of course, to pass judgment on Mr. Tozer's translation from a few citations, if these were exceptions; but the above are truly typical, and others like them could be taken from every page. A comparison canto by canto simply confirms this impression. By our method of parallel quotations, each reader can decide for himself which version reproduces more nearly Dante's texture of thought and diction, so far as these can be reproduced in the prose of a foreign tongue. As we do not find in Mr. Tozer any fine renderings of difficult passages, or illuminating suggestions, which might give special value to a work in other respects not entitled to great praise, we can say, at most, that his version is readable, but not the best.

Narragansett Bay: Its Historic and Romantic Associations and Picturesque Setting. By Edgar M. Bacon of Tarrytown. New York: G. P. Putnam's Sons.

This sumptuous volume of nearly 400 pages is printed in clear type, on good paper, and illustrated by the author's sketches and a few photographs, and is well indexed. As the title implies, it is a collection of superficial descriptions and colonial legends woven into readable form. The subject is not treated in any orderly way, either chronological, historical, or geographical, and the manner in which the reader is forced to skip from one place to another on the borders of the Bay precludes the possibility of his ever remembering his route. The author is at his best in the retelling of more or less trustworthy legends, and in the description of scenes where there is play for the imagination. Original documents are occasionally introduced, notably in the account of the *Gaspee* affair, to make the story more graphic. And yet there is very little sifting of evidence, traditions being apparently as much accredited as documentary facts.

The book is chiefly deficient in failing to show the powerful influence of the Bay on the social and economic development of the State. The existence of this broad sheet of water, dangerous and navigable with difficulty by the earliest colonists, as furnishing an explanation of the lack of unity between the settlers of Providence at its head and those of Newport at its mouth; the subsequent rise of boat-building and of commerce, which made of the Bay a servant instead of a master, conducing to unity rather than forming a barrier; the influence of the peculiar geographical environment upon Rhode Islanders of the eighteenth century which produced a race of sailors, seafarers, shipbuilders, traders and merchants, and nourished shrewdness, independence and individuality; the presence of so many river mouths on the border of this great expanse of water as contributory to the rise of manufacturing in which the State became preëminent—all these subjects are ignored except as some description or narrative dimly reveals their importance.

The volume contains many egregious lapses from fact that cannot possibly be blamed on the unresisting printer. That Brown University was incorporated in 1769, and had its origin in the town of Warwick, and that the Hon. Ray Greene, United States Senator in 1799, was lieutenant-governor during Gen. Burnside's administration, will be facts undoubtedly new to Rhode Islanders. Numerous other errors, to be sure, such as the misspelling of proper names, may be ascribed to the author's unfamiliarity with the subject, growing out of the fact of his residence in another State.

Type Studies from the Geography of the United States. First Series. By Charles A. McMurry, Ph.D. Macmillan. 1904. Pp. 288.

This volume is in striking contrast to the old geographies, which usually give a series of figures and a few general facts of but little interest to the average child, who naturally dislikes hunting out places on the map for the sake of the practice, apparently, nothing having been given him to fix his interest and attention. This author's plan has been to choose in each locality the point of most general interest, remarking fully upon that, and incidentally to give all necessary information on minor points: a slight reference to the geology (as, for instance, that of the Hudson River valley), a good description of the natural scenery, and usually a sufficiently full account of the principal industries of the region. Places so treated cannot fail to be more real to children, whether it is a question of the brick industries of the Hudson valley, the quarries of stone so much used in New York city, or the tale of the building of the Hoosac Tunnel. Incidentally the author tells of the Mount Cenis and Saint Gothard as well as the tunnel which furnishes Chicago with water. The Gloucester fisheries receive more than a passing notice, and a remarkably clear idea is given of the hardships of the life of the fishermen. Niagara is very fully described—not only the natural beauties, but the powerful energy as well. Thence Dr. McMurry proceeds to the James River, and before a child shall have left his account he will have a fair working idea of the cities, the country, its products, and the rivers which drain into the James. His mind has certainly taken in very fully the value of the river systems of the country, as special attention is given in every instance to them and their effects on the climate, commerce, and health of the people.

Coal-mining next receives an exhaustive description. The output for Illinois alone in 1889 is given as 11,597,963 tons. This would suggest an arctic climate, a notion somewhat modified, however, by the detailed account of the various fruits produced in Florida and California. The logging camps are made very interesting, and stress is laid on differences in soil between the Northern and Middle States forests. The wheat fields of the Northwest in particular—with much mention of Minneapolis and St. Paul as milling and distributing centres for this wheat—the hardwood forests of Ohio and Indiana, the Tennessee mountains, the Mississippi delta with its cotton-growing, are well described. Later on we find a good account of the Far Western States in natural order, in contrast with what we must think to be the weakness of the earlier chapters, where the tale shifts from one section to another for no apparent reason. It would seem that a child would get and keep a better idea of each section should he study it in connection with its neighbors. Apart from this criticism of the order of arrangement, we feel the book to be most admirably compiled.

378 WABASH AVE., CHICAGO

Seager's Introduction to Economics

By Henry Rogers Seager, Professor in Columbia University. 560 pp., 8vo, $2.00 *net*.

F. H. Dixon, *Professor in Dartmouth College:* "Professor Seager has written what is probably *the best text-book on the elements of economics that has yet appeared*. . . . The feature of the book is the exhaustive treatment of the subject of distribution, to which eight chapters are devoted. The mental balance of the writer is here most evident, for in spite of his Austrian training he finds himself unable to follow the Austrian writers in their extreme positions. His acceptance of much of the thinking of the classical school in combination with the more conservative portions of modern theory, results in a presentation which, far from being wavering and indefinite, as one might fear, is consistent, sane, and satisfying."

Bronson's English Essays

By Walter C. Bronson, Professor in Brown University. (*May.*)
A collection of representative essays by Bacon, Milton, Browne, Swift, Addison, Steele, Defoe, Goldsmith, Burke, Hazlitt, Lamb, Landor, Carlyle, Ruskin, Arnold, Pater and Stevenson.

Newcomer and Seward's Essentials of Rhetoric

By A. G. Newcomer, Professor in Leland Stanford University, and Samuel S. Seward, Jr., instructor in the same. (*June.*)
This book will be characterized by an abundance of fresh and suggestive exercises, including drill work on words and sentences, but with emphasis on wholes.

The Temple School Shakespeare

The volumes so far published are **The Tempest** (Oliphant Smeaton), **Merchant of Venice** (R. M'William), **Macbeth** (George Smith), **Julius Caesar** (F. Armytage-Morley), **Hamlet** (Oliphant Smeaton) **Richard II.** (W. Keith Leask) and **As You Like It** (Flora Masson). Price 35 cents *net* each.

Sophie C. Hart, *Professor in Wellesley College:* "Recently I went over them in detail and with a singular sense of satisfaction. To my mind they represent the most intelligent selection of Shakespeare scholarship and research within the limits of a school edition. What impresses me most is the good judgment that lies behind the preparation of the books. The illustrations are charming and give a distinct sense of atmosphere."

Recent Yale Studies in English

Edited by Prof. Albert S. Cook of Yale. Paper 8vo.
(Full list of these "studies" on application.)

The Cross in the Life and Literature of the Anglo-Saxons. By Dr. William O. Stevens. 75c. *net*.

King Alfred's Version of St. Augustine's Soliloquies turned Into Modern English. By Dr. Henry Lee Hargrove. 75c. *net*.

Jonson's Bartholomew Fair. Edited by Dr. Carroll Storrs Alden. $2.00.

——— The Poetaster. Edited by Dr. Herbert S. Mallory. $2.00 (cl. $2.50).

——— The Staple of News. Edited by Dr. deWinter. $2.00 (cl. $2.50).

Otis's Elementary German Grammar

Thoroughly revised and provided with new exercises by W. H. Carruth, Professor in the University of Kansas. xiii.+356 pp. 16mo. 80c. *net*.

The chief features of the revision are a new set of exercises and the fusion of the two parts into one continuous series of thirty lessons; in addition some subjects receive a fuller treatment in the book as it now appears. The new exercises are fuller than the old and have a certain continuity.

Biedermann: Deutsche Bildungszustände

Edited, with introduction and notes, by John A. Walz, Professor in Harvard University. xix.+205 pp. 16mo. 70c. *net*.

Schiller; Minor Poems

Edited with introduction and notes by John S. Nollen, Professor in Indiana University. (*June.*)

Gerstäcker: Germelshausen

Edited with introduction, notes, vocabulary and exercises, based on the text, by L. A. McLouth, Professor in New York University. vi.—124 pp. 16m o. 30c. *net*.

Meissner: Aus Deutschen Landen

With vocabulary by Josefa Schrakamp. 196 pp. 16mo. 35c. *net*.

Sealsfield: Die Prärie am Jacinto

Edited with Notes and Vocabulary, by A. B. Nichols, Professor in Simmons College. 131 pp. 16mo. 35 cents.

A vivid picture of life on the American frontier early in the last century, by Karl Postl, a fugitive Austrian monk who wrote under the pseudonym of Charles Sealsfield.

Nichols's Two German Tales

I. **Goethe's Die Neue Melusine.** II **Zschokke's Der Tote Gast.** With introduction, notes and vocabulary. By Prof. A. B. Nichols. (May.)

Rambeau's French Reader

By Prof. A. Rambeau. 190 pp. 16mo. (*April.*)
This new reader is based upon Passy-Rambeau "Chrestomathie Française," but is not like the larger work in phonetic characters. The matter of the new book is more vivacious and interesting in style than that of the traditional French reader, and includes selections in both prose and verse. The brevity of the book is in accord with the present tendency not to tarry long on a reader.

Schrakamp's le Livre Français

By Josefa Schrakamp. 195 pp. 12mo. 75c. *net*.

Bertha Moscovitz, *Girls' Technical High School, New York City:* "Combines the rare qualities of everyday useful matter for conversation with excellent and interesting reading matter that is specially adapted for memorizing and gives the learner a good insight into the life and feelings of the French."

Margueritte: Strasbourg

Edited with introduction, notes and vocabulary by Oscar Kuhns, Professor in Wesleyan University. 238 pp. 16mo. 35c. *net*.

Zola: L'Attaque du Moulin and Other Pieces

Authorized Edition. Edited by Arnold Guyot Cameron, Professor in Princeton University. 70+288 pp. 16mo. 80c. *net*.

Labiche et Martin: Le Voyage de Monsieur Perrichon

With introduction, notes and vocabulary by John R. Effinger, Professor in the University of Michigan. 128 pp. 16mo. 35c. *net*.

Erckmann-Chatrian: Waterloo

Edited, with introduction, notes and vocabulary, by Victor E. François, Instructor in the College of the City of New York. (*May.*)

The Astor Edition of Poets

is the best for schools and colleges. 93 vols. List price, 60c. per vol. (price to schools 40c.).

ISLAND

For Sale on the Maine Coast

One of the most beautiful islands in Penobscot Bay; one night's journey from Boston and close to regular daily steamboat communication. This property is in the middle of the finest sailing grounds on the coast. The island is a mile in length, and is on an admirably sheltered harbor for yachts or boats, with deep water throughout and close in shore. It comprises nearly 250 acres of high land, a large part of which is finely wooded. There are numerous beaches, coves, and bold rocky shores at almost every point, and beautiful views of surrounding islands and mountains. The property must be disposed of this spring, and will be sold at a low price to settle an estate. Address
JOHN L. DONAHUE, Executor, Rockland, Maine.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.

$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

IN SCIENCE AND MATHEMATICS

Andrews's Botany All the Year Round

New Edition, with Flora

$1.50

A new edition of this popular text-book is now published, including a Brief Flora of the Eastern United States, prepared especially for this book, covering all the flowering plants which are most frequently met with by the beginner in the eastern half of the United States. The use of a complete flora is both difficult and discouraging. The Brief Flora avoids such difficulty, and in addition describes each plant exactly and fully.

Tanner's Elementary Algebra

$1.00

In writing this book the author has aimed to make the transition from arithmetic to algebra easy and natural, to arouse and sustain the student's interest in the work, and to teach him to think clearly and to reason correctly. The exercises are numerous, well chosen, and carefully graded. Great care has been given to the fundamental principles involved. The book is designed to meet the most exacting entrance examination requirements of any college or university in this country.

Ames's Text-Book of General Physics

$3.50

This work provides a one-year's course in physics which is well adapted for use in American colleges. The book states the theory of the subject clearly and logically, and gives a concise statement of the experimental facts on which the science of physics is based. It presents also the accepted theories which correlate or explain them. Every experiment and observation which has an important bearing on our knowledge of physics is mentioned and explained. Numerous illustrations accompany the text.

Avery's School Chemistry

$1.20

This is an entirely new book, and possesses the various pedagogical features that have made the preceding volumes of the Avery series so successful and popular. Clearness and accuracy of statement mark the definitions, directions, and explanations. The experiments are simple and instructive, easily performed, and adapted to the use of inexpensive and easily obtainable apparatus. Unusual space is devoted to chemistry as applied to important industrial processes.

Robbins & Somerville's Exercises in Algebra

$0.50

This contains nearly 4,000 examples, intended to supplement those in the standard text-books, which are often insufficient for many classes. These exercises conform to the arrangement of the leading text-books. The grading of the examples has been made with great care, and neither problems of extreme difficulty nor those possessing the "catch" element have been included. Particular stress has been laid upon those subjects which form the basis of later work.

Hoadley's Practical Measurements in Magnetism and Electricity

$0.75

This book supplies a satisfactory introduction to a course in electrical engineering, and makes the student familiar with the fundamental measurements in electricity as applied to the requirements of modern life. It contains also a preliminary study of the phenomena of magnetism. The method of the book is to make use of a series of nearly one hundred experiments, arranged in logical sequence and each accompanied by suggestive directions and by a simple discussion of the principles involved.

KARL HEINRICH

Erzahlung von Wilhelm Meyer-Forster, edited, with introduction, notes, and vocabulary, by Herbert Charles Sanborn, A.M., Bancroft School, Worcester, Mass.

The story of Wilhelm Meyer-Forster's "Karl Heinrich," which was received everywhere in Germany with such high favor, has been made known to a large number of students in America through Mr. Mansfield's popular play of "Old Heidelberg," which is a reproduction of the story in dramatic form.

The text is that of the twenty-fourth Stuttgart edition, except for the omission of certain brief passages which might have been objectionable in the class-room, and has been corrected for the new spelling as laid down in the latest orthographical dictionaries of Duden and Matthias.

A. S. BARNES & CO. Publishers New York

IMPORTANT MACMILLAN BOOKS

PUBLISHED THIS MONTH

Prof. Edward Channing's A History of the United States

gathers into one comprehensive presentment the evolution of the American people. His orderly, well-balanced statements of fact stand out against a background of wide personal knowledge and deep personal insight. They are woven into a convincing, essentially readable narrative which is consistent in its point of view, and unbroken in its sequence.

To be complete in eight 8vo volumes. Vol. I. now ready. $2.50 net (postage 20c.)

Mr. Herbert Paul's A History of Modern England

Volume III. of Mr. Paul's spirited and vivid picture of the forces and events that have been making modern England for half a century "never fails to be suggestive, stimulating the reader's imagination and arousing interest the more one gets into the subject."—*—Phila. Ledger.*

The volume just ready covers the early phases of the Gladstonian ministry, and the climax of Liberalism in England.

Cloth, $2.50 net (postage 20c.)

Gen. Henry L. Abbot's Problems of the Panama Canal

discusses the whole question from the point of view of the one man who has been most closely in touch for seven years with every stage of the movement for the reorganization of the canal works. Brig.-Gen. Abbot is in a position, as is no other man, to know the exact truth, and makes the whole matter clear as to the climate, the health conditions, the rival routes, the engineering difficulties, and, in short, as to the construction of the best possible canal. *Cloth, 12mo, $1.50 net (postage 12c.)*

Dr. John A. Fairlie's National Administration of the United States

is the first comprehensive and systematic treatment of the administrative portion of our national government. The administrative questions are those most before the public now, and in view of the recent changes the work is exceptionally valuable to every one who has occasion to speak or write on matters of our federal government. *Cloth, 8vo, 274 pp. $2.50 net (postage 18c.)*

Bryan's Dictionary of Painters and Engravers (*Complete*)

A new edition of a work which has no rival for completeness and trustworthiness. Thoroughly revised, with over 1,200 new biographies and more than 4,000 alterations necessitated by modern research.

Five volumes, fully illustrated. Each $6.00 net. (Sold by subscription only.) Write for special terms.

Dr. Percy Gardner's A Grammar of Greek Art

A new volume in the series of "Handbooks of Archæology and Antiquities."

An attempt to make an elementary study of Greek art a part of general classical culture in relations with the study of Greek and Roman history and literature. *Cloth, illustrated, $1.75 net (postage 15c.)*

Mr. William A. Bradley's Bryant

A new volume in the American extension of the well-known "English Men of Letters" Series. Uniform with Colonel Higginson's "Whittier," Benson's "Rossetti," Chesterton's "Browning," etc. *Cloth, 12mo, 75 cents net (postage 8c.)*

Mr. Frederic Harrison's Chatham

"Worthily to portray him is a task at which many an accomplished man of letters has tried his hand, from Horace Walpole to Macaulay, but nobody has produced a sketch so adequate, so sympathetic, yet withal so discriminative, as that for which we are indebted to Mr. Frederic Harrison."—*New York Sun.* *Cloth, 12mo, $1.25 net (postage 10c.)*

Mr. Charles Trevalhan's The American Thoroughbred

A new volume in the "American Sportsman's Library," fully illustrated from photographs. Uniform with the earlier volumes in that well-known library published from time to time under the supervision of Mr. Caspar Whitney, Editor of *Outing*, including the late Dean Sage's "Salmon and Trout," etc. *Cloth, 12mo, gilt top, $2.00 net (postage 15c.)*

Prof. Isaac P. Roberts's The Horse (*Rural Science Series*)

Every detail of the training, cure and breeding of horses is simply and clearly dealt with from the point of view of the farmer. In the binding of the well-known series edited by Professor L. H. Bailey. *Illustrated. Cloth 12mo, $1.25 net (postage 9c)*

Mr. William Roscoe Thayer's A Short History of Venice

A rapid narrative of the structural growth of the Venetian Republic with detailed accounts of its crises and striking episodes. Its emphasis is upon the wonderfully efficient Venetian government and the Venetian character, a union without discord of a genius for the Practical and a worship of the Beautiful. *Ready next week. Cloth, 12mo, $1.50 net (postage 13c.)*

Prof. Davenport's Primitive Traits in Religious Revivals

A scientific description of religious revivals. A fair-minded investigation of the history of the whole subject. A critical discussion of both the harmful and the helpful sides of emotional religious movements. Altogether a timely book in revival controversy.

Ready next week. Cloth, 12mo, $1.50 net (postage 11c.)

THE MACMILLAN COMPANY, Publishers

Sixty-four and Sixty-six Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, APRIL 20, 1905.

The Week.

The flow of post-prandial oratory in honor of Thomas Jefferson on Thursday night suggests the need of a society to protect the original Democrat from his disciples. It is true that the great Virginian's life was so capacious that a precedent for almost any view may be drawn out of that bag. But Democratic opportunist, hesitant expansionist, educator, philologist, inventor, architect, as Jefferson was, the wide mantle of his opinions and activities surely failed to stretch from New York to Chicago at the anniversary dinner. Judge Parker and Judge Herrick cited him as an apostle of equal rights and *laissez-faire;* Mayor Dunne and Mr. Bryan claimed him as the original anti-monopolist, and the prophet of paternalistic control of accumulated wealth, of all means of transportation and communication. All this was developed by the exponents of the Chicago idea quite in the ingenious vein of Mr. Stead's famous pamphlet, 'If Christ Should Come to Chicago.' It only needed Mr. Jerome's characteristic dictum that "Jefferson was a faker" to complete the motley aspect of the commemoration. Of course, the attempt to make Jefferson at once the great individualist and the great socialist is pretty clear evidence of the hesitation in which the Democratic party finds itself. The conservative, we may say the Eastern, branch falls back upon Jefferson's authority for reiterating the old Democratic doctrines of individualism, as if conscious that the appeal sadly needs historic bolstering up. On this point Mayor McClellan spoke with refreshing plainness, forecasting a long delay during which the party must wait for the people to return to first principles. A very similar uneasiness was shown by the Chicago speakers when they tried to find warrant for the present vague and ill-formed anti-capitalism in Jefferson's qualms about issuing patents. To such shifts is a movement that distrusts its own vehemence reduced in the search for authority. In both cases was evident a pretty painful effort to establish an issue, and professions of individualistic and socialistic faith alike evinced a certain unreality.

"The Venezuelan case," it is now announced from Washington, "is a closed incident." The terrible grumble and rumple and roar of the past month has subsided, while President Castro and Minister Bowen disappear temporarily from the dispatches. Where, then, are the asphalt cases? Still in the Venezuelan court, whose processes, as inspired accounts had it only a few weeks ago, "the United States cannot recognize as having any validity." Secretary Taft, whom President Roosevelt left "sitting on the lid" at Washington, is willing to remain sitting there while the ordinary tribunals of a South American nation decide an important case in their regular way. Even the display of righteous indignation over the insulting language of the rash Venezuelan President is silently to be forgotten. The fact that, after calmly looking over the case with care, Secretary Taft may have discovered our former position to be untenable, surely ought not to justify the present pitiful collapse. It was a mistake to leave Taft in charge of the State Department at such a time. Give us Loomis, "acting," again.

The decision of the Isthmian Canal Commission to contract for 2,000 Japanese and 2,000 Chinese coolies will doubtless occasion not a little discussion. Taking advantage of the technicality that, while the canal zone is ours for administrative purposes, the title still resides in Panama, our Government proposes to do through its commission just what it prohibits private contractors from doing in the Philippines, namely, importing Asiatic laborers. The Commission has also sought an opinion from the Attorney-General on the question whether the same legal theory will not enable it to work its laborers for more than the Government eight-hour day. The practical exigencies of engineering work in the tropics have come squarely in conflict with the Chinese exclusion laws and the regulations laid down for Government work at home. As a result, means are being sought for evading these laws. Coolies are to be brought in under contract, worked as hard as possible, and then returned under forfeit. At best, this may be a regrettable necessity.

The President has again shown his disregard for fitness, and his collusion with political bargaining, in his appointments to the Federal bench. Close upon the heels of the promotion of Judge Kohlsaat in Chicago, comes the selection of ex-Governor Atkinson of West Virginia to fill a vacancy in the Court of Claims. Not only is that court one demanding exceptional legal proficiency and versatility; Mr. Atkinson has had no legal training whatever, and very little intellectual training of any kind, having passed from school teaching to the Methodist ministry, to journalism, and to politics. Not one of these fields of employment has any relation to the questions which come before the Court of Claims; and in what civilized country would such a preparation be considered sufficient for a judge of such a court, or indeed of any court except a lay one? Mr. Roosevelt's weakness as a President without legal discipline and experience glares again in this scandal; but if the root of civil-service-reform principle were in him, he would, though no lawyer, have turned in disgust from such a prostitution of his Executive powers.

There is an old-fashioned but salutary ring about the decision handed down on Monday by the United States Supreme Court, declaring the ten-hour bakery law of this State unconstitutional. The somewhat undefined police powers of our commonwealths have as their legitimate object the protection of the safety, health, and morals of the public. These laws have served all too frequently as the disguise under which labor organizations have attempted to create a partial monopoly. This pretence Mr. Justice Peckham, in his opinion, very clearly unmasks. The labor of the baker is in no wise peculiarly perilous to life or limb. The case is not at all analogous to that of the miner engaged in an employment fraught with unavoidable danger to life and health; nor analogous to the employment of women and children, who in some sort are to be regarded as the wards of the State. The learned judge took occasion to observe that there seemed to be a "suspicion that there was some other motive dominating the Legislature than the purpose to subserve the public health or welfare." With the majority of the court he declared that the law's absolute prohibition of the individual baker's right to work for more than ten hours a day was "an unreasonable, unnecessary, and arbitrary interference" with the rights of the individual under the Fourteenth Amendment. It was high time that an effectual stop should be put to the unionist's demand that no one be permitted to work more hours a day than the union deems proper.

The South Carolina dispensary case now pending before the Supreme Court points a curious contrast between the two main sources of Federal revenue. The Constitution confers upon the Federal Government a monopoly of revenue from customs duties. On the other hand, there is nothing in our organic law to prevent any commonwealth from imposing excise duties on the manufacture of such articles as spirits or tobacco, whence nearly half of the United States' revenue is derived, aside from the Post Office. The real deterrent to this action on the part of a State is the fear of driv-

ing such industries into the tax jurisdiction of another State. South Carolina, however, attempted to monopolize the sale of spirits within her borders, whereupon the State dispensary was required by the Internal Revenue Bureau to take out and pay for Federal liquor licenses. The Court of Claims in the first instance nonsuited South Carolina, which sought to recover the amount paid for the licenses aforesaid. That Court held that a State could not, under cover of its police power, withdraw legitimate subjects from Federal taxation. A contrary decision would have jeoparded about one-third of the current income of the Treasury.

The newly created Railroad Rate Commission of the State of Washington encounters at the very outset of its labors a question which has perplexed and exasperated both railroads and shippers for many years. Because the coast cities could be reached by an all-water route from the East, they have received a lower freight-rate than the interior cities, of which Spokane is the chief, although the actual haul is very much shorter to the latter. Spokane had growing business interests, however, and eventually secured a concession from the railroads in the form of a schedule which made shipments from Puget Sound to the region about Spokane unprofitable except in carload lots. Now that the new commission has been created with power to correct abuses, it is this latter discrimination which is first to be attacked. The wholesalers of Seattle are preparing to protest that the rates which they are charged on shipments of less than a carload are unreasonably high. If this is granted, the Spokane merchants are put at a disadvantage to the extent of the higher rate which they have to pay from the East. This rate, owing to the water competition, may be beyond correction. Thus, the section most anxious for the new railroad law will perhaps be the first to suffer from its workings. The case well illustrates the inevitable complexity of the rate-making problem.

As an indication of Chicago's sympathy with radicalism, the return of Frank D. Comerford to the Illinois Legislature is quite as significant as the election of "immediate municipal ownership Dunne." It will be recalled that the young member from the Second District was recently expelled from the House at Springfield because he had charged that "grafting" was going on there. A whitewashing committee declared that he spoke without knowledge, but refused to go into the case seriously. The seat being declared vacant, young Comerford stood for reëlection. The conservative press was against him, but he had no trouble in winning. Now he says that he means to take up his crusade at Springfield again. His programme includes the introduction of a bill intended to accomplish what Gov. Folk has accomplished at Jefferson City—the control of lobbyists. "I'd require them to make regular reports to the Governor," he says, "just like convicts on parole." He has also marked the railroad-pass evil for attack, and will endeavor to pass a law requiring the Speaker of the House of Representatives of Illinois to appoint all committees within ten days of the opening of the session. A programme thus made up does not appear unduly radical, yet it is planned by the Legislature quietly to sidetrack Comerford—as Robert (Anti-Pass) Baker was sidetracked at Washington.

Gov. Johnson of Minnesota managed to get along smoothly for three months with the Republican Legislature of his State. Had not Minnesota just completed a new and magnificent capitol, the friendly relations might never have been disturbed. But the new building had to have a custodian, and under him an army of employees. The immemorial custom had been for the Governor to control such appointments, but the Republican legislators could not sit still and see a Democratic Governor shake down those plums. They promptly drafted and passed a bill taking control of the capitol out of the Governor's hands entirely. He vetoed it. The Senate in retaliation has refused to increase the Insurance Commissioner's salary, and threatens to deprive the Governor's private secretary of his former perquisites as a notary. "Now," observes the St. Paul *Dispatch*, "we see the rift in the lute, the break-up of the era of good feeling and of feeling good." A squabble over a number of firemen, janitors, and scrub-women has been allowed to block the efforts at conscientious and non-partisan legislation on matters which really concern the State.

Frank S. Black's plan to overthrow Odell as boss is not being accepted with enthusiasm by Republican politicians. A few of them, who are in Odell's blacklist and know that they have nothing to lose, are declaring their adherence to the forlorn hope. Against these malcontents may be lined up a more formidable battalion of fighters who are thoroughly committed to Odell, and who must now stand by him at any hazard. The neutrals inevitably side with the ins rather than the outs. They may detest Odell and his methods; but Odell carries the "dough-bag," and they will not cut themselves off from this base of supplies until they are sure Black is the coming man. If Gov. Higgins or President Roosevelt should openly favor the Black faction, then Odell's position would be precarious; but, barring the help of a god from the machine, the siege of the Odell stronghold is a desperate undertaking. Not that a boss more strongly entrenched than Odell has never been hurled from power. The indignation of the rank and file of the party, the general desire for honest and able leadership, may do the work where the scheming of politicians fails. The indignant rank and file, however, the champions of honesty, will never take the trouble to revolt against Odell in order to set up Black.

The facts made public on Thursday regarding the heavy decline in the Equitable Life's new business since the company's internal dissensions have been known, probably surprised no one familiar with the insurance field. They point unmistakably, however, to one conclusion. The investigating committee must lose no time in weighing the evidence and in framing and publishing its report. Ordinarily, considering the mass of data which must be reviewed, very large allowance for delay would be made. But the Equitable situation admits of none but unavoidable delay. Confronted with another investigation, by the Insurance Department of this State, possibly with similar moves by the insurance authorities of other States, and with great demoralization among its agents, the interests of the Equitable itself demand the earliest possible answer to the vague accusations and insinuations which have already been too long left unanswered. The experience of the New York Life with its own internal troubles fourteen years ago ought to be conclusive as a precedent. So long as its directors were passing "harmony resolutions" and deprecating hurtful publicity, the New York Life continued to lose business at a rate that was all but ruinous. Publication of a frank and unsparing report on past abuses—even where those abuses were most scandalous—and public evidence that their recurrence had been made impossible, resulted in such a return of business to the company that the lost ground was almost instantly regained.

Gov. Douglas of Massachusetts has once more shown his independence of the party machine in Boston by appointing to the chairmanship of the police commission Col. Charles H. Cole, jr. Instead of being a seasoned ward worker, the new head of police is a young man of thirty-three. Nearly fifteen years of experience with the State militia and a few months on the Governor's staff have been judged a better preparation for taking command of a city's police force than the ability to swing an organization into line at a municipal or State election. Naturally, the politicians are bewildered. They are discussing a probable "breach between the State House and City Hall."

They are shocked that the Governor should ignore an alleged promise made during his campaign last fall that the Mayor should have the naming of the head of the Police Board. But the Mayor's choice fell upon the head of the Democratic city organization, a man more efficient in politics than in anything else. The Governor wisely decided not to take him away from his favorite occupation, and "went ahead on his own hook" in appointing Col. Cole. "Considering what the city escaped," says the Boston *Transcript* in discussing the choice, "the general public ought to be in pretty good humor."

The Massachusetts Labor Bulletin for March cites some interesting statistics indicating the percentage of wage-earners' children in normal schools and colleges. Returns from eight colleges in Massachusetts and one in New Hampshire show that, of 5,548 students, 43 per cent. are the children of business men; 24 per cent. of professional men; 7 per cent. of farmers, and 13 per cent. of wage-earners. Three schools of technology yield somewhat simliar results, except that only 12 per cent. of the technical students have fathers engaged in the professions. Similar investigations, based on replies from 1,658 students in ten normal schools in Massachusetts, disclose the fact that 45 per cent. of their pupils are sprung from the wage-earning stock. Our higher institutions of learning thus seem to show a healthy societary circulation. If Professor Marshall, the eminent English economist, is right in his estimate that half of the natural genius in a country is born within the class of manual labor, it would seem that there is no insuperable bar in this country to educating the promising section of this class. When Amherst, Harvard, and Williams show one-tenth of their students to be from the more capable wage-earning class, our colleges seem fairly guiltless of countenancing what Professor Marshall calls "that wasteful negligence which allows genius which happens to be born of lowly parentage, to expend itself in lowly work."

Among the official announcements from the Alabama State House is the following: "Gov. Jelks yesterday appointed C. M. Sherrod as Mayor, and R. H. Tweedy, A. F. Rebman, E. V. Chardavoyne as Aldermen of the town of Courtland, to hold office for the next two years." Thereby hangs a tale. Courtland was a Republican town, and was accordingly governed by Republican officials until five years ago, when the Legislature passed a law empowering the Governor, who is, of course, uniformly a Democrat, to appoint both Mayor and Aldermen. "But it saved the town from negro domination," will be the natural comment. On the contrary, the last census showed only twenty-one negroes in the whole of the county in which Courtland is located. Yet not even Pennsylvania's "ripper" bills ever went more than half so far in destroying local self-government. That the intolerance which denies political privileges to the black man can be turned on occasion against the white who differs with the dominant party of the State, is again perfectly plain.

Speaker Cannon is reported to be willing to assent at the next session to the creation of a public-buildings commission at the capital. As the *Evening Post's* Washington correspondent points out, there is no issue of economy involved in this question. With or without the services of advisory experts, the Government is certain to erect new buildings at Washington from time to time. The only question is whether these shall be considered as parts of a general scheme, or located, haphazard, each one for itself, with no reference to their harmonious relations with each other. Last year, for instance, the Secretary of Agriculture, with Mr. Cannon's approval, wanted to put the new building of his Department in the beautiful Mall, an ideal site so far as that particular edifice was concerned, but absolutely destructive of the magnificent vista between the Capitol and the Monument. This threatened encroachment was averted, but a similar question may arise the very next time a great building has to be located. It is altogether deplorable that the work of the Burnham Commission, which merely amplified and perfected the original plans of Major L'Enfant, should have become involved in the entirely extraneous question of Senatorial aggrandizement.

It seems certain that Mr. Chamberlain has patched up a truce with Mr. Balfour, whose partial programme of retaliation he accepts for the nonce in lieu of the whole reciprocity plan. Presumably, then, Mr. Chamberlain will call off his independent candidate in Lord Hugh Cecil's constituency; otherwise professions of loyalty to the Government will have little meaning. Whether this adherence to party regularity involves the abandonment of his vast scheme of imperial federation, it would be premature to guess; it evidently proves that the campaign is dwindling. When Mr. Chamberlain left the Ministry it was to give Mr. Balfour space to follow after with prudent ease; Mahomet departed a sufficient interval from the mountain to admit of a convincing miracle. The miracle delaying to take place, Mahomet now returns. The incident will hardly bring credit to the prophet at a time when his doctrine is being kicked about by unbelievers all over Britain.

When the "Wee Kirk," consisting of a handful of Highland parishes, got legal possession of the rich property—including, as well as churches, parsonages and universities—of the United Free Kirk of Scotland, it was felt that the law had worked a great injustice. The larger body was dispossessed of buildings and endowments its congregations had enjoyed for years in good faith; the original covenanters were put into possession of hundreds of pulpits which they could not properly fill. So embarrassing was the unexpected success of the long litigation to the "Wee Kirk" that it gladly let the Free Kirk in most instances continue its tenancy on sufferance, pending a Parliamentary investigation. The commission has come to the apparently equitable decision that the small body of Free Kirkers which had opposed the union with the Presbyterians is entitled to the enjoyment of such property of the unionists as it can use. A remedial bill to this effect will be introduced in Parliament. Clearly, it will be difficult to define the capacity the "Wee Kirk" has in this matter, or at least to arrive at a definition wholly satisfactory to the Wee Kirkers. But the problem is, after all, in its mere legal aspects not so different from the apportionment of "a reasonable allowance" to an individual whose property is under distraint.

Baron de Constant, the well-known advocate of international arbitration, made a notable speech last week in the French Senate, urging a proportional reduction of the military and naval forces of the various European States. He cited the laudable example of Chili and Argentina to show that such joint action was within the realm of practical diplomacy. Baron de Constant contended that the present and prospective outlay upon the French navy, which contemplates the expenditure of $290,000,000 in the next twelve years, was "ruining France under the pretext of protecting her." He further proposed a practical initiation of the project by negotiating an Anglo-French agreement for mutual limitation of naval expenditures, and for securing the adherence of other nations to the plan. This beating of swords into ploughshares and spears into pruning-hooks on the instalment plan is worthy of careful consideration and adoption. It is a remarkable thing that where big industrial concerns see that competition is the death of their profits, they can readily restrain the ravages of their wasteful rivalry, even though sometimes at the expense of the consumer. Nations, however, in their career of "emulative exhaustion" are unable to get together, despite the fact that this basis of mutual concessions, instead of injuring a third party, would cause millions yet unborn—and not alone their own subjects—to rise up and call them blessed.

OUR ITALIAN IMMIGRATION.

The Italian Government exercises through the law of 1901, which has been called by non-Italians "the finest example of contemporary social legislation," a legitimate and beneficent function little known to American writers on immigration. That law imposes a tax on every prospective emigrant—not exactly a proof of governmental encouragement. It forbids an emigrant to leave the kingdom without a passport issued by the local authorities. Such passport cannot be issued to a person who has been convicted of a crime involving moral turpitude; or, if it is issued, the criminal record of the applicant is given. If our own immigration law would provide for the exhibition of a passport (which every Italian immigrant carries), it would ensure a better certificate than the present absurd provision for asking an immigrant if he is an anarchist or a polygamist. Official instructions from the Italian Emigration Department to prefects in Southern Italy read as follows: "It is our plain duty, imposed by loyalty to the Government of the United States, to avoid any act on our part which might render difficult the application of the Federal provisions enacted for the purpose of sifting out the best immigrants." A little of this spirit of loyalty and good will on the part of the American Government towards Italy would go far to effect some international agreement regarding immigration, of general mutual benefit.

That the Italian Government is not opposed to such a plan is readily proved. Last year the Italian Emigration Department sent here one of its inspectors, Chev. Adolfo Rossi, not merely to study American conditions, but to get in touch with American immigration officials. The interviews had by Signor Rossi with Commissioner-General Sargent and the then Commissioner at New York, Mr. William Williams, are not mentioned in Mr. Sargent's last annual report, yet some very practical suggestions were made looking to the better enforcement of existing laws. Signor Rossi called Commissioner Sargent's attention to the necessity of the American Government's enforcing a very useful United States statute—article 4 of the United States Passenger Act—which provides that immigrant ships shall have suitable space for immigrants to sit down at table for their meals. It was pointed out that 90 per cent. of the immigrant ships entering the Port of New York violated this provision, and the evidence collected by Commissioner Williams during Signor Rossi's stay bore out the complaint. Such violations mean that, during stormy weather, steerage passengers, who often exceed 1,200 on a single ship, are fed in their berths. Imagine the hygienic conditions in the crowded steerage, with portholes and hatches closed, and many of the immigrants sick. We believe Commissioner-General Sargent has taken no action on such violations, not even mentioning the matter in his annual report.

It is well known that Italy allows United States medical inspectors to examine emigrants at ports of departure. Certainly this is some evidence of her willingness to aid in the enforcement of our statutes. An inspector at Naples, being asked why it was that he allowed certain emigrants to sail, some of whom, such as cretins, were, even to a layman, visibly physically unfit, declared the trouble to be with our statute, which gives inspectors the right to exclude only emigrants having certain diseases, notably infectious or contagious. Cretinism thus does not fall within the Federal provisions, and the victims of it are therefore allowed to sail, though certain to be rejected on their arrival.

It is generally said that the examination of the emigrant should be at the place of origin rather than at the place of arrival. The opinion of Italians in Government, political, and journalistic circles is that Italy would permit American boards to sit in Italian ports if the subject were properly presented. If our immigration authorities, instead of sending secret-service men to discover dark and fearful plots on the part of European governments to dump their criminals here, would resort to the more dignified policy of frank coöperation with a friendly nation through diplomatic channels, an international conference on immigration would certainly be possible.

Italian official reports might be cited urging the Italian immigrant here to higher standards of life, to become a citizen of his adopted country, and to avoid incurring the enmity of the working classes by selling his labor at less than current wages. Thinking Italians are convinced that the Americanization of the Italian immigrant is not only unavoidable, but desirable. Conditions in this country are entirely different from those in South America, where Italy may dream of a political future. They appreciate the endeavor of Americans to aid the Italian immigrant during the trying ordeal of his first experience here. The New York colony of itself has never been able to maintain successfully an institution of any influence or importance. The Italian Home was a terrible failure; the Italian Immigrant Aid Society lived only a short time; the Columbus Hospital is a religious, not a colonial, institution. The one bright spot is the Benevolent Institute, but its comparative success is due not to the interest of the colony, but to the generosity and unceasing work of one man —Celestino Piva. "The Society for Italian Immigrants at New York," said a member of the Italian Senate, "does more and better work than any Italian Immigrant Society abroad." And the late Commissioner of Immigration at Rome, in his last report, said: "We owe thanks to those American citizens who constitute a majority of the members of the Society [for Italian Immigrants] who assist our Italian laborers. They furnish an admirable example of civic charity, for, busy as they are with their own affairs, they sacrifice time and money to assist a foreign people in finding occupations useful both to them and to the country of adoption."

It is apparent, then, that both public and Government opinion in Italy would not oppose, and very likely would favor, any fair proposal by this Government for a better system of selecting and distributing Italians coming here. But a very different policy from the one now in vogue would have to be followed. To deal with Italy as if she were a South American republic, to substitute the Big Stick for the necessary courtesies of diplomacy—above all, to approach the question in any other spirit than that of equality, sincerity, and trust in the honesty of the other high contracting party—would be to doom the enterprise from the beginning.

"UNDERWRITING" AND THE EQUITABLE.

The public has not had long to wait for the first tangible results of the searching questions addressed by the Frick investigating committee to the Equitable management. Scarcely a week had elapsed when confessions of the most damaging sort were already being made by implicated parties. We say confessions because, manifestly, Mr. Hyde's revelations, in his letter of the 15th to the committee, would never have been made but for the intensity with which the searchlight of public inquiry has been turned upon the company's affairs. Mr. Hyde's deposit with the Equitable's treasurer of his profits in past "underwritings" where securities were sold to the Equitable Company, was by his own statement not contemplated until "the outset of this controversy." This is Mr. Hyde's review of the transaction:

> "There has been a syndicate known as 'James H. Hyde and Associates,' including James W. Alexander, president of the society, whose participation was always equal to my own, and this syndicate had been underwriters of a number of banking issues of securities, and the Equitable Society purchased, in some instances, in the ordinary course of business, securities which had been underwritten by this syndicate. At the outset of this controversy, Mr. Alexander and I were both advised by counsel that as to any such syndicate transactions in which any officers of the Equitable Society had been interested, a full statement should be made up and laid before the board of directors, and whatever law and justice required regarding them should be done by the officers concerned. Following the advice above referred to, I examined all these syndicate transactions and deposited my check for $61,446.92 with the treasurer of the Society as trustee. This amount represented my entire profits from syndicate transactions of the character above mentioned, with 6 per cent. in-

terest up to the date of such deposit period."

The statement concludes with the further assertion that Mr. Hyde admits no wrongdoing, and that the transactions referred to were "made with the sanction of universal precedent."

We have no other information as to the "underwritings" in which "James H. Hyde and Associates" were engaged. It may be as well, however, to outline clearly what is the nature of these undertakings. On the basis of such knowledge, we think the reader can draw his own conclusions as to the propriety of a high officer in a life-insurance company participating in a syndicate of this sort and selling the "underwritten" securities to his company. The purpose of underwriting, in this sense, is to guarantee a market at a price for new securities. These securities may be good or bad, sound or rotten; they may be an issue of United States Government bonds or the stock of the Shipbuilding combination. The syndicate, unless it can find a market for the underwritten securities elsewhere, must promptly pay the contracted price. Two necessary inferences follow: one, that the underwriter's profits depend altogether on the price at which he can sell the securities in question; the other, that the inducement to "unload" in a friendly quarter becomes greater as the prospects of the "underwriting" grow less favorable. Thus it must be clear to the simplest intelligence that the possibilities are such as to make the Hyde transaction with the Equitable Society indefensible in both law and morals.

Mr. Hyde very prudently refrains from any defence based on the smallness of his profits in the underwriting. Half a dozen years ago, such an argument might have been employed. To-day, with the incidents of 1901 and 1903 fresh in mind, the public has a pretty clear notion of what Wall Street underwriting may involve, and is not at all likely to pass lightly over any sign of the use of a life company's resources in such a connection. It will infer, very naturally, that Mr. Hyde's $61,000 is not the final accounting in this direction. The sixth question put by the Frick committee asked for a statement of "all the so-called underwritings by the Society." If the Equitable management has clean hands to show in connection with the wild "promoting deals" of 1901 and 1902, it will have reason to thank the framer of that question.

As a matter of fact, during that time of madness nothing was more disquieting to cool-headed financiers than suspicion as to the employment of life-insurance surpluses. Whose money stood behind the amazing performances of the "second Steel syndicate," the Shipping Trust underwriting, and the United States Shipbuilding promotion, the banking connections of which have, to this day, been veiled in mystery? That there was life-insurance participation in some of these undertakings, has long been known. It will be no misfortune if we now learn exactly how much and how little this one great company had to do with them. Believing, as we do, that such participation was questionable in the highest degree, we think also that full public information on the facts is very desirable. It is time that the public learned whether or not these institutions have been or could be used to support the ambitious schemes of promoting or speculating financiers. Whatever the facts developed, we are convinced that good will come of their disclosure.

We have said little as to the legal irregularity of the transaction described by Mr. Hyde. It appears to us, however, to be abundantly covered, in both language and intent, by the severe prohibitory paragraph of the Insurance Act providing that "no director or officer of an insurance corporation doing business in this State shall receive any money or valuable thing for negotiating, procuring, or recommending any loan from any such corporation, or for selling or aiding in the sale of any stocks or securities to or by such corporation." Nor do we propose to enter into the controversy as to whether Mr. Alexander's alleged participation in this "underwriting" of "James H. Hyde and Associates" made the matter worse or better. We hold a brief for neither faction; but we are very sure that the investigation into the whole Equitable matter cannot now be stopped until the last stone is turned in the public view, and the record of the responsible officers made clear.

A REVIVIFIED UNIVERSITY.

The installation of Mr. Edwin A. Alderman as President of the University of Virginia, so worthily celebrated at Charlottesville on Thursday, unquestionably marks the beginning of a new era in the history of that famous institution. This is not merely because, disregarding a sacredly observed tradition, it has at last chosen a responsible executive in place of government by its faculty, marshalled merely by a chairman of limited powers. Speaking generally, there have been two great periods in the University's history: the ante-bellum and the post-bellum. From its foundation until the civil war, it was the home of able scholars and the especial pride of the South, beside which the other institutions below Mason and Dixon's line were often not much more than flourishing high schools. As President Alderman said in his inaugural: "To the Southern man of middle life *the* university meant *this* university." Since 1865 it has recovered but slowly from the ravages of the war, not, however, because its buildings have not been thronged with students. To have been even for a time at Charlottesville is a distinction as clearly prized in the South to-day as a Harvard degree in Massachusetts.

Yet the University of Virginia has attained only tardily and in part that material prosperity which many sister institutions have long enjoyed. The destructive fire of ten years ago was needed to arouse public sentiment to the lack of proper facilities and to insure the construction of those buildings which to-day make it so notable architecturally. Mr. Carnegie's offer of half a million, conditional upon an equal sum from other friends of the institution, now assures for President Alderman's administration a gratifying increase in teaching efficiency. From the educational point of view the need of additional endowment is very great. Good as the teaching at Charlottesville has been, it has smacked of the text-book more than of the scientific spirit of the modern university. Indeed, as compared with Harvard or Michigan, the University of Virginia has contributed scarcely more than a "conception of culture as a compound of sound learning and gracious conduct." Though Jefferson himself is properly credited with being the first American to see in the distant future the outlines of the Germanized university of to-day, his own institution, the last of his "mortal cares" and the "last service" he could render his country—as he himself expressed it—has fallen short in the search for the truth.

Some of the reasons for this have already been touched upon. The lack of a president, the want of means, and the inability to set up a rigid standard of entrance examinations because of the absence of good preparatory schools, have all had a part. Students have entered almost as unquestioned as if attending lectures at Heidelberg; but comparatively few have been able to obtain their degrees, and still fewer have gone away with the investigator's zeal fully aroused. So, too, the University's location in the South has handicapped it, with its consequent attachment to a social order which denied freedom of thought even to its own citizens throughout the slavery era, and which is only now faintly aware in a few places that freedom of speech and thought is absolutely essential if a university is to be true to itself and to its community.

Right here lies President Alderman's greatest opportunity. At Vanderbilt, at Sewanee, at Washington and Lee, at the University of Georgia, and at Trinity College, Southern professors have begun to find their tongues, and to say their say without stopping to ask the cost. They have dared to criticise the deeds of the past, yea, even the existing order, and, though it has thundered and lightened, the skies have not fallen, and the academic atmosphere has thereafter been

sweeter and purer and far more inspiring. Now is the time for the University of Virginia to throw off that provincialism to which Dr. Alderman pleaded guilty so gracefully, and to enter more fully into the companionship and spiritual life of her sister universities of the North and West, from which the bitternesses and the memories of the past have not unnaturally cut her off to a greater or less degree.

Never in all the history of the South has there been a greater need for her universities to serve her well than to-day. The whole Southern country is athirst for education. Colleges and schools are feeling as never before the quickening impulse of rich gifts from North and South. There is under way an economic revolution which for the first time bids fair to develop all the vast material resources of the old slave States. The negro, hitherto a burden, even when most highly prized as a chattel, is lifting himself into prosperity and usefulness with fairly astounding speed. Yet with it all there is a deplorable lack of intellectual and of moral, as well as of brave and honest political, leadership from Virginia to the Gulf. Never before in the land of Jefferson has there been such a call for enlightened statesmanship. And of all the patriotic teachers of the South to-day no one has a more splendid opportunity than President Alderman. Equipped with a rare gift of eloquence, admirably trained by learning and by experience as the head of two institutions, on him now depends how valuable a service "*the* university" is to give, not merely to the South, but to the North. His own moving inaugural plea for spiritual freedom and for economic independence and justice is a happy omen for his administration.

THE ART SITUATION IN NEW YORK

Rumors of merger of the art organizations of this city come with a rapidity fairly recalling the spacious days when the United States Steel Company was in vigorous if embryonic growth. It will make for clearness to note that there are really two proposals for alliance, each quite distinct from the other. First, it is proposed that the Society of American Artists should rejoin the National Academy of Design; second, Columbia University has made overtures for a more or less formal alliance with the Academy and the Metropolitan Museum. The intention is that all three should coöperate for academic and practical instruction in art after the fashion of the École des Beaux-Arts. About two years ago Columbia advertised large expectations in the direction of the fine arts; President Butler's letter brings the project within the range of discussion.

As to the proposed union of the Society and the Academy, it would be most heartily welcome. To-day there is no real rivalry between them. The issues of 1905 are not those of 1877. The Paris trained independents who nearly thirty years ago set up their standard in defiance of Düsseldorf and the Hudson River School, are to-day grave and reverend seigniors—academicians in temper and, many of them, in name. For years the dissidents have been slipping back by a process of "painless penetration" to the older body; to-day about one-third of the Academicians are members of the nominally hostile society. Meantime the pressure of the Society—for many years a genuine representative of modern ideas—insensibly liberalized the Academy until there was little to choose between the two juries on the score of openmindedness. Indeed, there was some danger that the venerable Academy might seem more wide awake than the secession—by as much as Tory radicalism exceeds Radical radicalism. There is no reason, then, why the form of a separation no longer real should be kept up. The Academy will gain from an accession of young blood; the Society's work of liberalization is done, and, in view of the very practical and sentimental advantage of Academy membership, it can well afford to sink an honorable identity in the patriotic cry, *Vivat Academia.*

Whether the reinforced Academy with the Metropolitan Museum should enter into a close alliance with Columbia University is a more debatable matter. Until the exact nature of the federation is known, criticism can only be of a very general and tentative sort. One may fairly assume, however, that the University will support all the lectureships on the theory of art (æsthetics) and on the history of art; that the Academy will continue to control its own exhibitions and schools of painting, sculpture, and engraving; that the Metropolitan Museum will merely offer its facilities more freely than heretofore to students of the Academy and University. Such an attitude is only a resumption of an old *entente*, under which Columbia University supplied lecturers, the Museum the halls and the use of the collections. Under Sir Purdon Clarke it is certain that students of whatever affiliations, or none, will be hospitably received; indeed, the provisional management has already worked a gratifying change in the old habit of indifference to students' needs. For the future it may be assumed that accredited lecturers, whether of the sedentary or peripatetic sort, will be welcome. To-day, any Columbia professor who desired to expound any collection to his pupils could doubtless pass as freely as Ernst Curtius used to with his "Peripatetiker" through the halls of the Altes Museum. In other words, the alliance of the Museum and the University would involve very little except frank interchange of courtesies and facilities, with, in part, a common personnel on the two boards of trustees. Already this exists in substance, and any nominal federation will obviously be *Columbiæ in majorem gloriam.*

On the other hand, an alliance between Columbia and the National Academy would be of a more serious sort; it could hardly fail to bring prestige to Columbia; it might seriously prejudice the future of the Academy at a time when it is full of promise. At the outset, a University has nothing to do with the training of artists *per se.* So far, then, as the Academy is a teaching body, it has little to gain, except an undesirable site, by coming under the wing of the University. The freer, one may say, the less academic, the training of an art school is, the better. Furthermore, the exhibiting function of the Academy would be much better exercised independently and at a distance from the University. It would be unfortunate if our great annual exhibitions should be held at Morningside Heights instead of in some more central location; it would be a very unhappy outcome of the proposed merger if the Academy show should become a mere appanage of the University as the old Salon is of the Institut de France.

This is said in no unfriendly spirit towards a plan which may contemplate so close an association neither of sites nor of interests, but only that the Academy may count the cost. From the University it has rather little to gain; a small number of its more intellectual pupils may follow the Columbia courses in æsthetics and history of art; its schools will be at the disposal of Columbia students who for any reason desire skill with brush or pencil. All this might easily be arranged by courtesy or by mere commutation of tuition fees. In other words, nominal federation with Columbia would mean little more in the case of the Academy than it did in that of the Museum. By borrowing the names of two art institutions, Columbia might get the appearance of an art department, but hardly the reality. If Columbia wants a university faculty of the fine arts, her course is simple: she has merely to release for instruction in the fine arts competent professors now assigned chiefly to other subjects, and to appoint new professors where her present staff does not suffice. The rest is merely supplementing adequately the already notable collection of art reproductions in the Avery Library. If Columbia will but organize a force of teachers competent to teach art—to undergraduates as a means of liberal culture; to graduates as training in research—she may count upon the coöperation of the Metropolitan Museum, and, we are confident, of the National Academy of Design. In fine, Columbia's proffer of alliance remains rather empty until Presi-

dent Butler can point to a properly organized faculty in the main branches of art history. The proposed merger should indicate that such a department is in active process of formation.

A MUSICAL COPYRIGHT STRIKE.

The cabled news that a score of London music publishers, including many of the leading houses, have made an agreement not to print any new compositions or to sign any contracts with singers, players, or composers until Parliament consents to amend the musical copyright law, does not reveal a hitherto unheard-of state of affairs. A similar strike was begun last year, but on a smaller scale, and with the same object, namely, to get the printers and other allied trades to bring strong pressure to bear upon the Government to stop the present wholesale pirating of music. Now, it is hoped to tie up completely the publication, if not the production, of new tunes, until Parliament in self-defence surrenders—if only to limit the ravages of popular songs and to secure the rights of the music printers and publishers. Since members of Parliament have ears, like their humble brothers of the street, we look for an early triumph for the reputable publishers who have been driven to such desperate methods.

The pirating complained of has grown steadily. At a public meeting held in London under the auspices of the Musical Defence League, the Duke of Argyll presiding, Mr. William Boosey said that the evil was a comparatively new one, but had been rife for eight or nine years. Three million copies of pirated music have been seized since 1902, but this is barely one-tenth of what has been sold illegally. In one month recently 700,000 copies were confiscated. The profits of the pirates are so great that they can afford to lose a part of their stock. Some of their printing places have been closed, but the fines imposed by the present law do not suffice to abate the evil, and a new law is wanted which will jail music thieves as it does other classes of robbers.

Twice the passage of the Musical Copyright bill has been frustrated by the stubborn opposition of a single man, Mr. James Caldwell, whose obstruction tactics have developed into what has been denounced as "a scandal without equal or precedent in Parliamentary history." On one occasion, to prevent the other side from being heard, he spoke for three hours, branching out into such important questions as railway sidings and the hallmarking of foreign silver plate Singing his own favorite pirated airs would have been a more appropriate method of obstruction. In 1903 he professed himself willing to accept the bill upon the granting of one extraordinary condition: that for nine months after it had become a law, pirates should be permitted to print and sell their stolen music, and that their copies should not be liable to confiscation or penalty. "This proposal to legalize robbery by act of Parliament was," as Mr. Boosey remarked, "indignantly rejected, and with it our second attempt to obtain justice failed."

The main pretext for the opposition has been that, as music is a necessity for the poorer classes, Parliament should not be asked to protect musical property. But, as a matter of fact, the Government already does a great deal to supply, not cheap, but actually free music to the poor. Instruction in the art is supplied to all in the public schools at a cost of millions. In the parks there are free band concerts. The publishers sell a great deal of the best music at almost cost price. One of them issues a penny magazine containing eight or ten new copyright songs and pieces by popular writers. But as the issuing of new music is even more of a lottery than the launching of books, the successes being few and far between, the publishers are obliged to charge extra in all cases to cover their losses on most of their ventures. The efforts made by the proprietors of two cheap journals to revolutionize music-publishing by issuing new copyright songs at sixpence, were merely an advertising scheme, bound to come to an end after it had served its purpose. The street pirates sell their songs at a penny or two apiece, and can afford to do so, as they need not take any chances, but can wait until a given piece has proved its popularity. Lately, however, we are informed, they have become so emboldened by their success that they do take chances in the case of musical comedy numbers, so as to be in the market at the earliest moment in case of a "hit."

The charge has been made that the present agitation is entirely in favor of the publishers, and that the composers suffer little or nothing by the theft of their property. But the meeting referred to was attended by a number of England's most prominent composers—among them Sir Hubert Parry, Sir A. C. Mackenzie, Sir Edward Elgar, Edward German, Paolo Tosti, Dr. W. H. Cummings, Hamish MacCunn, A. Randegger, Sir Walter Parratt, Liza Lehmann, and Charles Godfrey—who were well aware of the losses threatening them. One popular writer, Stephen Adams, has testified that his profits have been reduced more than one-half by the pirates, and it is estimated that the total loss to British composers within three years amounts to $185,000. The outcome of the present strike will naturally be awaited by them with deep concern. The music publishers are certainly as much entitled to protection as those who produce books. As for the composers, every one's sympathies must go out to them. They are the most underpaid of all brain-workers; just a year ago the question was discussed whether, at the great music festivals where everybody who sings or plays is paid, the composers of the works performed should not also receive something more than the honor of getting a hearing and perhaps an ovation.

THE REFORM OF FRENCH SPELLING.

ITHACA, N. Y., March 25, 1905.

The movement for the reform of French spelling that has been going on with varying success for the last hundred years, has now reached a crucial point. It is no longer in the realm of theoretical discussions and newspaper agitations: a definite plan of changes, a complete and coherent bill of reform, is before the competent jurisdiction, awaiting its decision. This jurisdiction is twofold, being composed of the Ministry of Public Instruction, which controls all the state examinations in France, and the French Academy, whose authority in these matters has up to the present been recognized as supreme alike by the Government, the proof-readers, and the public.

The question, unimportant as it may seem, is creating a sensation in France among literary people, the teachers, and perhaps the schoolboys. The newspapers are publishing impassioned appeals from the reformers and indignant protests from the defenders of the purity of the language, to say nothing of the humorists, who find in this subject a rich vein for their satire. The *Revue Bleue* took the initiative in a petition signed by a great many writers of unequal prominence expressing a strong desire that the "traditional orthography" be not interfered with.

The movement for spelling reform is by no means new. Ever since the beginning of the last century, French orthography has been under attack. In Petit de Julleville's history of French literature, M. Ferdinand Brunot says: "The only thing that remained untouched in this stormy age was orthography, although universally acknowledged to be detestable." M. Michel Bréal, who is opposed to the reform, remarks that everybody asks for it in periods of calm, and nobody wants it when it is really offered. As early as 1805, a grammarian speaks of "la déraison orthographique," and in the thirties appeared a pamphlet entitled 'Les Inepties de la Langue Française.' From time to time some spasmodic attempts at reform manifested themselves either by a convention such as took place in French Switzerland in 1867, or by some monthly or weekly newspaper which, joining the example to the lesson, anticipated the orthography of the future by using it in its columns. In 1896 a petition was presented to M. Combes, then Minister of Public Instruction; and the late M. Gréard, a man of great tact and conservatism, presented to the Academy a favorable report. But nothing came of it. As to the reform adopted in 1901, and now slowly being introduced into the textbooks of the country, it deals mostly with syntactical peculiarities and not with the spelling of words.

The present agitation started with a resolution of the Minister of Public Instruction, in February, 1903, appointing a commission entrusted with the duty of presenting suggestions for "the simplification of

spelling." This commission was made up of philologists, grammarians, and teachers, besides two deputies, one a schoolmaster and the other a business man, and both Socialists in politics. At the head of the commission was M. Paul Meyer, the well-known professor at the École des Chartes, and the most prominent members were MM. Brunot, Croiset, Louis Havet, and Antoine Thomas, all professors at the Sorbonne, and the last-named a co-worker with Hatzfeld and Darmesteter in their great Dictionary. This commission finished its work in July, 1904. M. Paul Meyer presented his report to the Minister of Public Instruction with all the changes that the commission deemed reasonable and practical. It is this report, published in the *Revue Universitaire* of November 15, that has created the sensation.

The principle seems to have been to adapt the spelling to the pronunciation in a certain number of words whose orthography is too misleading, and to suppress letters that are useless or were introduced by ignorant philologists. Here are, in brief, the main changes proposed:

(1) To replace final *x* by *s* as the sign of the plural.

(2) To suppress double consonants in words like *ballet, ballon, charrette, collier, corridor.*

(3) To replace *y* having the *i*-sound by *i* in such words as *analyse, psychologie.*

(4) To suppress the *h* in *rh, th* and *ch* (with the *k*-sound, as in *chœur*), and substitute *f* for *ph.* Thus, one would write *rapsode* for *rhapsode, téâtre* for *théâtre, filosofie* for *philosophie.*

(5) To unify the spelling of all words of the fourth conjugation, and to write *je prens* like *je crains.*

(6) To replace the *s* of *case, épouse, blason,* etc., with a *z.*

(7) To replace the soft or palatal *g* with a *j,* writing *plonjon* instead of *plongeon, manjer* instead of *manger, gajure* instead of *gageure.*

(8) To replace the *t* of *aristocratie, ambition, nation, inertie,* etc., by a *c,* and write *aristocracie, ambicion, nacion, inercie.*

This report of the commission was transmitted to the Academy, which in turn appointed a commission to discuss the project. The decision has just reached us, and it seems that that body has been neither as conservative nor as revolutionary as was feared or hoped. At any rate, until some definitive solution is reached, the interest of the controversy lies in the arguments brought forth by the opposing parties, and it is these arguments which I should like to sum up.

In favor of the reform the arguments are such as have always been urged by all reformers:

(1) It is essential to suppress the many complications of French spelling so as to save time, both for school children and for foreigners, and avoid the useless hours wasted in learning irregularities of orthography that have no excuse for existing, not even in etymology.

(2) The orthography ought to be as far as possible consistent with the pronunciation or the words. Why write *femme* when one pronounces *fame* (which was the spelling of the Middle Ages), or *paon* when the word is sounded like *pan?* There is danger of altering the true pronunciation of the word, and people are already beginning to pronounce wrongly the *p* in *sculpter* and *promptitude.* Why write *ville* and *fille* alike when the pronunciation is so different? What is the use of the *gt* in *doigt,* which ought to be spelled like *doit?* Why a *d* in *poids,* especially when one remembers that this *d* was the result of a mistake on the part of a sixteenth-century pedant?

(3) The double consonants are a puzzle that no amount of reasoning and logic can explain. Why *siffler* with two *f*'s and *persifler* with only one, *imbécile* with one *l* and *imbécillité* with two, *chariot* and *charrue, sonner* and *sonore?*

(4) The *h* and *r* are a source of confusion in all words derived from the Greek. Why *théâtre* and *trône, frénésie* and *phrénologie?* Why *fantôme* and *flegmatique* on the one hand and *pharmacie* or *philosophie* on the other? They all represent the same Greek letters.

Taken all in all, these reforms, says Prof. P. Meyer, are not revolutionary, but conservative. In many cases the reform goes back to the old spelling, which had been forgotten. In all cases it aims to preserve the spelling that corresponds to the true pronunciation as well as to logic and common sense. A faulty spelling is sure to bring about a faulty pronunciation.

To these arguments, based on logic, history, or common sense, the opponents of the reform oppose reasons of various sorts. In the first place, M. Faguet, who spoke for the Academy, remarks, in an article published in the *Gaulois,* that, in spite of all reform, spelling would always be a long and tedious study; hence the saving of time would be trifling. In the second place, the attempt to make orthography copy the pronunciation cannot give satisfactory results, because "nobody is sure of the pronunciation," since "it varies from one man to another." Again, some of the changes would add to the confusion complained of, affecting only the primary word and leaving out the words derived from it. M. Meyer would write *fame* instead of *femme,* but would retain *féminin;* he proposes *cor* for *corps,* but does not change *corporel, corporation; tems* for *temps,* but *temporel* remains untouched; *pié* for *pied,* but *piédestal* retains its *d.* Moreover, some of these new spellings would tend to absurdity. M. Faguet again quotes as ridiculous these two sentences: "Son doit (finger) doit être coupé," "Il n'y aura ni ni ni fleur" (there will be neither nest nor flower). To this M. Meyer replies that there are already many words of that type in the language, and that nobody confuses *port* (*de mer*) with *port* (*d'armes*), for instance.

The main objection, however, does not come from this source. It comes from the artists, be they poets or prose writers, who consider that words are not mere stenographic signs; that they have a definite form and expression, and, so to speak, a face that we know and should hate to see altered. This æsthetic argument has been expressed by no one better than by Sully Prudhomme, who wrote in the *Revue Bleue* of March 4: "In themselves these faces are neither beautiful nor ugly, but any change makes them monstrous, comical." To many of these artists, to whom, as to Victor Hugo, "the word is a living being," and some words are as dear as favorite melodies, simplifications of spelling appear sacrilegious, and the reformers are hateful iconoclasts. The very thought that the poems of their favorite authors, and especially their own, should be rendered unrecognizable, makes them indignant. They cannot bear to have great masterpieces from the seventeenth century down to the present day, which are all printed in an orthography universally accepted, suddenly appear in a form at once strange and archaic, which shocks the eye and makes them look like caricatures.

In vain the reformers reply to those who are afraid of changing their habits that they do not want any one who has learned to spell to change his orthography, and that the two methods may well exist side by side for a score of years. In vain, too, M. Havet tells us, in an incisive plea for reform, that the new spelling of some words shocks his eye, too; but, since it does not shock his reason, he will soon get accustomed to it. In vain they tell the patient conservatives who are willing to wait for the next edition of the 'Dictionnaire de l'Académie,' that the last edition was published in 1878, and that the next edition has not gone further than the letter *c.* In vain, finally, the reformers remind us of the millions of children who are starting in life, and to whom the new rational spelling will be as natural as the old is to us. All these arguments are met by the sullen and invincible resistance of the force of habit.

The agitation created by the petition of these writers, the hostile articles in the press—above all, the strong feeling of conservatism that opposes all innovations which shock our physical habits, the most stubborn of all—were sufficient indications of the attitude of the French Academy, which is not given to revolutionizing nor to opposing public opinion. Actually, the report of the Academy presented by M. Faguet accepted changes in 150 words only, for which two spellings will be tolerated, such as *rapsode* and *rhapsode, confidenciel* and *confidentiel, potenciel* and *potentiel.* As to the seven words in *ou—chou, caillou, bijou,* etc.—which took an *x* in the plural, they may now be written with an *s,* like *clou* and *sou.*

It remains to be seen whether or not the Government will accept this makeshift, or whether it will endorse the conclusions of its commission and encourage the preparation of the new dictionary which it has recommended. But this is a reform over which universal suffrage is not very impatient, and it appears that the most radical in politics are often the most conservative in spelling. There was no more timid member in the commission, M. Meyer tells us, than the schoolmaster and deputy, M. Carnaud, who, in Parliament, is an uncompromising revolutionist, ready to destroy private property and upset the whole social fabric, but who, when it came to dropping a letter in a word, trembled lest it might shock the eye and hurt the feelings of that respectable but antiquated institution, the French Academy. OTHON GUERLAC.

THE AUSTRALIAN BLACKS.

SYDNEY, March 6, 1905.

With laudable candor, the Government of West Australia has issued a blue-book which, for its pitiless exposure of the ill-usage of an indigenous race, may rank with

Mrs. Helen Jackson's terrible indictment, 'A Century of Dishonor.' In 121 folio pages it contains the evidence of a large number of witnesses—some of them indignant disinterested spectators of cruelty and injustice; others police officers implicated, whose testimony must have been wrung from them; and a few stipendiary magistrates who had administered a harsh law with their hearts lacerated and their consciences seared. A stern summary of the facts elicited and a series of proposals for the radical amendment of an intolerable state of things accompany the report.

The condition of the blacks in West Australia has for a long time past in England, and for a much shorter time in more callous Australia, arrested the attention of sympathizers with a dying race. Dr. Rentoul, Professor of Theology to the Presbyterian Church of Victoria, and at one time leader of the church, was the first to take the field in a black crusade. He had served an apprenticeship in another campaign. When the South African war broke out, the ecclesiastical chief struck a diplomatic attitude and burked a resolution moved by a solitary member of the presbytery of Melbourne condemning the war. As the unequal struggle advanced, he experienced a change of heart. He became an enthusiastic pro-Boer, and founded the Victorian peace and conciliation league. Together with the attorney-general of a future Labor Ministry in the Commonwealth, two Labor legislators in New South Wales, and the professor of history in the University of Sydney, he formed one of a "small, transfigured band" which every variety of public and social persecution failed to intimidate. The taste of obloquy he then had, or the keener insight it gave him into the oppression of a whole race, made Dr. Rentoul an ardent advocate of the Australian blacks. In many a letter addressed to the colonial journals, he recited their wrongs. He told of the cruelties that were being practised upon them in the Northern Territory, Queensland, and West Australia. He was a voice crying in the "bush," and he was heard only of the laughing jackasses. The patient writer might have worn down his clerical quill to a stump before ever he made the faintest dint on the hardened colonial conscience.

Colonists in new countries have hardly any morality in their dealings with the indigenes. They use them for their labor or their pleasure, as suits themselves. The conscience of the motherland has to educate the colonial conscience, as Disraeli had to "educate" the Conservative party. The English conscience, now with an "unlidded eye" where colored races are concerned, if rather drowsy where a rival race threatens British supremacy, has had constantly to guide and ethically to train the colonists. It first suppressed and then reformed the infamous labor traffic in the Pacific, where Kanakas from the New Hebrides and other Melanesian islands were kidnapped, torn away from their homes, and carried off to work in the canebrakes of Northern Queensland. It appointed and paid a succession of Protectors of the Aborigines in New Zealand to shield the Maoris against the rapacity and cruelty of the settlers. In the interests of the Maoris, it resolutely resisted attempted infractions of the Treaty of Waitangi, under which the British Government took over the islands. Naturally, it was only when the colonial charges were reiterated in the English journals that the sluggish colonial authorities were aroused to take action.

Dr. Rentoul's accusations were repeated last year in the *Times* by a West Australian, Mr. Malcolmson, who supported them by accounts of harrowing sights he had himself witnessed in the tropical parts of the State. All philanthropic England was moved, and the West Australian Government was adjured to suppress such crying iniquities. On the other hand, the chief of the police, several pioneer squatters, and one or two impartial persons who knew the country, maintained that the charges were grossly exaggerated, and asserted that the blacks were well-used, contented, and jovial. Amid the clash of conflicting testimonies it was suggested in an article contributed (by the present writer) to an English review that a royal commission should be set up to inquire into the whole subject of the treatment of the blacks. It would be rash to connect the suggestion and the appointment as respectively cause and consequence, but it is a fact that soon afterwards Dr. Roth, very favorably known as Protector of the Aborigines in Queensland, and author of an authoritative volume on the blacks of that State, was appointed commissioner by the colonial government impeached. The commissioner visited great part of the extensive coast (it is complained that he did not visit the interior, where the state of things may not be quite so bad) where whites come into close contact with the blacks, made careful investigations, and (as stated) has just reported at length.

The "iniquitous" indenture system was supposed to be the head and front of the West Australian offending. A perusal of the statute of 1886 creating it does not at first justify the description of it as being "in every way unjust and immoral." It opens with a flourish of trumpets. As seems only right in a country where the whites have taken from the blacks the fee simple of an entire continent without paying a penny for it, the Government undertakes a large responsibility for the blacks, and engages to provide them with food, clothing, and medical attendance whenever they are destitute or in need. The provisions for indenturing the blacks require that each contract shall be written, shall be duly signed or marked by the black in each case (what they themselves call *millie millie*), and shall be witnessed to by some person uninterested in the contract. The term may be for a variable period of months, but is usually for one year. The squatter (or landholder) gives the blacks no wages (which they would not know what to do with); he does not house them (in a tropical climate they live in the open); but he engages to supply them with abundant food, clothing (which they cannot be got to wear—and their nudity is one of the charges made against him), tobacco, and medical attendance. In return, he commands their labor—as a master commands that of his apprentices, says the Commissioner of Police; as a slaveholder commands that of his slaves, say the opponents of the system.

So far, the provisions are not, on the face of them, inequitable. Much, if not all, will evidently depend on the way they are operated. As we read on, we perceive how abuses may enter. If the indentured black refuses to work, or is sluggish or unruly, he may be haled before a magistrate, who is empowered to have him flogged or imprisoned. Were the magistrate a stipendiary, there would still be great risk of abuse in the exercise of such power in remote districts. But he is usually a mere unpaid and uncontrolled justice of the peace, perhaps himself the employer of the accused black, and in any case an interested member of the squatting fraternity. The character of some of these so-called justices may be judged of from a single group of facts. Of five offenders convicted in a short time of vile and cruel treatment of the blacks, at least two were justices of the peace. That each of the five was fined what Mr. Mantalini would have called "the ridiculous sum" of £5, shows how lightly such offences are punished. Later clauses of the statute permit magistrates compulsorily to indenture youths under age, and thus so far justify Dr. Rentoul when he denounces "the cruel and cold-blooded provisions of the act, with its compulsory indenture of aboriginals and half-castes." All other indenturing is voluntary, at least in name.

The testimony collected by the commissioner seems to show conclusively that the charges made against the system by so many observers have been found proven. Evidently, the landholders will have to be taught by sharp penalties, if other means will not suffice, that the natives cannot be flogged or imprisoned with impunity because they are at times unmanageable on the farm. The law permitting indenturing will have to be repealed. It is a relic of slavery. There will still be trouble with the blacks. It took many hundreds or perhaps thousands of years before the white races became inured to systematic daily toil. It will take a long time before the blacks are broken into regular industry. They cannot yet be dispensed with. In these thinly-populated tropical regions white labor is scarce and dear. It is to the advantage of the black that there should be white men to employ him at outstation work—mustering, tailing, woolwashing, and sometimes fencing, while his *gin* performs domestic services indoors. And the pioneer farmer will find it to *his* advantage to use persuasion a little more, compulsion a good deal less, and violence not at all.

The most damning part of the indictment remains to be stated. The rieving or killing of cattle belonging to a neighboring country has at all times been a fertile source of quarrels between two peoples. It has marked the advance of settlement all over Australia for two or three generations, and it is going on at this moment in Northern Queensland and West Australia. In the earlier days the settlers defended themselves, and retaliated by petty warfare; such matters are now dealt with by the police. Their tender mercies are cruel, and the change to the more civilized procedure has hardly been an improvement for the blacks. The evidence given before Dr. Roth is nothing less than terrible. First, a black tracker (still more pitiless than the white police who accompany him) is employed to ride down the suspected or accused blacks. These are then driven in before the horses, sometimes in the heat of the tropical day, and "at a pace which no human being could keep up with for any

distance." The trial is a farce. The police prosecute; they never bring in witnesses for the defence; and the natives are left to defend themselves. They understand no English, and even the interpreter speaks only a few words of "pidgin English." All whom Dr. Roth examined agreed that the blacks do not grasp the nature or realize the gravity of the charge. That is not the worst. A magistrate admitted that he had often felt in dealing with cattle-stealing cases that "there was something of an undercurrent of injustice meted out towards the natives." A constable in charge confessed that "it was a queer country that he lived in, where every [black] mother's son was deemed to be guilty." And a gentleman occupying a responsible commercial position in a remote northern township "had not in three years seen a case of justice." He has "walked out of the Wyndham Court disgusted at what is called British justice." Convicts are at once placed in chains—no handcuffs, but neck-chains—as if they were wild beasts. Thus fettered, they have to work eight hours daily in summer, when work of any kind in a tropical climate is almost impracticable. Sometimes old and ailing when they are brought in, the prisoners not seldom succumb to sunstroke or excessive toil. It is in the interests of the police to multiply captures. They are paid a high sum for the maintenance of the blacks on the way (sometimes a very long way) to court, and yet these are not fed. The blacks, said a magistrate, "are a huge source of revenue to the police." The police state their "revenue" more modestly. "I have brought the black brutes in," one constable confessed, "simply because I can make a few shillings out of them."

A still graver tale is left to be told, though it cannot be fully told here. Some years ago, when he was governor of South Australia, Lord Tennyson denounced in passionate language the misdeeds of the white men who were living in promiscuity and savagery with the black women of the northern territory. The practice has prevailed in many parts of Australia for a hundred years. All along the line of advancing colonization the points of junction of the two races have been stained by miscegenation. It is still one of the ugliest features of the relations between black and white in West Australia. The resident magistrate at Derby was asked if much komboism (the concubinage of white men with gins) went on in his district. "Yes," he answered, "a tremendous lot is going on." Rapes of black Helens are frequent, and the black Menelaus has as yet no redress. In one case, however, a white Paris met with his deserts. He was fined £5. It is not stated that he restored his Helen. On the pearling coast in the far north another kind of miscegenation prevails. A constable testified that there was "a great deal of prostitution going on" between the gins and the Malay and other Asiatic pearling crews, "and if no person were there to protect the natives, it would be terrible." These and similar revelations are at last arousing the sluggish Australian conscience. The churches are moving, and their joint council has reprobated the atrocities. The Government is beginning to take action. The chief of the Westralian police has been suspended. In a few weeks or months at latest the Legislature will be asked to enact remedial laws. J. C.

Correspondence.

THE ALLUSIONS IN "LOTHAIR."

To the Editor of The Nation:

Sir: An edition of Disraeli's novels has been brought out by an American firm with a key to the personal allusions officially furnished by the late Lord Rowton, Disraeli's secretary and literary executor. Probably I am the last survivor of the set, so that, in saying a word about my own case, I may be helping to clear the memories of some of the rest.

The names generally are pseudonyms. Canning is "Mr. Charlatan Gas"; Dickens is "Mr. Gushy"; Bright is "Jawster Sharp," but I am plainly designated as the "Oxford Professor." I am described as "a social parasite," overpowered at finding myself in company with a lord. This was not published when I was in England, where I may safely say it would have fallen flat or recoiled. It was published when I was in the United States, where I was unknown and the slander, stamped with Disraeli's name, might tell. Once only had I met Disraeli. I never interchanged a word with him. I lived in a circle entirely different from his, and one in which, if there were fewer high titles, there were at least as many great names.

I am described as being brought to the New World by dreams of wild vanity which I thought the New World could alone realize. I had settled down for life on my professorship at Oxford, and had built a house there. I was called away and obliged to resign my chair by a sad domestic duty, in the performance of which I had to spend a year and a half. Then, having no special employment, and being much in need of change, I gladly accepted the invitation of Mr. Andrew White to help him in the foundation of Cornell University for the special benefit of poor students. Having lectured at Cornell for two years, I came to reside with the branches of my family settled before me in Canada.

It happened that, at the time of my leaving England, I had before me an offer of the nomination of my party for a Parliamentary constituency in which it had a sure majority. I had a similar overture after settling here. Had I ever desired it, a political career was open.

Intercourse with European patriots such as Garibaldi and Mazzini I do not think it necessary to excuse. I will not shelter myself under Disraeli's "Revolutionary Epick." Mazzini, let me say in passing, assured me that he had never taken part in an assassination plot.

Disraeli twice attacked me very personally in the House of Commons. On the first occasion it was for advocating the cession of the Ionian Islands to Greece. He charged me with wanting to break up the Empire. We now know that he told Lord Malmesbury in confidence that the colonies were millstones round the neck of England; and this language, his great friend Sir W. Gregory, tells us, he held in private to the end of his life. His second attack was for advocating the abolition of entail.

This practice of libelling under color of fiction surely is cowardly and mean. It may lend impunity to the vilest slander. Generally recognized as the allusion may be, the person traduced, if a pseudonym is used, cannot right himself without seeming to put the cap on his own head.

Yours faithfully, Goldwin Smith.

Toronto, April 7, 1905.

A NAVAL PARALLEL.

To the Editor of The Nation:

Sir: Just a century ago two great fleets were manœuvring in preparation for one of the greatest naval battles ever fought. On April 4, 1805, Nelson was informed of the sailing of the Toulon fleet commanded by Villeneuve. Believing it to be bound for Egypt, he patrolled the Mediterranean Sea between Sardinia and the African coast. Villeneuve, on the contrary, was carrying out Napoleon's plan of campaign to rendezvous at Martinique with Missiessy, who, however, had sailed back to Europe from the West Indies on the very day Villeneuve eluded Nelson and escaped from Toulon. To the West Indies Nelson followed Villeneuve in May. On June 4 the English fleet was at Barbados, and Villeneuve was only two hundred miles away at Martinique. They never approached more closely until the eve of the fateful 21st of October. Villeneuve recrossed the Atlantic, but failed to make the combination planned by Napoleon, as a precedent to the naval control of the English Channel, while he invaded England. Instead, he retreated to Cadiz, and was watched by Collingwood during the summer months, while Napoleon, foiled in his hopes of invading England by the misadventures of his fleets at sea, was conducting the great Austerlitz campaign on land.

Villeneuve, peremptorily ordered by the Emperor to take the risk of a naval engagement, left Cadiz on October 19, with the combined French and Spanish fleets, to enter the Mediterranean. Nelson, who had just taken command of Collingwood's squadron, faced him off Trafalgar, and on the 21st the deathblow was struck at Napoleon's power.

The world has waited a century, for during the interval no great naval engagement by two powerful fleets has been fought. There have been brilliant naval duels and examples of magnificent target practice, and fights between weak or small fleets, such as that of Navarino; but, under the altered conditions which steam and electricity have brought about, no two great fleets have met and been manœuvred in the open sea, so as to demonstrate the extent to which machinery can replace, in naval warfare, human skill, human genius, and human courage. The winds and the tides will not control the plan of a future naval battle, and therefore skilful seamanship will not play as important a part as formerly. But there will be scope on the part of the admirals for higher generalship in manœuvring their ships than even the commanders of land forces must display in disposing of and moving their battalions.

The issue of the impending battle in the Far East may be as momentous as was that of Trafalgar itself. It may even be more so, for, if Japan crushes or scatters the Russian fleet, a new naval Power of

the first magnitude will be created, whereas the struggle between France and England was a contest between Powers of equal strength who had been rivals for centuries.

THE SCRUTINY OF CHARITABLE GIFTS.

To the Editor of The Nation:

Sir: It may interest some of your readers to know that the objection to Mr. Rockefeller's gift to missions has a curious parallel in the action of no less worldly a body than the New York City Council. I quote from the record, which is self-explanatory:

"At a meeting of the Common Council, held in the city of New York, at the City Hall, on Friday, the 14th of October, 1785, present James Duane, mayor, Richard Varick, recorder, etc., etc., 'Whereas, it has been represented to this board in behalf of Mr. Lawrence Embree, one of the commissioners of the alms-house, that the company of comedians in this city, some time since, presented him with forty pounds for the use of the poor; that as he disapproved of a donation so circumstanced, he thought it his duty to suffer it to be deposited with him until the sense of the magistrates concerning the same could be obtained.' Whereupon the board came to the following resolutions:

"That it appears that the play-house was opened by said comedians without license or permission of the civil authority; which in the opinion of this board is a thing unprecedented and offensive. That while so great part of this city still lies in ruins, and many of the citizens continue to be pressed with the distresses brought on them in consequence of the late war, there is a loud call for industry and economy; and it would in a particular manner be unjustifiable in this corporation to countenance enticing and expensive amusements; that among these a play-house, however regulated, must be numbered, when under no restraint it may prove a fruitful source of dissipation, immorality, and vice. That the acceptance of the said donation by the order of this board might authorize a conclusion that they approved of the opening of said theatre, and that therefore it be and it is hereby recommended to Mr. Embree to return the same to the person from whom he received it."

William Dunlap, from whose 'History of the American Theatre' (published in 1832) I take this extract, adds (pp. 58, 59) that "a few days after, a writer in *Oswald's Journal* ironically praises the wisdom of the city magistrates for discountenancing the theatre, and preferring the licensing tipplingshops, they being harmless and yielding a revenue unpolluted by its source."

THE HARVARD-TECHNOLOGY MERGER.

To the Editor of The Nation:

Sir: The letters that have appeared in the last two numbers of the *Nation* on the proposed Harvard-Technology merger have failed to explain the full intent of this arrangement, as well as one of its inevitable consequences. "Harvard A.B." says that Harvard will get nothing out of it. Is this really the case?

At the outset it should be said that it is generally believed that the Harvard Corporation favors the plan of merger, although it is certain that it has not yet officially adopted it. Furthermore, as "Technology S.B." believes, it is quite possible that the effective, though veiled, initiative in this matter of merger has really come from that body, although in the active promotion of the idea it has been found convenient to enlist the services of a representative of the other side. Also it is true that, on its face, this plan not only seems to give everything to the Institute, but appears extremely disadvantageous to Harvard in many ways, and particularly in the following:

First, it would sacrifice a large, flourishing, and useful department of the University, and alienate a great bequest.

Secondly, it would require the University to break faith with the teachers of the Lawrence Scientific School.

Thirdly, if it would not involve an actual breach of faith with benefactors of the University, it would undeniably require the Harvard Corporation to reverse its traditional policy towards bequests. The McKay gift would have to be dealt with not in a frank and scrupulous spirit, but more nearly in the spirit of the man whose standard of moral obligation is to avoid being sued and to keep out of jail.

These are very grave objections to the plan of merger as proposed. If it is true that this plan is being seriously considered, is it credible that the respectable and intelligent doctors, lawyers, and bankers who, with President Eliot, constitute the Harvard Corporation, would face these consequences if they were not inclined to believe that Harvard University would gain more than it would lose by the transaction?

What is the gain to be expected? Primarily, it is neither the doubtful economy which uninformed persons might predict from union, nor any vague advantage to the community or to technical education from doing away with so-called competition. While these pretexts have been urged in favor of the merger, they could have only collateral weight with the Harvard Corporation, who are not charged with the general oversight of technical education in the community or in the commonwealth. What is really to be expected is nothing less than the ultimate absorption of the Institute as a teaching body in Harvard University, with all the gain resulting from the exchange of a scientific school of 600 students for one of 1,600. To prove that the plan of merger is intended to bring about this result, no further evidence is needed than the provision for establishing the Institute in a new location alongside the Cambridge departments of Harvard. Physical propinquity is made the *sine quâ non* of the agreement. If the intention of the merger were merely to avoid duplication and competition, and to promote economy through the abolition of the Lawrence Scientific School and the transfer of its teachers and funds, these objects could be as well attained with the Institute in its present location or in a new one in Jamaica Plain. Furthermore, the independence of the Institute, although provided for at the beginning, is not safeguarded for a single year, and there is no security whatever against a closer union whenever it shall seem expedient. Is it not, then, entirely clear that the attraction of the plan for the Corporation must lie in the idea that Lazarus, made into a Dives and planted at the gates of Paradise, would before long clamor for a place in Abraham's bosom?

And who can doubt that this would be the final result? The opposition to complete absorption on the part of the faculty of the Institute would naturally die away with time and with judicious appointments to vacancies. The acidity of the older graduates of the Institute would first be diluted and finally neutralized by the flood of young graduates, educated under mellower conditions and under the Harvard spell. It might take a generation, but, finally and inevitably, and in the most natural way in the world, complete absorption would have to come about.

But is it worth the price? As men of affairs, they are probably greatly attracted by this opportunity for a Diomedic exchange, but, before irrevocably committing themselves to the venture, the Harvard Corporation may be relied on to give the fullest consideration to all its drawbacks. For example, they will consider its effect on technical instruction within the University, giving due weight to the fact that the Lawrence School is almost at the point where it needs only money to enable it to become a Graduate School of Applied Science, while the Institute could not reach this point for years—that is to say, not until its requirements for admission were greatly increased. They will consider, also, that the merged institution would begin its career under a heavy handicap—without morale, cohesion, or confidence in its head. And especially they may be depended on to weigh most carefully the consequences of juggling or appearing to juggle with the McKay bequest, forgetting neither the example set to the young men under their charge, nor the effect on future benefactors of the University. "Harvard A.B." may confidently be assured that the Corporation do not need to be told that the benefactor is the most timid of investors, and that their own duty as trustees, perhaps their first duty, is to do nothing that might divert from Harvard any part of the stream of gifts which is now pouring into it.

Harvard Graduate.

DEGREES FOR CAMBRIDGE WOMEN FROM THE UNIVERSITY OF DUBLIN.

To the Editor of The Nation:

Sir: The Council of Newnham College have sent out a circular letter to their alumnæ informing them that Trinity College, University of Dublin, offers degrees to those students of Newnham and Girton who have passed degree examinations of the University of Cambridge. Three students of Newnham College at once availed themselves of the opportunity and became graduates of Trinity College, Dublin, on the first occasion at which it was possible, in 1904. As the offer is open to Cambridge women until 1907 only, and is coincident with the opening of the degrees of Trinity College to women, it looks much like a bid from Dublin for women students.

The report of Newnham College for the year 1904 incidentally furnishes a striking comment on the action of the University of Dublin. The two largest colleges for men in Cambridge, both mediæval foundations, are Trinity and St. John's. Newnham College reported 168 students in 1904; its students have been admitted to Tripos examinations, without degrees, since 1881, just twenty-three years. But in the number of students classed in Triposes for 1904, Newnham College stood third in the whole University. Trinity College secured 99

honors, St. John's, 74; out of Newnham's 168 students, 75, or nearly one-half, went in for honors, and 72 obtained honors. Of first class honors, the proportions for the three leading colleges read, mathematically, Trinity, one-fourth plus; St. John's and Newnham, one-fifth minus.

It is natural that in an old institution the advance of new ideas should be slow and their development be accompanied by anomalies and inconsistencies. But no institution can lead in the educational world and at the same time pursue a policy which turns from its own door to another's a considerable and influential body of its students. We hear much of the poverty of the two oldest English universities. Is it not partly poverty of spirit, an inability to meet and answer the practical questions of modern education in a practical way?

MARY AUGUSTA SCOTT.

SMITH COLLEGE, April 15, 1905.

Notes.

A. S. Barnes & Co. will shortly publish 'On Tybee Knoll,' by James B. Connolly.

A second edition of Miss Calkins's 'Introduction to Psychology' has been called for, and has now appeared. The special point of view adopted in this book will be further defended by the author in a small volume to be brought out by Veit & Co., Leipzig, under the title, 'Der doppelte Standpunkt in der Psychologie.'

We receive from Ginn & Co. a curiously offhand and chatty book upon one of the most difficult subjects known to the archæologist. 'The Greek Painter's Art,' by Irene Weir, director of art instruction at Brookline, Mass., might fairly be called amateurish by any one to whom "amateur" is not necessarily a term of reproach. The first hundred pages tell how a party of seven travelled by Brindisi and Corfu to Olympia, Delphi, Corinth, Mykenæ, and Epidaurus, and then to Athens. About forty half-tones illustrate this Introduction, and of these a moiety may deal with works of art, buildings, and sculpture, the rest with bits of scenery. Then, with page 103, begins "A Brief History of Greek Painting," divided into five chapters, and the reader should stop a moment and think what this means. When Sir Charles Eastlake had collected a great mass of material in his special subject, he published it as 'Materials for the History of Oil Painting'; and the only reason why no book with a similar title has been devoted to the painting of the ancient Greeks is that the "materials" do not exist. The most that can be done is to collect a number of detached facts, some of which seem to contradict one another; or to present a paper on the probable relation of Hellenistic bas-reliefs to paintings, or one about the probable derivation of Pompeian wall pictures from those of Greece proper. No information about the artistic character of Greek work, coloring, drawing, notions of proportion, conceptions of pictorial design, is to be obtained from classical writers. Not one fragment of Greek pictorial work in color remains to us. The inferences from vase-painting and mosaics are most risky. We need only add that the illustrations are as numerous, proportionally, in the "History" as in the "Introduction," that they are well chosen and interesting, and that nearly all are photographic.

'Out of Bondage' (Houghton, Mifflin & Co.) is the title of a collection of tales and sketches by the late Rowland E. Robinson. Mr. Robinson was of Quaker stock, and his home in Vermont was a station on the Underground Railroad; the tale which gives its title to the book has for its subject the escape of a slave. The contact of Yankee and French Canadian in the borderland of Lake Champlain produced social peculiarities which no one has illustrated with a more delicate touch than Mr. Robinson, and the very rusticity of his humor increases the verisimilitude of his portrait.

John A. Cipperly's 'Labor Laws and Decisions of the State of New York' (Albany: Banks & Co.) is a useful compilation, which includes statutes as well as cases. Besides its value for purposes of reference, it shows almost at a glance what has been done in this State for "Labor," and how far we have advanced (or fallen away) from a state of society in which the laborer shifts for himself. On paper our laws are very paternal, and if the laborer is not protected against the employer, it is not the fault of the legislature. How many people know that no free-born toiler in a factory can be deprived of a full sixty minutes for his noonday meal, *except by permission of the Commissioner of Labor*? But this is only an odd illustration of the length to which regulation has gone. At every turn there is some command or inhibition designed to guard the laborer against the dangers of his calling. Fire escapes must be provided, ventilation secured, cleanliness guaranteed, contagion made impossible, scaffolding sufficiently strong to bear his weight provided. At every point there is inspection. It is here, of course, that the weakness of the system is seen. Unless paternalism is genuine, the inspector may need inspection, and protection be required against the protector. But old-fashioned suggestions relating to the province of Government have little weight with a modern democratic legislature. The system, rigidly enforced, would be a benevolent despotism; means are found with us to temper it, as inspectors soon learn.

It is not quite clear why Prof. Robinson Ellis publishes his recent pamphlet on 'Catullus in the XIVth Century' (H. Frowde). It is hardly of the quality of a public lecture, nor is it designated as such. On the other hand, there is not enough new material or suggestion in it to make it a marked contribution to knowledge. Mr. Ellis calls attention once more to the attempts that have been made to unravel the enigma of the epigram by Campesani appended to the Codex Sangermanensis, mentioning, among other conjectures, that of Mr. Falconer Madan, who thinks the mysterious discoverer of Catullus may be Francesco Accorsi, and that of Sir E. M. Thompson, who thinks some such name as Strada may be shadowed forth by the periphrasis of the fourth verse. Mr. Ellis himself suggests the possibility of an allusion to Avignon (*Avena*) in *a calamis*, in which case Francis of Avignon would be the great Petrarch himself. But if Petrarch had in reality discovered Catullus, it is not likely that we should be without any other reference to the fact than that contained in Campesani's puzzle; and Mr. Ellis is content with the conclusion that the riddle is yet unread. In this connection may be mentioned the note by Dr. Henry Bradley, in a recent number of the *Athenæum*, who thinks the accepted idea that *Francia* points to the name Francesco is probably wrong, and that a French word for *calamus* is meant. He would suggest Roselli, or Rosello (from *rosel*, now *roseau*), accepting for the surname Strada, or, preferably, Lachmann's Notapassanti, or some word of similar meaning, which may have been a *signum* for Roselli, instead of a true surname to Rosello. Mr. Ellis repeats his suggestion, made to the Oxford Philological Society in 1903, that the long-legged bird which figures so often in Codex O may date from an actual papyrus archetype. He then proceeds to point out indications of the use of a complete MS. of Catullus by the compilers of two florilegia of the fourteenth century, by Albertino Mussato (1261-1329) and by Petrarch. In the earlier of these matters the argument is inconclusive, and, as regards Petrarch, Mr. Ellis depends mainly upon the well-known work of De Nolhac.

The predominance of the prefix *re-* helps to make the thin fascicle for April 1 of the Oxford English Dictionary (Ree-Reign) exceptionally devoid of matter inviting comment. A word blest with three spellings and with two stresses, equally reputable, is Referrible (1596), Referable (1646), Referrable (1661). Another typical English case of go as you please is presented in Reflection, Reflexion. Here Mr. Craigie tells us that "the etymological spelling with *x* is the earliest [in Chaucer, 1384, etc.], and is still common in scientific use, perhaps through its connexion [in the United States, rather connection] with *reflex*; in the general senses the influence of the verb has made the form with *ct* the prevailing one." It is noticeable that Continental usage has not affected English so far as to make "The Reform" an allowable synonym for "The Reformation." No writer seems to have ventured it. To that historical period belongs the verb Refrigerate (which is antedated by more than a century by the participial adjective having the same form). The earliest citation for the verb is 1534, and is from Sir Thomas More's 'Dyalogue of Comfort against Tribulation,' composed in the Tower. Now the participle *refrigerata* is glossed in Erasmus's 'Colloquies' ("Uxor Mempsigamus"), as if a neologism, and this conjunction of Englishman and Dutchman, bosom friends, recalls afresh Samuel Daniel's diatribe, in his 'Defence of Ryme': "Erasmus, Rewclin [Reuchlin], and Moore brought no more wisdome into the world with all their new revived words than we finde was before."

Prof. D. B. Macdonald's illuminating discourse on the "Moral Education of the Young among Muslims," delivered under the auspices of the Philadelphia Society for Ethical Culture, is printed in the April number of the *International Journal of Ethics*. It shows forcibly how the Society's aim—"to advance the ethical training of the young in independence of any definite theological instruction"—runs counter to Muslim orthodoxy as an impious absurdity. Christian orthodoxy is, of course, heavily committed to the same view; yet we can but think that this class will read Profes-

sor Macdonald's exposition with more disturbance on account of resemblances than of differences in Muslim and Christian pedagogy. Is this (from al-Ghazzālī), for example, less admirable in Muslim than in Christian training?—"So, first, is the committing [of the creed] to memory; then belief and certainty and acceptance. That is what results in a boy without proof; it is by the grace of God upon the heart of man that He opens him in earliest childhood to faith without need of evidence or proof. How can that be denied, seeing that all the creeds of the mass of the people, in their beginnings, are simple imitation and acceptance of authority purely?"

The *Genealogical Magazine* for April (Boston: Eben Putnam) contains some weighty censure, by the editor-publisher, of the mode in which the vital records of Massachusetts are being printed under the laudable act of 1902, "to provide for the preservation of town records of births, marriages, and deaths previous to 1850." Up to date, the Commonwealth has accepted forty-one volumes of vital records, representing forty towns—to the profit, it is said, of the parties printing them, but this is a small matter in comparison with the mode adopted. One form of arrangement, says Mr. Putnam, has been followed, but it "does not provide for all the information which the records contain," as he convincingly proves. Hence it is not safe to dispense with independent examination of the originals, to which, for the searcher's vexation, there are no references in the several printed editions. Finally, the attesting of the transcripts has been almost universally disregarded.

The *Annales de Géographie* for March contains a report of a recent scientific expedition to Figuig, an oasis on the eastern frontier of Morocco. After treating of its physical features, its mineral resources, chiefly lead and copper, its vegetation and inhabitants, the writer, M. Émile Gautier of Algiers, draws attention to the fact that a few years ago such an expedition would have been impossible, because of the hostility of the people to the French. Now, through the establishment of posts and the extension of the railway from Oran, the warlike nomads have retired to the desert, and the region is being rapidly settled and developed by peaceful agriculturists. M. Gautier believes that the whole of Morocco could be speedily brought into the same condition at small expense and without bloodshed, by the creation of a native police force, serving under the Sultan's flag, but officered by Frenchmen. M. B. Auerbach states that the census of the German Empire for 1900 shows a growth, practically wholly by the excess of births over deaths, greater than that of any other European State. During the preceding decade the annual emigration averaged 120,000, but in 1902 it had fallen to 32,000. The religious statistics reveal the surprising fact that there are 222 distinct sects, and also that in the last thirty years the percentage of Protestants has increased slightly and that of the Roman Catholics has decreased. There are twenty-two languages and dialects, but the number of those speaking a foreign tongue is very small, and rapidly diminishing. Other articles are an extended review of M. Lacroix's report on the eruptions of Mont Pelée, and an illustrated sketch of the physical geography of the island of Eubœa.

The philosophical faculty of the University of Vienna has pronounced, by a vote of forty to ten, in favor of making women eligible to professorships, and it is expected that the Ministry of Public Instruction will authorize the carrying out of their views. The movement in this direction has been largely brought about by Prof. Friedrich Jodl, who is otherwise well known as a promoter of the interests of women. Professor Jodl is the author of a book on Psychology which is easily among the most important general treatments of the subject; he has also the characteristic of being unique among German professors in his acquaintance with, and recognition of the importance of, the work of American psychologists. The movement recently instituted in the Association of College Alumnæ for adding to the number of professorships accessible to women will need to be pushed forward rapidly, if Germany is not to leave this country quite in the rear in this regard.

The *Berlingske Tidende* of Copenhagen announces the death, on March 15, of the Danish novelist, Fru Amalie Skram, in her fifty-eighth year. Fru Skram belonged to the extreme school of Scandinavian naturalism, and her choice of this form of artistic expression was closely related to her whole attitude towards life. Even those who least approve of her methods must admit the perfect sincerity of this foremost of the Danish women writers of to-day. Among her works, all of which show an absolute mastery of style, may be mentioned 'Betrayed,' 'Lucie,' and the series of three novels bearing the untranslatable title 'Hellemyrsfolket.'

In view of the critical state of the Scandinavian Union, special interest attaches to the recent publication of a photographic reproduction of the Norwegian Constitution of 1814.

We are glad to receive from F. Gutekunst, Philadelphia, a large imperial photograph of the late Theodore Thomas—a front view of head and bust, and a most excellent likeness. It is sure of acceptance wherever this great conductor was honored, and is worthy to hang in any music room.

—The first volume of Mr. Worthington C. Ford's edition of the 'Journals of the Continental Congress' (Washington) is a notable example of the sumptuous bookmaking of which the Government Printing-Office is capable. The series, which will extend to fourteen or fifteen volumes and occupy five or six years in publication, promises high usefulness to the student of American history. The original journals, as is well known, have never been printed in full; the contemporaneous issues, on which later editions were based, comprising such parts of the record only as it was deemed advisable to publish at the time. For the present edition, Mr. Ford has undertaken not merely to reproduce the original manuscript of the journals, but also to complete or supplement the entries by data from other sources. A comparison of the present volume, covering the period of the first Continental Congress of 1774, with the printed copies does not show many additions to the text; the insertion of Galloway's motion and plan, September 28, which the Congress repudiated and ordered stricken from the journal, being the most important. Mr. Ford's method of editing is not, in certain details, impeccable. If one may judge from a comparison of his printed text with the facsimile page of the manuscript facing page 13, he has felt free to make minor alterations in the manuscript and to supply or modernize the punctuation. The entry, "The Congress met according to adjournment," under date of October 17, is omitted from the printed text (p. 74). The source of the admirable facsimile, in three sheets, of the "Association" is not indicated, nor of the occasional bracketed additions to the text. The printed signatures to the petition to the king (p. 121) show minor variations from the facsimile inserted in the text. The interesting memoranda of Samuel Ward, a delegate from Rhode Island, several times cited in the footnotes, are not located. It would seem to be worth while, also, to indicate the important variants in printed copies of the journals, such, for example, as "Colonel" for "Mr." Folsom (p. 28) in the edition of 1777, and the considerable verbal changes found on pages 62, 63, 74, 75, 81, 90, 101-105, and 113 of the present volume. A third printed copy of the "Association," with the signatures of the members—apparently the only one known besides the two referred to in the note on page 81—is in the Rhode Island Historical Society, from whose collections some additions could also be made to Mr. Ford's bibliography. None of these defects is of the first magnitude, or detracts seriously from the high value of Mr. Ford's editorial work. We mention them because of the hope that we are to have from his hands a thoroughly critical variorum edition of the journals.

—Parts I. and II. of a book on old Edinburgh come from William J. Hay of Edinburgh, whose address is "John Knox's House." The page is 11x15 inches. There are in each number three plates, with a sheet of text respectively, and it is stated that there will be about sixteen parts. The book is entitled 'Old Houses in Edinburgh'; the drawings are by Bruce J. Home. The introduction, which is as brief as a preface, is signed by G. Baldwin Brown, and there is a curious tone of detachment observed in it, which enables Mr. Brown to praise Mr. Home in a very unreserved fashion. "The present publication is based upon a competent structural knowledge of the buildings it illustrates"—such is one clause of this introduction, and the remainder of it is conceived in the same spirit. Now, as for the drawings themselves, they require consideration before even the practised student of books on old architecture can speak his mind about them freely. The plates are photographic, and indeed are announced as being collotypes—a term which is hardly used in America, but which is equivalent to gelatine plates, or nearly so. They have been made from drawings which are singularly conceived—without attempt at effect, in black and white, without strong shadows, without marked difference between the lighted and the shaded surfaces, without affectation of relief and projection. They are evidently calm settings down of the conditions of the old buildings, each on the day when it was before the artist's eye, when his drawing-board was set up in the little close in front of it.

Have they been drawn by the aid of the camera lucida? At all events, here is a mine of wealth for a student of that picturesqueness which comes of almost unconscious building, with no more architectural sense than that which would provide a centrepiece in a steep roof, or some carefully moulded coping along the slopes of a dormer window. Picturesqueness, not of the highly wrought Gothic with pointed windows and steep gables, all carefully moulded according to the rules of the art, but coming of itself as the unwatched mason, building his high stone walls, left windows where they seemed to be required—that is the evident purpose and the result of the collection before us.

—We record with pleasure the appearance of Father Dinneen's 'Irish-English Dictionary,' published by the Irish Texts Society. It will be a welcome resource to students of modern Irish, who have had to make shift hitherto with very imperfect lexicographical aids. O'Reilly's Dictionary, the only one which has been easily obtainable, fails to take account of a large part of the living vocabulary, and is an utterly uncritical compilation besides, representing no particular stage of the language and containing words that probably never existed in any stage of it. Father Dinneen, being himself a native speaker, has been chiefly concerned with the living tongue, and has undertaken to explain "the main stream of words, idioms, and forms that constitute the modern Irish language." We believe he has accomplished this object creditably. In addition to his own traditional acquaintance with Irish, Father Dinneen has been able to turn to account his experience as editor of a number of modern poets; and he has made use of earlier lexicographical materials, both printed and unprinted. He has also been supplied by collectors with lists of words in local use to-day in various parts of Ireland. He is probably justified in claiming that his book contains more of the words and expressions in present or recent use than any Irish dictionary yet published. The number of entries, as we calculate them roughly, cannot be far from 30,000. It is in no spirit of censure, then, that we point out that there still remain many modern Irish words which Father Dinneen has not recorded. We have tested his dictionary hastily by a few poems and folk-tales selected at random from the literature of the last three centuries, and in nearly every instance we have come upon words not noted in its pages. Even in Father Dinneen's own editions of Irish poets, the special glossaries contain some words not included in his dictionary; and we have found others registered in O'Reilly, and known to us to occur in modern texts. It was inevitable that the work should be incomplete, in view of the short time and limited assistance at the editor's disposal. Many omissions, too, are doubtless attributable to the editor's deliberate method, for it appears from his preface that he did not mean to register everything, but rejected words not deemed to be in sufficiently good use. What he attempted was not a complete thesaurus of the language, but a selected vocabulary, genuine in character and ample for the reader's ordinary needs. There still remains work enough for future makers of Irish dictionaries to do, and those who come after Father Dinneen will not be reduced to "gleaning here and there."

—We have also received from the Irish Texts Society the fifth volume of its regular series of publications, an edition and translation by Mr. Patrick M. MacSweeney of the 'Caithreimh Conghail Cláiringhnigh' (The Martial Career of Conghal Cláiringhneach). The story is of considerable interest for both form and matter. It is preserved in a manuscript of the seventeenth century, and the language, which, in the light of present information, can be only roughly dated, belongs to the period of transition from Middle to Modern Irish. But part of the material probably comes down in substance from early Middle Irish times, and one episode has been plausibly connected with a lost saga mentioned by title in the "Book of Leinster." The critical analysis of the existing tale offers a pretty problem which Mr. MacSweeney discusses at length in his introduction. Stylistically considered, the tale is a good example of finished Irish narrative, composed in the regular form of mixed prose and verse characteristic of the earlier sagas. The editor's work is done with care and in a scholarly spirit. His tabular analysis of the verbal forms will be of assistance to future investigators in historical grammar; and the same scholars will commend him for not having changed the spellings and initial mutations of his manuscript to make them conform with present usage. He thinks it necessary to defend himself for this procedure, but we should have been glad to see him still more conservative. Many spellings are doubtless inaccurate or insignificant, as he concedes; but it is surely desirable not to destroy or conceal manuscript evidence, such as it is, with regard to the practice of the seventeenth century, in these uncertain matters. Mr. MacSweeney's running commentary in footnotes is uneven in value. Many notes are taken up, quite properly, with explaining familiar grammatical forms for the benefit of Gaelic readers without philological training. From others Celtic scholars will derive useful information about modern usage. But occasionally the editor's remarks are very inadequate. Thus, on page 20, Prof. Osborn Bergin is said to have pointed out to the editor "the parallelism between the position of the French pronoun object and the Irish infixed pronoun." This is a commonplace of grammatical information, and was long ago discussed by M. Henri Gaidoz (*Revue Celtique*, vi., 86 ff.), with illustrations from Latin as well as from French.

—Walt Whitman's 'Diary in Canada' and 'American Primer' (Boston: Small, Maynard & Co.) seem at the first blush rather memorial volumes than books. The first is edited, with "extracts from other of his diaries and literary note-books," by William Sloane Kennedy; the second, "with facsimiles of the original manuscript," by Horace Traubel. There are also two good portraits. Piety could hardly go farther, for everything, however trivial, is given the benefit of the doubt. The volumes inevitably recall Hawthorne's note-books (they are mainly a mass of scraps and disjointed notes), with the difference that they are rather vociferous and exuberant than significant or pregnant with suggestions. Of the two, the Primer is the more important, because Whitman seems to have had an idea at one time of publishing it. He adds, however, that "the best of the Primer stuff" has no doubt "leaked into" his other work; and this strikes us as a very good description of what happened. The Primer is a sort of prose rhapsody on Words, of which it is notorious that Whitman was fond. Ideas he did not care much for, but words, good, bad, and indifferent, filled him with delight. He exults in the English language; he likes short nicknames—Tom, Bill, Jack; he likes good words and bad words, words used by clergymen, literati, lawyers, gamblers, thieves, and prostitutes; in short, he likes any kind of word, and the notion of an absolutely unexpurgated dictionary fills his cup of pleasure. In this Primer the later Whitman is adumbrated very effectively, and for lovers of his perfected works the volumes have of course an interest which others will fail to find.

—"As the exhibition recently opened by the New York Water Color Club in London," writes a correspondent from that metropolis, "is the first it has held in England, it is a matter of regret that more care was not taken to attract attention to it in the right way. For those who know nothing of London, it probably seems that if once a Bond Street gallery is secured, an exhibition may then be left to take care of itself. But there are Bond Street galleries and Bond Street galleries, and a good deal depends upon which is chosen, as well as upon the way in which the show is announced—facts which American after American, coming to London for the first time, has failed to grasp. The New York Water Color Club has gone to the Modern Gallery, which, fortunately for the members, has just moved into new premises where, at least, the work exhibited can be seen. But even its most devoted patrons can hardly claim for it the first rank among the minor galleries in London. Nor has the exhibition been announced as it should. There are such innumerable little shows in London that advertisement—and not merely the advertisement you pay for at so much a line—is absolutely necessary. This the club has not had, and the result is that the exhibition is passing almost unnoticed. Again, the drawings have not been well hung. Who is responsible for the hanging, I cannot say, but I doubt if it was any one who knew much about American art and artists, for I found Mr. La Farge's two little studies skied, while the drawings that really have the most individuality and interest, Mr. Cooper's "Skyscrapers," are not given the prominence they deserve. These are by far the best things in the exhibition. If, as yet, nothing has been sold, I think it should be pointed out that this, no doubt, is largely due to prices that seem unduly high in London."

THE WARS OF RELIGION.

The Wars of Religion. (The Cambridge Modern History; planned by the late Lord Acton; edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., Stanley Leathes, M.A.) Volume III. The Macmillan Co. 1905.

The great work of the Cambridge Modern History, late in starting, now advances with a steady and regular pace which

atones for the former delay and is highly creditable to the editors, as any one will know who has had experience in trying to drive a large team of contributors, some of whom are pretty certain to lag behind the others. The present volume, the third in order, though the fifth to appear, covers very nearly a century, from A. D. 1525 to A. D. 1621, overlapping at the earlier point some of the chapters of the last preceding Volume II. It consists of twenty-two chapters, written by sixteen authors, more than half of whom appear in the work for the first time. Two, and two among the best, have unhappily quitted this world since they prepared their respective chapters, viz., Prof. Samuel R. Gardiner and Mr. T. G. Law of Edinburgh. In point of scientific and literary excellence, Volume III. is distinctly better than the volumes on the United States and the French Revolution, and, we think, equal to the first two volumes, which treat of the Renaissance and the Reformation, although no chapter in the present volume is quite as striking as Principal Lindsay's upon Luther in Volume II.

The general character of those volumes reappears here. Different as the writers are in some respects, they all aim at a plain, direct, lucid narrative rather than at any graces of style or picturesquely dramatic handling of their matter. Some are, however, plainer than others. Mr. Butler describes the struggle, often intermitted and often renewed, between the Roman Catholics and the Huguenots in France from 1562 to 1593, with a care and clearness which will earn the praise of those who know the difficulties. But he gives us nothing but narrative, seldom interposing any remark to indicate the views he must have formed upon the characters of the actors and the general causes which were at work. This is the tendency of most of the contributors, though Dr. Ward, in his excellent chapters on the Emperors Maximilian the Second and Rudolf the Second, sometimes pauses to note the forces that governed events and to touch upon the qualities of leading men; and Mr. Hume allows himself some picturesque details in his account of Philip II. The period is full of interesting personalities. Of Elizabeth of England and Mary of Scotland there is no need to speak, for no personalities in history have given rise to more controversy. But we have also Henry IV. of France and Catherine de' Medici; we have the Emperors Charles the Fifth, Ferdinand the First, and his son Maximilian; we have William of Orange (the Silent), Margaret of Parma, Granvelle and the Duke of Alva; we have Stephen Báthory of Transylvania and Poland. These are all well handled. But the most effective characterization, the figure which is made to stand out most clearly and sharply, is Pope Sixtus the Fifth. Count Ugo Balzani's chapter upon this most remarkable of the post-mediæval Popes is one of the best in the volume, giving, within the compass of thirty-six pages, a vigorous and lifelike picture of an extraordinary practical genius, who left his impress alike upon the city of Rome, upon the Church, and upon his secular dominions. Nor must the admirable chapter of Mr. Law upon Mary of Scotland pass unnoticed. It is probably only one-tenth in extent of the part of Mr. Andrew Lang's recent History of Scotland devoted to this inexhaustibly interesting person, whose fortunes have produced almost as much poetry as controversy. But it brings out the salient facts more clearly and broadly than Mr. Lang has done, and it is more impartial. Mr. Law's view of Mary's conduct will commend itself to dispassionate minds. He hesitates to pronounce upon the vexed question of the Casket Letters, apparently inclining to the view that they were really written by the Queen, but subsequently tampered with so as to have become, in the shape in which they were presented to Elizabeth's commissioners at York, partially forgeries. His account of the plots against Elizabeth's life as well as crown, to which Mary was a party, goes far to justify her execution, distasteful as that is to modern notions, and goes some little way to justify the apparently unfilial behavior of her son, King James the Sixth of Scotland.

The volume closes with an important chapter on "Political Thought in the Sixteenth Century," important because that century, or rather the century and a half which followed the great outbreak of religious strife, has been the most fertile and determinative period in the sphere of political thinking that the world has seen. It gathered up all that the ancient world and the Middle Ages had produced. It poured the old wine into new bottles, and added much new wine of its own. The so-called "Principles of 1789," as well as the principles of the Declaration of Independence, are really present, though not always explicit, in the controversialists of the Reformation and post-Reformation age. Professor Figgis, who writes this chapter, sees the magnitude of his subject, grapples manfully with it, and makes many judicious and instructive remarks. He has not, however, the supreme art of arranging what he has to say in its most natural order, and of getting right down to the fundamental principles involved. It would have been better to set forth separately in its completeness each of the competing theories, and to show the real differences of religious sentiment and religious doctrine as well as of political sentiment and view which existed between them. Nether does he sufficiently examine the mediæval conceptions out of which some at least of these sixteenth-century theories sprang. There is not, for instance, a single reference throughout the chapter to Marsilius of Padua. Even the bibliography appended to the chapter does not mention the 'Defensor Pacis' of that remarkable thinker, though it is perhaps the most striking political treatise of the Middle Ages. One wishes here, as so often in turning over the pages of this History, that Lord Acton could have lived to contribute to it, or that at least he had lived to write that 'History of Liberty' to which he had at one time intended to devote his powers, and which would have been a treasure of thought and knowledge for his successors.

Apropos of the excellent bibliographies which are attached to each of the chapters, and which naturally grow longer in each successive volume, as each comes nearer our own time, it deserves to be remarked that they would become much more useful if the leading or most valuable books upon each topic were indicated, even by a line or two. A very long list tends to defeat its object, because few indeed are the students who can read through all the books enumerated. Some of the original sources, and some of the modern treatises or detached articles, are much more valuable than others. To indicate these would greatly lighten the labors of the student who desires to turn the bibliography to account. There are books in these bibliographies which one who has read them will rate low. Let it be added that the workmanlike quality of the whole undertaking, so marked in the first two volumes, is thoroughly well maintained in this one. It is generally accurate; it is critical; it is clearly written; it is dispassionate. One does not ask one's self whether the writer of each particular chapter is a Catholic or a Protestant, and, if a Protestant, what is his particular theological position. The attitude of pure science is worthily maintained.

The century and a half which follows the beginning of the German and Swiss Reformation has, among other characteristics, three on which a perusal of this volume suggests a few passing words to be said. It is the epoch of European history (with the exception of the twenty-five years from 1791 to 1815) in which the fortunes of all the great European States are so closely linked together that the history of no one of them can be written without constant reference to the history of the others. There was, indeed, during this period a greater unity of Europe than there had been in those earlier days when the Pope and the Emperor claimed to be universal monarchs. The nations, so far from being united, were, indeed, engaged in almost constant wars with one another. But they were also engaged in civil wars, and these civil wars were all, ostensibly at least, wars due to the same disturbing element of religious discord. Each religious party in each country felt its prospects of success or defeat involved with the prospects of those who championed the same doctrines in every other State. Only Russia and, to a less degree, the lands north of the Baltic lay outside this principle of discord, which for a time seemed to be suspending national antagonisms, for it made the Protestants of Germany, France, Holland, Hungary, Bohemia, England, and Scotland the allies of all other Protestants, as, similarly, the Catholics in each of these countries, as well as in Spain, Italy and Poland, were leagued with all other Catholics.

Sympathy in principles held to be vital was no doubt not the only motive at work, because the sovereigns of most States were governed as much, or more, by their own interests as by their religious prepossessions. If the two great Roman Catholic Powers, France and Spain, had cared to unite against England, they could have overthrown Elizabeth, and, with her, the Protestant cause everywhere, because Holland also must have succumbed. Fortunately, even Philip the Second, devoted as he was to his faith, had far too strong a jealousy of France to make a real alliance with her for any purpose. So, if Elizabeth had cared more heartily for Protestantism, she would have sent earlier and more effective help to the revolting Dutch. As for the German princes, some of the Catholics were ready to hire out their troops to the French Protestants, some of the Protestants to give like help to French Catholics. Yet the sympathies of the people went with the religion to which they belonged, and, in the main, it prescribed their line of action to the monarchs. After the

Peace of Westphalia, religion sinks to a second place, and dynastic interests of sovereigns predominate, aided or modified by the interests of trade. There is no longer a bond uniting sections of one nation to sections of another; nor does any such bond appear till after the Napoleonic wars, when the principles of the Holy Alliance drew Russia, Prussia, and Austria together, and led them to repress revolutionary doctrines everywhere; when, later, sympathy for freedom makes England disposed to favor the national movement in Italy, when France displays her feeling for Poland, and when, in our own days, European peoples subscribe money for the benefit of the South African Dutch in their resistance to England.

The sixteenth century is an age marked more than most others by a group of remarkable female rulers. Besides Mary and Elizabeth of England and Mary of Scotland, Catherine de' Medici guides the policy of France for many years with Italian adroitness and tenacity, while first the aunt, then the sister, and then Margaret of Parma, the illegitimate daughter of Charles the Fifth, all showed remarkable gifts as regents of the Netherlands. In no subsequent generation have women figured so prominently in affairs of state, though there have been times when their secret influence has been potent. This may be an accident; but another feature of the period is no accident. The days of the Wars of Religion were marked by more frequent assassinations and attempts at assassination of monarchs and other conspicuous political figures than any century of the Middle Ages had been, or than any subsequent period has been down to our own time, when the phenomenon has again appeared. France takes the first place with the murders of two kings, Henry III. and Henry IV., and of two great Catholic leaders, Francis Duke of Guise, killed by a Huguenot, and Henry Duke of Guise, killed by Henry III., not to speak of that orgy of slaughter, the Massacre of St. Bartholomew. William the Silent's life was often threatened and twice attempted, the second time with success. In England there are incessant conspiracies to kill Elizabeth; there is the Gunpowder Plot, in which not only the King but the whole Parliament was to have perished; there are the murders of Buckingham and Overbury, and there are in Scotland, where manners were still more fierce, the murders of Cardinal Beaton, of Riccio, of Darnley, of the two regents, Murray and Lennox. (Many of the executions under Henry VIII. and his children were really murders done by law.)

These assassinations were in most cases perpetrated by the orders of kings or princes, and were usually approved by the opinion of the party in whose interest they were effected. To get rid by the knife or by poison of a formidable antagonist like Guise, or Murray, or William of Orange, was deemed a legitimate act of warfare. A Te Deum was sung at Rome on the receipt of the news of St. Bartholomew. This kind of feeling is now almost confined to the Turks, and indeed to the worse kind of Turks, with the present Sultan at their head. An event like the recent murder of the King and Queen of Servia horrifies Europe, though it is what might well have happened in the Scotland of Queen Mary. The explanation is to be found partly in the intensity of passion which religious strife excites, and partly in the belief that all means are justifiable where religious faith is in question. A modern parallel is afforded by the anarchist murders of our own days, such as those of President McKinley, of President Sadi Carnot, of the Empress Elizabeth of Austria, of King Humbert of Italy. In these cases men's brains are inflamed by a mad and unreasoning hatred, born of ideas which are held with the intensity of religious doctrines, and which render the assassin ready to sacrifice his own life, as did Balthasar Gérard and Francis Ravaillac when they killed William of Orange and Henry IV.

THE SIEGE OF PORT ARTHUR.

Port Arthur: Three Months with the Besiegers. Illustrated. By Frederic Villiers. Longmans, Green, & Co. 1905.

In view of the complaints of newspaper men who were offered a lesson in patience which they did not learn, and through whom the Japanese declined to publish their more intimate military operations while they were still inchoate, it is interesting to read this veteran artist-correspondent's valedictory in his diary of incidents observed with the Third Imperial Army of Japan. He says: "I never left any army in the field with greater regret, nor have I been treated with more consideration and kindness by all ranks, from privates to generals." Nothing could be plainer, and from such long experience in the ways of warring men there can be no more satisfactory testimony to the good sense and good temper of the new nation, so that the querulousness of the inexpert may be disregarded.

As history (although interspersed with much personal matter interesting only as illustrating a mode of life) this book contrasts with the tales of the mobile columns by describing the persistent and heroic siege operations which brought the Japanese character into new relief. When the capture of Nan-shan opened the way, Gen. Nogi's army swept down the peninsula, and the Russians were pushed back from outlying point to point until the assault of Taku-shan forced them into the stronghold. The reverse of this shan (hill) is as sheer as Gibraltar, and it rises 600 feet to a crest rugged with precipitous rocks. Its sloping base, intersected with trenches, runs in undulations to the plain. "After fighting incessantly from the afternoon of August 7 till early on the 9th [these dashing little soldiers] rushed the positions at four o'clock in the morning, only taking five minutes from the beginning of the slope to scale the crags to the crest, capturing four guns and hundreds of rounds of ammunition." The time seems incredible, but, whatever its length, the feat was accomplished. As this point of observation commanded all the besiegers' movements, its occupation was essential.

The wonderful achievements of Nan-shan and Taku-shan seem to have inspired the Japanese with the belief that no position was beyond their immediate seizure, and they must have kept in mind that, ten years previously, at a cost of less than 300 casualties, they had torn Port Arthur from 14,000 Chinese in a single fight that closed at midday. Hence their terrific efforts to carry the works by storm—efforts through which in six weeks they "lost nearly 30,000 men without having captured any position of great strategic advantage" (p. 124). Of these, 14,000 fell between the 18th and 26th of August (p. 35). On the land side the terrain was very rough, and Port Arthur was shielded by a semi-circle of works crowning the ten miles of crowded hills.

"All the permanent forts that top the hills in front of us, skirting the valley from sea to sea, have smaller redoubts wedged in between them, some fifty in all, and the majority of them connected by covered ways; the whole, apparently, forming a double line of impregnable works that, if held by a strong garrison, might, even on meagre rations, keep a besieging army at bay for months, and, if the men were well fed, for years. Behind these formidable lines, standing out in a yellow blaze of sunlight against the blue background of the waters, is the famous sea fortress of the Golden Mount" (p. 17).

At four in the morning of August 21 the Ban-u-san forts, near the centre of the lines, were attacked, and they changed masters only after twenty-eight hours of continuous and fearful fighting. Excepting that this feat was actually accomplished through unparalleled exertion and frightful losses, to carry them might fairly be pronounced impossible. But in this war human life means so little in comparison with a necessary end that "impossibilities" become ephemeral in duration and powerful forts inconstant in allegiance. There are vivid descriptions of captures and repulses, midnight actions, rushes at dawn, bloody engagements in broad day, of bombardment by enormous (11-inch) rifled mortars and other great guns throwing 500-pound projectiles, and of life in trenches so near the enemy that ordinary conversation draws fire. After repeated demonstration that even Japanese infantry could not live on the fire-swept open below the parapets, zigzags and parallels checkered the great natural glacis of those gun-crowned hills, and scientific approaches by the engineers replaced, or more strictly supported, the valorous attacks of the infantry and the perpetual pounding of the artillery. The siege settled down into industrious digging, continuous cannonading, the repulse of desperate sorties, and the dash of yet more desperate attacks. For months hardly an hour passed without some kind of fighting (p. 130), and one can well appreciate how finally any sound might startle the nerve-racked combatants.

Apart from the extreme audacity and fury of the warfare—desperation, for example, that left only seventeen survivors from a great regiment (Ouchi's)—a novel characteristic has been the artificial illumination of the field by the Russian searchlights and star bombs—great cones of vivid glare that bathed the whole terrain, and showers of softer light that fell over the advancing lines moving under cover of the night.

"It is 1 A. M., and still the fight rages furiously. Three of the nine searchlights that the Russians appear to possess are playing incessantly on this section of the battlefield, and star bombs or rockets are bursting continually, their incandescent petals spreading fan-like, and falling slowly to the ground. So brilliant are these lights that the moon, now nearing the horizon, is but a faint slip of silver in the sky. The colour of this night warfare is what Whistler would have revelled in. The deep purple of the mountain against the nocturnal blue, the pale lemon of the moon,

the whitish rays of the searchlights, the warm, incandescent glow of the star bombs, the reddish spurt from the cannons' mouths, and the yellow flash from the exploding shell, all tempered to a mellowness by a thin haze of smoke, ever clinging to a hill-top and valley, make the scene the most weird and unique I have looked on during all the many wars I have witnessed. In the old campaigning days, both armies usually ceased hostilities at some period between sundown and sunrise; but here, at Port Arthur, for purposes of fighting the night is as the day" (p. 27).

Disregarding further illustration of its extreme gallantry, one asks how came this army to be so superbly tempered? It is notorious that recruits may be led to victory over ground where veterans fear to tread. Soldiers whose eyes have been opened may falter until they attain the calculated defiance of peril and precision of obedience that reward intelligent discipline. These Japanese were neither recruits nor veterans. They had passed into the reserves familiarized, under a general conscript law, with the more common military requirements, and in the field they soon must have seen windrows and hecatombs of the slain, deterrent to any but the stoutest hearts. The conviction forces itself upon the student that Japanese success has depended upon two prime factors. One is the merging of the individual's identity in that of the nation; a concentration in the man of action of both ancestors and those yet unborn. With them, even more than with other Orientals, the generation on earth connects itself with the past and the future, a visible link in a vital chain between the two eternities. Their dead have not been destroyed. They inspire the living and in turn largely depend upon the living for their own happiness; and, moreover, the qualities of the living are to be bestowed upon those not yet embodied. This, which also might well be considered in the propagation of religion, has a wider range than along a mere family line. Even the private not simply has before him the honor of his ancestors and the credit of posterity, but realizes that he is adding to the character of the nation as well. Napoleon's rhetoric at the battle of the Pyramids is living doctrine to the Japanese soldiers. Not merely forty disinterested centuries, but the termless and crowded past of Dai Nippon supplies the cloud of witnesses that are beneficiaries as well of the heroic deeds. There is, therefore, not a mere indifferent disregard of death, but an altruistic welcome of it as the portal to a higher life for the martyr and for his people. Along with the ingrained patriotism, which also may show itself in other ways, is a distinctly native martial spirit; so that the Emperor's call transforms the most tranquil man of peace into one eager for war.

The other factor is the Japanese genius for little things and the never-ceasing application of practical instruction. This is shown in the good sense with which military teaching is carried on. A newly arrived contingent is drilled in scaling a neighboring hill, dashing from cover to cover, finally with triumphant shouts to charge the imaginary foe. An officer of an "enlightened" nation forbade a captain to drill his command over wooded country in the similitude of actual war, because "the parade-ground was set apart for drilling." "In the camp, men are gathered in little groups round their officers, intently listening to lectures on the behavior of soldiers in the field, the way to preserve their health, and other little details. The men all seem to take the keenest interest in these talks, which occur daily in Gen. Nogi's camp" (p. 87). Is it possible that they supposed themselves following American precedent, and that United States troops, overflowing with zealous desire, imbibed similar instruction on the sands of Florida or under the groves of Chickamauga, in anticipation of yellow fever in Cuba or of typhoid at Camp Thomas? The author arranges for a personal supply of "the boiled water served to the troops" (p. 35). Has the United States, has any "civilized" State, issued boiled water in the field? Has it acted, not merely declaimed, against raw water in contaminated regions?

Fertile in resource and quick to adopt the newest instrumental aid, we believe the Japanese were the first to use the hyposcope in actual war in this campaign. Its arrangement of prisms enables an officer out of the direct line of vision to observe the effect of artillery fire and to lay the guns as required. Large detachments of literal grenadiers were improvised and the rarely used missile reinstated. Extemporized wooden mortars, wrapped and reinforced with strips of bamboo, light enough for two men to drag to the immediate vicinity of a trench, bewildered the defenders by dropping charges of guncotton among them preparatory to a bayonet attack (p. 135). The Filipinos, in their destitution and desperation, used wooden cannon of small calibre and light weight, bound with cordage and bursting after a few rounds—pathetic signs of poverty. But these extemporized Coehorns were ingenious devices, admirably adapted to the situation. As to the Japanase treatment of the horse, Mr. Villiers admits that the miniature horse-lines before Port Arthur may not fairly represent a large cavalry camp, but, as far as they went, notwithstanding his extensive campaigning, he had never seen them equalled. Their leafy shade was refreshing to enjoy; "and so cleanly were they kept that, though the heat was intense and the moisture arising from the wet ground considerable, there was not the slightest effluvium of any kind to offend" (p. 48). In connection with the attention paid them, he adds: "Being an animal myself, if I had the choice of what form I should like to be in before Port Arthur, for comfort, regular meals, cleanliness, and general kind treatment, I should say, 'Make me a horse.'" One other point: on the eve of a great assault the troops expecting to be engaged "are tidying themselves up and changing their linen, for the Jap soldier has a horror to be found dead in a state of uncleanliness"; which the author notes as a novel custom in his campaign experience.

These are simple illustrations of the ways of an uncommon people. There is no discussion of the siege from a soldier's point of view. It is simply the diary of an experienced observer, and is a curious medley of Chinese rural life in the midst of war which we entirely pass by, of various trivial personal happenings, and some account of spirit-stirring combats and of the uproar and confusion that follow the operations of death-dealing mechanisms. As becomes an artist, the illustrations are copious and graphic, and many if not all are evidently reproductions of the original sketches for the *Illustrated News*, bearing upon them notes to the engraver, thus: "Please keep exactly to shape of white smoke. They are special studies of bursting projectiles sketched during the attack on the forts and therefore realistic of modern warfare." All the thirty-odd full-page illustrations bear evidence of being equally true to life.

The Diary and Letters of Madame D'Arblay. Vols. I-III., 1778-1788. With Preface and Notes by Austin Dobson. The Macmillan Co. 1904-5.

This edition of Fanny Burney's famous 'Diary' is based on the seven volumes issued by Colburn in 1842-6, rearranged in six volumes by the present editors. The Introduction, by Mrs. Barrett, the diarist's niece, is retained; but her notes were in many cases out of date and have been revised with numerous additions by Mr. Dobson. His footnotes are often quite unnecessary to any intelligent reader of the text. The appendices are new, and consist of "unpublished letters, or extracts from other sources which were too lengthy to be included in the notes."

The 'Diary' opens with the publication of 'Evelina' in 1778, when Fanny Burney was twenty-six. Her father was a teacher of music, whose great personal charm had long given him the *entrée* into fashionable society where the ordinary music-master, even though he had written an admirable 'History of Music,' would have been completely ignored. As it was, Dr. Burney was one of the most popular men in London, and his little house in St. Martin's Street was visited by most of the distinguished men and women of the day. The Burneys belonged to the middle class, but talent of any kind was fashionable, and there is no evidence that they were ever snubbed. When Fanny Burney, with infinite misgiving and speechless confusion, allowed it to be revealed to a select few that 'Evelina' was hers, she was promptly carried off by Mrs. Thrale, the great lion-hunter of the day, who had long entertained Dr. Johnson as her domestic philosopher and was eager to secure for her Streatham salon this latest celebrity, at whose identity every one was guessing. London society at that time was led by "the Wits." Mrs. Delany, Mrs. Montagu, Mrs. Chapone, and their kind dominated the drawing-rooms of London and Bath, while Mrs. Thrale, the wealthy brewer's wife, could always gather a crowd of "tonnish" people who were only too flattered to be browbeaten by Dr. Johnson if they could but be seen publicly in his set. Johnson was ever ready to give away his heart to a young woman of intelligence, and all London envied her her intimacy at Streatham with this "ponderous *amoroso*"—if we may borrow a phrase of Mr. Henry James. Even the young bloods craved the distinction of dancing with "little Burney" at what they called "flash" or "flaming" parties. A most unresponsive and embarrassing partner they must have found her. Her silences, which became as famous as those of Æschylus, earned for her the nickname of the "Mute Angel." One who had got on the soft side of Dr. Johnson and had written 'Evelina' could not, of course, be stupid, and when Hannah More

alluded to "the silence of intelligence" in a poem on "Attention," the compliment was at once fixed on Fanny Burney.

The Streatham party and their interests fill the first volume and half of the second. What is true of Fanny Burney's novels is true of her 'Diary': it is the minor characters that are the most amusing. We can all imagine for ourselves what it might be to sit down to dinner as she does in the natural course of things with Edmund Burke on one side, Sir Joshua Reynolds on the other, and Gibbon opposite. But think of going to tea with the Bowdlers, all unconscious that one's host was to be immortalized not by his 'Expurgated Family Shakspere,' then in vogue, but by being transformed, like Captain Boycott, into a verb. Among others then creeping silently into fame, Fanny Burney encountered Thomas Lawrence, whom she saw at his home, the Bear Inn, at Devizes, a boy of ten already known in the neighborhood for his wonderful drawings. Her brother married Sally Payne, of whom Fanny could not foretell that she was to furnish Lamb with the original of "Mrs. Battle." In those days, when it was fashionable to be "blue," there was an astonishing number of beautiful women in English society in whose list of charms a knowledge of Greek was placed second, if not first. Such was Sophy Streatfield, the belle of Tunbridge Wells, who, in addition to her Greek, had an extraordinary gift for tears. She used to be asked to cry in society as other people were asked to sing, and would cry smiling, like the water nymph in Theocritus with her April eyes.

In 1784 Mrs. Thrale married Piozzi the singer, and was cut by all her friends. Mrs. Delany, who counted with the "old Wits," now became Fanny's mentor. Mrs. Delany was adored by George III. and Queen Charlotte, and it was, no doubt, mainly due to her influence that they disregarded court precedents and in 1786 appointed Fanny Burney dresser to the Queen. She was now thirty-four. No one could have been less suited by nature for a life at court, and no one was ever less adaptable than Fanny Burney. For a woman who had been the pet of London society for eight years she was astonishingly slow at acquiring etiquette. Yet nearly all that the Georgian etiquette required was that you should not seem to exist in a royal presence unless requested by a royalty to speak or move, should scratch at a door instead of rapping, and leave the room when you were told you could go. Fanny Burney's awkwardness was partly due to her extreme short sight. It was court etiquette when you unexpectedly met the King or Queen to stand rooted to the spot, and, if convenient, to flatten yourself against the nearest wall. "Mrs. Burney," as she was officially called on her promotion, lived in a chronic state of nervous prostration at these encounters. The King and Queen were always genial and unbending with their suite, but there was a court spirit that could not be offended with impunity, and Fanny was constantly reminded by the odious Mrs. Schwellenberg, her chief among the Queen's attendants, that she was regarded as an interloper who must be taught her place. This German dragon, the Queen, and Mrs. Delany, fill the foreground of the third volume.

The pride of the Burney family in its new dignity was never shared by Fanny. She took life very hard and herself very seriously. She could always see the humor of another's situation, but could never face her own lightly. She shows herself in all these volumes an amiable prig, but still a prig. When she attended the first sittings of the trial of Warren Hastings in 1788 she snubbed Burke, who left his place to speak to her, because, being one of the court party, she regarded him as the cruel persecutor of one who, after all, was only her acquaintance, while Burke had long been her friend. She had little to describe that was as brilliant as this trial, for the home life of George III. was monotonous, not to say bourgeois, and of a respectability that strictly barred the "flaming" and the "flash." What makes this part of the 'Diary' entertaining is Mrs. Burney's lively descriptions of the trivial interests and difficulties of the ladies-in-waiting, their harmless sociabilities, their clothes, their relations with the equerries of the King, their squabbles and discussions when the whole suite met every evening at the tea-table of Mrs. Schwellenberg, all the little incidents connected with their frequent migrations to Kew and to town.

The full-page illustrations consist of portraits, views, and plans, and are well reproduced. There is an index to every volume, and a general index is promised at the close of the work.

Pathfinders of the West; Being the Story of the Adventures of the Men who Discovered the Great Northwest, Radisson, La Verendrye, Lewis and Clark. By Agnes C. Laut. With illustrations by Remington, Goodwin, Marchand, etc. The Macmillan Company. 1904. Pp. xxv., 380.

Miss Laut's 400 pages trace the careers of several preëminent American pathfinders to their ultimate goals. Radisson, Verendrye, with Lewis and Clark, are mentioned on the title-page. Two others of the elect few are there unnamed, though they each fill about as many pages as Verendrye or as Lewis and Clark combined. One of those unmentioned was Hearne, whose pilgrimage down the Coppermine in 1770 to Arctic salt water started that series of polar adventures which may wear out the world. The other of the unmentioned was Mackenzie, who first of all men crossed North America, and that twelve years before Lewis and Clark's grand traverse. The lack of these supreme names in the forefront, analogous to leaving Hamlet out of his namesake play, is the more noticeable because it is a typical negligence. All through the volume we desiderate something we ought to find but do not. Many a toothsome plum is plucked out of Radisson, but in the pile of sweets we miss that mortar of pudding which in the original showed their relations and hence significance, making them each to both lend and borrow light and sweetness.

The culmination of each pathfinder's endeavor made him also a pathbreaker and epoch maker. Radisson's discovery in the seventh decade of his century regarding that divide, or height of land, whence rivers flowed to Hudson Bay, cost France half her fur supremacy, and gave birth in 1670 to the Hudson Bay Company, the most longæval known, and which, after two centuries of record-breaking dividends, to-day lives with eye undimmed and natural force not abated. Mackenzie and Lewis, first overlanders to our ultimate sea, were fathers of international counter claims to that coast and country which to the world's wonder lasted a hundred years without a war.

For painting to the life her favorites, each a Columbus in his sphere, Miss Laut has many rare qualifications, and, thanks to a cardinal characteristic common to them each and all, she has naturally treated them all in the same book. As we have hinted at her weakness betrayed on her title-page, we are glad of the prima-facie illustration of her strength which greets us in the pictorial outside of her volume. The central field of the left cover we see filled with a nondescript figure which she declares to represent the form and pressure of a pathfinder's stockade. "Such a fort was a triangle, and, if on a river-side, built with its base at the water's edge, with gate there and log walls running up to the apex" (p. 114). Many a reader's comment is, "Preposterous! just like a lady's fortification, on the pattern of the blockhouses her pinafore boy builds on the nursery floor." But we read in Gass, who was the architect of Fort Mandan, in which Lewis and his men wintered: "We built huts in two rows, joined at one end in an angle, roofs rising shed-fashion from the inner side, so as to make the outer wall eighteen feet high," etc. This form of fort appeared as a cut in one of the earliest editions of Gass, and it has been copied in Thwaites's comprehensive edition now in press. In analogous cases Miss Laut, when she has kept in mind the classic shoemaker's last, is critic-proof. Indeed, her antecedents lent her special fitness for her task. Her birth and breeding were not only amid scenes which her heroes trod, but where pristine conditions are not much changed. Her travels have been along Labrador, in Hudson Bay, or inland in Keewatin, still further from beaten paths. She has known life in bark boats on rivers where she has learned how, before horses were known, the adventurers she writes of forced their way. She has also met in the flesh as well as in their writings the best new Dominion specialists as to research in her department. Her style, if not without words unfound in our lexicons, has justification from new things —or it is an attractive brogue or Canadese which banishes dulness, though, like her rivers, it may bubble at times with a fatal facility.

The pathfinders, building wiser than they knew, while all seeking fur as a chief end, sowed seeds which have sprung up in continental railways, imperial companies, and even empires. Radisson, starting on his crowning quest into the vast unknown, led thirty-two Frenchmen and six hundred wild men. No sooner had the French smarted in the first hedge of thorns than they all, except his brother, deserted him. Then he approved himself a leader born, if not heaven-born. Standing in the Indian council, which was becoming as faithless as the French had proved, he swayed it as the leaves of a tree are moved by wind—somewhat by memories, but mostly by shouldering his pack and starting, self-centred, all alone on a forward march. *Qui sibi fidit dux regit examen.* Not one of the Indian legion failed to follow in his trail, and all served him as Ariels or Calibans did the monocratic Prospero. Contemplating an analogous magnetism, or whatever we call

it, in all her pathfinders, no wonder that when Miss Laut relates their legendary miracles, her narrative is permeated with unconscious exaggerations and imaginations, so that her book may be fitly classed among historical novels. To all who cannot take in hand Radisson's own book, hitherto printed only in a single Society edition, we commend Miss Laut's dilution; but let those who can, forsake the stream for its fountainhead.

Old English Furniture. By Frederick Fenn and B. Wyllie. London: George Newnes; New York: Charles Scribner's Sons. Pp. x., 91.

This book is the first of a series, of which the general title is announced as the "Newnes Library of Applied Arts." It is a gratifying promise which is made to the public, for the signs are plain that branches of decorative art not hitherto sufficiently popular to deserve volumes devoted each to a single branch, will now receive notice. English furniture, to be sure, is the subject of many a book, but there is announced a volume on "Sheffield Plate"; and who would have dared, ten years ago, to propose that as a subject for a volume? So, a volume on French Pottery is announced; and apparently there is no adequate treatment of the beautiful eighteenth-century faïence anywhere in English, except in the very recent work of M. L. Solon —a book of three times the cost of one of the volumes we are discussing.

As to the present volume, it seems to follow very nearly the same historical course as the stately quarto on English Furniture by Mr. MacQuoid, of which there has been preliminary discussion in these columns. As in that costly book, the periods are named in accordance with the materials in favor—oak, walnut, and mahogany—so here chapter ii. is devoted to "Oak Furniture," chapter iii. deals with "The Walnut Wood Period," chapter iv. with "The Introduction of Mahogany," chapter v. with "Inlaid Mahogany and Satinwood." The sixth chapter is entitled "Painted Furniture," and one turns to it with the hope of finding there some discussion of the early mediæval work, of that epoch of design when form was simple and color was all. In this the reader will be disappointed. The painted furniture alluded to is of Angelica Kauffmann's time, and the chapter is only a page and a half long. Finally, chapter vii. deals with "Chairs and Sofas," they being reserved for discussion apart from the cabinets and cupboards, chests and tables, because of a very natural and very praiseworthy feeling. The commodious and agreeable seats of the eighteenth and nineteenth centuries are hardly to be discussed on the same lines as the more monumental pieces which have no upholstery, no compulsory reduction to unchangeable dimensions, no limitation of their solid parts to such slender bars and slats.

What we like especially about the text is its reserve, and quiet tone, and plain statement of the impossibility of fixing dates very closely. Again, one finds (pp. 37, 38) a very sagacious criticism of Chippendale, and a comparison of his work with that of the Stuart period. The author (in this case, Mr. Frederick Fenn) desires to remove the absurd impression which he thinks is prevalent, that furniture-making of good taste began with Chippendale. Mr. Fenn has dealt with walnut and mahogany, and the periods which they represent, and Mr. Wyllie with oak, inlaid and painted furniture, and chairs and sofas; but the introduction—chapter i., which is a general essay on making and buying fine furniture —is by Mr. Fenn, and it rather seems as if he were the deviser of the book.

It does not appear, however, who is responsible for the illustrations. These are ninety-four in number, all half-tone prints, but on separate sheets of coated paper with white backs. The fashion of hoisting the picture itself as high as possible on the page has at least the advantage of leaving plenty of room for a five-line legend. By an unusual connection of ideas, the word "hutch" is applied to a kneading-tray for bread, as shown in plate xvii. This is the French *pétrin* of the eighteenth century exactly, and it is the only specimen of English make that the present writer has heard of; but a kneading-tray is a well-known thing, and the term "hutch" applied to it, though to be found in the Century Dictionary, is assuredly unusual. Let it be accepted as a collector's name for this rare piece of household decorative art.

With the Pilgrims to Mecca. John Lane.

This is a very entertaining illustrated book. The main authorship is left decidedly obscure by being assigned to a certain Hadji Khan, M.R.A.S., all the parts of which name are titles simply. Nor is there much further illumination when he calls himself "Hadji Raz," which means "Mystery Hadji." Plain, however, it is that he is a Shi'ite Muslim, who had been educated in England, and to whom the East was, to a great extent, as new as to an Englishman. Persian is, evidently, his Oriental tongue, and very weird work he makes of Arabic liturgics. In an incautious moment he describes himself as "an agnostic who would like to know," and he evidently went through the ritual in a more or less sportive frame of mind. Only the interior of the Ka'ba struck a hush of awe upon him, and, with that, ventilation may have had a great deal to do. Even the sermon at Arafat, which so impressed Burton, had no emotional effect upon him.

Apart from entertainment, the interest of this book must lie in its revealing broadly the state of mind of such "enlightened" Muslims. How shall a stiffly traditional ritual, full of the crudest fetishism, impress a philosophic doubter? is the problem. The present doubter took his solidly, and made no attempt to ease the burden by symbolism or allegory. Apparently he said to his soul, "I will go through the whole thing and see how it affects me." Apart from the Ka'ba, where he seems to have half fainted, it evidently did not affect him much. Of interest, too, is his quite artistic use of a skeptical and very unregenerate master of ceremonies in order to bring out the high lights of sarcastic comment.

It is unfortunate that little reliance can be put on our author's accuracy. Otherwise, the account of the distinctively Persian and Shi'ite "use" in the liturgy would have much value. Up till now, we have nothing of the kind. With the pictures of society and trade in Mecca it is different; these are most lively in color and give every appearance of truth. Indeed, the last chapters, on the Meccan bazaars and the tales told by the Talisman-Monger and by the aforementioned master of ceremonies, are the most entertaining part of the book. How much there and elsewhere is due to Mr. Wilfrid Sparroy, the collaborator with the Hadji, is left obscure. Fifty pages at the beginning are plainly his, but how extensive were the "notes" (p. 299) of the pilgrim we are not told. To be divided between them, then, is the burden of most scandalous proof-reading, and of an inserted slip correcting some of the errata, which are blunders of the worst. Apparently a more competent Orientalist read the sheets very hastily at the last moment.

NEW BOOKS IN PSYCHOLOGY AND NATURAL SCIENCE

Published by **Henry Holt and Company,**

29 WEST 23D ST., NEW YORK. 378 WABASH AVE., CHICAGO.

Angell's Psychology

By JAMES ROWLAND ANGELL, Head of the Department of Psychology in the University of Chicago. vii.+402 pp. 12mo. $1.50 net.

John E. Russell, Professor in Williams College: "I have not been so favorably impressed by any similar work. I know of none that has so successfully brought the results of modern physiological and experimental methods of psychology to bear upon the problems of mind."

Within three months of the publication of the book it was introduced at Harvard, Columbia, Princeton, Smith College, Colorado College, the Universities of Michigan, Indiana, Illinois, Iowa, Chicago, and Cincinnati, the State Normal Schools at Los Angeles, Calif., Milwaukee, Wis., and Terre Haute, Ind., and in the Pratt Institute, Brooklyn, N. Y., and the Ethical Culture School of New York City.

Caldwell's Plant Morphology

By OTIS W. CALDWELL, Illinois State Normal School, Charleston. 194 pp. 12mo. $1.00 net.

This revised form of Arthur, Barnes & Coulter's Plant Dissection is arranged with the evolution of the plant kingdom as the organizing principle.

W. A. Setchell, Professor in the University of California: "I find the selection of types, especially of the Cryptogamous Plants, very good, and the suggestions for investigation accompanying each type, clear and adequate. It worthily represents the more modern phase of the subject."

Atkinson's College Botany

By GEORGE F. ATKINSON, Professor of Botany in Cornell University. xvi.+737 pages, 8vo. Illustrated. $2.00 net.

This is an elaboration and enlargement of the author's "Elementary Botany." Some of the most important additions are chapters on the classification of the algæ and fungi with studies of additional examples and with classifications carried out so that the regular sequence of classes, orders, and families is given at the close of each of the sub-kingdoms. Another important change is the elaboration of the part dealing with ecology, made possible by the studies of the past few years.

Champlin's Young Folks' Cyclopædia of Natural History

By JOHN D. CHAMPLIN, assisted by FREDERICK A. LUCAS. With some 800 illustrations. xvi.+725 pp. 8vo. Cloth, retail price, $2.50.

The latest volume in the popular series of Champlin Cyclopædias. Earlier volumes ($2.50 each) are COMMON THINGS—PERSONS AND PLACES—LITERATURE AND ART—GAMES AND SPORTS.

Jordan's Guide to the Study of Fishes

By DAVID STARR JORDAN, President of Leland Stanford University. *With over 900 illustrations.* 2 vols., square, 8vo. (*Early in May.*)

This work treats of the fish from all the varied points of view of the different branches of the study of icthyology.

THE BANK AND THE TREASURY

By FREDERICK A. CLEVELAND, Ph.D.

Professor of Finance in the School of Commerce, Accounts, and Finance, New York University.

With 13 charts and tables. Crown 8vo. 340 pages. $1.80 net. By mail $1.94

CONTENTS: Commercial Banking and Speculation, A Financial Retrospect—The Use of Commercial Bank-Credit in Lieu of Industrial Capitalization—The American System of Currency and Banking—National Credit-Money and the National Bank—The Demand for a "Sound" and "Elastic" System of Bank Credit—The Relation of Bank Capitalization to the Problem of Elasticity—The Public Control of Commercial Banks—A Point of Control not Adequately Covered by the National Bank Act—Character of Assets to be Held by Banks as "Invested-Reserves"—Public Dangers in the Present Equipment of National Banks—Why the "Unencumbered Securities" of National Banks are not Readily Convertible into Cash—Dangerous Assumptions made by the Government with Respect to Currency and Banking—Advantages of National Banks under the Present Practice over State and Private Banks—The Amount of Elasticity for which Provision is to be made—Possibilities of Increasing Elasticity by Modifications of the Present Law—Superiority of the American Funding System over those of Other Countries—Recent Efforts made to further adapt our Funding System to the Nation's Business Needs—Appendix of Documents.

LONGMANS, GREEN, & CO., 91-93 FIFTH AVENUE, NEW YORK.

The Home Life of Wild Birds

A New Method of the Study and Photography of Birds. By FRANCIS HOBART HERRICK of the Department of Biology, Adelbert College.

New Edition, entirely rewritten, and issued in a form suitable for use as a field book

8vo, with 145 Original Illustrations from Nature by the Author, net $2.00.

"Never before have we had placed before us in a series of illustrations from life such a revelation of the intimate daily life of birds as is here presented."—*N. Y. Eve. Post.*

"Nothing written has ever contained quite so much ornithological matter of this sort, and the book, typographically beautiful, is one to be treasured."—*Chicago Interior.*

G. P. PUTNAM'S SONS, New York and London

CLARENDON PRESS PUBLICATIONS

The Complete Poetical Works of Shelley

Including materials never before printed in any edition of the poems. Edited, with Textual Notes and Bibliographical List of Editions, by THOMAS HUTCHINSON, M.A. Demy 8vo, with the Bodleian portrait of Shelley and two other Collotype illustrations. Cloth, uncut, paper label, $2.50. Cloth, gilt lettered, $2.50.

Dante's Divina Commedia

Translated into English Prose by H. F. TOZER, M.A. Extra fcap, 8vo, uniform with Dean Wickham's Translation of *Horace*, etc. Cloth, $1.00.

ALSO PUBLISHED BY HENRY FROWDE

Chaucer.—Facsimile Reproduction of the First Folio of Chaucer, 1532

Edited, with Introduction, by the Rev. Professor SKEAT, Litt.D., etc.

A Collotype Facsimile of the collected edition of Chaucer's Works (together with many Chaucerian pieces), edited by W. THYNNE and printed in the year 1532, is about to be issued.

The copy to be used as the original for this reproduction is that in the British Museum Library. It is taller and in better condition than the Bodleian copy, and is complete.

The edition will be limited to 1,000 copies, of which the greater number have now been subscribed for. The price will be $50.00 net, bound in Antique boards, or $60.00 net, in rough calf.

The Tragedies of Seneca

Rendered into English Verse by ELLA ISABEL HARRIS, Ph.D. (Yale). Crown 8vo, cloth, $2.00.

The Face of the Earth (Das Antlitz der Erde)

By EDUARD SUESS. Translated by Hertha B. C. Sollas, Ph.D., under the direction of W. J. Sollas, Sc.D., LL.D. (Prof. Suess has written a special preface for the English translation.) Vol. I., with 4 maps and 50 other illustrations, $8.35.

The Early History of India

From 600 B. C. to the Muhammadan Conquest, including the Invasion of Alexander the Great, by VINCENT A. SMITH. With maps and illustrations. 8vo, cloth, $4.75.

Murray's Small Classical Atlas for Schools

Edited by G. B. GRUNDY, M.A., D.Litt., Folio (14¼ x 9¾ inches), $1.50.

The Maps in this Atlas incorporate the results of recent scholarship, and have been most carefully prepared so as to accentuate all the chief names and natural features of the countries, and by eliminating those of minor importance to avoid overcrowding. The use of color contours, whilst displaying the configuration of the countries at a glance, enhances the effect of simplicity, which cannot be achieved in maps where the old-fashioned method of hachured mountains obscured the names.

JOHN WILEY & SONS'
SCIENTIFIC PUBLICATIONS

An Introduction to Projective Geometry and its Applications

An Analytic and Synthetic Treatment. By ARNOLD EMCH, Ph.D., Professor of Graphics and Mathematics in the University of Colorado. 8vo, vii+267 pages, 114 figures. Cloth, $2 50.

Elements of the Kinematics of a Point and the Rational Mechanics of a Particle

By G. O. JAMES, Ph.D., Instructor in Mathematics and Astronomy, Washington University, St. Louis. Small 8vo, xii+176 pages, 39 figures. Cloth $2.00.

An Elementary Treatise on the Differential Calculus, Founded on the Method of Rates

By Professor W. WOOLSEY JOHNSON, U. S. Naval Academy. Small 8vo, xiv+406 pages, 70 figures. Cloth, $3.00 *net.*

Elements of Mechanics

Forty Lessons for Beginners in Engineering. By MANSFIELD MERRIMAN, Professor of Civil Engineering in Lehigh University. 12mo, 172 pages, 142 figures. Cloth, $1.00 *net.*

Descriptive Geometry for Students of Engineering

By JAMES AMBROSE MOYER, S.B., A.M., Instructor in Descriptive Geometry in Harvard University. Second Edition. 8vo, viii + 198 pages, 128 figures. Cloth, $2.00.

Ordinary Foundations

Including the Coffer-dam Process for Piers. With Numerous Practical Examples from Actual Work. By CHARLES EVAN FOWLER, C.E. 8vo, xxvi+ 314 pages, 148 figures. Cloth, $3.50.

A Text-book on Roofs and Bridges

Part I. Stresses in Simple Trusses. By MANSFIELD MERRIMAN, Professor of Civil Engineering in Lehigh University, and HENRY S. JACOBY, Professor of Bridge Engineering in Cornell University. Sixth edition, rewritten and enlarged. 8vo, cloth, $2.50.

Influence Lines for Bridge and Roof Computations

By WILLIAM H. BURR, C.E., Professor of Civil Engineering in Columbia University in the City of New York; and MYRON S. FALK, Ph.D., Instructor in Civil Engineering in Columbia University in the City of New York 8vo, ix+253 pages, 158 figures (many full page) and 3 folding plates. Cloth, $3.00.

A Treatise on Concrete, Plain and Reinforced

Materials, Construction, and Design of Concrete and Reinforced Concrete; with chapters by R. Feret, William B. Fuller, and Spencer B. Newberry. By FREDERICK W. TAYLOR, M.E., Vice-President American Society of Mechanical Engineers, and SANFORD E. THOMPSON, S.B., Assoc. Mem. Am. Soc. C. E. 8vo, xxxv+585 pages, 176 figures. Cloth, $5.00.

A Handbook for Superintendents of Construction, Architects, Builders, and Building Inspectors

By H. G. RICHEY, Superintendent of Construction U. S. Public Buildings, Author of "Richey's Guide and Assistant for Carpenters and Mechanics." 16mo. v+742 pages, 357 figures. Morocco, $4.00.

The Modern Asphalt Pavement

By CLIFFORD RICHARDSON, Director, New York Testing Laboratory, Long Island City, N. Y., sometime Principal Assistant Chemist in the U. S. Department of Agriculture and Inspector of Asphalt and Cements of the District of Columbia; Member of the Committee on Road Materials, Am. Soc. for Testing Materials. 8vo, vii+580 pages, 32 figures. Cloth, $3.00.

Manual of Psychiatry

By J. ROGUES DE FURSAC, M.D., formerly Chief of Clinic at the Medical Faculty of Paris. Authorized Translation from the French by A. J. ROSANOFF, M.D., Junior Assistant Physician, L. I. State Hospital, Kings Park, N. Y. Edited by JOSEPH COLLINS, M.D., Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School. Large 12mo, xii+344 pages. Cloth, $2.50.

Elements of Applied Microscopy

A Text book for Beginners. By CHARLES EDWARD AMORY WINSLOW, Instructor in Industrial Microscopy and Sanitary Biology in the Massachusetts Institute of Technology. 12mo, xii+183 pages, 60 figures. Cloth, $1.50.

Conversations on Chemistry

First Steps in Chemistry. By W. OSTWALD, Professor of Chemistry in the University of Leipzig. Authorized Translation by ELIZABETH CATHERINE RAMSAY. Part I. General Chemistry. 12mo, viii+ 250 pages, 46 figures. Cloth, $1.50.

Notes on Assaying and Metallurgical Laboratory Experiments

By R. W. LODGE, Assistant Professor of Mining and Metallurgy in the Massachusetts Institute of Technology. 8vo, viii+287 pages, illustrated. Cloth, $3.00.

A Manual of Mining

Based on the Course of Lectures on Mining delivered at the School of Mines of the State of Colorado. By M. C. IHLSENG, C.E., E.M., Ph.D., formerly Dean of the School of Mines of the Pennsylvania State College, and EUGENE B. WILSON, Mining and Metallurgical Engineer. Fourth Edition, Rewritten and Enlarged. 8vo, xvi+723 pages, 337 figures. Cloth, $5.00.

Untechnical Addresses on Technical Subjects

By JAMES DOUGLAS, LL.D. 12mo, v+84 pages. Cloth, $1.00.

Forge-Practice

(Elementary.) By JOHN LORD BACON, Instructor in Forge-work, Lewis Institute, Chicago. 12mo, viii+257 pages, 272 figures. Cloth, $1.50.

Elements of General Drafting for Mechanical Engineers

By C. E. COOLIDGE, Assistant Professor of Machine Design, Sibley College, Cornell University, and H. L. FREEMAN, Instructor in Machine Design, Sibley College, Cornell University. Oblong 8vo, iv+51 pages, 21 folding plates. Cloth, $2.50.

Elements of Mechanism

By PETER SCHWAMB, S.B., Professor of Machine Design, and ALLYNE L. MERRILL, S.B., Associate Professor of Mechanism, Massachusetts Institute of Technology. 8vo, vi+264 pages, 341 figures. Cloth $3.00.

The Temperature-entropy Diagram

By CHARLES W. BERRY, Instructor in Mechanical Engineering in the Massachusetts Institute of Technology. 12mo, xvi+134 pages, 49 figures. Cloth, $1.25.

Adjutants' Manual

By COURTLAND NIXON, Captain, Second Infantry, U. S. A. 24mo. vi+135 pages. Cloth, $1.00.

Locks and Builders' Hardware

A Handbook for Architects. By HENRY R. TOWNE, President The Yale & Towne Manufacturing Company, Past President Am. Soc. Mechanical Engineers. Profusely illustrated with half-tone cuts. 16mo, 1117 pages. Morocco, $3.00.

The Textile Fibres: Their Physical, Microscopical, and Chemical Properties

By J. MERRITT MATTHEWS, Ph.D., Head of Chemical and Dyeing Department, Philadelphia Textile School. 8vo, vii+288 pages, 69 figures. Cloth, $3.50.

Handbook on Sanitation

A Manual of Theoretical and Practical Sanitation. For Students and Physicians; for Health, Sanitary, Tenement-house, Plumbing, Factory, Food, and Other Inspectors; as well as for Candidates for all Municipal Sanitary Positions. Second Edition, Revised and Partly Rewritten. By GEORGE M. PRICE, M.D., Medical Sanitary Inspector, Department of Health, New York City, etc. 12mo, xv+301 pages, 29 figures. Cloth, $1.50 *net.*

Inorganic Chemistry

With the Elements of Physical and Theoretical Chemistry. By J. I. D. HINDS, Ph D., Professor of Chemistry in the University of Nashville. 8vo, viii+651 pages, 76 figures. Cloth, $3.00.
2d Edition. Thoroughly revised.

VOL. LXXX—NO. 2078. THURSDAY, APRIL 27, 1905. PRICE TEN CENTS.

Just Published by the Macmillan Company

FOR THE STUDENT OF HISTORY

Prof. Edward Channing's A History of the United States

His orderly, well-balanced statements of fact stand out against a background of wide personal knowledge and deep personal insight. They are woven into a convincing, essentially readable narrative which is consistent in its point of view, and unbroken in its sequence.

To be complete in eight 8vo volumes. Vol. I. now ready. $2.50 net (postage 20c.)

"Its facts are largely based on original records, and its form and arrangement will commend themselves highly for their practical value and helpfulness."—*Boston Transcript*

Mr. Herbert Paul's A History of Modern England Vol. III.

Mr. Paul's spirited and vivid picture of modern England "never fails to be suggestive, stimulating the reader's imagination and arousing interest the more one gets into the subject," says the *Philadelphia Ledger.*

The volume just ready covers the early phases of the Gladstonian ministry, and the climax of Liberalism in England. *Now ready, Vols. I.-III. Cloth, each $2.50 net (postage 20c.)*

Mr. William Roscoe Thayer's A Short History of Venice

A rapid narrative of the structural growth of the Venetian Republic with detailed accounts of its crises and striking episodes. Its emphasis is upon the wonderfully efficient Venetian government, and the Venetian character in its genius at once for the Practical and the Beautiful. *Cloth, 12mo, $1.50 net (postage 13c.)*

Professor Karl Lamprecht's What Is History?

FIVE LECTURES ON THE MODERN SCIENCE OF HISTORY. By KARL LAMPRECHT, Ph.D., LL.D., Professor of History in the University of Leipzig. Translated from the German by E. A. ANDREWS.

Cloth, 12mo, $1.25 net (postage 9c.)

These lectures include "Historical Development and Present Character of the Science of History," delivered at the World's Fair in St. Louis; also the addresses delivered last October in New York during the celebration of the founding of Columbia University.

"The entire work is in the highest degree suggestive and deserving of consideration by everyone to whom history is something more than biography on one side, or description on the other. As studies in historical synthesis, Lamprecht's essays are of the utmost importance."—*The New York Evening Post.*

Dr. John A. Fairlie's National Administration of the United States

is the first comprehensive and systematic treatment of the administrative portion of our national government, and in view of the recent changes the work is exceptionably valuable to every one who has occasion to speak or write on matters pertaining to our federal government.

Cloth, 8vo, 274 pp., $2.50 net (postage 18c.)

Gen. Henry L. Abbot's Problems of the Panama Canal

Brig.-Gen. Abbot is in a position, as is no other man, to know the exact truth through seven years' close connection with the reorganization of the canal works. He makes the whole matter clear as to the climate, the health conditions, the rival routes, the engineering difficulties, and, in short, as to the construction of the best possible canal. *Cloth, 12mo, $1.50 net (postage 12c.)*

BOOKS OF SERIOUS INTEREST PUBLISHED BY McCLURE, PHILLIPS & CO.

By J. S. McLain

The New America of the Northwest

Alaska and the Klondike

The account Mr. McLain, editor of the Minneapolis *Journal*, gives of his travels with the Senate Commission in this valuable work is the first adequate representation of the hitherto unexpected resources of the wonderful region. We are accustomed to think of it as a land of snow and ice, with gold for its only product. As a matter of fact it is rich in every kind of agricultural and pastoral as well as mineral wealth.

Cloth, 8vo. 85 illustrations. Postpaid $2.18; net $2.00.

By "O"

The Personal Side of the Russian-Jap Conflict

The Yellow War

The best book that has yet been written about this awful struggle in the Far East. Such pictures of the personal side of war have never been written since Stephen Crane and George W. Steevens.

"Of the numerous books which the conflict in the Far East has called forth, none stirs the emotions so profoundly as the volume of sketches from the pen of an extremely skilful and effective writer who signs himself "O." The stories are overpowering in their vivid presentation of the methods of modern warfare." N. Y. Globe.

Cloth, 12mo. Illustrated. Postpaid $1.30; net $1.20

By P. Kropotkin Author of "Mutual Aid"

The Flower of the Russian Nation

Russian Literature

This history traces the literary development of Russia from the earliest time, with extended personal and critical discussion of all the principal writers, including Tourgenieff, Tolstoy, Gorki, Dostoievski, and others. A book invaluable at all times, and particularly at the present moment.

Cloth, 8vo. Postpaid $2.18; net $2.00

By the author of "Letters from a Chinese Official"

The Religion of the Modern Man

Religion: A Criticism and a Forecast

This is one of the little books we are publishing from time to time dealing with aspects of modern life treated in a spirit of sharp criticism and penetrating analysis. This volume is the most clean-cut statement yet made of the conflict between science and revealed religion, and might be called an exhibition of the religion of the modern man.

Paper boards. Postpaid 53 cents; net 50 cents.

By Felix Adler

A New Book by Dr. Adler

Marriage and Divorce

Powerful and suggestive addresses dealing in an original manner with the greatest problem of modern society. Postpaid 53 cents; net 50 cents.

McClure, Phillips & Co. 44 E. 23 St., N. Y.

The Nation.

NEW YORK, THURSDAY, APRIL 27, 1905.

The Week.

The far-reaching import of the Supreme Court's decision that the ten-hour-day law in bakeries is unconstitutional is evidenced by the utterances of the Unionist leaders. It speaks poorly for the Unionists' case in either law or morals that Mr. Samuel Gompers, President of the American Federation of Labor, is unable to make a better argument than that he presented on Tuesday week before the Quill Club. His treatment of the decision was such as to obfuscate his hearers both as to the law and the facts involved. He averred that if the court "had seen the conditions that prevail even under the ten-hour law, they would have believed that it was within the police power of the State to regulate the hours." So far as the abstract of the decision shows, there was no attempt made to prove that the conditions prevailing in bakeries are prejudicial to life or health. Moreover, the court expressly affirmed the police power of the State to extend to the correction of such conditions. Having apparently garbled the facts, Mr. Gompers proceeded to distort the law. Rhetorically asking his hearers what they would do if the Supreme Court had affirmed a ten-hour day unconstitutional in their own occupation, Mr. Gompers declared that as for himself he would strike until he had won the right "which the Supreme Court calls unconstitutional in law." Mr. Gompers's right to strike is undoubted, but the right which the Supreme Court calls unconstitutional is the right of a tyrannous labor union to prevent citizens from working longer than ten hours a day, if they will.

The proceedings just brought against certain railroads at the instigation of the Interstate Commerce Commission for violation of the safety-appliance act cover the two most important points of that law. In one case, the alleged offence was the hauling of a freight car not provided with automatic couplers; in the other, the operation of cars not provided with brakes controllable from the locomotive. The automatic coupler is now in practically universal use, and the violations in this particular are merely sporadic; but the air-brake requirement has been a prolific source of difficulty. The original regulation that every train must contain enough air-brake cars in connection to control it without resort to the hand brake was too vague, and two years ago the law was amended so as to require one-half the cars in every train to have working air-brakes. So long as any considerable number of freight cars are without air-brakes or have their mechanism out of order, the railroads will encounter constant difficulties in making up trains. If every car except one in a train, for instance, has its air-brakes in perfect condition, while that one is out of order, the railroad is violating the law unless the defective car is shifted to a place in the rear part of the train. Thus the air-brake law involves in the yards a good deal of extra work of a somewhat exasperating character. It is one of the points on which there is a natural temptation to "take chances."

The Senate has lost this year, in the one case by the turn of politics, in the other by death, two members of the type in some ways the most valuable in the work of legislation, and certainly the hardest to replace. Cockrell, the Democrat, and Platt of Connecticut, the Republican, who died on Friday, were alike distinguished for ripe experience, extraordinary knowledge of the details of lawmaking, intense application to small as well as great tasks, and judgment and probity in which their colleagues placed absolute reliance. The service of men of this type is of a kind which the casual observer of legislation finds it hard to appreciate, but to the value of which fellow-workers always give generous testimony. It was not until late in his career that Orville H. Platt began to be recognized as one of the real leaders of the Senate. In fact, the attaching of his name to the most important piece of Cuban legislation made him better known to the country at large than ever before. He was always quick to dispute on the floor of the Senate any insinuation that the new Cuban republic was not in every sense an independent nation, while, as the representative of a tobacco-growing State, his advocacy of Cuban reciprocity showed a breadth of view too rarely seen when sound statesmanship and parochial interests conflict.

John Sharp Williams of Mississippi has announced himself a candidate for the United States Senate against Senator H. D. Money. From a national point of view, it is to be hoped that Mr. Williams may obtain the office he aspires to. His leadership in the House has been adroit and forceful, and his place would not be an easy one for the minority to fill. But it seems not impossible that the gain to the Senate will more than compensate for the "lost leader" in the House. The heavy and stifling air of the Senate, the placidity with which it ratifies the will of its creators, the corporations, and the majestic effrontery with which it smiles at public opinion, ought to be changed for the better by the presence of Mr. Williams. His advent might perceptibly move the waters of that dead sea.

The lower house of the Illinois Legislature has delivered a characteristic blow at the classified civil service. After toying for some time with a comprehensive plan to put employees of the State under the rules, the members, by a bit of clever political juggling, rejected it and sent to the Senate a substitute emasculated to suit the most sturdy spoilsman. A demand for the reform was included in the platforms of both parties last summer, and its importance was emphasized by Mr. Deneen in his campaign for the Governorship. In fulfilment of the Republican pledges, Representative Norden, chairman of the civil-service committee, introduced into the House a serious and sweeping measure. As the spoilsmen's reply to the call for reform, Representative Lindly brought in a "freak" bill, designed to turn over the Democratic city administration of Chicago to the Republican Civil Service Commission of Cook County. This bill was solemnly debated at two sessions of the House, and, directly after its defeat, Mr. Norden's measure was called up and beaten. As a sop to the reformers, the House then passed a bill placing the employees of the State charitable institutions under the civil-service rule — excepting the superintendents, chief clerks, and one stenographer for each institution! As one critic has pointed out, there is actually only a corporal's guard of janitors and scrubwomen affected by the bill.

In the case of Justice Warren B. Hooker the Assembly Judiciary Committee has now taken all the testimony, and is preparing a report. One important charge against Hooker, substantiated before the legislative committee, was not even touched on by the State Bar Association—an attempt to deprive the city of Dunkirk of the use of its own land. Without going into all the details, it is enough to say that Hooker and Lester F. Stearns, one of the State Tax Commissioners, were joint proprietors of a building which adjoined property of the municipality of Dunkirk. For the sake of giving this structure more light and making it more valuable, Hooker used his influence with a fellow-justice of the Supreme Court, White of Buffalo, to secure an injunction forbidding Dunkirk to build on its tract. Justice White signed the order without giving it much attention, but when he

learned of the irregularity of the proceeding, he himself had the order vacated. Thus Hooker failed to profit by a bit of characteristic trickery. The building just mentioned is the one in regard to the rental of which George W. Beavers was so accommodating. When the structure was completed in October, 1901, Hooker and Stearns leased the ground floor for the post-office at $1,350 annually for ten years. In February, 1902, they persuaded Beavers to cancel the lease and raise the sum to $1,500, on the pretext of allowing the Government whatever space it might need in the basement. Finding the game easy and remunerative, they went to Beavers again in May, 1902, and had the rental fixed at $2,000 for the same space as before—less a room in the basement for the Western Union Telegraph Company. In February, 1904, when the methods of Beavers were becoming pretty well known, the Postmaster-General cancelled the third lease, and informed Hooker and Stearns that he would pay no more than $1,350. This, as rents go in Dunkirk, is ample. Hooker helped conduct the negotiations with his dear friend Beavers.

Much of the testimony in the public-lighting inquiry in this city is of so technical a nature as to confuse the really interested parties who pay the bills. For their sake a recapitulation of some of the main avowals of the representatives of the lighting monopoly may be of service. It has come out, first, that the Consolidated Gas Company is grossly overcapitalized, and is charging an inordinate price for gas; second, that it is operating in several instances under outlawed charters; third, that there is a great discrepancy between the actual valuation and the tax assessment of its properties; fourth, that its method of metering gas is crude and inequitable; fifth, that the company is evading desperately all inquiries into the status of the conduits for pipes and wires, the exclusive possession of which insures it against possible competition. In fine, there have been ample admissions both of excessive profits and of far-reaching disregard of law. The most promising tactics for those who wish to see proper control asserted over this public-service corporation is to work for a legislative reduction of the price of gas, and to probe searchingly the illegal monopoly maintained over the street conduits. The inquiry has already justified Mayor McClellan's courageous policy in refusing to renew contracts with this company until the reasonable remuneration has been judicially ascertained. He also deserves praise for disavowing the acts of Commissioner Oakley.

In most of its aspects, the sordid tragedy which came to light in Milwaukee banking circles on Monday is too familiar and commonplace to invite more than perfunctory comment. The bank president whose head is turned by watching the enormous profits of speculation; who throws into such a "deal" first his own money, then money stolen from the bank over which he presides; whose speculation goes wrong, leaving him to face his angry directors, his panic-stricken depositors, his astonished social acquaintances, and the State's Prison—these are unfortunately old and well-known incidents of what we call our "financial booms." No touch of familiar circumstance is omitted in the case of President Bigelow. He "occupied a foremost place" in the affairs of Milwaukee. He had even been honored with that coveted distinction, the presidency of the American Bankers' Association. To make the picture complete, let us add that the speculation in which he indulged was conducted under the auspices of a vulgar gambling ring, whose unscrupulousness, recklessness, and ignorance were notorious enough to warn away any intelligent business man. These danger signals had no such effect, any more than the tawdry personality of Ferdinand Ward kept James D. Fish from throwing the Marine Bank's deposit fund into Ward's speculations. It is the wearisome story of the paralysis, not only of business probity and honor, but of ordinary common sense, which occurs when an officer of trust is infected with the get-rich-quick delusion. There will be little question who is to blame, if the public voice should suddenly be raised in an undiscriminating outcry against all fiduciary officers who have allowed themselves to be even remotely associated with what look like schemes of financial graft. If the public fails to draw accurate distinctions between using an institution's funds in an unscrupulous attempt to corner the wheat market, and using them to swell commissions of trustees concerned in good, bad, or indifferent "underwriting" schemes, the participants in such deals will have no right to complain.

The organization that rules Philadelphia to its own great profit finds itself now with a bankrupt city on its hands, and, in order to provide funds, proposes to pawn the municipal gas plant. The United Gas Improvement Company is now operating the plant under a lease which will expire in 1927. The annual payments to the city under the terms of the contract have increased from some $193,000 in 1897 to a little more than $650,000 in 1904. Now, the organization proposes to abrogate the present contract and make a new lease for fifty years, from January 1, 1908, in consideration of a reduction of 10 cents a thousand in the price of gas and a lump payment of $25,000,000—terms exceedingly profitable to the gas company, as is shown by tables published in the newspapers that oppose the deal. These tables indicate that the normal increase in the use of gas, according to the figures of the past eight years, would bring into the city treasury in fifty years, under the terms of the existing contract, at least $100,000,000, and before the expiration of the present lease over $31,000,000. But, of course, the big sum for immediate needs could not be realized by letting a fair contract stand, and the organization must have money to pay its favorites who build the city's sewers and engineer the Republican vote. The alternative of raising funds by increasing the tax rate has not been considered—that way lies danger to the machine, which, after all, must draw its power from the voters.

No man could have met death in a better cause than Sheriff Poag of Tate County, Mississippi, who was shot down by a lynching mob while doing his duty in protecting a negro criminal. The prisoner had been tried and convicted of a particularly revolting murder, but the Supreme Court, acting on a technicality, had ordered a new trial. Therefore a mob concluded to take the law into its own hands. So far the story is familiar But the sheriff was not content with warning the mob. He fired upon it, and was himself killed by a bullet of one of the would-be lynchers. Strange to say, the negro in the jail was left unmolested, and the mob slunk away. But the outrage has aroused public sentiment in a way that the mere lynching of the criminal could not have done. Rewards have been offered for the arrest of the mob leaders. As the Chattanooga *Times* says, in commenting on the case, "the beginning of the end of mob violence would unquestionably date from the hanging of the ringleaders of this cowardly mob." Gov. Vardaman has thrown himself with energy and determination into the apprehension of the murderers. In fact, since he took office he has uniformly stood strongly against the lynching spirit.

Writing on the question of negro education in the South in the Boston *Transcript*, Professor Hart has touched upon certain striking inconsistencies in the attitude of the whites. As is well known, white teachers of the negro are social outcasts throughout the South as a whole, particularly if they are of Northern antecedents. In one case known to us, the immediate neighbors of a splendid school in Alabama, run by New England women of the highest type, never set foot within its walls until a distinguished party of Northern and Southern educators visited it. As Professor Hart says, the relentlessness of this ostracism is hard for a Northerner to believe. "An educated and cultivated

family," he reports, "lives in a Southern city, superior intellectually and morally to most of the community about it, yet no friendly foot ever crosses its threshold." Even in the border States, the feeling is so strong that the daughter of a prominent family would be considered as hopelessly disgraced—as if she had committed a social crime—were she to associate herself with as noble an institution as Atlanta University or Hampton. It therefore surprised Professor Hart to discover that in Charleston the teachers of the colored public schools were white people. Had he gone to Richmond and Lynchburg, he would have found a similar paradoxical state of affairs, and, in the case of a high school, he would have been told that the reason why the teachers were white was because the salaries were too large to pay to negroes. Little inconsistencies like these, however, never affect the believers in the theory of racial aloofness.

Mr. Kenyon Cox discusses in the *Evening Post* the proposed affiliation of the National Academy with Columbia University. He shows very clearly that nothing like absorption of the Academy is contemplated, and gives very welcome assurances that only its art schools are to be located on Morningside Heights. We learn also on sure authority that even the art schools are to retain their autonomy. The plan, in short, comes down to a common building, which the Academy provides, capacious enough to house both its own schools and the Columbia courses in the fine arts. For this building Columbia will give the site under conditions safeguarding both parties in case the partnership should ever be dissolved. The visible result of the alliance, then, will be a great building, in which, side by side with the Academy classes in drawing, painting, sculpture, and engraving, will be conducted the University lectures in æsthetics and art history. Evidently the Academy finds its account in the arrangement. It disposes of the vexatious problems of its schools, for which it gets a free site, and is enabled to approach, without ulterior embarrassments, the task of securing a capacious and centrally located exhibition building. Moreover, it is probable that on the one hand the Academy may be able to draw upon Columbia for lectureships on anatomy and on the more geometrical and chemical aspects of the painter's craft, while University instruction in the history and theory of art may gain something of actuality by the presence of those who handle clay and pigments. As the distinguished artists who thanked President Butler for his overture remarked justly, "somewhere the arts intersect."

Professor Francke of Harvard, to whose ardent efforts the Germanic Museum in Cambridge largely owes its existence, hopes for a brilliant future for this institution. He would have it become not merely a storehouse of Germany's artistic past, but a strong tie between the Germany and America of to-day. In connection with the exchange of professors between Harvard and Berlin, he suggests that the Museum should be sufficiently endowed to enable it to invite German savants to give yearly a course of lectures on German history, literature, and art. From Cambridge they could travel westward and repeat their lectures in other university centres, and thus instil a knowledge of German aims and ideals, which are often sadly ignored or misunderstood despite our many German-American citizens and the numerous American students who attend German universities. If only as an offset to Jingo animosity towards Germany, the scheme commends itself quite aside from the merit of the plan. It is gratifying to note, in passing, that for the last few months American attacks on Germany have ceased altogether. Now, it is Japan which keeps us awake o' nights by her perfectly open efforts to oust us from the Philippines—would she might!—or to steal Hawaii, or close the door on us in Asia. Germany for the moment is allowed to rest in peace.

In diplomacy as in life no man is indispensable, but M. Delcassé is at least the pivotal figure in Europe to-day, and the news that he meant to resign could but cause a certain apprehensiveness. The weight of his influence has always been cast on the side of peace. International arbitration has found in him a steadfast friend. Such notable treaties as the Siamese and the Anglo-French conventions testify not only to the good will and straightforwardness which he has put into the negotiations, but also to the extraordinary ability with which he has represented the interests of his nation. Again, the *entente* between France and Italy is largely of his making—a step which by perfectly legitimate methods has done much to offset the undue preponderance of Germany in Europe. In recent days the irritating activities of the Kaiser in Morocco have put M. Delcassé's equanimity to the supreme test, and his quiet but decisive reiteration of the Moroccan policy openly adopted by France more than a year ago has made the bluster of the Wilhelmstrasse look not only meddlesome, but foolish. It was said that he resigned because the hotheads of the Chamber wanted him to answer the Germans according to their folly. Happily, he was induced to reconsider and remain at his post.

For the moment, the Liberal ferment in Russia seems to have ceased. The suspension of Witte's peasant committee is taken as a matter of course. The reactionists evidently stake their cause on the event of the impending naval battle. Even the reformists are divided among themselves. Few of the learned bodies and zemstvos which have petitioned for a legislative assembly are likely to concur in the minimum programme of the new Progressive Liberal party. An advisory council elected by the zemstvos is all that M. Shipoff and Prince Trubetskoy propose. These leaders condition their plan upon the extension of the zemstvo system throughout the Empire. Here, at least, the Czar and the Liberals are in accord, for he has recently instituted zemstvo government voluntarily in Eastern Siberia. If the plan for an advisory council falls far short of the hopes of the average reformer, the scheme has much to be said for it. Russia is hardly prepared for genuine parliamentary rule, and a great council might afford a valuable training for future parliamentarians. To change the council at need into a national legislature would be a very simple matter. But the success of such a compromise depends, first, upon the good faith and courage of the Czar, who might, under the sinister influence of the Grand Ducal cabal, be induced to authorize such an assembly without ever consulting or even convening it; and upon the temper of the Liberal proletariat. May Day should tell whether the path of concession and compromise is still open, or whether the leaders of the people, as many symptoms indicate, are committed to the plan of revolution.

The Cretan Parliament meets only at intervals of two years; accordingly, its unanimous vote for the termination of the High Commissionership and for union with Greece has the emphasis of long repressed emotion. As representative of the four treaty Powers, Prince George is bound officially to discourage unionist sentiment; personally it can hardly be a grief to him to see that the anomalous position of the island is irksome to its inhabitants. Among the 303,000 inhabitants enumerated in the census of 1900, Greeks are to Muslims in a ratio of eight to one. The pacification of the island is relatively complete; Greek possession would menace the Mediterranean interests of no Power Even the Sultan would have no sound reason for declining to relinquish his nominal overlordship, since Crete no longer pays tribute, and recent events in Macedonia have made all Greeks in a sense allies of the Porte against the Bulgars. In short, the restoration of Crete to the parent country would involve only a loyal assumption of the Cretan debt. But the signatory powers—Great Britain, France, Italy, and Russia—have set their face against it.

TERRITORIAL WATERS AND NEUTRALITY.

Recent events are likely to bring international law back to its beginnings in the dispute over *Mare clausum* and *Mare liberum*. Characteristically, the Russians may be cited on both sides of the controversy. They sowed floating and even set fixed mines many leagues from Port Arthur, treating the two broad gulfs as territorial waters of their leasehold on the Liaotung Peninsula; and their fleet has made long sojourns off neutral ports, just beyond the three-mile limit, thus claiming the narrowest interpretation of the limit of national jurisdiction on the high seas. Both actions argue strongly against the three-mile rule which we have inherited from the early part of the eighteenth century.

Bynkershoek's dictum, "Terrae dominium finitur ubi finitur armorum vis," was promptly interpreted to mean the extreme range of a cannon of that time. Evidently, the strictest application of his principle would regulate territorial waters by the range of cannon, and to-day an international conference, recognizing the improvement in ordnance since William and Mary's day, could hardly fail to multiply by three the old limit of a marine league. In the *Alabama* affair the French Foreign Office took this ground, and warned Capt. Semmes seven or eight miles away from the harbor of Cherbourg. In 1894 the Institut de Droit International discussed the matter of the coastal zone, and without dissent agreed that it should be extended. A majority of the delegates favored establishing a limit of six marine miles from low-water mark, in time of peace; with the right on the part of a neutral State to extend it, in time of war, upon due notification, to the longest range of a modern gun. This discussion brought out the essential principle that national jurisdiction over coastal waters and the duties of a neutral by no means coincide geographically. These eminent jurists agreed that in time of war a neutral might, in the interests of peace, control the sea far beyond its ordinary jurisdiction. In other words, a neutral is its own judge of its duty towards the comity of nations, and in performance of such duties must not be bound by the geographical limits of ordinary police power.

Any definition of territorial waters is likely to be inadequate in time of war, for such definitions are not made in view of that eventuality. The three-mile limit, at its origin and to-day, simply expressed the range within which the shipping and revenue regulations of a nation might conveniently apply. It set a check to the growing doctrine of a free sea, and provided a rule-of-thumb application for Grotius's maxim that the law of the land extends over that part of the sea which is clearly appurtenant thereto. Thus *armorum vis* means logically not the stray shot of an enemy, but the range of the arms of the law. In other words, the three-mile rule, a convenient demarcation for the ordinary purposes of common and admiralty law, is always a most arbitrary and defective index under the extraordinary conditions arising in time of war. Indeed, it is very difficult to lay down any principle that shall fix by log and lead the very delicate duties of a neutral. But one or two points are clear: the neutral zone exists primarily for the defence of a nation at peace. Upon it she places a ban in order that her general tranquillity shall not be disturbed, or her shipping and coast endangered by either of the belligerents. Under modern conditions of naval warfare, a fight far beyond present or probable territorial jurisdiction might be dangerous, and a nation should have power to prevent it. Would England permit a fight in Queenstown offing, or the United States at Scotland Light?

But, besides this duty of self-protection, a neutral nation has also that of treating belligerents humanely. Thus, the right of the war vessel of a belligerent to enter a neutral port is wholly analogous to the right of asylum granted to a disabled craft. In either case the principle is clear that only necessary assistance must be rendered, and that the visiting ship or squadron must not abuse the hospitality extended to it either by making warlike preparations or by prolonging a stay which at best is embarrassing to the host. Here the use of nations has fixed the rule that a disabled war vessel may make indispensable repairs in a friendly port, while the stay in all other cases is limited to twenty-four hours. The spirit of the rule is that aid of any sort rendered to a belligerent should be of a temporary and strictly limited kind. If such aid be continued, neutrality is offended, even if the belligerent be neither in port nor outside the bounds of territorial jurisdiction. If, as appears to be the case, the Russian fleet lay weeks off Madagascar and days in Kamranh Bay, with launches and dispatch boats maintaining an uninterrupted supply service with the land, neutrality was sorely stretched, though the anchorage of the fleet were miles outside the conventional bounds. As a matter of fact, even the police power refuses to be bound by the three-mile limit. Many cases are cited in the books on international law. For our purpose, let the patrolling of international yacht races on the high seas suffice.

If the present conception of territorial waters is too narrow for proper exercise of the ordinary police power, and can with difficulty be made to cover the neutral zone in war time, then the three-mile limit appears doubly obsolete and absurd. Nothing can justify the Russians for strewing mines in the Chinese gulfs, yet modern requirements of national defence might, upon proper notification, justify a belligerent in extending its cordon of mines beyond the three-mile limit. Quite as clearly, belligerent fleets seeking neutral ports are to-day on a different basis from the old squadrons of ships of the line. On the side of repairs, the new-style fighting machines are absolutely more helpless; on the side of supply, steam launches, lighters, derricks, and all the improved machinery of translocation, make it possible to do in a few hours what was formerly the work of days. All these considerations call emphatically for an authoritative international utterance on territorial waters and neutrality. One may confidently expect that the approaching conference on neutrality and the law of contraband will agree with Prof. T. E. Holland of Oxford, that the line should be drawn at a considerably greater distance than three miles from shore, and with the eminent jurists who in 1894 decided that the neutral zone in time of war should be much more generously described than the administrative zone in time of peace.

THE GROWTH OF SOCIALISM.

"A growing Socialistic tendency among the American masses" is one of the things on which H. Rider Haggard commented last week before he sailed for England. His observation merely confirms the opinion expressed by other, and perhaps better informed, students of political and social conditions in this country. The late Senator Marcus A. Hanna, who was by no means a sentimentalist, is often quoted as saying, "The next great issue this country will have to meet will be Socialism." Predictions of this kind are hazardous; but no man who has followed public discussion for twenty-five years can deny that Socialistic theories are more freely debated and belief in them more frankly avowed than ever before.

The causes which are luring so many Americans from the old creed of individualism are not far to seek. The socialistic movement in Europe inevitably has its effect here. No protective tariff bars out ideas. Thousands of immigrants, converted to Socialism by the prevailing poverty of the lower classes in the Old World, bring here a faith which we have been wont to regard as exotic and alien. Then, too, every foreign mail bears its freight of newspapers, pamphlets, and books to sustain the propaganda. Municipal ownership, State insurance, workingmen's pensions, minute regulation of the hours of labor, nationalization of railways, telegraphs and telephones—the thousand schemes of paternalism, now find strong and numerous advocates here. The experiments in England, Germany, France, Italy, and Australia are cited for our guidance by the very schoolboys. The argument of people who ignore differ-

ences in national genius and ideals or in methods of administration, is brief and persuasive: Shall we confess that a republic is more impotent than a monarchy? What Government has done, Government may do.

Our Socialists, indigenous and imported, have, we must admit, been confirmed in their error by the shamelessness with which managers of public-service corporations have debauched the commonwealth. Our bold speculators in street railways and in gas and electric lighting have laid heavy and dirty hands on governors and legislators, mayors and aldermen. So familiar have we become with venality that when a prosecuting officer, like Joseph W. Folk, has the courage and the honesty to bring traffickers in franchises to the bar of justice, he wins instant fame. Yet St. Louis is not peculiarly wicked. In Chicago, Philadelphia, New York, and indeed wherever two or three boodlers are gathered together, the tale is the same. Since municipal ownership would obviously do away with this particular form of corruption, thousands of voters clamor for the change, regardless of the danger of jumping from the frying-pan into the fire.

The insolence and extortion of our railway and lighting companies have also stirred profoundly the popular consciousness. We may endure with comparative equanimity the spectacle of the elected representative of the people selling himself to a piratical corporation, but the most apathetic of us resents having his pockets picked to pay some one else's dividends on watered stock. Human nature being what it is, the gas investigation in this city has made friends by wholesale for the project of municipal gas and electric plants. When a monopoly manufactures gas at from thirty to fifty cents a thousand feet and sells for a dollar, when it meets heavy interest charges on enormous overcapitalization, when it deliberately supplies a product inferior to the stipulated quality, when it juggles with the pressure in order still further to swindle the consumer, no one can be surprised if men in their haste seize the weapon of municipal ownership. Harrison E. Gawtry, William Rockefeller, Anthony N. Brady, Thomas F. Ryan, and the other directors of the Consolidated Gas Company, are the real leaders of the crusade for Socialism — not such frothy demagogues as Eugene V. Debs.

We must reckon into the account also certain recent revelations in high finance. Nobody imagines that stories of rebates to the Standard Oil Company and to the Colorado Fuel and Iron Company have failed to move men toward State control of railways. No one can deny that the disclosures about the Equitable will point many appeals for State insurance. Whatever the perils—so runs the plea—we shall incur nothing worse than this. In brief, our noisy agitators can turn to sleek and solid capitalists who deprecate wild talk about Socialism, and retort with the lines from Sophocles:

" 'Tis you that say it, not I. You do the deeds,
And your ungodly deeds find me the words."

Prophecies as to political results are, as we have said, unwise. To form a sound estimate of the strength of the Socialists is impossible. The party cast 97,730 votes in the Presidential election of 1900, and 391,587 in 1904. The Socialists themselves assert, and not without reason, that Mr. Roosevelt's extraordinary personal popularity and the widespread conviction that his own programme is radical, drew the Socialist lightning. Moreover, many who draw the line at Debs or any declared Socialist as President, are ready enough to try local experiments in Socialism. Chicago, for example, has just come out deliberately and overwhelmingly for municipal ownership of street railways. That instance, however, does not prove everything, for the successful candidate for Mayor, Judge E. F. Dunne, was nominally a Democrat, and of course received a considerable party support regardless of local issues. The procedure of Chicago is probably typical. As Socialism gains headway here or there, one of the older parties will seize the occasion to make capital for itself. This is the means by which an independent Socialist organization has been kept down in Europe. In England, no less distinguished a Conservative than Joseph Chamberlain himself has proposed old-age pensions. In this country the Democrats, by adopting an "advanced" platform in 1908, may render the Socialists, as such, a negligible quantity. But radicalism is not, as President Roosevelt has shown us, the exclusive patent of either party. In any event the tendency toward Socialism is a grave fact, a menace to our traditions, which will disturb both the plots of our politicians and the visions of our statesmen.

THE YOSEMITE RECESSION.

When Gov. Pardee of California took in hand a quill plucked from a Yosemite Valley eagle and signed the bill for the recession of that valley and the Mariposa Big Tree Grove to the National Government, he consummated a deed which must have rejoiced all who are interested in the scenic wonder of the West. The creating of the Yosemite National Park by Congress in 1890 established a state of affairs which was bound to bring about deplorable complications. Here was a park, nearly the size of Rhode Island, thirty-six miles in length and forty-eight miles in breadth, belonging to the Federal Government, and in the heart of it the Yosemite Valley and the Mariposa Grove, belonging to the State of California—an *imperium in imperio* which resulted in constant friction and trouble, as might have been foreseen. A year ago matters went so far that a fire was permitted to ruin some of the finest trees because both Federal and State officials insisted that it was outside of their respective jurisdictions.

In 1864, when Congress ceded the Yosemite Valley and the Mariposa Grove to the State of California, "to be held for public use, resort, and recreation," little was known of the unique marvels of this region. To-day all the world knows about them, as it does about the Yellowstone Park and Niagara Falls; the Valley is visited by tourists from other States and foreign countries in much larger numbers than by Californians, and it is therefore proper that the National Government should have charge of it. For more than a decade complaints have been rife that the State did not take proper care of the Park placed in its trust; the floor of the Valley, a natural flower garden, was allowed to be devastated and disfigured, and in one instance the commissioners proposed action of which Frederick Law Olmsted said that it "would eventually result in an irreparable calamity—a calamity to the civilized world." That was as long ago as 1892, and that matters have not mended is indicated by these remarks made only a few weeks ago by the man whose name is identified more than any other with the Yosemite, Mr. John Muir:

"Any person who doubts that it will be best for the national Government to take charge of the Valley, need only visit the portion of the National Park under Government control, and then compare it with the Valley. The Park will be found blooming with flowers, the trails well kept, and everything done to preserve the natural beauties of the place. On the other hand, the Valley is disordered and unkempt, the trails are overgrown, and not laid out through the finest portions, and the best part of the Valley will be found fenced off and used as a corral for the riding horses of the saddle trains."

The difference in favor of the national part of the Park exists notwithstanding the fact that it is really only a forest reserve, and not a National Park in the sense that the Yellowstone is, for the greatest natural beauties and wonders are in and near the Valley. With this, too, under its jurisdiction Washington would feel called upon to do for it what it has done for the Yellowstone, for which more than half a million dollars have been appropriated within two years, or more than the California Legislature has expended on the Yosemite in forty years. The Sierra Club, whose president, John Muir, and secretary, William E. Colby, were the most valiant champions of the recession bill, estimates that $100,000 a year is needed for the proper care of the Valley in place of the $10,000 or $15,000 provided by the State. It will cost $200,000 to build the new hotel absolutely needed; two summers ago there was such a congestion in

the accommodations provided for visitors, that the State Commissioners had to notify the transportation companies not to allow any more tourists to enter the Valley.

Two years ago both President Roosevelt and the Governor of California were won over to his side by Mr. John Muir, on the way to the Valley; and since then, in the words of that enthusiast, "the movement was like Yosemite avalanches." The Opposition had for its chief and almost sole organ a yellow journal which professed to have received nearly 65,000 signatures against the recession bill. A demagogic appeal was made to State pride: "Should California be advertised as poverty-stricken, miserly, and incompetent?" The appeal fell flat in face of the fact that the State had not, in four decades, done its duty. The *Examiner* itself had to admit that, "as John Muir loves the Valley, and is neither a grafter nor a windbag, it may be said with certainty that, when he asks for recession, there is a lot that the State should do for the Valley that it has not done."

The remark of a Senator of the Opposition who owns property near the Park, "I don't want soldiers to manage my property," threw light on the situation and emphasized the need of the change. Experience in the Yellowstone Park has shown that military control was needed to enforce the rules regarding trespassing and a hundred other things. Heretofore the Yosemite has been under the management of a board of commissioners who received no salary, met once a year in the Valley, and usually had had no experience in the duties expected of them. In striking contrast with this is the Yellowstone, which the National Government has placed in charge of salaried engineers and army officers, who devote all their time to the Park. Under such management the Yosemite would soon show a changed aspect. There are toll roads to be made free, other roads to be constructed, and various measures to be taken to decrease the time and expense of travel. Of the first importance is the establishment of a system of permanent telephone stations to give proper protection to the forests from fire.

California being largely a winter resort, it is expected that the Government will make the Park accessible all the year round. In the case of the Yellowstone, this cannot be done; it is hospitable only three months a year, whereas in the Yosemite Mr. Muir has found flowers and butterflies in midwinter. His books, the 'Mountains of California' and 'Our National Parks,' should be put in the hands of all our legislators in order that they may appreciate the value of the new trust committed to them, and be moved to care on the highest principles for a region that comprises not only forests which Sir Joseph Hooker and Asa Gray pronounced superior to all others in beauty and grandeur, but peaks, domes, cañons, gardens, and cataracts unique among the world's wonders.

LESSONS OF THE MUSICAL SEASON.

The musical season which is drawing to a close has been one of the most interesting on record—so interesting, indeed, that it is difficult to see what the managers can do to prevent the next one from being an anti-climax. Popular artists like Paderewski, D'Albert, Josef Hofmann, Pachmann, Kreisler, Ysaye, Von Vecsey, never visit this country two years in succession, and it will be impossible to find their equivalents for next winter. There are plenty of others on both sides of the ocean who deserve success, but the trouble with most of them is that the American public stubbornly perseveres in its foolish policy of patronizing only the acknowledged heads of the profession. As long as the piano manufacturers continue to back up the concerts, the minor pianists will have a chance to come before the public and run the gantlet of newspaper criticism; but it is likely that the managers, in view of the future, are beginning to realize that they made a mistake in giving the public too sumptuous a feast.

Of the artists named, all had a prosperous season with the exception of the boy violinist, Franz von Vecsey. Without being exactly a failure, he fell far short of his manager's expectations. In Berlin, Vienna, London, he had drawn larger audiences than such mature artists as Kreisler and Ysaye. Although the reverse was the case here, we are not entitled to boast ourselves superior in taste and less prone to sensationalism in the prodigy line than the Europeans. There is always a lottery element in such things; Kubelik, for instance, was as great a success in America as in Europe, although he was emotionally as immature as Von Vecsey. It is true, however, that there is at present less interest in young prodigies in this country than in London and elsewhere, and this is on the whole a good thing, for there can be no doubt that, in nine cases out of ten, harm—often irreparable—is done by the hothouse method of forcing musical talent. Rubinstein summed up this question accurately when he wrote that "these children generally exhibit astonishing musical talent from a very early age, but there comes a time (with boys from the fifteenth to the twentieth year, with girls from the fourteenth to the seventeenth) when the musical gift weakens or sleeps altogether; and only those who are able to cross this Rubicon will then become real artists. Of such the number is very small." Von Vecsey is reported to have said that he will not return to America till he has a beard, and in this remark there is a useful hint to all exploiters of prodigies.

In the matter of orchestral concerts the lesson has once more been taught that the conductor is more important than his "instrument." Our Philharmonic, although it has its weak points, is one of the best orchestras in the world, yet one need but glance at the figures given in Mr. Krehbiel's history of that organization, and the more recent records, to see that its prosperity was always—in some cases almost startlingly—dependent on its conductor. Two years ago it was deemed necessary to make a radical change by importing half a dozen famous leaders from Europe. The experiment proved so successful that it was repeated, although there were those who declared that only its "sensationalism" had helped it through. The second star-conductor season, however, increased the earnings of each member of the orchestra by $112, and this makes it likely that the present policy will be maintained for years, in spite of efforts to steal the Philharmonic's thunder. The late Theodore Thomas always declared that, to secure satisfactory results, an orchestra should play under only one leader, and this opinion is often advanced by others. If it were correct, it would be impossible ever to hear a first-class operatic performance in Vienna, Berlin, Munich, or the other German capitals, for in all these cities—and in Bayreuth, too—there are always several men who alternate as conductors of the same orchestra. The plain truth is that change in leadership is actually an advantage; it makes the players alert, attentive to their work, eager to do their best. Richard Strauss travels from one city to another conducting the most complicated of his scores, generally after two rehearsals, and the results are usually lauded without reserve. We shall probably hear no more about the bugaboo of multiple conductorship.

The patrons of the Metropolitan Opera House last year taught Mr. Conried the lesson that he could not tempt them to pay $5 a seat for even the most popular operas unless he engaged the most popular singers to appear in them. This year there were indications that he had taken that lesson too much to heart. He secured nearly all the favorite artists, and then found that he could present almost anything he pleased, with or without rehearsal, and be sure of a full house. Is there now, or was there ever, a manager able to resist the temptations offered by such a situation? Mr. Conried saw his opportunity of making the season the most profitable one on record, and he seized it, to the detriment of art. With seven performances a week—one of them in Philadelphia—it was next to impossible to do any rehearsing, and presently there were amusing rumors about prima-donnas (whom Mr. Conried had, on assuming his office,

threatened with dire punishment if they refused to attend rehearsals) actually begging for, nay, angrily demanding, at least one rehearsal, and not getting it!

There are, to be sure, two sides to this operatic question. In Germany they have plenty of rehearsals, but no singers; here we have the singers and no rehearsals. Which is the better, or the worse? The great Felix Mottl refused to come back to America because he was in despair over the rehearsal question; but now that he has become Generalmusikdirector in Munich, it is reported on good authority that he is in despair over the singer question. The American situation, after all, seems more hopeful than the German. When an opera is repeated several times we generally get excellent results. Lengthening the season and crowding less into each week would be a way of mending matters. Mr. Conried seems to have had the intention of adding a month to next year's season. In this he was confirmed by his disastrous week in "unmusical Boston." But in the cities of the West he had such a brilliant success that he may, after all, change his mind again about confining himself to New York hereafter.

THE NATIONAL ACADEMY OF SCIENCES.

WASHINGTON, April 24, 1905.

Never before, we believe, since the National Academy of Sciences was created, in 1863, has a spring session brought so meagre a crop of papers as did that of last week. Meeting in Holy Week has not hitherto had such an effect, but this year there were only eight papers. The consolation was that those few were not hurried over as Academy papers usually are, but could be understood and enjoyed in full.

Dr. William Morris Davis, Professor of Geology in Harvard, opened the readings with a deductive sketch of the distinctive effects upon the conformation of the surface of any land-region of several modes of erosion. No other than erosive agencies were considered; and indeed the title of the paper, "The Geographical Cycle in an Arid Clime," would limit the subject still further. But, unfortunately, no lantern had been provided, and the paper probably had to be modified in its presentation. It was very interesting, however, as it was given. In an ordinary climate, the surface of the land would in the ultimate result get washed down to one lowest possible level, technically called the base-level. It usually coincides with the sea-level. Powell showed the importance of recognizing this tendency, since, under normal conditions, there is no other cause that can produce a terrestrial level surface. In arid regions there is no other erosive agency than that of the wind to mould the surface; and wind is far more efficient in such regions than where vegetation arrests it and makes a relative calm close to the ground. Air, of course, does not seek any particular level for itself and its freight, as water does. But its action, as figured by Professor Davis on the blackboard, reminds one of the process of grading a railway-bed by cutting and filling, the depressions being raised with the matter removed from the elevations; so that, like that operation, it does at last leave a level surface—interrupted, it may be, by bare crags of rock. This level surface may perfectly well be below the sea-level, none other than which can usually be the last surface washing. Nevertheless, the wind may strike upon the base of an obstruction in such a manner as to dig holes. It was a matter of regret that a second paper by Professor Davis, which was announced on the printed list, did not get read.

Professor E. L. Nichols of Cornell gave a paper entitled "The Mechanical Equivalent of Light." Since ordinary text-books do not use this phrase, the reader may naturally ask what meaning can be attached to it. The photometric intensity of any one bright line or narrow band in a spectrum will vary in strict proportion to its heat-energy, and the value of the inverse ratio (the energy per brightness) will be the mechanical equivalent of the light of the wave-length of that band. But, for different parts of the visible spectrum, this inverse ratio will vary immeasurably, becoming infinite at the limits of the visible spectrum. We may add that the curve of variation will be appreciably different for different eyes, though they be normal eyes, and not a little for the same eye at different times of day, conditions of health, etc. Perhaps our many expressions about "everything looking blue" to a man in one mood, "bearing a roseate hue" in another mood, and so forth, though they are all now understood as purely metaphorical, may, some of them, have had their origin, before poetry was recognized as such, in nice observations of positive fact. At any rate, the mechanical equivalent of ordinary light capable of dispersion by a prism will have a different value for each illuminant, for each pattern of lamp or burner in which that illuminant is used, for each state of cleanliness of that lamp, for each eye, and for each state of the eye. But the usage of physicists restricts the phrase to the light of a little lamp introduced by Von Hefner-Alteneck burning "pear oil" (often insufficiently designated as "amyl-acetate") and having a flame of a certain fixed height. The photometric intensity of such a flame is called a hefner. It is about eight-ninths of a standard sperm candle-power. An ardent admirer of the marvellous precision of modern physical measurements was all ears and eyes when Prof. Nichols proposed to set down upon the blackboard the three principal determinations of the mechanical equivalent of light by Thomson, Tumlirz, and Ångström, and was evidently preparing himself to be astounded. When he learned that the three values of this important unit which the three eminent physicists had obtained were in the ratios of 19, 13, and 7, respectively, his surprise was of an unexpected kind. Prof. Nichols gave a number of conclusive reasons for holding Ångström's value to be the only trustworthy determination. What had to be done was to remove all the invisible rays from the Hefner flame and measure the heat of the remaining visible rays. If a young student under examination were unexpectedly required to give an instant answer to the question how this should be done, never having heard of the problem, he would infallibly propose to disperse the light into a spectrum, screen off the invisible parts, and concentrate the rest into a calorimeter. But, easy as this would be to say, the difficulties of doing it, with the consequent probable errors, caused Thomson and Tumlirz to prefer to cut off the dark heat by simply passing the light through water. Now it is true that the water would permit the passage of but a very small proportion of the dark heat; but this small proportion might amount to as much as all the heat of the visible part, or more. Ångström therefore chose the difficult method. Some of the visible rays would be absorbed in the spectroscope, no doubt; but, by a photometric comparison with the bare flame, or otherwise, he could readily correct for that; and his value is alone capable of reconciliation with Langley's bolometer results and various other observations.

Prof. Nichols gave the amounts of energy per unit of photometric intensity in the light of a kerosene lamp, of an ordinary gaslight, and of an acetylene light. Such vague descriptions of course preclude precision, but the three amounts of heat were nearly in the ratios of 9, 8, and 7. He compared the different illuminants from other points of view. If we take the "economy" of a mode of illumination to consist in the proportion of the energy that is visible, then the Welsbach burner is a more economical source of light than the electric arc or than the sun itself. If, however, we define the economy as consisting in the ratio of the watts of light-emission to the consumption of fuel-weight, the Welsbach burner stands very low—hardly above a tallow candle—while acetylene distances every artificial competitor. Professor Nichols remarked that the place in the spectrum to the light of which the human eye is most sensitive is also the point of maximum energy in the solar spectrum, and that the curve of sensitiveness of the eye for light of different wave-lengths and the curve of energy in sunlight are substantially identical; which he thought gave logical support to the idea that our faculty of vision, including its seeing the particular mixture of light as colorless which it does so see, has been developed in conformity to the character of sunlight. Fortunately the idea is in no desperate need of logical support.

The well-known therapeutist, Dr. Horatio C. Wood, spoke upon the effect of alcohol on the circulation. The University of Pennsylvania has always taught that alcohol is an active stimulant to the heart. The Johns Hopkins University teaches that it is a sedative to the heart. In order to settle the question, Dr. Wood had instituted a thorough experimental research. The mammalian heart is so susceptible to a thousand influences that no decisive results can be obtained with it. The numerous experiments that have been made upon it are conflicting in the extreme. A heart of more poise is needed—one of those hearts which can be taken out and hung on a peg, and which will still go calmly on for days undisturbed. Cold-blooded reptilian and batrachian hearts were chiefly employed. The first question submitted to experiment was, What is the effect of alcohol upon the arterial pressure? The apparatus employed was described. It was ingeniously contrived to avoid subjecting the blood-vessels to unnatural strains. The experiments so con-

ducted showed that ordinarily the pressure is not affected at all by alcohol. But arterial pressure, like all pressure, is a reaction between two opposing forces, the strength of the heart's action on the one hand, and the friction in the arteries on the other. Alcohol might increase one of these while correspondingly diminishing the other. In fact, this was found to be the case; for if the constrictive reaction of the arteries was paralyzed by severing their connection with the vasomotor centres, it was found that the heart dilated so much more fully under the influence of alcohol that the increase in the flow through the carotid would amount to from 50 to 75 per cent., although the frequency of the heart-beat was unaffected. The apparatus was so arranged that every five minutes there was an alternation between supplying the heart with blood mixed with alcohol and with pure blood, while the blood that passed through the carotid in each five-minute half-period was collected. The result was invariably as stated. It follows, therefore, that alcohol has a double effect on the circulation, at once stimulating the heart and paralyzing the vasomotor centres. But if this be the case, the flow of blood must be greatly increased, and consequently there should be a dilatation of the smaller vessels which would be shown by that instrument which detects changes in the volume of a limb. Dr. Wood's communication was set forth in so interesting a way, and his delivery was so admirable, that the audience was vivaciously responsive.

Professor Brooks, of the Johns Hopkins University, explained how he had discovered that the principal axis of symmetry of the mature oyster is already marked in the ovarian egg—in the egg before it is yet an egg, and while it is still attached. In that stage of development it has a kind of stem, in reference to which the nucleus of segmentation is symmetrically situated. It also has a shell at that time, but as soon as it is expelled the sea water enters the shell, and the egg slips out; whereupon, in ninety-nine cases out of a hundred, the egg assumes a spherical form, so that the axis which its stem had marked now appears to be obliterated. However, in one egg out of every hundred a sort of neck remains, which is identifiable, by its peculiar shape and by the situation of the nucleus, with what was at first the stem. The segmentary spindle and all the segmentations are placed symmetrically to the axis of this neck, and the identity of the axis can be traced throughout the animal's life. It is perhaps the only case in which a principal feature of a mature, individual, and unattached animal is so indubitably determinate from the very first.

Mr. Agassiz, the President of the Academy, gave a fascinatingly interesting account of his last *Albatross* expedition. It was intended to explore a part of the Pacific Ocean that had been quite unknown. We will not undertake to state all the lines run over, but the following will show some of the principal passages, though not always in chronological order: From Panama to the Gallapagos (on the equator due south of New Orleans); thence to Callao (12 degrees south); thence to Easter Island, and to Manga Rava Islands (on the tropic of Capricorn westward of Pitcairn, due south of Sitka); back to Acapulco (south by west of the city of Mexico). In this quadrilateral, particularly in its southern part, was found a large district of the ocean characterized by a bottom of manganese nodules, with scarcely anything else. Each haul would fetch up two or three bushels of what looked like potatoes, running up to the size of cannon balls. Such a bottom is found nowhere else, although manganese nodules have been brought up sporadically. Elsewhere the bottom is covered with an ooze largely of decaying animal matter, affording plenty of food, but in this district there is very little food. It is a sea-bottom desert. It lies upon a plateau some 2,000 fathoms deep, between which and the coast is a series of deeps where the soundings were most irregular, some of them reaching 4,000 fathoms. It is curious that the explorers took with them a chart from Kiel, where they found laid down, on the evidence of a few soundings, the "Albatross Plateau," a sort of clairvoyance of what was to be. Mr. Agassiz called it a guess. Over this plateau there are no currents. No food is drifted there, and consequently there is no animal life at the surface. There being no life at the surface, no food can drop to the bottom; and that explains its being a desert. In the Humboldt Current, animal life reaches a depth of 300 fathoms. Where there were currents, plenty of food and animal life was everywhere found. The amount of animal life on the surface of the Humboldt Current is immense, but it diminishes very rapidly as the depth increases, because the temperature falls very rapidly. It would be 72 degrees Fahrenheit at the surface, 52 degrees at 30 fathoms, and at 100 fathoms not much above 40 degrees. Many of the so-called deep-sea animals really do not live below 150 fathoms; but they are brought up in the hauls, and, being much damaged, are supposed to have come from great depths. Mr. Agassiz remarked that this relation between the distribution of animals and the currents throws a certain light upon former geological conditions. It was the eastward currents that stocked and peopled the islands of the Pacific; and there were greater currents in geological ages.

Easter Island was visited, and it was most satisfactory to have an account of that enigmatical place from such an observer. The whole periphery of the island is land-walled 12 to 15 feet high, with numerous platforms for the gigantic images. In the entire absence of wood, these were roughly cut from stone with obsidian tools. The stone must have been soft when first taken from the quarry. They are idols with enormous heads and small bodies, not apparently intended to imitate humanity, and infinitely below the work found in Central America. Hieroglyphics abound which the natives can still read. Originally there must have been a population of four or five thousand inhabitants; at present the natives number fifty or sixty. Every indication is that the work ceased most suddenly, as if in consequence of some unexpected physical or psychical catastrophe. The audience was charmed with the lecture. It recalled Louis Agassiz to those who had heard that famous naturalist and lecturer.

On Wednesday the Academy visited the new Bureau of Standards with the Washington Academy of Sciences. It is as yet impossible to form any critical opinion of this institution; but it has certainly been planned upon a generous scale, with the intention of covering every kind of standardization that there is any important wish in the country to have the Government undertake. The appearance of everything —buildings, instruments, and men—is highly creditable; and there are enough accomplished physicists in the country to make its work an object of national pride.

On Wednesday evening the Academy dined with Mr. Agassiz at the New Willard.

DR. EVANS'S SIXTH YEAR'S CRETAN CAMPAIGN.

KNOSSOS, March 29, 1905.

Had I not already made similar prophecies, I should say, after this week spent in the Museum at Heraclion and on the site of the House of the Double Axe at Knossos, that discoveries are likely to end with the present year's work. But an incident of two days ago gives me pause. While our party was paying its last visit to the excavations, the foreman brought the curved segment of a vase-handle, instantly identified by Dr. Evans as belonging to one of the familiar Knossian funnel-shaped vases made of micaceous schist. The Italians have found the like at and near Phæstos. This handle was decorated with alternating nautiluses and sprays wrought in an extremely clear-cut fashion, suggesting the best palace-style of vase painting. But the newly found fragment came fresh from a trial pit just experimentally sunk at a considerable distance west of the palace. Indeed, it lay on the upward slope of the long hill running parallel to that on which the Knossian palace stands. If followed by others, this small find must indicate the presence of important remains upon that hill. The trial pit was sunk in the line of the deep-level Mycenæan causeway discovered last year below a Roman road built along the same line about 2,000 years afterwards. These two roads run, one under the other, from the theatre building 100 yards northwest of the palace due westward. The problem in hand is to remove the upper Roman road and lay bare the lower Mycenæan one. This will probably have been done by April 14, when a visit is expected from members of the forthcoming Archæological Congress at Athens.

Incidentally there is also in progress the excavation of certain magazines lying deep down and by the side of this Mycenæan causeway. Whether there are older magazines beneath the ones now in hand remains to be seen. Fewer magazines belonging to the oldest Knossian palace have come to light so far than might have been hoped. The Italians at Phæstos have found several such, and it is equally clear on both sides that at least two distinct epochs are distinguishable in buildings and in pottery and the like. Of course, the older and the later palace both antedate 1500 B. C.; and remains both earlier and later than either have been forthcoming, not only from Knossos, Phæstros, and Hagia Triada, but also notably from Gournia, where our countrywoman, Miss Harriet Boyd, has found so much of vital importance for the history of earlier Cretan handicraftsmanship and for the understanding of the mysterious worship of the Cretan snake goddess.

As the years pass by since Dr. Evans's final campaign at Knossos, it becomes more

and more evident that his vast accumulation of ceramic specimens from various strata in the palace will yield us the means of sketching in outline the history of the potter's craft during the vast period stretching from neolithic times to the dawn of Greek history. The earliest stages have been well studied elsewhere, but only in the collections at Knossos can these stages be linked on by specimens of most gradual transition to the "Mycenæan" period as described by Furtwängler and Loschke. Professor Petrie at Abydos has followed primitive Mediterranean pottery backward into neolithic times, and similar evidence for Knossos lies still in undisturbed neolithic strata below the palace of Minos. But the evolution of artistic pottery between the stone age and the earliest days of Greece is best understood through the Knossian specimens. These prepare the careful observer for the dates supplied partly by Professor Petrie and partly by Dr. Evans, connecting the slow progress of Knossian ceramics with the course of Egyptian history. Dr. Petrie has identified the very earliest Minoan pottery with specimens found at Egyptian Abydos. Dr. Evans has found a similar link, for somewhat more advanced Minoan work, through the affinities of certain Cretan seals of the Sixth Egyptian dynasty. The three styles of Middle Minoan pottery, sometimes called the polychrome styles, have their contact with Egypt in the case of the second polychrome style of Knossos, specimens of which were in much demand for importation into Egypt. Professor Petrie found abundant evidences of this at Gurob. Two Egyptian works, imported when they were new into the Knossian palace, give Mr. Evans further interlacings with Egyptian chronology for his account of the later stratification of pottery on the Knossian site. But we hardly need Egyptian dates to enlighten us. The mere consideration that there is a whole history of art running its course, with periods of revival, perfection, and decay, thrice recurring, in the three Minoan periods, each falling into three successive styles, shows that more than two thousand years are required. Dr. Evans and his assistants have achieved nothing of more permanent and universal value for all students than this classification. Indeed, it must soon be recognized that students of Mediterranean and European anthropology can hardly dispense with the study in Crete of Cretan ceramics; and Egyptologists in particular must spend some energy in mastering the details of Dr. Evans's classification.

Meanwhile the rainiest of rainy seasons threatens the grand staircase leading up from the Hall of the Colonnades to a third story on a level with the pavement of the central court, and at its southeastern angle. Here, as readers of previous Knossian letters in the *Nation* may remember, a stairway, broken by a square landing midway, ascends to an upper story the main features of which have been preserved, including a long corridor at that level. Also, a stone with marks of a similar staircase ascending to a topmost story has been preserved and shored up approximately in its original place. Thus clear proofs of three stories are visible. But everything above the ground level has been kept in place only approximately, and there has always been danger of a fatal collapse. This actually began not very long ago—fortunately, where the damage can be repaired. The flagstones of the upper corridor have in one place collapsed, carrying with them the lowest step of the staircase leading to the topmost story. The ugly hole thus produced was prevented from growing wider and involving more damage only by the insertion of solid columnar props effected an hour or two before our party arrived. Now, it is a relief to say that a competent architect, summoned by telegraph from the British School at Athens, is directing a thorough system of repairs, and there is hope that this danger may be fully provided against before the impending visit of members of the Archæological Congress. The expense, however, will be great, and, considering that only £700 of the £2,000 required has so far been subscribed, the adequate prosecution of this year's work is in serious jeopardy.

As the visitor from Heraclion approaches Knossos, the first view of it is a very great surprise. It appears to be in a valley, because the not inconsiderable intervening depression escapes the eye, and because much higher hills flank it on the west and on the east, while on the south rises a still higher hill, the one where the tombs of Mycenæan date, excavated last year, were found. He who would forget how inconspicuous was Knossos, if approached from the north and the sea, should press on along the fine road which has been pushed southward beyond Knossos and along the valley of the Kairatos, for which the town and palace of Minos were originally named. Viewed from the south, as every one approaching it from the south and the interior inevitably viewed it, Knossos occupies an impregnable position. It commanded the passage from the interior most effectually, and seems from this side to be the natural home of those who should rule the land. In agreement with the requirements of its strategical position, such fortification as Knossos certainly had was at its northern end, toward the sea. But the remains of fortification are by no means extensive, and it certainly appears that Knossos must have trusted for defence in the days of its greatest power not to strong walls, but to command of the sea. In the earliest days, when Knossos first emerged from the condition of a neolithic settlement, its safety from pirates may have been due partly to its distance from the sea (four miles) and partly to its inconspicuous position when approached from the coast.

LOUIS DYER.

FOUCQUET AND FRENCH LETTERS.

PARIS, April 6, 1905.

The Superintendent Foucquet achieved the reputation of a great patron of letters. He counted among his friends Lafontaine, the immortal fabulist; Madame de Sévigné; Mlle. de Scudéry; Pellisson. They all remained faithful to him at the time of his misfortunes, when he incurred the ill-will of Louis XIV. Sainte-Beuve, in his "Causeries du Lundi," which are an inexhaustible source of information, twice analyzed the character of Foucquet, and tried to imagine what would have become of French letters if the Superintendent had remained longer in power.

M. Chatelain has just published a huge octavo volume on 'Nicolas Foucquet, Patron of Letters, Arts, and Sciences,' the result of protracted labor.

"I have long interested myself," he says, "in N. Foucquet and his courtiers. I lived several years among them, and if I did not succeed in liking them, I at least tried to understand them. Every human soul is an enigma, and if the well-marked personality of a man of genius seems sometimes to facilitate the solution of the problem, I did not find this precious help in the present study. But this only made the problem even more captivating in my eyes. The psychology of this singular man; his historical and considerable part in the evolution of letters, science, and art, as well as in the evolution of monarchy; the extraordinary exactitude with which it reflects the spirit and the fashion of his time and the average intelligence of his contemporaries—all excited me to make greater efforts to understand him."

Nicolas Foucquet belonged to the high parliamentary bourgeoisie which bordered on nobility and often mixed with it by buying estates and titles. He pursued his studies at the Collège de Clermont, in Paris, kept by Jesuits. He left college at the age of sixteen, and was presented to Richelieu, who, pleased by his good looks and his intelligence, pledged him not to take orders, but to follow, like his father, a parliamentary life. He at once gave him a commission to make an inventory of the titles of the chancery of Vic, which brought him in relations with a learned German, John Freinsheim. "Foucquet saw all the members of the Parlement fond of rare and precious books, searching for them and glorifying themselves with them. If the president and the councillors of the various chambers set the example, the mere lawyers who had fine libraries were legion." The books of Talon, De Thou, De Mesmes are well known to all bibliophiles, and so are those of Foucquet, with the curious emblems which appear on his bindings, and which were added at the time of his prosperity.

At the age of twenty-one Foucquet was *maître des requêtes*. He remained in Paris till 1642, when he was appointed *Intendant* of the Army of the North. He was, during the years of his début in Paris, a frequenter of the salons of two great ladies, Madame du Plessis Bellièvre and Madame du Plessis Guenegaud. The latter lady was a Jansenist, and it was in her house that were read for the first time some of Pascal's "Provincial Letters." Foucquet was thrown also in the world of the *Précieuses*; he became a lady's poet and wrote sonnets; he became attached to Mlle. de Scudéry, and to Pellisson. Nobody nowadays reads the 'Clélie' of Mlle. de Scudéry, but all the important people of the time found a place in this extraordinary work, under false names. The book was devoured by everybody. Foucquet appears in it as the modern Mæcenas. Mlle. de Scudéry and Pellisson were inseparable; she was Sappho and he was Herminius. Foucquet had a deep admiration for Pellisson, who was a great scholar, a poet, and a philosopher.

Foucquet was at the same time a business man, and his friends were afraid he would become too much absorbed by his financial duties. Pellisson expressed this fear in verse, while Foucquet was at his splendid country house at Vaux.

> "Dans un séjour si beau
> Ne ferait-il rien de nouveau,
> Et n'aurait-il point de fauvette
> Dont il fût un jour l'interprète?"

This was the answer:

"Plût au ciel; mais en vérité
Mon style est tout déconcerté;
J'ai d'autres soins plus nécessaires,
Je perds mon esprit en affaires.
Je vais, je viens pour mes amis,
Je fais tout ce que j'ai promis
Quand ce ne seraient que sornettes,
Et point de temps pour les fauvettes."

Pellisson became secretary to the Superintendent, and was at the same time his agent in many secret negotiations. He kept Foucquet in relations with the literary world, with Boisrobert, with Scarron, with Tallemant, Maucroix, and Lafontaine. His friends called him the "notary of Parnassus."

Foucquet had risen to the dignity of a statesman; he had great views; he was filled with the traditions of Henri IV. and Richelieu. The patronage which he exercised in the world of literature and of the fine arts seemed to him only a part of his duties. He wished to direct public opinion, he inspired pamphlets and newspapers; he felt an obligation to help the distributors of fame. He had a list made of all the men who, in France or abroad, had in his opinion a right to obtain royal favors. He was anxious to pension all writers of merit. He often made presents with his own money. It was a somewhat wearisome work. The poets specially were incessant in their demands; it was not considered dishonorable in those times to obtain pensions and favors by flattery. "Chapelain and Corneille," says M. Chatelain, "disapproved these practices in theory, but they conformed to them. Boisrobert, Scarron, Colletet regarded them as natural. The men of letters had an excuse: literature was unable to give them their daily bread."

There are many interesting details in the work of M. Chatelain on the relations of the State to the writers. Foucquet was the administrator of the royal finances, and he saw that all the pensions to literary people were paid. Most of the pensions, before the time of his administration, were bestowed on the meanest writers, actors, and musicians. There was nothing left for the real poets. Foucquet resolved to help them personally, and not always out of the royal purse. He did so for Pellisson, for Molière, for Quinault, for Lafontaine, for Corneille. His patronage became broader, less interested, less political, than that extended by Mazarin to the pamphleteers of his time. He became the real precursor of Louis XIV. There is a long chapter on the books which were dedicated to him; the only ones worth noticing are Scarron's 'Roman Comique,' the second part of which was dedicated to Madame Foucquet; a work by Perrault (the famous author of the 'Contes'), entitled 'Dialogue between Love and Friendship'; the 'Mort d'Adonis,' by Lafontaine. This poem was a fragment of the description of Vaux, Foucquet's magnificent château, and was never finished. Lafontaine undertook it rather reluctantly, as he himself says:

"Je n'ai jamais chanté que l'ombrage des bois,
Flore, Echo, les Zéphyrs et leurs molles haleines,
Le vert tapis des près et l'argent des fontaines."

The Château de Vaux witnessed performances, given by Molière, of "Sganarelle" and "L'Étourdi." Molière's troupe played afterwards at Vaux "L'École des Maris" before the Queen of England, Madame and Monsieur. Another festival on the 17th of August (a famous date in Foucquet's life) appears like the final apotheosis of his life. It was honored by the presence of the King, the Queen Mother, Madame, Monsieur, Monsieur le Prince (Condé), the Duke de Longueville, M. de Beaufort, M. de Guise; the whole court coming from Fontainebleau. The King wished to see everything—the fine paintings of Lebrun, the statues, the tapestries, the gardens, the cascades, the canals. After the repast, was played Molière's "Fâcheux." Lafontaine wrote concerning this representation some verses to his friend Maucroix:

"C'est un ouvrage de Molière.
Cet écrivain par sa manière
Charme à présent toute la cour.
De la façon que son nom court,
Il doit être par-delà Rome.
J'en suis ravi, car c'est mon homme.
Te souvient-il bien qu'autrefois
Nous avons conclu d'une voix
Qu'il allait ramener en France
Le bon goût et l'air de Térence?"

Twenty days had not elapsed after this famous fête when Foucquet was arrested at Nantes (on the 5th of September, 1661). All the details of this drama are known. Colbert had denounced the extravagance of Foucquet, and made the King afraid of his ambition. His fall and his long imprisonment are a chapter of history. M. Chatelain has taken a limited field in the life of Foucquet—his relations with the writers of his time and his influence on French literature. Most of the writers whom he had aided remained faithful to his memory; Lafontaine honored himself by writing his "Élégie aux Nymphes de Vaux." On the whole, M. Chatelain's book, so rich in particulars, can be recommended to all the friends of French literature.

Correspondence.

CLASSICAL ASSOCIATION OF THE MIDDLE WEST AND SOUTH.

To the Editor of The Nation:

Sir: For a number of years it has been felt by many classical teachers of the Middle West and South that the American Philological Association could not offer them the practical possibility of attendance upon meetings, or the strong sense of community of interest, which was desirable. The Association meets mainly in that part of the country in which the majority of its active members live, namely, the East. This is as right as it is natural. But, on the other hand, the fact that the members who attend come mainly from the East is due to the difficulties of distance—difficulties which work, in precisely the same way, to cause a small attendance of Eastern men when an occasional meeting is held in the West. The meetings began in the East, and it is perfectly intelligible that the attendance upon them should not have shown any preponderance of Western men to bring about a change. The question has therefore often been raised, of late, whether the large and vigorous body of classical teachers of the Middle West and the South should not have an organization of its own. The answer given by the older men, both in the West and in the East, has been that this was the inevitable and the desirable outcome, but that it was best to wait until the urgency of the demand should make immediate success certain.

Early last November Prof. W. G. Manly, of the department of Greek of the University of Missouri, sent out a number of letters of inquiry, asking whether the time for organization had not come. The replies received were very encouraging. Professor Manly, and those whose help he had asked, then formed a provisional committee, representing twenty-two States. This committee sent out invitations to join the projected association, and notice of a meeting to be held in Chicago, on May 5 and 6. Over seven hundred persons have answered Professor Manly, signifying their desire to join the organization. The actual attendance at any given meeting will, of course, be very much smaller, as always in bodies of this kind, but the success of the movement seems assured.

At the coming meeting papers will be read by Messrs. J. J. Schlicher of the Indiana State Normal School, Terra Haute; B. L. D'Ooge of the State Normal College, Ypsilanti, Mich.; F. W. Kelsey and Walter Dennison of the University of Michigan, Arthur Fairbanks of the University of Iowa, J. A. Scott of Northwestern University, Paul Shorey, J. G. Laing, C. D. Buck and W. G. Hale, of the University of Chicago, and Ettore Pais of the University of Naples. The number of papers has purposely been kept moderate, both for other reasons and to allow time for the work of organization.

W. G. Hale.

Chicago, April 22, 1905.

ADMINISTRATIVE ENTITY.

To the Editor of The Nation:

Sir: In the *Nation* for April 13, 1905, you speak of the phrase "administrative entity" as "now fully accounted for as of German origin," and you suggest that it "must be simply the translation of *entité administrative*—a Gallic metamorphosis, for diplomatic purposes, of some still more metaphysical Teutonism whose determination we leave to philosophical philologers."

Being neither a metaphysician nor a "philologer," I can throw no light upon the hidden meaning or derivation of the phrase. It may be a "Gallic metamorphosis" of some "metaphysical Teutonism" for aught I know; but I *do* happen to know that Secretary Hay used precisely the same phrase in his circular note to the Powers, during the crisis of the Boxer uprising, on July 3, 1900. (See House Documents, I., Foreign Relations [1900], Fifty-sixth Congress, second session, p. 299.) In that note Mr. Hay announced that it was the policy of the United States to "preserve Chinese territorial and *administrative entity*," etc. But then the German Emperor may have been responsible for this barbarism on that occasion, too. Of this we may, however, be certain: neither the phrase nor the policy which it suggests is altogether new.

A. S. Hershey.

University of Indiana, April 21, 1905.

[We are glad that our surmise has had at once the effect of restoring that jewel of a phrase to its creator, Mr. Hay, and of proving that territorial and administrative entity are not necessarily identical. But even with this gloss further

elucidation is not superfluous.—Ed. Nation.]

ANNUAL CYCLOPÆDIAS.

To the Editor of The Nation:

Sir: Within the past two years, both Appletons' 'Annual Cyclopædia' and 'The International Year Book' of Dodd, Mead & Co. have ceased to be published. The former had a most honorable career of more than forty years; the latter was published only a few years, but it had made a place for itself. Both were valued by all users of reference-books.

Both the Messrs. Appleton and Messrs. Dodd, Mead & Co. have recently brought out revised editions of their general cyclopædias; they expect that these works will put an end to any demand for an annual issue of a cyclopædic character. They disclaim any intention to begin again the publication of their respective annuals.

Is not here an excellent opening for an enterprising publisher? More persons and institutions than ever before in this country are probable purchasers of reference-books of the right sort. Will not some one occupy the field so long and honorably held, and so strangely abandoned?

Yours respectfully,

Frank H. Chase.

Beloit College, Wis., April 21, 1905.

Notes.

A facsimile reprint of 'The Only True Mother Goose' from the Boston edition of 1833 is in the press of the Lothrop, Lee & Shepard Co., Boston. Dr. E. E. Hale furnishes an introduction.

Mr. Sidney Lee has been employed by the London firm of Methuen to edit a Standard Library of "first-rate texts of the classics of all nations at a very low price"—foreign works sometimes translated, as in the case of the 'Meditations' of Marcus Aurelius, sometimes not, as with the Divine Comedy. The beginning is made with Gibbon's 'Decline and Fall,' in the first of seven double volumes selling at a shilling each—sixpence being the ordinary single-volume price; in paper, but cloth bindings may also be had: witness the 'Meditations' and 'Pilgrim's Progress' on our table. This series cannot fail to attract purchasers of slender means. The typography and paper are adequate. In some cases the complete works of an author will be undertaken, as with Jane Austen, of whose novels we already have 'Sense and Sensibility,' Francis Bacon, of whose English works we have 'The Essays and the New Atlantis,' and Shakspere, volume i. Mr. Lee's editorial function is restricted to an introductory biographical and bibliographical note. There are no portraits or other pictorial embellishments.

The admirable "Cambridge English Classics" from the University Press (New York: Macmillan) proceed with Butler's 'Hudibras,' edited by A. R. Waller. The spurious or pirated issues attending the first appearance of Part I., and other complications, make a choice of this text a matter of caution, and for Part III. there is a considerable choice. What results from Mr. Waller's care is, if not a facsimile, a complete report of the original either in the body of the work or in an appendix.

It is a pity that so captivating a series as the Dent-Putnam "Classiques Français" should not be beyond reproach in the matter of proof-reading, which, the more we read in them, appears discreditably careless. Here, at page 82 of the 'Paul et Virginie,' we meet with "sujet éternal"; at page 98, "aprés." Chateaubriand's 'Atala' was thick with this sort of misprints. Mérimée's ever fresh 'Colomba' is companion to the 'Paul et Virginie.'

A welcome reprint is that, by Messrs. Putnam, of the late Sir Leslie Stephen's group of 'Essays on Freethinking and Plain-Speaking,' now more than thirty years before the public in book form, and for some lesser time out of print. The new issue is much enhanced in value by an excellent portrait of Stephen, and by two estimates of him; one, personal and intimate, by Mr. Bryce; the other, more particularly concerned with Stephen's several writings, by Herbert W. Paul. Together these papers make a capital introduction to the lamented author commemorated.

The present state of Russia furnishes a natural excuse for a reprint of Stepniak's work on 'The Russian Peasantry: Their Agrarian Condition, Social Life, and Religion' (London: Routledge; New York: Dutton). The original appeared as long ago as 1888, an interval, unhappily, not too long to bury the methods of Nihilism defended by the mild-mannered author, yet long enough to effect some changes in the peasant conditions he depicts. These chapters, contributions to the *Times* and the *Fortnightly Review* in the first instance, have an historical value, and still throw light on the great problem of Russian revolution.

Katherine Hooker's 'Wayfarers in Italy' has reached a fourth edition in proof of its wide acceptability. We notice that the little peccadilloes which we pointed out in our review of it two years ago have not gone uncorrected. The Messrs. Scribner are the publishers.

'The Story of the Declaration of Independence' has been prepared by William H. Michael, chief clerk of the Department of State, and printed at the expense of that Department. Only a superficial examination of the book is required to show its worthless character. It is not a history, it is not prepared in the historical spirit, and it is not even a straightforward compilation of known facts. The few important events connected with the signing are repeated no less than three times in twenty pages of text, and are not correctly stated in any of the three versions. To make out a volume, the compiler has prepared paragraph biographies of the signers, and claims to have obtained a complete set of the portraits of the signers, but this is far from true. As no list of sources is given, it is impossible to say how the extraordinary series has been made, but no one familiar with the signers can be deceived by the impudence of the claim to completeness. The biographies are without value or originality, and the only novel illustration in the volume is that giving the present appearance of the original document. The cost of this volume to the Government was $4,500, and the result deserves to be pilloried as an example of the great waste of the public money in printing volumes that can serve no useful purpose.

James Minor Lincoln has printed the 'Papers of Captain Rufus Lincoln' of Wareham in a limited edition. They have some historical value, but required more careful selection. Some of the Diaries record events in which the writer took no part, and were based upon contemporary newspaper accounts; others are true records, and full of the recorder's personality. Of chief interest are the letters of John Hewson and the many excellent reproductions of documents, muster-rolls and company accounts. The editing is carelessly done. The letter on page 101 was written by Galvan, not Galvon, and the poem on page 65 was addressed to John Handfield. Such errors and omissions are numerous.

Such of our readers as are interested in Irish affairs have a treat before them in 'The Seething Pot,' a novel, by George A. Birmingham (London: Edward Arnold; New York: Longmans). It is by far the most racy book dealing with Ireland, her agitations and agitators that has appeared for some time. The name of the writer is not familiar to us. If he continues in an equally happy strain he has a future before him. All parties are touched off in a good-humored vein—Catholic ecclesiasticism perhaps most heavily, for which reason the book, unless with the liberal-minded, may not in Ireland itself meet the reception it deserves. Light as is the author's touch, he himself must have felt deeply. The stolid iron stand of the constabulary in preventing a meeting where two members of Parliament desire to speak, and which the Castle has proclaimed, is related with a verisimilitude sufficient to bring the blood to the cheeks of a hot Home Ruler. The book deals with the experiences of the son of an exiled Irish Nationalist. Born abroad, he inherits a property in Ireland, and soon finds himself in the "seething pot" of Irish politics. Parnell and other personages are, under different names, thinly veiled. The hero, Sir Gerald Geoghegan, is in the end himself disillusioned: "Would we love Ireland so well as we do if we had not got to love her in spite of her breaking our hearts?"

Prof. Oliver H. Richardson of New Haven has published a 'Syllabus of Continental European History' (Ginn), which discloses the method employed in conducting the "History 1" course at Yale. This book contains a skeleton outline of seventy-eight lectures on the leading historical topics that emerge between the fall of Rome and 1870, and furnishes an adequate set of special bibliographies. Opinion varies a good deal as to whether the didactic or the tutorial element should predominate in a general introductory course, such as most undergraduates are put through during the freshman or sophomore year, but in any case it is desirable that a syllabus similar in scope to Professor Richardson's should be placed in the hands of the class. A good many teachers print pamphlets of their own which are distributed gratuitously or sold by the local bookseller. Professor Richardson has been at some pains to make his outline rather fuller than that which is usually given by the instructor to his junior students. In an introductory course, the range of subjects is almost stereotyped, and the same broad subjects come up for discussion everywhere. Such being the case, a good many lecturers may find it more convenient to prescribe the use

of Professor Richardson's 'Syllabus' than to prepare their own.

Of the papers in M. Henry Lapauze's 'Mélanges sur l'Art Français' (Paris: Hachette et Cie), those which possess the greatest general interest are the two on Ingres. M. Lepauze, himself a native of Ingres's town of Montauban, adds a local patriotism to a real comprehension of the fine and austere art of his hero, and writes with infectious enthusiasm as well as with critical acumen and literary skill. We know of nothing more likely to evoke an interest in and an understanding of one of the greatest, if one of the least popular, of modern artists. Another sort of interest attaches to the historical notes on "Une Académie Révolutionnaire des Beaux-Arts." There is something comic, at once, and pathetic in these records of a struggle to establish an organization of art on a strictly democratic basis. What is most to the credit of the French artists of that day is that, in the midst of proscriptions and denunciations, they tried to preserve as much as possible of the art of the past, and to guard the public monuments of France from destruction at the hands of the haters of "emblems of royalty." Other papers of more or less interest are those on the Academy of France at Rome, on the pastels of La Tour, and on the work of Jean Carriès.

Few engraving "processes" have yielded such good results for so little money as that which is called "the Rembrandt Photogravure," with its headquarters (or chief printing works) in England. The series of "Great Masters" done in this way, and published in London by Heinemann, was an excellent performance. Admirable reproductions of the finest pictures in the world were issued for what seemed, in comparison with other enterprises of the kind, an extremely small price. Now, the same method is being used for a new series called "The Art Folio," of which Messrs. C. W. Faulkner, London, are the publishers. The price of each number is but a guinea, and each contains four plates much larger than those in the "Great Masters" collection, and, if the two numbers as yet seen can be taken as representative, equal in excellence. Good photographs of the same size would cost much more. The publishers start out by appealing to popular taste in art, and the four prints in the first number are apparently chosen with due deference to what is usually supposed to be the standard of the public. But the second number contains at least two fine things: Holbein's "George Gisze" and the beautiful "Duchess of Devonshire and Baby," by Reynolds.

The great Russian Encyclopædia begun in 1890 and published by the firm of Brockhaus-Efron in St. Petersburg has just been finished. It contains 41 volumes, with about 40,000 double-column octavo pages, some 110,000 articles, and 4,000 charts, plans, and illustrations. Of the three original chief editors, only one has survived to witness the completion of the work. They were assisted by a staff of twelve, and the list of contributors numbers 746 savants. The work was primarily intended to be an imitation of the famous Brockhaus Konversations-Lexicon, and to consist of from 16 to 18 volumes. But it was soon found that, in the absence of special cyclopædias of Russian literature, the scheme must necessarily be made more comprehensive. German critical journals have repeatedly spoken highly of the work as it was going through the press, and the Munich *Allgemeine Zeitung*, No. 51, warmly commends it now that it is concluded. Naturally, its chief excellency consists in its Russian features.

The report of the census of the Philippines, just issued by our Census Bureau, is summarized in the April number of the *National Geographic Magazine* by the editor, Mr. G. H. Grosvenor. It contains many interesting and encouraging facts about the islands, but leaves, we are convinced, a too favorable impression of the condition of the Filipinos. To take a single instance: it is stated that, of the civilized people (practically the whole, there being only 647,740 wild natives out of a total population of nearly seven millions), 43.5 per cent. are returned as workers, as compared with 36.3 per cent. in the United States. These figures are obtained by the inclusion of 29.4 of the women as wage-earners, against 12.8 in this country. If the hosts of American women who aid in farm and garden work and are engaged in village industries were enumerated in our census returns, the figures would tell a very different story. But the optimistic view of the situation reaches its climax when we are assured that it is not too much to expect that, under the present favorable conditions, "the Filipinos will become a numerous and homogeneous English-speaking race, exceeding in intelligence and capacity all other people of the tropics." A remarkable series of 130 pictures admirably illustrate the types of people, their manner of life and industries. Mr. Edward Atkinson contributes what he terms his own egotistigraphy, showing how he was led in his youth to investigate the facts regarding cotton and its manufacture. The ignorance in respect to it and similar subjects which prevailed then, and in a measure still prevails, should be dispelled, he thinks, by the establishment in our schools of courses of instruction in commercial geography, geology and climatology.

The "Life and Writings of Dr. José Rizal" is continued in the January and February numbers of the Madrid review, *Nuestro Tiempo*, by W. E. Retana. These two instalments deal with Rizal's life in Spain, France, and Germany, 1882-1887, and the influence of that life upon him. His studious habits and close thought during his student days in Madrid, whither he went as early as October, 1882, are dwelt upon at length, and his journal kept there during part of the time (1882-1885) is given almost *in toto*. One is struck on perusing the latter by the number of books that Rizal buys, his book expenditures being, in fact, the largest item to be found in his accounts. The books, in many different lines, show a wide range of interests. At Madrid he pursued his studies in various languages—English, French, German, and Arabic—while also applying himself to his chosen field of medicine. His brilliancy as a student appeared rather in his literary and philosophical studies than in that of medicine, where he proved to be not above the average. He made a study of military fortification, while he had already begun his celebrated novel, 'Noli me tangere.' Attaining his degree in philosophy and letters, in June, 1885, he went to Paris that same year, where he studied diseases of the eye (his specialty) with Wecker, and also applied himself to the study of English, French, and German, while at odd moments he continued writing on his novel. At the beginning of 1886 he is at Heidelberg, where he first enters into correspondence with Blumentritt, the eminent Philippine ethnologist. From Heidelberg, he goes to Leipzig, where it is said that he supported himself as a typesetter while pursuing his studies. Thence he goes to Berlin in the beginning of 1887, and meets Virchow and other eminent men. That same year his 'Noli me tangere,' of which Retana gives a brief synopsis (partly in extract), was published in Germany. His love for his native land seems ever to increase, and he is eager for his return. He shows himself self-restrained and moderate, a lover of liberty, but a despiser of revolution. Retana appears to insist too much on Rizal's wish to see the Philippines freed from the Spanish yoke.

Mr. Walter Powell, of Birmingham, discusses in the March *Library Association Record* some "Indexes Wanted," *e. g.*, on the drama, on heraldry, on topographical views and maps, on biographies (Phillips's 'Dictionary of Biographical Reference' brought down to date and extended to cover biographies in periodicals), on portraits (the author seems to be unacquainted with the 'A. L. A. Portrait Index,' now nearing completion), on essays (in spite of the 'A. L. A. Index to General Literature,' which he thinks might need recompiling in England). He proposes coöperation between the Library Association and the American Library Association for the preparation of a comprehensive index or set of indexes. The value of this suggestion is doubtful. The defects of the A. L. A. indexes are due to the inconsistencies inherent in a work produced on the coöperative plan.

—The lectures which Mr. Sidney Lee gave at the Lowell Institute in 1903 have, after revision, been published under the title 'Great Englishmen of the Seventeenth Century' (Scribners). More, Sidney, Ralegh, Spenser, Bacon, and Shakspere are the separate stars in this constellation, and, save for an opening essay on "The Spirit of the Sixteenth Century," Mr. Lee keeps strictly to their lives and works. Not improbably the author may find it tiresome to have his name linked always with the Dictionary of National Biography, but one's natural instinct is to compare any lectures which he may deliver on biographical subjects with the articles he has contributed to the great work itself. Such an examination brings out the fact that the exigencies of public speaking have not forced the scholar to disappear in the vulgarizer. When one adopts the biographical methods which Leslie Stephen employed with such conspicuous success, it becomes possible to interest a popular audience in the career of any great man. In other words, the element of discussion, criticism and explanation assumes such large dimensions that the minutiæ of scholarship need not be paraded, while the speaker or writer whose grasp of details is perfect cannot fail to disclose this fact in a hundred ways. Mr. Lee is deeply impressed by the ethical paradoxes of the Renaissance, and finds them illustrated in the careers of all the men with whom he deals. More's defence of intellectual freedom in the 'Utopia' offers a sharp contrast to his martyrdom on be-

half of authority; the altruistic tone of Ralegh's 'History' is belied by the author's love of gold; Bacon's devotion to lofty intellectual ideals did not save him from becoming the meanest of mankind. Even Sidney, Spenser and Shakspere did not escape from the spell of influences which break in on the unity of a career. "The poets, Sidney and Spenser, who preached with every appearance of conviction the fine doctrine that the poet's crown is alone worth the poet's winning, strained their nerves until they broke in death in pursuit of such will-o'-the-wisps as political or military fame. Shakspere, with narrow personal experiences of life, and with worldly ambition of commonplace calibre, mastered the whole scale of human aspiration, and announced his message in language which no other mortal has yet approached in insight or harmony." The spectacle of lofty genius touched alike by the good and evil of the Renaissance has furnished Mr. Lee with his real theme, nor are his lectures unworthy of such a noble subject.

—Edward P. Cheney's 'Short History of England' (Ginn & Co.) is a small volume of almost seven hundred pages, designed for the use of students and teachers. The history is brought down to the present time, and in this respect is supplementary to Green's. A compendium of this sort can be tested only by actual use; but apparently this one is better in the earlier than the later portions. The last two hundred and fifty years are covered in two hundred pages, and these give us little more than an outline. The author seems to be of the opinion of those who hold that the study of the early political and ecclesiastical organization of a nation throws great light on later changes. But, to our mind, in history, illumination is rather thrown backward than forward, and we could have spared a good deal of the early part of the book for the sake of a more thorough treatment of the modern period. Condensation and perhaps haste here lead to what is tantamount to obscurity. A page is given (sec. 531) to American and English ideas of representation at the time of the Revolution; but, except that they were opposed to one another, we cannot make out exactly why they should have induced a long and bloody war. A good deal of it looks as if the author thought the colonists' view was that they were entitled to elect members to the House of Commons. Trevelyan, one of the authorities referred to by Mr. Cheney, makes the matter plain enough. In the account (p. 674) of the causes of the Boer war, the author, referring to the modifications introduced into the relations between the South African Republic and Great Britain in 1884, instead of telling us what they were, merely says: "They do not seem to have been generally understood." This is true enough, but the business of the historian is to explain the nature of misunderstandings which lead to great wars. The book, however, must be regarded as a compendium, rather than as an original inquiry, and, as such, it will be found useful. It is provided with many illustrations and a number of maps.

—In connection with the Whistler Memorial Exhibition in London, there has been published a little book that deserves to be widely known, and that probably one day will be in great demand among collectors. 'In Memoriam: James McNeill Whistler,' it is called, and it consists of the speech delivered by Prof. Walter Raleigh at the dinner held on the occasion of the opening of the exhibition. Of the eloquence and beauty of the speech as delivered, every one who heard it was loud in praise. Now that it appears in print, it will be praised with scarcely less warmth. That Professor Raleigh has been able to make his just estimate, comes, it is clear, from careful and intelligent study of Whistler not only as artist, but as writer. Whoever is familiar with the 'Gentle Art of Making Enemies' will recognize the inspiration—and at times more than the inspiration; for it is amusing to find how, on all sides, Professor Raleigh is being given credit for the saying that Whistler first taught people to look *at* and not *through* a picture, when these were Whistler's own words, years ago, in the 'Ten O'Clock,' the lecture to which so many went to laugh and stayed to applaud. Another interest attaching to the speech is that Professor Raleigh came to the dinner as the representative of Glasgow University, which showed Whistler the recognition denied to him at Oxford and Cambridge and bestowed upon him the degree of LL.D. It was the last honor he received in this life, and it was one he appreciated very deeply. The little book is got up in the now well-known manner of the Whistler catalogues and pamphlets. It has been printed at the Ballantyne Press and published by Mr. Heinemann for the International Society of Sculptors, Painters, and Gravers.

—For the past twenty-five years there has been lying among the antiquities in the Pump Room at Bath a little lead tablet with a few lines of writing scratched upon each side of it. Nobody hitherto has succeeded in making anything out of this writing except that it is in a wretched cursive hand; even the language seemed open to doubt. But now comes Bodley's librarian, Mr. E. W. B. Nicholson, with a little pamphlet called 'Vinisius to Nigra' (H. Frowde), in which he endeavors to show that the tablet is nothing less than a Latin letter written in the fourth century by a Christian man in Britain to another man's wife (also a Christian), residing at Bath. We hasten to add that, in spite of these suspicious circumstances, it should not be thought that here is a bit out of some ancient edition of the 'Bath Guide.' To be sure, Vinisius is moved to refer to certain "faults" in Nigra's husband, but he offers nothing warmer than ghostly consolation and a warning against a certain "dog of Arius," one Biliconus, who is coming to drink the waters. Trivial as all this sounds, the tablet would be of importance as one of the very few ancient documents of Christian Britain in Roman times, if there were any way (without going to Bath) of verifying Mr. Nicholson's interpretation, or if his reputation as a palæographer made such verification unnecessary. As it is, we can do no more than mention his general theory, adding that the little which can be deciphered from his collotype facsimile of the tablet suggests that no two scholars are likely to agree in transcribing the original.

—The March number of the *Zentralblatt für Bibliothekswesen* gives an account of the National Library of Turin after the fire. It would seem that in some respects the calamity which befell the Library was a blessing in disguise. The gifts that have poured in from all parts of the world number more than twice as many volumes as were destroyed. Up to the 4th of December, 1904, 22,880 volumes were received from 811 donors—publishers, authors, libraries, other institutions, and private donors. The British Museum, the Early English Text Society, the Folklore Society, the Royal Belgian Academy presented full sets of their publications, while the Imperial Academy of St. Petersburg sent the catalogue of its numerous publications to select from, and the Government libraries of Prussia put a selection of their duplicates at the disposal of the Turin Library. Several American institutions gave extensively, among them the libraries of New York and Chicago, and Harvard University (though the latter is not among those mentioned in the present article). The city of Siena gave 328 volumes. Five Italian publishing houses gave together 2,400 volumes. Among the individual donors, with one exception the largest gift came from Prof. J. Mayor of Cambridge, who presented not less than 700 volumes, among them several incunabula. But the most munificent donor remains to be mentioned; namely, Baron Alberto Lumbroso, who presented a whole library of about 30,000 volumes, chiefly consisting of a collection of material relating to Napoleon, larger even than that of the Paris National Library.

—While the collections of printed books in the Library have thus materially increased, the loss of manuscripts remains, and probably will remain, irreparable. Of the 4,500 numbers which were contained in a carefully prepared catalogue of this collection—which, by the way, was destroyed along with the treasures it described—only some 1,350 remained to be catalogued in the list which the new director of the Library, Prof. Carlo Frati, published recently in the *Rivista di Filologia e d'Istruzzione Classica*. In connection with this account is found a résumé of an article by Prof. Icilio Guareschi, first printed in last year's volume of the *Memorie* of the Turin Academy, and also reprinted in pamphlet form (Turin: Unione Tipogr. Editrice), in which the writer describes his experiments in restoring the remains of a number of vellum manuscripts. This article should prove to be of interest to libraries that possess manuscript collections, because, as the author of the present notice remarks, library chemistry has a wide field, even when there are no fires, and deserves increased attention.

—The Korea *Review*, in concluding volume iv., in December, 1904, finishes also the History of Korea, by the editor, Prof. Homer B. Hulbert, who, from the prehistoric and legendary period, brings the narrative down to the fall of Liaoyang, in the Russo-Japanese war. The work, well indexed, is to appear in two volumes. In the initial number of volume v. for 1905 are two articles of interest. In the one on Korea and Formosa, it is shown that there is a definite connection between the so-called aborigines of the island and the ancient inhabitants in the southern regions of the peninsula (the northern folk being of wholly different origin and under political

order of another mould). In physical likeness, in tribal, linguistic and social similarities, close agreement is shown between *insula* and peninsula. The architecture of both was of the pit-like order, with a door in the roof of flat stones. In detail of dress, adornment, tattooing, treatment of the teeth by removal for social demarcation, burial customs, and head-hunting (which in Japan, by direct evolution, became the more civilized game of polo, in which balls took the place of human noddles), further similarities are made manifest.

—On the economic side, advertisement of Korea has been for years handsomely and perseveringly done by the *Review*. A good chapter on iron mining in Kang-won province suggests great possibilities in the future of scientific metallurgy in Korea. There is a description of the new Seul-Fusan railway, which traverses the peninsula from east to west, and which the Japanese have built within a year and during the war. This account is all the more valuable because the writer has twice traversed the Siberian railway, and makes critical comparison. He declares that "nothing too good can be said" of the workmanship on the new road, the masonry, ties, rails, etc. In place of the eight-inch, round-bottomed split trees on the Russian roadbed, which are easily worn into by the rails, the Japanese metal rests on squared Korean timber resembling ash, and the spaces between are ballasted with broken stone. Express trains are not yet run, but the average speed excels that of trains on the Siberian road, and a minimum rate of forty or fifty miles per hour is expected for express trains, when put on. Some of the tunnels are 4,000 yards long. Meanwhile, trains are run over the mountains without switchbacks. At Taiku are vast antiquities of the Shinra (Silla) mediæval kingdom, of old visited by the Arabs and compass-directed Chinese fleets. Fusan, the Japanese port, boasts its three-storied brick hotels and Commercial Museum, and is a modern city. In place of the old one month's river-freighting from Fusan to Taiku, freight trains deliver goods in a day, compelling new readjustments of organized industry.

—Joseph Jefferson, who died on Sunday at Palm Beach, Florida, in the seventy-sixth year of his age, was the last survivor of the first-rate actors who helped to maintain the fading dignity of the American stage during the closing decades of the nineteenth century. No actor of modern times has been the subject of more eloquent or, it must be added, more undiscriminating eulogy, the result of his prestige, his popularity, and his personal charm. As a matter of fact the sum of his achievement was small, and his actual influence upon the stage insignificant. Indeed, the record of his artistic career is singularly barren. He did nothing, beyond setting the example of a blameless life, to elevate the profession to which he owed so much. Notwithstanding his vast influence, he offered no encouragement to modern dramatic authors, and did little or nothing to preserve the old from oblivion. The beginning of his success was the end of his ambition. Having once won the smile of Fortune, he would not put himself in peril of her frown. The public never wearied of his one masterpiece, and he contented himself throughout by far the greater part of his career with the profitable multiplication of replicas. His *Rip Van Winkle* was one of the most perfect realizations of an ideal character even seen upon the stage. The ideal itself, of course, was in many ways unworthy, false, and inconsistent. But artistically the actor gave it the fullest possible interpretation. His impersonation will live in stage history as one of the perfect gems of acting, comparable with the *Falstaff* of Quinn, the *Richard* of the elder Kean, the *Sir Pertinax Macsycophant* of Phelps, the *Iago* of Edwin Booth, or the *Conrad* of Salvini in "La Morte Civile." These differ in kind and value, of course, but resemble each other in perfection of achievement and truth of conception. To few actors has it been given to create more than one masterpiece, and Jefferson never did anything else equal to his *Rip*. His *Caleb Plummer* was quaint, humorous, and pathetic, but not vital. It was inferior to that of Owens. His *Bob Acres* was an exquisite bit of refined fooling, comic from periwig to toe-tip, and charged with all the actor's personal attractiveness, but had little or nothing in common with the character as designed by Sheridan. His *Salem Scudder* was a good specimen of the stage Yankee. His *Pangloss* and his *Ollapod*, like his *Acres*, were in many respects but eccentric manifestations of his own identity. Of his earlier impersonations none are now remembered. Mr. Jefferson received the honorary degree of A. M. from Harvard ten years ago.

ST. FRANCIS AND HIS BIOGRAPHERS.

Sons of Francis. By Anne Macdonell. London: J. M. Dent & Co.; New York: G. P. Putnam's Sons. 1902. Pp. vi, 436.

St. Francis of Assisi according to Brother Thomas of Celano: His Descriptions of the Seraphic Father, A. D. 1229-1257. With a Critical Introduction, containing a description of every extant Version. By the Rev. H. G. Rosedale. London: Dent & Co.; New York: E. P. Dutton & Co. 1904. Pp. xxxiv., 12, 110, and 174 (the opuscules are paged separately).

Little Brother Francis, the most courteous (*curialissimus*) of holy men, why should he, above other religious reformers, have given rise to strife so bitter and prolonged that few scholars to-day can discuss the records of his life without the blinding heat of partisanship? He had none of Luther's *Heftigkeit;* he was no adept in scorn and scurrility, like St. Jerome and Beza. He was very much of a gentleman, and never forgot that saintly good breeding (*sancta curialitas*) which his biographer notes and which penetrated every word and deed. Yet it had become clear, even before his untimely death, that he had come to send not peace but a sword. Some of his followers took his teaching about Lady Poverty quite literally, and continued for a century and a half to protest bitterly against those who believed that mere poverty could never win the world. Francis resigned his headship of the order several years before his death, and ratified the selection of Brother Elias as leader. Now Elias belonged to what later became the laxer party, who placed their trust in fine churches and solid monasteries, papal privileges, and the general potency of wealth and organization. Elias had a way of making holiness "hum" which saddened Francis, and led him to forebode the evil days which were soon to come upon those who shared and defended his superb possessionlessness. So the issue was early joined, and in a century the *Zelati*, or stricter party, had for various reasons been so completely discredited that they were regarded by the Church as little, if any, better than heretics.

The last twenty years have witnessed a marvellous revival of interest in St. Francis. Protestants vie with Catholics; Jesuits and Dominicans with the Franciscan scholars. Several series of publications and at least one periodical, the *Miscellanea Franciscana*, are devoted exclusively to the early sources for Francis and his order. Five years ago a Leipzig professor gave a course on two of the early Lives of Francis, and in 1902 a Società Internazionale di Studii Francescani was established. There are innumerable monographs and discussions, and long introductions to little books. The controversy over the earliest Lives of St. Francis, like the not altogether dissimilar discussion of the synoptic gospels, "rouses heated passions, calls out abusive and scornful language, provokes withering attacks." That this is not the familiar *odium theologicum* or *scholasticum* one would gladly believe. The writer of 'Sons of Francis,' at any rate, sees something deeper. She says:

"Scholars may think themselves quite detached from the concerns of the present, and, when they wax hot over the religious history of more than six hundred years ago, may congratulate themselves on the intensity of their intellectual interest. But, consciously or not, they are partisans in a struggle of their own hour. It is not the question of the supreme power of the Catholic Church that divides them, any more than it divided the men whom they quarrel over now. The separation lies far deeper, springs from an ideal half concealed, half revealed, as much social as religious, never realized, yet always dimly felt; an ideal that has divided, that will eternally divide, the world till the millennium."

In short, Francis long ago said the last word on the newly rediscovered "simple life"; and his own life and doctrine save those who study him from being completely victimized by palæographic subtleties.

The 'Sons of Francis' forms a natural sequel to the famous life of Francis by Sabatier. It carries on the story of the order, beginning with the immediate disciples of Francis—those who authoritatively and proudly call themselves "Nos qui cum eo fuimus"—Bernard of Quintavalle, Rufino, Giles, Angelo, Masseo, and the celebrated Leo. Brother Elias is very sympathetically exposed. He was surely no Judas, even if he had no business in a brotherhood such as Francis's. Probably, as our author suggests, neither he nor his friend Cardinal Ugolino (later Gregory IX.) "wished that Francis, the child of Heaven, should ever learn their earthly knowledge of men. His innocence, his hopefulness, his high expectations, drew souls as they could not. If only once drawn into the fold by Francis's high hopes for them, the souls might be left to men of the world to deal with!" Perhaps even Francis saw that there was no other among the brothers who would so well govern the rapidly increasing numbers in the order as Brother Elias. Indeed, Celano reports that Francis gave Elias his special blessing, and prayed that God might remember all the toil and labor that he had expended for the order.

In 1239 Elias was deposed, much to the joy of his many enemies, and eight years later John of Parma, now pretty much forgotten, but a great man in his day, was not unreasonably selected in the hope that he might bring back peace among the distracted Franciscans. "He was a great practical experimenter in the field of religion and morals. Few there have been who have willed and planned on so great a scale to make the City of God a reality on the earth. He failed. And the strugglers of the world might go to school to him to learn how to fail with noble dignity." For toward ten years John held his own pretty well, but at last, accused of heresy, he resigned with dignity, and, before long, Bonaventura was made general of the order. Of him our author has little to say, preferring to turn her attention to Salimbene, the most diverting of Franciscans, whose memoirs are full of very light gossip and very solid information. Angelo Clareno and the 'Chronicle of the Tribulations'—an important account of the sorrows of the *Zelati*, which he helped write, and which has attracted a good deal of study lately—is assigned a chapter, as is Jacopone da Todi. "Dante and the Franciscans" is the closing theme of the volume.

The writer exhibits her complete grasp of the sources in her text, and enumerates them in her appendix of critical notes. Her volume is the peculiarly felicitous outcome of long study and a highly critical mind. It is not in the least amateurish, as books on St. Francis commonly are, nor is it primarily for edification. Probably one should know something of the general situation before he takes up the book, but then he will find it a delight throughout.

Dr. Rosedale has performed a great service by publishing from excellent manuscripts, and in the original Latin, the three accounts of St. Francis by Thomas of Celano. Thomas joined the Franciscans about twelve years before the death of their founder, and must have known him well. He was early sent as a missionary to Germany, but appears to have returned to Assisi from time to time, and was there on the occasion of Francis's death in 1226. In 1229 Thomas had completed a Life of Francis. This he forwarded to Pope Gregory IX. Although commonly known as Celano's "First Life," Dr. Rosedale prefers, for the sake of clearness, to use another title, which the work owes to its close association with the Pope, namely, *Legenda Gregorii*. Nine MSS. of this Life are in existence, and it has already been printed twice from two MSS. which have mysteriously disappeared. The best known of these earlier editions is that of the Bollandists, included in the *Acta Sanctorum* for October. But this is hardly to be had outside very large libraries, and the other edition is even rarer. Consequently, Dr. Rosedale is the first to make this most fundamental of the biographies really accessible. He has collated all nine MSS., making special use of one in the British Museum, which he thinks may perhaps have been written by Celano's own hand.

Celano's prominence in the order, his clear and graceful diction, and, above all, his indubitable nearness to the events, combine to recommend his work above all the other Lives. Yet, in spite of these considerations, the doctors are in disagreement as to its value.

"The one party," writes Dr. Rosedale, "which numbers among its adherents the orthodox Roman writers, is led by the able and polemic editor of the *Miscellanea Franciscana*. It recognizes in Thomas of Celano the true and only exponent of the life of St. Francis. The other party, whose leader seems to be one who to my mind deserves the most respectful consideration of every scholar and student, Professor Paul Sabatier, is tending in its views towards the opinion that in our author we have a man of weak character and one easily led, the tool of the dominant party, and in fact a man who was almost unscrupulous in his writings."

In 1898 Sabatier published the 'Mirror of Perfection,' which he extricated and reconstructed from much other Franciscan matter with which it had become confused. He declared that this was the work of Brother Leo, one of the foremost of Francis's companions, and, relying upon the colophon of a copy made long after the work was written, he assumed that the Life was finished early in the year MCCXXVIII—which would have been still 1227, following our reckoning. Accordingly he issued the 'Mirror of Perfection,' with many pages of introduction and notes, as the *Legenda Antiquissima*, the very oldest and most authentic account of Francis, antedating even that of Celano. But soon another MS. was discovered containing the 'Mirror,' and apparently older than that used by Sabatier. This had the date MCCCXVIII., and Sabatier's lynx-eyed opponents eagerly pointed out how easy it was for the copyist of the MS. first discovered to have made inadvertently an X instead of the third C. Sabatier, we believe, still thinks that he has reasons for maintaining his first position. However this may be, the 'Mirror of Perfection,' which has been beautifully rendered into English by Sebastian Evans, remains a marvellous source for the workings of Francis's spirit in his own life and that of his companions, and must have been written within a score of years after his death.

Under the generalship of Crescentius de Jesu, 1244-1247, the brethren were commanded to bring together "such tokens and miracles of the most blessed Father Francis as might be known or discovered." This order led to the preparation of two lives, which have come down to us—that by the "Three Companions," viz., Brothers Leo, Rufino, and Angelo; and a supplement by Thomas of Celano to his 'First Life.' The 'Legend of the Three Companions'—now to be had in English in the "Temple Classics"—is perhaps the most beautiful little work in the whole range of hagiography. Its style is infinitely simple, entirely different from the carefully considered antitheses of Celano, and yet it borrows from his 'First Life' the accounts of several incidents, and even reproduces now and then Celano's words. This legend seems to break off abruptly when it reaches the last, troubled years of the saint, and suddenly passes over to a brief notice of his death. This circumstance has led Sabatier and others to suspect that certain chapters relating to the period of storm and stress, when Elias had begun to show his hand, have been suppressed. It was while looking for the missing chapters that Sabatier discovered the 'Mirror of Perfection.' Two Franciscan scholars, Marcellino da Civezza and Teofilo Domenichelli, have brought to light an ancient Italian translation of the 'Legend of the Three Companions,' in which the gap is filled in by chapters corresponding with certain of those in the 'Mirror of Perfection.' They hold this to be the complete legend, and published it with an elaborate and learned introduction (Rome, 1899).

As for Celano, students have hitherto been puzzled by seemingly irreconcilable statements in regard to the successive accounts which he wrote after issuing his 'First Life.' Happily, Dr. Rosedale has cleared up all the difficulties, which are too technical to be presented here. Before the death of Crescentius in 1247, Celano prepared a supplement to his 'First Life" quite as voluminous as the original work. He briefly and perfunctorily reviews the career of Francis, and then classifies the incidents of his life under a series of headings—for example, "On Poverty in Clothing," "On Poverty in Bedding," " On Seeking Alms," "On Foolish Gayety," "On Holy Simplicity," etc. This forms the second treatise, *Legenda antiqua*, in Dr. Rosedale's collection, and is a reproduction of the only known MS. now preserved at Assisi. Celano shows by one passage that he was familiar with the work of the Three Companions, written in 1246, and in several cases he reproduces incidents in the 'Mirror of Perfection,' using the same words. This is but one illustration of the puzzling way in which the bits of early Franciscan literature, owing to their episodal character, began to be taken apart and shuffled around until, by the fifteenth century, matters reached such a pass that the veriest Sherlock Holmes among the Franciscan detectives finds his head swimming.

Under John of Parma, the successor of Crescentius, Celano issued a new edition of the *Legenda antiqua*, with some rather slight changes, and added a long account of Francis's miracles, to which he had given scant attention in his earlier writings. Only very recently has a MS. been discovered of this *Tractatus secundus*, which is reproduced as the final treatise in Dr. Rosedale's collection. Its discovery seems to clear up all the confusion which has hitherto existed in regard to the thirteenth-century references to Celano's various lives.

Shortly after Bonaventura was chosen head of the order, he was deputed, in view of the many scattered and sometimes conflicting legends of Francis, to prepare an official Life. When this was completed, the general chapter of the Franciscans held at Paris in 1264 commanded, in virtue of the vow of obedience, that "all legends of St. Francis hitherto made shall be destroyed; and, where they are discovered outside the order, the brethren shall endeavor to do away with them, since that legend which has been made by the General [Bonaventura] has been made up of those things which have been diligently proven, and which he had from the mouths of those who were almost continuously with St. Francis and knew all things of a certainty." Thus the whole Franciscan order was set to work to annihilate all the primary sources for the life of St. Francis, and certainly succeeded in creating or enhancing many perplexities for the modern historian. Yet, with Celano's works, the 'Legend of the Three Companions' and the 'Mirror of Perfection,' in spite of some minor mysteries, the ad-

mirer of the *Poverello* has abundant material for judging him and his teachings, and need not depend upon the prudent compilation of the irenic Bonaventura, nor upon the fascinating but untrustworthy 'Little Flowers,' which were probably brought together a century after Francis's death.

In the preceding explanation of the relation of Dr. Rosedale's publication to the previously available sources, there has been little opportunity to speak of Celano's matter and style. A single and not wholly typical example of the prose of the supposed author of the august hymn "Dies Iræ" must suffice. He thus pictures Francis's character:

"Dulcis in moribus, natura placidus, affabilis in sermone, commodissimus in exortatione, fidelissimus in commisso, providus in consilio, in negotio efficax, gratiosus in omnibus; mente serenus, animo dulcis, spiritu sobrius, contemplatione suspensus, orationi assiduus et in omnibus fervens; constans proposito, virtute stabilis, gratia perseverans, et in omnibus idem. Ad indulgendum velox, ad irascendum tardus, liber ingenio, memoria luculentus, subtilis in disserendo, circumspectus in eligendo, et in omnibus simplex."

MRS. WARD'S LATEST NOVEL.

The Marriage of William Ashe. By Mrs. Humphry Ward. Harper & Brothers.

'The Marriage of William Ashe' is an interesting contribution to a series of novels by Mrs. Ward, which might not inappropriately be named "The Stately Homes of England" Series.

"The Stately Homes of England,
How beautiful they stand!
Amidst their tall ancestral trees
O'er all the pleasant land.
The deer across their greensward bound
Through shade and sunny gleam,
And the swan glides past them with the sound
Of some rejoicing stream!"

Thus sang Felicia Hemans, proclaiming with early Victorian simplicity the romantic charm that the visible signs of long descent and power exercise upon the popular imagination. The tuneful poetess would have repelled indignantly visitations of a vulgar curiosity about what went on behind the ancestral trees, though she may well have cherished a secret vision of human beings beautiful and graceful as the deer and swan, passing their days in occupations comparable for innocence with the bounding and gliding of those highly decorative animals.

There are several points of resemblance between Felicia Hemans and Mrs. Ward. Each in her way represents that admirable mixture of romantic sentiment, good sense, independent judgment, and profound respect for national conventions which every English gentlewoman is proud to own. Mrs. Hemans wrote verse flowing at about the same level as Mrs. Ward's prose—always respectable, yet barren of inspiration, of high or rare quality. This verse enjoyed in Mrs. Hemans's day such popularity as Mrs. Ward's novels enjoy to-day, and it is still read by many people and respectfully treated by critics, as Mrs. Ward's fiction may easily be fifty years hence. The great difference between these two "gifted" writers is really the difference of the times. In Mrs. Hemans's time the idol-breakers had not fairly got to work, and many institutions and objects, including "stately homes," were still revered by the people. In Mrs. Ward's time nothing is revered by the people; and the "stately homes," having lost all their mystery, would have lost all their interest, were it not for the curiosity of a still excluded mob about what is going on behind the park gates.

The public has settled to the belief that Mrs. Ward can gratify that curiosity; and probably the public is right. She moves with such serenity and authority through great, gilded drawing-rooms, up and down splendid staircases, across those greenswards where the deer used to be so prominent, that it is only reasonable to assume her familiarity with the nobles and great ladies, soldiers and statesmen, who have had the entrée from time immemorial. Our demands may have been unreasonable, for we have often experienced a disappointment in her delineation of such personages. These have seemed to us less spirited, less insistent on having and holding, vastly more proper than they were in the days of their seclusion, as we know them in history and through tattling writers of memoirs and letters. They have impressed us as figures that might have been commemorated in verse by Felicia Hemans, if her imagination had had the audacity to cross the portals.

In 'The Marriage of William Ashe' we meet a few people, not drawn to fit ideals, born and nourished in the humbler homes of England. First among these is Lady Kitty Bristol, the wife of William Ashe. She is an Irish girl with a bad inheritance on both sides—a father without morals and with a touch of madness, and a charming but shady mother. Ashe meets Lady Kitty at one of her mother's parties, where we are told that a sea of black coats overflowed from the drawing-room to the staircase landing, while the sex that doesn't wear coats in the evening was represented only by the hostess and her daughter. Ashe promptly falls in love with Lady Kitty, and that is the beginning of trouble.

The girl, with intelligent, wild eyes looking out from a childish face, was neither mad nor bad, but incurably perverse. She longed for love, and, when love came to her at the right moment, the dawn of life, she played cruel pranks with it, and only failed to kill it because it had passion and patience and loyalty which were never hers. She thirsted for money and pleasure and power, and, having got all these things, she threw them away. For her the thing craved lost its value with possession. The gardens of delight always lay for her beyond the shore she safely trod. She could do wrong both impulsively and deliberately, but she could expiate the wrong only in a momentary fit of self-reproach. Her vision of perfection was dim, yet she had it just enough to wring compassion from the hardest heart. Mrs. Ward has brought out this point with great skill and unfailing sympathy. She has also resisted the temptation towards exaggeration and theatrical effect offered by such a picturesque and intense figure. In the last chapter, when Ashe and his wife come together, the improbability of such an accident disappears in the sense of its appropriateness. Lady Kitty, of course, might have died unforgiven, though deeply repentant and forgiving her enemies; but she might accidentally die otherwise, and so Mrs. Ward has chosen. The whole difficult, delicate episode is beautifully managed; and if the end is not inevitable, it is the best, the perfect.

Ashe is more in Mrs. Ward's usual manner than is Lady Kitty, but he has some original touches and a strong individuality. He married for love, foreseeing clearly embarrassing complications. He bore the consequences admirably, and, we suspect, would have borne the worst—have gone back to his wife broken and abject and crying for him, after her adventure with Geoffrey Cliffe—had his mother, Lady Tranmore, not interfered. She called him to order; she reminded him of things he must stand for, traditions and family honor; she kept him firm in the attitude that the limits of forbearance had been long passed, hardening his heart against its own passion. Ashe's marriage with Kitty is only an episode, but one is made to feel that it fixed a measure for his future, gave him a standard for joy and a standard for sorrow, and that he could never forget.

It is difficult really to see Geoffrey Cliffe, the villain of the piece. At a critical moment, when we were in "the midst of some disagreement with America, a whirlwind was unloosed, and, as it happened, Geoffrey Cliffe was riding it." Lady Kitty would be fatally attracted by a rider of whirlwinds, and, from the moment of meeting with Cliffe, her doom might be regarded as sealed. Mary Lyster's manœuvres to keep two such firebrands apart could but be futile; so, though it is not quite believable, she might have been guilty of the act that brought them irrevocably together. She had ample provocation to ruin a woman who had done her out of two lovers, and perhaps she thought it no harm to hasten the predestined; still, her revenge was shameless, and makes the way found by the lurid actress, Mlle. Ricci, to pay off her score against Cliffe, appear dignified, even noble.

The grand society that Lady Kitty dazzled, offended, and shocked is described with suitable leisure, and each individual's feeling and opinion about her help to vivify her and show her off. The set is, of course, political, always more or less agitated by a foreign question at the point of crisis. For the great social functions where her world congregates, Mrs. Ward throws wide the big front door, so that her public may flock in and satisfy its curiosity. This is the sort of stuff supplied by the page:

"There could be no question that in all external matters Lord Parham was that evening magnificently entertained by the Home Secretary and Lady Kitty Ashe. The *chef* was extravagantly good; the wines, flowers, and service lavish to a degree which made both Ashe and Lady Tranmore secretly uncomfortable. Lady Tranmore in particular detested 'show,' influenced as much by aristocratic instinct as by moral qualms; and there was to her mind a touch of vulgarity in the entertaining at Haggart which might be tolerated in the case of financiers and *nouveaux riches*, while, as connected with her William and his wife, who had no need whatever to bribe society, it was unbecoming and undignified."

Such a passage intimates familiarity with "external matters" pertaining to the aristocracy, and also intimacy with the inward breast. It conveys to the waiting public a bland assurance that the author has "been there," that she "knows it all."

DYER'S EVOLUTION OF JAPAN.

Dai Nippon: A Study in National Evolution. By Henry Dyer, C.E., M.A., D.Sc. London: Blackie & Son; New York: Charles Scribner's Sons. 1904. Pp. xvi., 450.

The scope of this work is shown by the titles of its twenty chapters. They are: Introductory, Fall of Feudalism, The Japanese Mind, Transition, Education, Army and Navy, Means of Communication, Industrial Developments, Art Industries, Commerce, Food Supply, Colonization and Emigration, Constitutional Government, Administration, Finance, International Relations, Foreign Politics, Social Results, The Future, Recent Events. The chapter on Recent Events was appended to explain the main events just before and after the outbreak of war with Russia. The Introductory chapter tells about the author and his work in Japan, the purpose being "to bring my readers within the sphere of my mental environment." He came to Japan (1873) to organize at Tokio the College of Engineering under the Department of Public Works. As principal of that college, he stayed in Japan about ten years, resigning his position "for personal and family reasons."

While the author seeks "to indicate the forces which have been at work in bringing about what is admitted to be the wonder of the latter half of the nineteenth century, namely, the rise of Japan as a member of the comity of nations, and to note some of the chief results," his aim is, not to write a history of modern Japan, but "to supply some materials for such a history by a preliminary study of the dynamics of the subject." He realizes that the task set for himself is complicated and difficult, but he finds the main force in "Bushido," "the sense of honor which cannot bear to be looked down upon as an inferior power" and which creates "the intense loyalty of the people." To this are added "great intellectual ability" and "great power of foresight." But would not "pride" better express the meaning shown by the context for "sense of honor"? Similarly, when we read, "The two predominating features in Japanese national life are therefore patriotism and loyalty, and these to a large extent explain the circumstances which led to the overthrow of the Shogun and the restoration of the Emperor as the centre of executive authority in Japan," troublesome questions arise. Where were this patriotism and loyalty during the two hundred and sixty-five years of the Shogunate? Were they, after all, not a product of "Bushido," or was there a modern "Bushido"? Besides his curious conception of facts, the author thinks that, in estimating the chief forces in national evolution, "the value of opinions expressed must depend, to a very large extent, on the personal experience of the writer"—surely a new historical canon. Beyond this, it were bootless to set opinions against those of the author about the "inner forces which have been most powerful" in making Japan.

But in fact few readers are likely to measure this work by the standard set up by the author. Most readers will value it for the facts and the suggestions it contains. Looked at in this way, two merits lift the work above most of the books on Japan. It is a serious effort by one who has had a good opportunity to know Japan. It brings together a vast deal of information which the general reader seeks, but which must otherwise be sought in a wide variety of sources. Furthermore, most of the abundant statistical data are drawn from official sources, and are brought fully up to the date of publication. On what may be called the concrete aspects of the subject, each chapter gives a good summary view. The chief facts concerning the growth of institutions are woven into an interesting narrative. Untrustworthy in theories, perhaps no other single volume gives so wide and correct a view of the main facts in the several phases of Japanese national life. Since busy people need summary views of large subjects, they will find this one of the best works of the kind on Japan. But pictures suggested by such works are rarely in every way lifelike. The best use of space is, therefore, to point out wherein this book seems likely to mislead the reader.

The trustful Western reader is likely to feel abashed by this book. He is likely to be weighed down with a sense of inferiority —partly of guilt, partly of relative mental and moral weakness, partly of impracticable, if not even low, ideals. On the other hand, he will get only a vague conception of the Japanese. He will find them in most things superior to the men he knows; but the picture will be blurred, and the Japanese will remain incomprehensible. Such impressions result, not merely from statements of the author, but also, and perhaps even more, from actual and implied comparisons and from the general spirit in which he writes. His picture of the moral guilt of European States in their treatment of Oriental peoples is not overdrawn; but the implication that Japanese are wholly incapable of such things is not consistent with the author's reference to Japan's relation to Korea. In respect, not merely of things peculiarly Japanese, but also of institutions taken by Japan from the West, the reader is both told and made to feel that the West has much to learn from Japan. On the other hand, the author gives the impression that Japan got far less from the West than is generally supposed. Thus, he quotes Hearn to the effect that, after all, there was really no revolution in Japan, and that, for the most part, the new things introduced were in neither nature nor effect fundamental. But, if the changes in Japan have not been more numerous and far more radical than those caused by the break-up of feudalism in the West—if they have not affected institutions, customs, and modes of thought—then they are measured by standards not known to ordinary students, and the Japanese themselves, in their new codes, their new system of education, their new political and economic institutions, their daily practices, are vainly chasing illusions.

In his interpretation of Japanese motives and ideals, Mr. Dyer has mainly followed Nitobe, Hearn, Okakura—men of poetic gift —and so his picture lacks nothing in the way of color and proportion. He shows how Shintoism, Buddhism, and Confucianism, by a sort of chemical action, crystallized into "Bushido" and the Japanese spirit—in short, made Japanese motives and ideals. How these ideals as such compare with those of Christianity, he does not say. But he ventures "to affirm that its [Bushido's] principles entered more deeply into the national life of Japan than do those of the religion we profess into Western civilization." What is most misleading is the failure to keep clear the fact that these are ideals. The author himself is thus misled. A seeming recognition of this fact elicits from him a tardy disclaimer that he is "placing the civilization of Old Japan or of China before that of the West." Let the author himself tell how far apart were the ideal and the real. To illustrate the spirit of old Japan, he speaks about *katakiuchi* (which he calls "redress," but which means killing an enemy in *revenge*) thus: "Redress did not descend to mere personal revenge, for it was justified only when it was undertaken on behalf of superiors and benefactors. 'One's own wrongs, including injuries done to wife and children, were to be borne and forgiven.'" Later, he says: "I can recall the Satsuma men, with their swaggering gait and sometimes scowling aspect, and one was thankful when one got safely past them in the streets; for there was no saying what an angry samurai might do on the spur of the moment." Again: "There can be no doubt that mere bravado and a domineering spirit led to a reckless use of their swords by the samurai class." Similarly, under the glow of his worded ideals, the author tells us that "the Japanese samurai, and to a very considerable extent all other classes in the country, were fairly well educated"; that "the mind was trained in such a manner that it obtained the capacity to undertake any study to which it was directed." But, later, he says: "It was curious to note how much the people were the slaves of mechanical methods in their mental training. . . . Learning by heart and copying constituted the greater part of the education of the Japanese youth, and the teacher did nothing to stimulate original thought." Then he quotes from the Imperial Rescript on education: "For farmers, artisans, and merchants, and also for women, learning was regarded as beyond their sphere, owing to some misapprehension in the way of school administration. Even among the higher classes much time was spent in the useless occupation of writing poetry and composing maxims, instead of learning what would be for their own benefit or that of the State." We may believe the Rescript as against the author.

For him the test question is: "Have they [the Japanese] been gainers by the changes?" The main trend of his feeling seems to be that Japan lost more than she gained. But, as the changes are in a sense the price paid for her continued existence "as a separate nationality," he reluctantly accepts the hard bargain. Not unnaturally some curious standards had to be set up in order to maintain this mental attitude and also avoid self-contradiction. Thus, economic gains disappear before logic like this: "We have also seen that the prices of nearly all the necessaries of life have risen, although not so much as the wages, so that on the whole the economic condition of the majority of the people has improved. On the other hand, their wants have also developed, and it is doubtful if there is a large proportion who find themselves better off than they would have been under the old conditions." Thus, it seems,

when wages rise faster than prices, it can only better the condition of people if they do *not* satisfy more wants! Also, the economic condition of the people improves, and yet the people do not find themselves better off than before. Besides, we read: "Sanitary conditions have been bettered, the quality of the food of the majority of the people has improved, and more attention is now being paid to systematic physical development than was the case under feudal conditions, when it was for the most part confined to the samurai class." So, also, with regard to mental, moral, spiritual and social well-being, the standards which show the superiority of the old conditions are a little hard to grasp. These standards are that "intellectual activities and material means are not necessarily the accompaniments of moral and spiritual development"; that "many found pleasure in their work, and they asked for no other blessedness"; that "life was simple, and wants were few"; that "artists were able to work in a leisurely manner and give full play to their genius," while in exchange for their products "they had a sufficient allowance to meet their small personal wants." If these be good standards, the French Revolution was not justified; Europe, like Japan, made a mistake in leaving feudalism; even the Greek and Roman slaves had little cause for complaint! This shows the source of error to be a lack of historical perspective. Like many writers on Japan, the author, as *a mere spectator*, was close enough to Japanese feudalism to be awed by its picturesque outside. He did not look carefully enough at what was within. If "many of the most thoughtful minds in the country look back with something like regret on the old state of affairs," it is like the thrill we have in reading 'Ivanhoe' or looking at the castles on the Rhine. Like us, they would not think of exchanging freedom of conscience, freedom of speech, equality before the law, for more refined art *for the few*, arbitrary government, summary justice and kindred feudal institutions.

Since in Japan *two* universities must serve a population of forty-five millions, it is misleading to read that "the youth of Japan have now opportunities for higher education which will compare very favorably with those of almost any other [*sic*] country in Europe or America." Specimens of logic are, that the quality of Japanese copper causes (?) extensive use of electrical power and development of electrical industries; that low development of commerce in Old Japan was the consequence (?) of the low social position of merchants and speculators. Errors occur. Tea is declared the most important export to America, while its value is less than a fourth that of silk exports to America. The number of *Kotogakko* is stated (incorrectly) as six (p. 84) and (correctly) as eight (p. 88). There are other errors, inconsistencies and curious specimens of logic. But most of the facts concerning Education, Commerce, Transportation, Finance, and such subjects are correct, and it is for information of this kind that the book has its chief and real value. If it had less of the personal element—the first personal pronoun singular appears almost as many times as there are pages—it would please the reader more and be none the less convincing.

The Women of America. By Elizabeth McCracken. New York: The Macmillan Co.

It is a pity that those old Greek satirists who were so profoundly impressed with the uselessness of women (Simonides of Amorgos for instance, or Phocylides, or Hipponax) cannot read Miss McCracken's book. Simonides took ten types of women and compared them each with an animal—the pig, the dog, the ape and so on—all in the most unflattering terms. Only one in ten could he find to admire—the busy housewife, the type of the bee. The rest were greedy, vain, back-biting, dangerous, and tedious companions. Miss McCracken takes thirteen types of American women and finds them all excellent save only one. No superlatives can be found to exhaust their good qualities; America is in their hands, and, being there, is perfectly safe. We are reminded of the remark of a very sensible woman who, last autumn, having listened patiently to several members of the Peace Conference making speeches to an audience of young women, and assuring them, on the honor of American men, that the whole future of America depended on their pleasure, with many variations of the theme, at last, in her turn, rose and said abruptly, "Girls, don't be misled by all that flattery"—a warning that was greeted with prolonged applause.

Miss McCracken set out on a tour to study the American woman, and found her almost without a flaw. She found prairie towns in Nebraska permeated by Shakspere through the influence of the Women's Shakspere Club, a whole community transformed by the presence of a single college woman, libraries everywhere due to women, women everywhere reading the books in them. There is a refreshing absence of statistics and a good deal of platitude in her evidences, but the book, "Germanly speaking," as De Quincey would say, lets itself be read. It is the view of an emotionalist with a fixed idea, but not unobservant. We have said that Miss McCracken found one flaw; there is one reservation in her panegyric—*surgit amari aliquid.* The political women enjoying the franchise in Colorado she sadly admits have sunk to equality with men. It is, indeed, a case of "women, once our superiors and now our equals." Ten years of suffrage in Colorado have, says Miss McCracken, injured the women, whatever may have happened to politics. But politics has not escaped unscathed.

"Public life in Colorado is hysterical. . . . The simplest discussion of the most trivial matter is marked by a breathless tenseness out of all proportion to the occasion. I very soon found in Denver, for example, that it was unwise to put questions to any woman whomsoever regarding any public issue, if another woman at all likely to disagree with her chanced to be present. Instead of hearing one reply, or even two differing replies, I was obliged to listen to a long, excited and chaotic argumentation between the two women pledged to opposite sides of the situation."

"I grant that you may have influence, but *we* have power," said one of these female-suffragists to Miss McCracken. The women philanthropists of Denver, if we may believe the writer, "do it to get votes." "How sweet she is with that baby!" I said to a woman standing near me. "Yes," replied the woman, with a sudden accession of interest and curiosity, "she is. And I hadn't supposed *she* was looking for a new office!" In short, Miss McCracken agrees with the Colorado husband who remarked, "Women don't change politics as much as politics changes women."

There are so many types of American women that it would have been impossible to describe them all in a volume of less than 400 pages. The chapter on "Women in the Professions" says nothing about women who are teaching in colleges or managing them. There is no account of the industrial woman, whether employed in a factory or taking a part in the management of large business concerns. The typewriter is ignored. The domestic servant who makes or mars so many thousand lives is left out of range. In fact, the book has far too wide a title; it merely touches the fringe of the skirts of the great, complex, bewildering, many-sided American woman whom Miss McCracken travelled West and East and North and South to discover and verify and describe.

Another Hardy Garden Book. By Helena Rutherford Ely. The Macmillan Co. 1905.

There is no good reason why the author should not give us a second book on the Hardy Garden, the first was so good. Moreover, she has had in the case of this, as of the first, the help of Professor Chandler in providing excellent illustrative photographs. Some of the recent books on gardening read much like expanded catalogues of nurserymen and seedsmen, the element of inflation consisting largely of that kind of experience the recital of which lightens the daily journey of the suburbanite—or else exasperates him beyond reasonable control. A friend of ours, whose train to and from the city carried the usual number of amateur gardeners with precocious vegetables and early fruits, was wont to obtain from his seed merchant the very *latest* and, so to say, *slowest* varieties of everything. His late sweet corn just escaped the first frosts and afforded him a topic of conversation when his rival passengers had to confess that their summer was past and their harvest was ended.

The author of this work places before us her quiet statements in an unobtrusive and instructive manner, and, here and there, gives touches to her sketch which make the book more than usually readable. She insists with some show of reason that a woman's heart in gardening is with her flowers and shrubs, and the raising of vegetables is only a propitiatory offering to the other members of the family. In taking women through her garden, she says, she "has never heard one ask about the vegetable garden, but she cannot recall a single instance of showing the flowers to a man who failed to inquire with a strong note of interest about the vegetable garden." We wish we could quote at length the pleasant account the author gives of the home itself and its surroundings. The following outline sketch will sufficiently indicate that the story of the garden and the home has been written by a sympathetic and keen observer. The mare driven by the author is an animal of great intelligence, and has come to know its daily and its Sunday tasks very perfectly.

"The mare is a creature of superior and somewhat lofty manners, and not only domineers the other horses in the home stable,

but fairly browbeats those with whom she comes in contact in the church sheds. They, faithful creatures, mow great fields of hay, plough, and draw heavy loads; and the light task of taking their families to church makes Sunday for them a day of rest. My petted animal hears their tales of the hard week's work, and recounts to them her life of ease, telling how her only labor is to take her mistress upon pleasure drives. But last summer her pride met with a downfall and her haughty spirit was brought low. The weather being very warm, I bought her a hat, bound the holes cut for her ears with red, and adorned it further with a gay red *chou*. She wore it proudly for a few days; then came Sunday. Out of the church shed she came that day with a sadly subdued air; seemed to have no spirit; hung her head, and returned home so dejectedly that I feared she might be ill. The next day the united strength of two men could not put on that hat. She had been laughed at and jeered at by her companions in the shed for her frivolity in taking to millinery, so that her pride was broken and she learned the lesson of meekness."

The Law of Foreign Corporations and Taxation of Corporations, both Foreign and Domestic. By Joseph Henry Beale, jr. Boston: William J. Nagel. 1904.

It is safe to say that this book, on which the author has been engaged for years, will be welcomed by the profession for which it has been written. There is, we believe, no other which covers the field explored by Mr. Beale, to the exclusion of other topics, and this fact alone would make the work professionally important. The subject itself, especially in this country, bids fair to occupy bench, bar, and Legislature more and more as time goes on, for this country may, without paradox, be called the home and nursery of foreign corporations. In this country alone of great modern commonwealths, every State jurisdiction is a "foreign" jurisdiction in every other State; and every corporation chartered by one State is a foreign corporation in every other. The complexity of the jurisprudence which this system produces can hardly be exaggerated, and it is made more complicated still by the concurrent existence of still a third (Federal) jurisdiction, with a constitution, laws, and courts of supreme authority in certain limited directions, although, as a rule, this is not the authority from which a corporation derives its franchise. Our foreign corporations, too, being, in the ordinary sense of the word, domestic corporations, Mr. Beale is quite justified in attributing to the law of his subject great practical interest. It is by "foreign" corporations that an enormous part of the business and commerce of the country is carried on. The subject of taxation is naturally involved, especially as the provisions of the Constitution of the United States affect the right to tax. It should be added that the author has devoted considerable space to the statutory provisions of States and Territories, as well as of Great Britain and Canada. "A knowledge of the form of statute on which the decision is based is necessary for an understanding of many important authorities on the law of foreign corporations."

Without going into details, we may call attention to chapter xxx., on Taxation and Interstate Commerce, as specially valuable just now that States are laying about them in every direction for new sources of revenue. The taxation of "franchises" has divided the Supreme Court as effectually as the questions of colonial expansion. A State may tax a foreign corporation, but it may not regulate interstate commerce. After an elaborate review of the cases, Mr. Beale's conclusion is that a tax upon a foreign corporation, to be valid, must fulfil two requirements: first, it must be levied equally upon domestic and foreign corporations; second, "it must in substance be a means of making property within the State bear its share of the burdens of government, or of paying for the grant of special privileges or for special services not connected with interstate commerce. If the tax fails in either of these respects, it is a tax on commerce, and is invalid."

Mediæval Art, from the Peace of the Church to the Eve of the Renaissance, 312-1350. By W. R. Lethaby. London: Duckworth & Co.; New York: Charles Scribner's Sons. 1904. Pp. xviii., 315.

Mr. Lethaby is author of a small volume, published in 1892 and entitled 'Architecture, Mysticism, and Myth,' and another of 1893 entitled 'Leadwork: Old and Ornamental, and for the most part English.' In 1894 he acted with Mr. Harold Swainson, since dead, in producing one of the most valuable monographs we have, 'The Church of Sancta Sophia, Constantinople,' not fully described without citation of its second title, "A Study of Byzantine Building." He has appeared as editor of a valuable and unique set of manuals, "The Arts and Crafts Series of Technical Handbooks," of which three volumes have been reviewed in these columns during the last two years; and now he joins the very well-chosen group of authors who furnish the red-covered volumes of another series of books on Fine Art—that to which belong Gronau's 'Titian' and Holroyd's 'Michelangelo' —with his 'Mediæval Art,' a work of great research and of singular thoroughness.

Two apparent characteristics of Mr. Lethaby are a laudable willingness to take pains, and a marked readiness to adopt positive opinions—to reach final conclusions and avow them. As to the first point, it would not need much study of the book before us to convince the reader that the monuments have been carefully studied and minutely compared, the latest as well as the old standard authorities consulted, the religious and racial influence weighed. As to the second point, it requires some explanation, for we would not give the impression that our author is hasty in his conclusions. He is, we think, one of those students who are quick to see a positive evil, or a positive good, in a race, an epoch, a tendency—quick to find it and bold to announce it. That habit of mind seems to Americans who are taught rather in the Continental schools than by British example, a peculiarly national one. We expect the Englishman to believe in an unhesitating way certain doctrines about mediæval and other literature, scholarship, philosophy, and fine art. Thus, we find a continued acceptance of views announced forty years ago by James Fergusson, a pragmatical and self-satisfied writer having little real insight into architectural conditions; and in new English books and periodicals we meet with the reiteration of doctrines embodying conditions and beliefs announced half a century ago, in the days of the Gothic Revival, of the Pre-Raphaelite movement, of the writings of William Rossetti and Burges, Morris and Palgrave, Pugin and Lord Lindsay. In short, American students of art matters are rather apt to find the English writers doctrinaires.

Now there is, as one might expect, a certain mysticism combined with this tendency to firm conviction. By "mysticism" we mean the tendency to find in the work of art certain thoughts or utterances which are not visible to the bodily eye. "Wherever, in Italy, we see a school of architecture in course of formation, we shall find that it has its roots in a fresh Byzantine impulse" (p. 91); the bronze font at Liège is "the most remarkable work of art, in an historical sense, of any known to me" (p. 216); Ruskin, "who, at least, was a supreme judge of beauty" (p. 92); "the principle [of Gothic design] was exactly that of natural growth" (p. 169); "one feels that this dazzling mixture of blue and ruby was made use of by a deeper instinct than taste. Such windows seem to fulfil an active part in cathedral ritual—an incense of color" (p. 180)—these quotations show, not unfairly, the tone of conviction and, as it were, illumination in which this treatise is composed. We may add the curiously hasty assumption that the circle of black and white inlay with the sun and zodiacal signs in the pavement of the Florentine Baptistery is studied from a stained-glass rose window (p. 102). It is not merely that a resemblance is pointed out, but that inferences as to date are drawn from it.

The book is divided into twelve chapters, of which the first deals with the age of Constantine. The words of the title, "Peace of the Church," refer, as it seems, to the declaration of Constantine and his colleague, Licinius, that Christianity should be tolerated in the Empire. Four chapters following this treat of the Romanesque and Byzantine—that is, the Western and Eastern—round-arched styles, which followed that of classical Rome. Then comes chapter vi., which deals with the peculiar characteristics of the later Middle Ages, not in architecture alone, but in art conceptions generally, and the reasons for the rapid spread of Gothic architecture, when fairly developed. This chapter introduces the treatment of Gothic art, which fills the second half of the volume. The discussion of it stops with the fourteenth century, and is, in so far, one more disappointment. When shall we see a book that will give its proper place to fifteenth-century art? Let it be called Early Renaissance, as French writers are often inclined to name it, or Developed Gothic, or simply the Flamboyant style, it deserves analysis and criticism as well as the art of any *Décadence* that has ever been, and there is always much beautiful work in the times of *Décadence*.

There are 66 full-page, half-tone prints and 125 text cuts, some of which show, we think, Mr. Lethaby's own handiwork. His illustrations in firm line are recognizable here to those who have studied the cuts in the 'Sancta Sophia.' His selection of material indicates that large knowledge of the monuments and the authorities to which allusion has been made. If any bad tendency may be thought to exist in the enthusiasm, the ready conviction, the inspired tone of the book, the good tendency is at least as noticeable. Where else are such hearty words of praise of the noblest works

of mediæval men? Nowhere, surely, have the Pisan group of cathedral buildings, or the apse of Beauvais, or the cathedral at Laon, received more sympathetic and affectionate words of praise.

Inner Jerusalem. By A. Goodrich-Freer. E. P. Dutton & Co. 1904. Pp. xv., 388.

The object of Miss Freer's book is to describe Jerusalem as it is to-day. She appears to have visited the country for the special purpose of writing a book, which differs, nevertheless, from that of the ordinary traveller in that she spent two years at Jerusalem investigating and studying. She tried to enter into relations with all the various creeds and communities in the Holy City, so as to absorb, if possible, their point of view, and she seems to have written her chapters about some, at least, of these different nationalities during or immediately after her period of special affiliation with them. As, furthermore, she wrote with the intention of publishing her accounts of them separately in periodicals (in point of fact only one chapter was so published), the effect produced is somewhat as though a representative of each nationality had written a chapter about that nationality. We see its virtues and few of its faults, and consider it largely for itself, without regard to its relations to the others. The style, however, is the same throughout—amusing and light, without being irreverent.

Now and then Miss Freer makes use of historical and learned material, as in the chapter on the history of the Franciscans. In general she avoids archæological and historical disquisitions and discussions, not, as she says, because she is not interested in those topics, but because others have treated them or can treat them better. Her object is to present a picture of the Jerusalem of to-day, its inhabitants, its social life, its customs, and its religious practices.

She is in general tolerant and kindly toward Jews, Roman Catholics, Greeks, Abyssinians, Armenians, Moslems, the peculiar American colony, to the care of which has been entrusted for some years the public-school system of Moslem Jerusalem—in fact, toward every one except her own compatriots, the English; but for them, and especially for the English missionaries, she has hard and even unjust words and judgments. As a result of this attitude of easy tolerance there is generally an apparent lack of strong conviction or deep feeling, but once she is roused to burning indignation, namely, in the chapter, "Martyrdom in Jerusalem," where she describes the disgraceful disturbances at the Holy Sepulchre three years since, when the Greek monks endeavored to take possession by force of the outside flight of steps, which it is the privilege of the Latin Franciscan monks to sweep. Five Italian Franciscans, two Germans, one Frenchman, one Spaniard, one Hollander, two Russians, three Syrians, and one Englishman were more or less seriously injured by stones thrown upon them from above, or wounded with clubs and daggers in the hands of the Greek monks. This fracas attained international importance, because, inasmuch as France, through her latter-day relations to Russia, failed to champion, as of yore, the cause of the Latins in Palestine, the German, Italian, and Spanish Governments interfered and took charge of the cases of their respective subjects. It may be added that no real punishment was inflicted upon the offending monks, and that the Greek community in general viewed this violent onslaught upon the Latins with favor. Such is the bitter rivalry for possession of the sacred sites in Palestine, and so much has the religion of sacred relics, rites, and sites superseded the religion of life! In her account of this fracas, Miss Freer has made use of a manuscript narrative written by one of the Franciscans of the Convent of St. Salvador.

As a woman, Miss Freer enjoyed certain special advantages for the study of the domestic life of the Moslems, and the description of a Moslem wedding at which she assisted, even to taking part in attiring the bride, is peculiarly interesting.

Despite her lack of familiarity with the Arabic language, she found means of communication which were, on the whole, satisfactory for her purpose. Her transliteration of Arabic words is somewhat erratic. As she herself says, it reminds one of the elder Weller's account of the spelling of the name of that illustrious family. For all practical purposes, however, it represents the sounds with sufficient accuracy. But by what perverse ingenuity was Miss Freer led to revive the obsolete *scirocco*, which has no justification either in sound or in etymology?

Our author finds some amusement in the American method of choosing consuls, and the lack of dignity and form characteristic of American consular representation. Although American subjects (almost exclusively Jews, be it said), many of whom cannot speak English and very many of whom doubtless obtained their naturalization papers by fraud, are very numerous, America alone among the Powers represented in Jerusalem has no consular residence. A good word is spoken for the curious "American Colony," commonly called Spaffordites, of dubious repute and yet abounding in good works, educational, benevolent, and industrial. While commending the work of the American "School of Archæology, opened in 1900, which receives, irrespective of religion, nationality, or sex, all students who are graduates of a university of recognized standing," Miss Freer remarks that "it has no local habitation and only one professor, annually renewed, and, however learned, as new as are his pupils to the Holy Land" (p. 4). Unfortunately, this is likely to be the case until increased interest shall enable the directors of this school to provide, as at the similar schools in Athens and Rome, a resident director. The German Archæological School, which has a resident director, is mentioned in terms of unqualified approval, as is also the admirable archæological and Biblical work done by the Dominicans at St. Étienne.

While unhampered by prejudices which prevent intimate social relations with the American Colony, with Latin and Greek monks, with cultivated and intelligent Jews and native Moslems, as are her English compatriots in Jerusalem, or so Miss Freer claims, she was so far limited by social restrictions that all she saw of Jerusalem in the case of each nationality appears to have been what may be called its upper section. The ignorance and need, the curious superstitions and religious vagaries, the vice, the crime, the misery, do not appear in her pages, or at least are merely referred to. The book gives a pleasant and entertaining and, in spite of its limitations, probably the best available picture of actual living conditions in Jerusalem at the present day. It is well got up and satisfactorily illustrated.

Modern Advertising. By Ernest Elmo Calkins and Ralph Holden. (Appletons' Business Series.) D. Appleton & Co. 1905.

The series in which this book is published appears to have been designed for those who wish to advertise their own businesses. The contents of 'Modern Advertising' imply that it is more particularly addressed to business men disposed to employ an advertising agent not only to deal with mediums, but to plan their campaigns or coöperate with themselves in such planning. Assuming this to be its object, we can say it probably serves its purpose. It must accordingly exhibit the art as it is practised by agents and accepted from them; not strictly the art of advertising, but of joint advertising and sales-management. Not unnaturally it commends such performances as "Uneeda Biscuit," "The Smile that Won't Come off." "Sunny Jim," "The Road of Anthracite," etc.; and such a periodical as the *Ladies' Home Journal* as "the highest type of an advertising medium, well edited, with great influence, a circulation reaching well-educated, well-to-do, intelligent, American women"; . . . and "the people who read it are of the better and more discriminating class." It would be out of place for a book like this to lay down the lines on which salesmanship by print may exercise itself to the best advantage; this will be very clear if we add—in the long run.

In the effort to make a book, there is a whole chapter on Definition of Advertising, another on the History of it. The authors appear to think that engravings, "designs," "display," and smartness, are about the whole thing. It does not occur to them that good advertising is, essentially, giving such information as will enable the reader to buy intelligently, with the equivalent in print of a salesman's manner, or something more substantial, to win confidence. They know nothing of candor and fairness, and the exhibition of them in the style of writing and in the typography, as the essentials of proper advertising to extend the area of trade wherever want exists. They know nothing of what the world has lost by the general lapse from such candor and fairness on the part of advertisers. This remark on a certain class of advertisement stands for the book: "The more complete and enthusiastic the description, the larger the returns from the advertising." Enthusiasm and returns!

Strangely enough, there is not a word about book advertising; the class of trade advertising which has least felt the degrading influences of the "expert" advertisement-writer, is not even mentioned—unless Booklover's Library advocacy is book advertising. Medical advertising also is slighted, perhaps for the opposite reason.

A NOTEWORTHY NEW BOOK

Hale's DRAMATISTS OF TO-DAY

ROSTAND, HAUPTMANN, SUDERMANN, PINERO, SHAW, PHILLIPS, MAETERLINCK.

Being an Informal Discussion of Their Significant Work, by EDWARD EVERETT HALE, Jr. Dr. Hale has been a frequent contributor to the *Dial* on the leading literary plays of our time.

With gilt top. 12mo, $1.50 net. By mail $1.60.

A few of the plays considered are "Cyrano de Bergerac," "L'Aiglon," "The Sunken Bell," "Magda," "Ulysses," "Candida," "Letty," "Iris," and "Pelleas and Melisande."

Times' Review: "He writes very well, with abundant knowledge of his subject, derived from study at first hand. He has much to say of the technical details of the theatre, and many of his ideas seem practical 'which is most rare.' . . . A useful appendix contains dates and facts touching the performance and publication of the plays of the authors considered."

Must be well educated, at least high-school diploma, good appearance and address. Rapid advancement for work and ability. State age, experience, and salary expected; give reference as to character. Address in own handwriting, Jobber, care of the *Nation.*

Important Publication

Robinson's Selections from the Public and Private Law of the Romans

$1.25

A COLLECTION of carefully selected texts, systematically arranged, which present some of the more instructive and interesting principles of Roman law. This book, which is the only volume of its kind published, shows the importance of some acquaintance with the source-material for the study, and encourages a closer union between philological and legal studies. The texts illustrate and explain the commonly recurring technical terms of a legal character, as they are most frequently found in the Latin authors usually read. The commentary traces the history of such fundamental institutions as *patria potestas, manus,* marriage, adoption, manumission, *familia,* etc., and endeavors to make them intelligible in their legal aspects.

Hart's Essentials in American History

By **Albert Bushnell Hart**, LL.D., Professor of History, Harvard University.

Price, $1.50

THE purpose of this volume is to present for high-school classes an adequate description of all essential things in the upbuilding of the country, and to supplement this by good illustrations and maps. Political geography is made a special topic, while the development of government, foreign relations, the diplomatic adjustment of controversies, and social and economic conditions, have been duly emphasized. Almost all the illustrations are pictures of actual objects, chosen with great care. There are many special maps illustrating boundary controversies, campaigns, etc. The aids to the teacher include carefully prepared topics for the pupils' study and collateral reading, and lists of references to selected books.

The New Macmillan Publications

Prof. Edward Channing's A History of the United States *Volume I.*

His orderly, well-balanced statements of fact stand out against a background of wide personal knowledge and deep personal insight. They are woven into a convincing, essentially readable narrative which is consistent in its point of view, and unbroken in its sequence.

To be complete in eight 8vo volumes. Vol. I. now ready. $2.50 net (postage 20c.)

Mr. Herbert Paul's A History of Modern England *Volume III.*

Mr. Paul's spirited and vivid picture of modern England "never fails to be suggestive, stimulating the reader's imagination and arousing interest the more one gets into the subject."—*Phila. Ledger.* The volume just ready covers the early phases of the Gladstonian ministry, and the climax of Liberalism in England. *Cloth, $2.50 net (postage 20c.)*

Mr. William Roscoe Thayer's A Short History of Venice

A rapid narrative of the structural growth of the Venetian Republic with detailed accounts of its crises and striking episodes. Its emphasis is upon the wonderfully efficient Venetian government, and the Venetian character in its genius at once for the Practical and the Beautiful. *Cloth, 12mo, $1.50 net (postage 13c.)*

Gen. Henry L. Abbot's Problems of the Panama Canal

Brig.-Gen. Abbott is in a position, as is no other man, to know the exact truth through seven years' close connection with the reorganization of the canal works. He makes the whole matter clear as to the climate, the health conditions, the rival routes, the engineering difficulties, and, in short, as to the construction of the best possible canal. *Cloth, 12mo, $1.50 net (postage 12c.)*

Dr. John A. Fairlie's National Administration of the United States

is the first comprehensive and systematic treatment of the administrative portion of our national government, and in view of the recent changes the work is exceptionally valuable to every one who has occasion to speak or write on matters pertaining to our federal government. *Cloth, 8vo, 274 pp. $2.50 net (postage 18c.)*

Bryan's Dictionary of Painters and Engravers *(Complete)*

A new edition of a work which has no rival for completeness and trustworthiness. Thoroughly revised, with over 1,200 new biographies and more than 4,000 alterations necessitated by modern research.

Five volumes, fully illustrated. Each $6.00 net. (Sold by subscription only.) Write for special terms

Mr. Frederic Harrison's Chatham

"Nobody has produced a sketch so adequate, so sympathetic, yet withal so discriminative, as that for which we are indebted to Mr. Frederic Harrison."—*New York Sun.* *Cloth, 12mo, $1.25 net (postage 10c.)*

Mr. William A. Bradley's Bryant

A new volume in the American extension of the well-known "English Men of Letters" Series. Uniform with Colonel Higginson's "Whittier," etc. *Cloth, 12mo, 75 cents net (postage 8c.)*

Professor Harry Thurston Peck's Prescott

In the same series as the above, uniform with Benson's "Rossetti," Chesterton's "Browning," etc. *Cloth, 75 cts. net (postage 8c.)*

NOTABLE NEW NOVELS NEARLY READY. LEAVE YOUR ORDER WITH ANY BOOKSELLER

Mr. Robert Herrick's Memoirs of an American Citizen

(with 50 illustrations)

is at once the best work he has done and the strongest in its appeal to the popular interest. *Cloth, $1.50*

Mr. Foxcroft Davis's Mrs. Darrell

is a picture of the social life of the political circles of Washington, done with the light, pleasant touch which characterized "Despotism and Democracy" by the same author. *Cloth, $1.50*

Miss Robins's A Dark Lantern

is a very modern story of exceptional interest, especially to women who will find its pictures of English society as graphic and authoritative as anything in fiction. *Cloth, $1.50*

Maj. John Heich's The House of Cards

A record which will appeal to many as a strong story of a somewhat exceptional kind. The some time major who tells it is of the age when wit is ripest, judgment mellowed, and horizon broadest. *Cloth, $1.50*

Charles Egbert Craddock's The Storm Center

is a sweet natural love story whose scenes are set in the surroundings where the author is most at home—the mountains of golden Tennessee. *Cloth, $1.50*

Jack London's The Game

A transcript from real life by the author of "The Call of the Wild," "The Sea-Wolf," etc., etc. Illustrated by HENRY HUTT. *Cloth, $1.50*

ASK YOUR BOOKSELLER OR NEWSDEALER TO SHOW YOU

THE MACMILLAN COMPANY, Publishers, 64-66 Fifth Ave, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 4, 1905.

The Week.

The *Herald* of April 25 made the startling allegation in its news columns that Mr. Herbert Bowen, the United States Minister to Venezuela, had preferred a very serious charge of personal corruption against Assistant Secretary of State Loomis. In brief, according to this account. Mr. Bowen found himself estopped from further proceedings in the matter of the asphalt case now before the Venezuelan Supreme Court because President Castro possesses a check for $10,000 paid by the New York and Bermudez Asphalt Company to Mr. Loomis while he was representing the United States. It was further alleged that this is only a part of the money given to him by that company, and that details of the scandal have been sent to all the chancelleries of Europe by the foreign diplomats at Venezuela. Still further allegations were to the effect that Mr. Loomis bought up a claim against the Venezuelan Government for a small sum and then used his official position to collect it; also, that Mr. Loomis contracted to bring about a settlement of a Venezuelan debt of ten millions, in return for which he was to receive about $1,400,000. Mr. Loomis's categorical denial of these charges clearly placed upon the diplomat the duty of proving his case or retiring from the service. He has accordingly been recalled for that purpose by Secretary Taft, and it seems unlikely in any event that he will return to his post.

The strike of the Chicago teamsters presents the usual incongruity between the smooth official deliverances and the lawless, non-official acts of a desperate body of would-be job-monopolizers. The Chicago Federation of Labor, by formal resolve, has requested President, Governor, and Mayor to "investigate existing conditions in Chicago" before complying with any request made for military protection. If the striking teamsters can win by peaceably withholding their service, there is nothing standing in the way of their success. A regiment under arms on every thoroughfare could not prevent the teamsters from winning, provided there is not an adequate supply of teamsters to be had outside the unions. The real reason for their expressed desire for official investigation before an order is given for military protection is, clearly, the fear of the unionists that without violence they must lose their fight. The shooting of the Grady brothers on Sunday on the suspicion that they were connected with an obnoxious firm of employers, and the killing of Peter Klausen, who was guilty of the crime of driving his own wagon, point significantly to the real cause for the union protest against military protection. The pathetic report of Mayor Dunne's "peace committee" would seem to imply that the employers are more obdurate than the teamsters in refusing to assent to arbitration. The unions are quite willing, according to the peace committee, to submit the controversy "to persons commanding the respect and confidence of the community." If the unionists, after killing several such persons, are willing to submit the controversy to others of the same class, the magnanimity of the unions certainly deserves the highest laudation.

The new arbitration agreement adopted in the building trades of this city appears to be a victory for the unions. The plan which it supersedes ignored practically all their rights. It was arbitration only in name. The unions were not consulted when it was framed, and had little to do with its enforcement. Nominally, it provided for the arbitration of all labor disputes, but the machinery was carefully kept in the employers' hands. Thus, the old arbitration board had a permanent secretary, but his salary was paid by the employers, and his office was at the headquarters of the Employers' Association. It is not strange that such "arbitration," instead of permanently settling labor disputes, should have constantly fomented them. The new plan is the result of the joint deliberation of unions and employers. Provision is made for a general arbitration board, whose office shall be on neutral territory, the expense to be shared equally by masters and men. The fight now ended was largely between the employers and the walking delegates. The old arbitration treaty, it was said, would end the rule of the Parkses and the Weinseimers. Hence, it was specifically provided that "business agents" should not serve on the arbitration boards. In the new plan, however, that clause is omitted. A new section declares that "business agents of the unions, parties to this plan, shall be permitted to enter all shops, buildings, or structures" under the jurisdiction of the association.

This is not the only ominous feature. The real issue involved in the recent struggle was whether building in New York was to be monopolized by certain employers on one hand and certain unions on the other, or whether the old system of unfettered competition was to prevail. It was a question not only of the closed shop, but of the closed industry and the closed city. In specific terms, the old arbitration treaty provided that employers should hire only of those unions which were parties to it, and that all agreements existing between the men and contractors should continue inviolate. These latter agreements, it was no secret, assured monopolies on both sides—the bosses promising to employ only certain men; the men, in turn, to work only for certain employers. The matter is put not quite so bluntly in the new plan. The employers, however, promise to employ only union men, and numerous other stipulations make it clear that only those unions which are parties to the agreement are intended. New unions, too, are to be admitted only by the consent of the general arbitration board, or as the result of a special arbitration proceeding. Labor conditions in the building trades are reported improved, but not much encouragement is to be drawn from this new plan, which means the return of the walking delegate.

Mr. Carnegie's great fund for pensioning professors is characteristic of the donor in that it makes for efficiency. No one with the slightest acquaintance with college life can have failed to note the number of professors, worn out in the service and long past their highest usefulness, who continue on sufferance simply because, without their salary, their provision for old age is inadequate. The handling of such cases is one of the most difficult points of college management, for kindness to the superannuated professor frequently means lowering the whole tone of instruction. Mr. Carnegie's fund, which he placed in the hands of a large committee of college presidents, aided by a handful of financiers, changes the situation completely. The annual income of $500,000 will provide annuities, or supplement existing ones, for about three hundred beneficiaries. And since State and sectarian colleges are expressly excluded from the deed of gift, this will provide an average of, say, two retiring pensions for each eligible college. But by no means every professor should be retired at sixty-five, the age contemplated by the donor; nor does every superannuated professor need a stipend. Accordingly, the provision is much more adequate to the need than the statistics might seem to indicate. Furthermore, figures have rather little to do with the case; the presence of a single inefficient professor may mean that an entire department is demoralized, and that a quarter of the instruction afforded to successive classes is worthless. The terms of Mr. Carnegie's

letter show that, while he had efficiency chiefly in mind, he was by no means oblivious to the pathos of lives broken in the drudgery of the classroom, and maintained in relative penury by salaries no longer earned.

In giving his reasons for vetoing the bill depriving the Board of Aldermen of the right to pass upon franchises, Mayor McClellan has made very skilful use of the arguments at his command. His hot attack upon the Pennsylvania Railroad is not without foundation. It is, indeed, regrettable that such radical legislation should have emanated from the office of the Pennsylvania's counsel. Moreover, we have another case of hasty resort to some new governmental device just as soon as one portion of our legislative machinery fails to work smoothly. The Mayor is quite correct in saying that the evil influences which have been brought to bear upon the Aldermen will now be focussed upon the Board of Estimate. His contention that a large body is safer than a small one in such matters is not, however, sound. Public opinion can be concentrated more directly upon a mayor, a comptroller, or a borough president than upon the alderman of an outlying district. Mr. McClellan stands on firmer ground when he argues that the better way to correct misconduct on the part of officeholders is by improving their character rather than by stripping them of power. The achievements of the Municipal Voters' League of Chicago are in point here. It is to be noted, however, that there is no evidence that the Pennsylvania has attained its ends by the use of money, while there was a genuine public demand for the change outside of the railroad's offices.

Mr. Bonaparte's references, at the dinner of the National Municipal League on Friday night, to the childlike faith with which we Americans turn with eternal hopefulness to one cure-all after another to heal our municipal sores, ring singularly in unison with the Mayor's protest. Dr. Adler was ready to face the awful charge of being pessimistic, and spoke the truth when he pointed out afresh that our greatest need is an enlightened public spirit, and that there are precious few signs of it. Supposing that the bulk of the business men in this city had desired the passage of the connecting-railroad franchise sufficiently to give a little time to it, does any one believe that it would have been proposed to deprive the aldermen of their franchise powers? The very slight interest taken by most of the press and the public of this city in the meetings of the Municipal League also speaks volumes. The sessions should have been largely attended. Every one familiar with American conditions knows that upon our solving our municipal problems correctly depends the stability of our national institutions. Not only should the League have had a warmer welcome, but its membership should have been largely increased. It is doing an admirable and much-needed work, and it ought to have all the money and members it needs.

In reporting unanimously for the removal of Justice Warren B. Hooker, the Assembly Judiciary Committee has followed the only course really open to it. No one can longer doubt that he has been guilty of conspiring to defraud the Federal Government and of other irregularities which prove him unfit for the bench. The evidence has been carefully reviewed by the grievance committee of the State Bar Association and by the Assembly committee, and each of these bodies has found against him. Two members of the Assembly committee hesitated, not because they regard Hooker as innocent, but because they are not sure that Section 6 of Article xi. of the Constitution applies to this case. Justice Hooker can gain nothing by contesting the decision against him. Through political influence he might be able to muster a few legislators to his support, but their votes could not save him. By quibbling he might secure a respite, but in the long run the courts are bound to hold that the Legislature has power to remove a justice who—whatever may be said in defence of his rulings—is personally corrupt.

By the appointment of Mr. C. F. McKim and Mr. Thomas Hastings as professors, the School of Architecture of Columbia University assumes a more distinctly professional character. These eminent architects will conduct ateliers in which the students will work on problems simulating those that confront the architect in practice. Evidently, this sort of training is to an architect what clinical experience is to a physician, and it has been a weakness of the Columbia course hitherto that, though excellently equipped in the history and theory of architecture, it has not had adequate facilities for exercises of a practical sort. The innovation, then, is by no means a renunciation of the former policy of the school; it is merely an improvement along lines of demonstrated usefulness. This reform is of more than architectural interest, because the two ateliers may be the forerunners of a new school of art. If the alliance now under discussion is effected, the schools of painting, sculpture, and engraving now conducted by the National Academy of Design will come under the jurisdiction of Columbia, and the classes will run parallel with those in architecture. We have already pointed out that the training of professional artists alongside of candidates for the traditional academic degrees is an anomaly in education. The plan, however, must be judged on its merits and by its fruits. We desire only to add that the success of an architectural school as a university department by no means promises that of schools of painting or sculpture.

"I have little faith in restrictive legislation of any kind, but very great faith in the removal of the cause," said ex-Gov. Garvin of Rhode Island a few days ago to a Springfield audience in a speech on "Corruption in American Politics, with Remedy." He cited, as an illustration of the loopholes to be found in any restrictive law, the "Tasmanian dodge" to cheat the Australian ballot: A specimen or imitation ballot is secured and given to a voter, marked as desired. The voter casts his marked ballot and returns to deliver over to the party worker the unmarked ballot given him by the election officers. The party heeler marks this and sends a second voter in. Thus a chain of voters is started, each of whom is bound to "deliver the goods." Dr. Garvin proposes to remove the temptation to buy votes by the establishment of larger election districts. "In a word," he said, "there should be a general ticket for the whole city [in the case of a municipal election], and each elector should be allowed to vote for but one person, making his choice from the entire list of candidates." He believes that popular candidates would then be sure of election without resorting to bribery.

One Southern editor has, as he himself confesses, obtained some idea "of the narrowness which goes with ignorant [color] prejudice, and which makes the discussion and the solution of the race problem so difficult in the Southern States." He is Desha Breckinridge of the Lexington (Ky.) *Herald*, son of the late Col. W. C. P. Breckinridge. Writing as an unbiassed editor should, Mr. Breckinridge commended the selection of Dr. Hunter, a high-minded and able colored physician, as a delegate from Lexington to the tuberculosis convention in Atlanta, and also urged his appointment as a member of the local Board of Health. Mr. Breckinridge promptly heard from the "please-stop-my-subscription" reader with whom all editors are acquainted. This one told Mr. Breckinridge that he was surprised and astonished at any Kentuckian holding such views or *daring* to express them. To this the editor replied in an editorial breathing the characteristic fire and vigor of his family, and declaring that, as long as he had any subscribers, he would express what he felt on this or any other question, and those who did not like it might cancel their

subscriptions as speedily as possible. More than that, Mr. Breckinridge flatly averred that "there is no nigher duty the white man owes his own race than the duty of doing all within his power to aid the negro race." Finally, the editor treasonably declared that Dr. Hunter is a more valuable member of the community than the white man who protested.

In the ordinary way of business, the Insular Bureau announces to American sculptors the opportunity to compete for a monument to José Rizal. His fellow-countrymen have raised a great subscription in order that the figure of their typical patriot may always be seen in Manila, and, with a spirit worthy of him whom they would commemorate, they seek simply the best artist for the work. Art, unfortunately, knows little of national metes and bounds, or there would be a certain incongruity in a compatriot of Otis and Lawton perpetuating the memory of the poet-reformer. José Rizal, by his education, represented the fine flower of European culture. Moreover, nothing could have more effectually saddened the dreams he entertained of a gradual progress for his countrymen than the spectacle of rulers come from the land of liberty who exceed even the proscription of the Spanish régime. Thus the visible presence of Rizal in Manila will be at once a condemnation of those who seized the islands out of greed, and a rebuke to those who so despair of his people as to seek to keep them in indefinite tutelage. An American sculptor with a sense of irony and pathos could ask no more complex and yet alluring subject than a statue of Rizal to dominate Luzon as she has been Americanized.

For five years we have had the tariff treatment of a most favored nation at Germany's hand—a privilege that is to terminate upon notification less than a year from now. Then the revised customs schedules, which are in the main higher than before, will be applied in their full severity to our exports. On the part of Germany this marks the withdrawal of a one-sided concession made in the hope of a comprehensive reciprocity treaty. Naturally, Germany is mindful of the fate of the other reciprocity conventions, which still sleep in the Senate pigeonholes. And now, as she goes upon a higher tariff basis, and makes reciprocity treaties with all the Central European Powers, she declines to hold out longer to us a hand we have shown no disposition to take. That the effect upon our export trade to Germany must be disastrous, will be evident upon an examination of the new maximum duties. The duty on wheat, for example, has been raised by 57 per cent. Of wheat we sent over in the year ending June, 1904, 7,490,648 bushels, of a value a little less than six million dollars. The possibilities of this trade are shown by the figures of 1902—19,725,674 bushels, valued at nearly fifteen million dollars. What will become of this trade when the wheat fields of Russia and Austria-Hungary receive a tariff preference may readily be imagined. The American hog has always been a sufferer in Germany; under the new schedules the persecution of that noble beast is intensified threefold. In 1904 our exportation of hog products, in spite of vexatious discrimination on alleged sanitary grounds, considerably exceeded $18,000,000. In 1906 we shall have to face a duty raised from an average of 5 to a minimum of 12.50 marks on every imported porker, with corresponding increases on butcher and kettle products. We have indicated merely two points at which our trade is menaced. Unquestionably there will be bitter complaint when the pinch is actually felt, and recriminations against any insolent foreign application of our own tariff medicine to our own case. The more reasonable attitude will be to recall that the agrarian lobby is doing in Germany precisely what the manufacturing lobby is doing here; and, finally, that the damage is not beyond repair, for Chancellor Bülow professes entire willingness to negotiate a new convention. In any case, reproach of a Reichstag revising the tariff up would lie very ill in the mouths of Senatorial standpatters.

Frankness and even a studied insolence, as Lord Robert Cecil maintained long before he became a foreign minister himself, have their place as auxiliaries of diplomacy, but it is a question if these qualities have ever been so lavishly used in a minor controversy as now, by Germany, in the case of Morocco. Certainly, the interview imputed to Count von Tattenbach-Askold, chief of the special mission to Fez, is hardly exampled for offensive plain speaking. He complains of an international conspiracy against German trade, protests in especial against the British tariff preference in South Africa—a slap direct at Downing Street; asserts that there is "an attempt to introduce the same policy [of discrimination] in Morocco"—a charge of bad faith against both France and England; finally, proclaims the integrity of the Sultanate, and invites his Shereefan Majesty to call an international conference—a deliberate attempt to set aside the Anglo-French agreement. This inflammatory utterance may be only an individual indiscretion. If so, Count von Tattenbach-Askold should be recalled. If he is not, it will be an indication that the Kaiser means mischief in Morocco, and that the clamor for the open door is only a pretext for malign political activities.

Conflicts between the Turkish garrisons of Western Arabia and the desert tribes are of constant recurrence, and the present disorders are exceptional only in their degree and because they fall in a time when the international balance in Asia is wavering. The Sultan's tenure of the coast strip is of the flimsiest, as is shown by the capture, after something like a regular siege, of the capital of the province of Yemen. In fact, the Sultan retains possession of the littoral chiefly because England is unwilling, until forced, to handle so turbulent a population. There are also strong sentimental reasons for leaving Mecca nominally in the hands of the greatest Muslim potentate. So far there is no news indicating that England will depart from her policy of abstention. Secure in the possession of Aden, at the mouth of the Red Sea, she has just experienced in Somaliland the expense of bringing wild tribes to terms. As before, the Sultan will probably be left to handle his rebels in his own way. Only a serious assertion of foreign pretensions would stir Downing Street, and this, in spite of the Moroccan manœuvres of the Kaiser and the visit of the Shah to St. Petersburg, is as yet only a remote possibility.

The Constitution now offered to the Transvaal, three years after the signing of the treaty of peace at Vereeniging, falls far short of the expectations of that treaty. It is the political legacy of Lord Milner, and proves that his administration can have little furthered the work of conciliation. Suspicion appears in every stipulation of the new Constitution. The Transvaal is not to control its own finances. In this matter the Governor enjoys exclusively the initiative. Nor will this nominally self-governing colony even fix the conditions of the franchise. Former burghers have the right to vote, and white male persons of British birth possessing $500 or paying $50 rent; but no legislation granting privileges or imposing disabilities upon the blacks is valid without the consent of the Home Government. The Volksraad itself is small, consisting of some thirty elected members, besides some nine official members, who should easily dominate its proceedings. Such is the self-government which England deems it safe to extend to Oom Paul's people. In fairness it should be said that the Colonial Office regards this concession merely as a beginning. Mr. Alfred Lyttelton promises a greater measure of liberty when the wounds of war shall have been more fully healed. This statement should be regarded as the answer to Gen. Cronje's charge of perfidy. In fact, the pledge of self-government made in the treaty of peace was cautiously guarded as to times and seasons, in mindfulness of the dear cost of the colony.

OUR FISCAL DILEMMA.

As the fiscal year approaches its close, the Republican leaders are manifesting no little anxiety about the growing deficit. Secretary Shaw's official estimate of it was $18,000,000, but it is already $30,000,000, and there are still two months and more before the final figures can be known with certainty. Even if the estimate of the Actuary of the Treasury should prove correct, and judicious timing of disbursements should somewhat curtail the magnitude of the deficit, "the little gap between the pants and the vest" is not officially expected to be below the $23,000,000 mark. It is all very well for Mr. Shaw to make a brave face at the wry figures, and to speak of it "as of small moment" to "a great and prosperous Government"; but the truth is, there is no way for a party whose stock in trade is its alleged capacity for successful finance, to maintain its prestige with the people unless it can make both ends meet. And the problem of making the blanket of revenue cover the bed of expenditure is causing some strenuous tugging at the fiscal bed-clothes.

The causes of the deficit are too well known to need more than passing mention. First of all is the swollen expenditure necessitated primarily by the militant policy of the Administration. Gunpowder, guns, and battleships cost money, and in the end the cost of glory, as Sydney Smith reminded his countrymen, is taxes. Besides the exorbitant outlay caused by our strenuous foreign policy, the Dingley tariff wall is so high as to cut down seriously the influx of imported goods. The total tariff revenue is a product of two factors, the volume of dutiable imports multiplied into the average rate of duty. The fact that the Dingley tariff makes the last factor high, operates also to make the first factor far smaller than it would otherwise be. The result is a smaller product in terms of revenue than might result from a lower rate of duty. Swift's dictum that in the arithmetic of the customs two and two do not always make four, but sometimes only one, is admirably exemplified in our case.

In the abstract the remedy for the situation is simplicity itself, but in the concrete circumstances a teasing puzzle. Curtailment of expenditure would be the dictate of a prudent individual who discovered he was spending more than his income. But it has long been Republican doctrine that what would be prudent in the case of a frugal private household becomes folly when applied to the affairs of "a great and prosperous nation." The Republican leaders on all hands are at least agreed on this, that the remedy for the situation is to be found not in curtailed expenses, but in increased taxation. But here the limit of agreement is reached, and the financial wiseacres split into two factions, one demanding an overhauling of the Dingley tariff, the other the opening up of new sources of revenue in the shape of import duties on tea and coffee, or additional taxes on beer and spirits.

This alternative offers grave difficulties to the Administration from a tactical partisan standpoint. The "stand-patters," with Mr. Shaw at their head, supported by such financial lights as Speaker Cannon, Mr. Payne, and Mr. Grosvenor, stand aghast at laying impious hands on the sacred Dingley schedules. "The disturbance of business conditions" has been so long a choice arrow in the quiver of the protectionist archers that they regard it as little less than suicidal to make a present of this poisoned shaft to their political adversaries. The longer heads on the Senate Committee on Finance, such as Allison, Aldrich, Burrows, and Spooner, know that the outcry against "tampering with the tariff" is one of those common arguments convenient on the hustings, but not binding on practical financiers. As against the "stand-patters," the "friendly revisers" have this advantage, that they could trim out some of the obsolete schedules that are absolutely prohibitive, and then pose as champions of the consumer. The Aldrich crowd is also shrewd enough to perceive how widespread and deep-seated is the public irritation at schedules which allow Trusts, while extorting monopoly prices at home, to dump their surplus output on foreign markets at lower prices.

The revisionists may also point out that the plan of Mr. Shaw to impose duties on tea and coffee would sin against another cardinal catchword of the traditional Republican policy—namely, "the free breakfast-table." This hypocritical plea has more than once availed to keep protective abuses intact when a surplus threatened the Treasury. If the laborer is not only to taste the tariff in his sugar as at present, but to catch its flavor in his tea and coffee, what becomes of the protestation that the Republican ægis is over the board of the workingman? If beer is selected to bear the additional tax burden, the campaign check of the brewer is jeopardized, and the cohorts of Gambrinus are challenged.

It is really very hard that a Government cannot devise some scheme analogous to Thackeray's plan for the individual on "How to live on nothing a year." The Republican plight is indeed piteous. Whither shall they go from perplexity? or whither shall they flee from factional difference? If they ascend up into the heaven of the Dingley schedules, plagues are there; if they make their bed in the hell of taxes on consumption, behold they are there. If they take the wings of the morning coffee-cup and dwell on the tax-yielding powers of tea, even there shall discord lead them and a tight hand shall hold them. Fortunate it is for the Republicans that they are confronted with their fiscal worries in a time of general industrial activity. Let a reaction in trade set in and the deficit which now disturbs their dreams will haunt their waking hours. Such a calamity, it is to be hoped, we may avoid for years to come. But Fate has more than once proved a jester, and what a sorry ending it would be to the present Administration to go out amid execrating cries of "the Roosevelt deficit," or, worse yet, "Roosevelt soup-houses."

A CHECK TO UNION TYRANNY.

The recent decision of the Supreme Court in the case of Lochner versus New York is of far-reaching importance. Lochner had originally been convicted in the Oneida County Court of a misdemeanor in employing in his bake-shop an employee for more than sixty hours in one week. By section 110 of the so-called Labor law of this State it is forbidden to either employer or employee in the bakery business to contract for more than sixty hours' labor per individual per week. Lochner's conviction on appeal was reaffirmed, first by the Appellate Division of the Supreme Court, Fourth Division, and again by the Court of Appeals. The case was finally brought before the Supreme Court of the United States, which reversed the previous decisions on the ground that the aforesaid section, No. 110, is unconstitutional as denying the right of contract, and so violating the liberty of the individual guaranteed by the Fourteenth Amendment. The final adjudication of the case checks the insidious advance of union tyranny hitherto made under the cloak of the police powers of the State. The decision is also a tonic revindication of the doctrine of individual liberty.

To appreciate the scope and bearings of the decision several important circumstances must be borne in mind. The set of the current of speculation and legislation has for many years been against the doctrine of individual liberty in industry. The Janus-faced attitude of thinkers a decade or two ago was indicated by the Duke of Argyll's dictum that the two great discoveries in government during the nineteenth century were the harmfulness of restrictions on trade and the necessity of restrictions upon labor. This cautious discrimination among doctrinaires soon yielded to the jauntier aphorism—"When in doubt, kick Cobden." Consequently the factory laws were read as a burial service over the doctrine of *laisser faire;* and, except for Herbert Spencer and a few other old fogies, the imprescriptible rights of the individual were lost sight of in the solicitous anxiety manifested for the health of "social tissue."

This situation created an opportunity of which labor unions quickly availed themselves. The State had already intervened on behalf of women and children, and had rightly limited the conditions under which they might labor. Partly on the ground that adult male workers were also the wards of the State, and partly on the ground of preserving the public health and morals, a vast number of similar statutes was enacted. Overcrowding, defective ventilation, insufficient sunlight, inadequate fire escapes, and poorly screened machinery typified the most plausible and least injurious forms of this legislation. The eight-hour day for public employees and for miners and other workers in extra-hazardous industries served as a wedge by which the unions sought to lay down the conditions under which all toil might be performed. To the same class of questionable laws belonged those which prescribed certificates of competence for an ever-growing class of workers. Even janitors of apartment houses, barbers, and blacksmiths have been included in this category. The police power of the State had been stretched in many of these instances to warrant restrictions upon the adult male individual's right to sell his labor when, where, and as he would.

The bakery case practically forced a sharp alternative on the Supreme Court. It had either to lie down and allow these barely disguised attempts at union tyranny to walk over it roughshod, or to bring up the unions and their subservient legislatures with a short turn. The majority of the court chose the latter course. After dissipating the hazy and attenuated contention that the object of the law was the preservation of the public health, Mr. Justice Peckham says bluntly: "Statutes of the nature of that under review, limiting the hours in which grown and intelligent men may labor to earn their living, are mere meddlesome interferences with the rights of the individual. . . ." This sounds for all the world like Adam Smith in 'The Wealth of Nations,' where he says: "The patrimony of a poor man lies in the strength and dexterity of his hands, and to hinder him from employing this strength and dexterity in what manner he thinks proper, without injury to his neighbor, is a plain violation of this most sacred property. It is a manifest encroachment upon the just liberty both of the workman and of those who might be disposed to employ him."

The dissenting opinion by Mr. Justice Harlan is founded upon the assumption that "this statute was enacted in order to protect the physical well-being of those who work in bakery and confectionery establishments." How unsubstantial this assumption is can best be shown from the majority opinion, which cites the other sections of the law providing for the most careful construction, drainage, ventilation, plumbing, and inspection of bakeries. A gleam of humor is imparted by the very minuteness of these provisions, which decree *inter alia* that "no domestic animals, *except cats*, shall be allowed to remain in a room used as a biscuit, bread, pie, or cake bakery." "There can be no fair doubt," says Mr. Justice Peckham, "that the trade of a baker, in and of itself, is not an unhealthy one to that degree which would authorize the Legislature to interfere with the right to labor, and with the right of free contract on the part of the individual, either as employer or employee."

The main effect of the decision, as has been pointed out, will be to stop the subterfuge by which, under the pretext of conserving the public health, the unionists have sought to delimit the competition of non-unionists, and so to establish a quasi-monopoly of many important kinds of labor. But the decision suggests one or two curious queries to the lay mind. Should we have been at the absolute mercy of the unions if the Fourteenth Amendment had never been adopted? Another puzzle connects itself with the closeness of the decision—5 to 4: how is the attitude of the individual judges to be explained? On the old theory of the Roman jurists that the law is the embodiment of the Universal Reason, such an inquiry would smack of the profane. But along the lines of the more mundane theory of Mr. Pickwick's counsel that "a good, contented, well-breakfasted juryman is a capital thing to get hold of," an explanation may be ventured. Mr. White, the only Democrat in the minority, was perhaps influenced by the States Rights contention that it falls properly within the competence of the State, and not the Federal, Government to determine the conditions of employment. The rest of the dissenting justices were doubtless swayed by their general inclination towards paternalism.

THE NAVY AS A BUSINESS ORGANIZATION.

Rear-Admiral Stephen B. Luce has contributed to the *Proceedings of the Naval Institute* a criticism of "The Department of the Navy" which should be read by all those who are convinced that State or municipal ownership of railroads and other industries is the cure-all for our latter-day political evils. The Navy Department is to a large degree in business. It is not only manufacturing warships of all sizes, but is doing a very large repairing business at its dozen or more shipyards. It employs thousands upon thousands of skilled laborers, giving them a short working day and the best possible treatment. Moreover, its officers are noted for their integrity and high character. "Grafting" is generally believed to be confined within the smallest possible limits, and as a commercial organization the Department is free from the unpleasant features accompanying industrial competition. In repairs alone it can count on an enormous business annually, and one that grows automatically as our fleet increases. It is estimated at eight millions of dollars for the fiscal year 1905-6.

Obviously, the history of the Navy Department affords an unexcelled opportunity to see just how the Government conducts a strictly business enterprise. What is the record? Rear-Admiral Luce, who has been in the service since 1841, has no difficulty in showing from official reports that the entire business organization of the navy has been and is wholly unbusinesslike, wasteful, and extravagant. Not only is the responsibility divided among eight bureau chiefs, but those officers work in the main independently of each other, with the result that no one person, least of all the Secretary, can be held responsible for the efficient dispatch of business. The Secretary himself, generally a lawyer, is usually helpless in the hands of the bureau chiefs, whose discussions, when it comes to planning new ships, seem often endless. Some Secretaries have struggled to bring about a better state of affairs; others have given it up as useless. Secretary Whitney was one of the former. He was scandalized by the conditions he discovered on assuming office in 1885. He declared that over seventy-five millions of dollars had been expended "on the construction, repair, equipment, and ordnance of vessels, which sum, with a very slight exception, has been substantially thrown away." To illustrate the "follies of the Department," Mr. Whitney showed how the *Omaha*, an obsolete wooden vessel, had been rebuilt at a cost that would have paid for a fine steel cruiser. The whole record he declared to be "one of mismanagement, of wasteful expenditure, of injudicious and ill-advised disposition of public moneys."

Despite Mr. Whitney's just indignation, only one reform was accomplished beyond the purification of the navy yards and the ending of much wasteful expenditure. The Department's business methods were improved by placing the purchases of the several departments in the hands of the Paymaster-General. Up to that time each bureau chief himself bought what was needed—a policy that would have wrecked any private corporation in short order. But the bureau system remained to vex Secretary Tracy, who reported in 1889 that "the details of administering the navy, as an existing force, its vessels in commission, its officers, and its crews, were scattered, without system or coherence, among a variety of officers, bureaus, and boards." He found cases where ships had received simultaneous orders from three different bureaus which were so directly contra-

dictory as to be impossible of execution. Naturally, there was "delay, confusion, changes of plan, and additional expense," precisely as is the case to-day. Mr. Tracy instituted a board of construction, but even with this improvement it happened that the hulls of the monitors *Puritan* and *Terror* were rebuilt by one bureau while their antiquated and worn-out engines were allowed to remain by another, with the result that two otherwise splendid vessels were practically useless in the Spanish war.

Fourteen years later, in 1903, another Secretary, W. H. Moody, repeated the criticisms of twenty-five years ago, and expressed his dissatisfaction at finding eight bureaus working independently and unrelated to one another. For these evils, Rear-Admiral Luce has his own remedy, with which we shall not concern ourselves here. We would merely bring out that, after twenty years of agitation, the Navy Department is still organized in such a way as to make efficient and economical conduct of its business affairs impossible. By concentrating all its efforts it has, it is true, succeeded in constructing the battleship *Connecticut* at the Brooklyn navy yard about as fast as the *Louisiana*, which is being built at Newport News by a private company. But when the Department called in expert electrical engineers—from civil life—to advise it about the consolidation of the power plants at its navy yards, it was found that the establishment of one central station would save the Government $30,000 a year at the New York yard alone. It is needless to say that if that shipyard had been privately owned the consolidation would have been made years ago.

Exactly the same condition of affairs exists in the army. Not even Mr. Root could bring about a consolidation of the four separate bureaus which pay the troops, supply their food, their cooking utensils, and their clothing. Yet to this malorganization of the War Department more than to anything else was due the sad waste of life, the disgraceful confusion and disorder of our brief war in 1898. The same vicious system remains to-day, improved only by the creation of a General Staff. Government works everywhere are wasteful and extravagant, even where there is no corruption. A contractor of wide experience remarked the other day that he would undertake the construction of the Panama Canal at what it would cost the Government to do the work, and make a handsome profit. If the United States Government cannot conduct its business affairs any better than this, what prospect is there that such municipal governments as those of Chicago and New York could do as well in the lighting or transportation fields?

THE THEATRE TRUST ON VIEW.

Comparatively few persons, probably, outside "the profession," have taken the trouble to wade through the testimony in the undignified theatrical lawsuit which was concluded last week before Justice Fitzgerald in the Supreme Court after a considerable number of sittings. To the ordinary layman a good deal of it must have seemed nearly unintelligible and wholly uninteresting, unless he happened to be a partisan of either of the disputants. And yet the matter was one in which everybody having any interest in the theatre, and indirectly the public at large, is deeply concerned.

Not, indeed, in the rights and wrongs of the particular case under consideration. The questions whether or not a partnership existed between two rival managers, whether one or the other got more or less than his own proper share of the profits, or whether there has or has not been double dealing, may be left to the law for a decision which will affect only the contestants. But when the very existence of the theatre, as a reputable and artistic institution, is seen to be threatened by a system which deprives it of growth while exhausting its energies, there is sound reason for public anxiety. The revelations made in the court proceedings touching the nature and operations of the various syndicates in the Theatrical Trust contained nothing that was new to the initiated. All along it had been known that the primary object of the organization was the establishment of a high protective monopoly, the concentration of the management of the theatrical show business of the country in the hands of a small speculative group, and the abolition of anything like successful competition. But few, except those immediately affected, realized how completely that object had been attained, until it became the subject of legal investigation.

Without pretending to divine the exact truth in a mass of confusing, muddled, and contradictory evidence, it is possible to grasp certain salient facts. First, practically all the best theatres in all cities and towns of considerable size in this country—the few exceptions are not enough to modify the general situation—are controlled by a close corporation. No independent manager can occupy one of them without submitting to terms which must strip him, even in the most favorable conditions, of nearly all his profits. If he will not concede them, he must either take his attraction to an inferior house or build a new one. In the next place, the Trust, having capital and credit, is able to secure the American rights of all the most promising works by the leading foreign dramatists, and thus minimize the risk of production. These are almost sufficient to supply the theatres in their vast circuit and are moved on in rotation from city to city until their drawing powers are exhausted. When there are not enough foreign plays to go round, the deficiency is supplied by a few domestic playwrights who have been fortunate enough to enjoy the confidence of the syndicate since its inception. For outsiders there is very little chance, simply because there is no market for them.

Thus it appears that the Trust dominates the theatres, selects the pieces that go into them, owns the men who write them, and, as a matter of course, the actors who perform in them. It is in the position of an absolute dictatorship or tyranny. Now a dictatorship of any kind, to be beneficial, must be able, wise, and benevolent. Which of these qualifications has been manifested by the administration of the Trust? What has it done for the art which it has taken under its tutelage? By its policy of enforced long runs, it has almost stopped the production of capable actors. By its artificial creation of stage reputations, it has grossly debased all former standards of acting. By its prolonged neglect of the imaginative and literary drama it has made the proper performance of it almost impossible. There is not to-day a single first-class actor of tragedy or of the older comedy in the country. Such sound, all-round players as remain to us are survivors of a preceding generation. The vast majority of our younger and even of our middle-aged performers can neither move nor speak except after the manner of their personal and daily habits, simply because they have had no incentive to learn even the rudiments of histrionics. Elocution is almost a lost art, actual impersonation is scarcely dreamed of. The very meaning of the word "interpretation" seems to be unknown.

Undoubtedly the dictatorship has exhibited one kind of ability—the capacity to organize and execute a scheme for killing opposition, reducing expenses, and monopolizing the profits. Credible report says that the prominent members of it are rich. That, fortunately, is no proof of the permanent success of their system. Their intellectual and moral calibre has been exposed mercilessly in this court squabble. It is plain that their one motive has been that of immediate gain by the crudest and most short-sighted methods. They have had no thought of the interests either of theatrical art or of the theatrical profession; or of anything save the accumulation of money. But to achieve this end they are surely but slowly killing the goose that lays the golden eggs, by alienating the public on which they depend. Sooner or later there will be a crash, and a new and wholesome theatre will arise slowly from the ruins.

If there were no other question involved than that of a commercial failure, the end might be awaited with pa-

tience. But, unhappily, the condition of the theatre—an institution which can never be wholly suppressed—is a matter of the gravest public importance. Whatever may be its powers for good—and its devout supporters believe that it ought to be and might be, as the embodiment of all the arts, one of the most potent educational influences in a well-organized state—there can be no question concerning its infinite potentialities for mischief. It is monstrous that in a country in the forefront of civilization it should be merely a speculative device for money-making, a commercial pander to the lower instincts of humanity. From year to year it is becoming more inane in its trivialities, more audacious in its indecencies, until a latter-day comedy is as unclean in spirit as some of the Restoration pieces. No other result could be expected from the directorate of a body of men anxious only to please the majority, uninfluenced by artistic sense or aspirations, and quite unconscious of public responsibility.

MONEY FOR SMALL COLLEGES.

The small colleges are just now attracting much attention from professional philanthropists—a term which Andrew Carnegie would bitterly resent. Following Mr. Carnegie's announcement that the slackening demand for libraries has forced him to the small college as an outlet for his accumulating millions, D. K. Pearsons of Chicago has just announced gifts aggregating $135,000 to five small Southern colleges. He had previously said that he would "pick out the very poorest and most worthy." Mr. Pearsons, of course, did not intend to convey the impression that poorness is a proof of worth. He has studied college administration too long and too carefully to fall a victim to that fallacy. Both he and Mr. Carnegie must be keenly aware of the fact that the cause of education would be greatly advanced if some of the smallest and poorest colleges, instead of being helped to prolong a miserable existence, were kindly chloroformed. There are parts of this country where two or three struggling colleges, occupying much the same local field, might well be merged into a single institution—still small enough to satisfy the most exacting taste.

The arguments in favor of the small college may almost be taken for granted. Not every boy is fitted by temperament or training to profit by the advantages of Harvard or Yale. For certain types of character the supervision exercised by the faculty and the more intimate community life of the small college are very wholesome. Another consideration, as Mr. Carnegie notes, is that at the big colleges sport is too generally supplanting study as the subject of chief interest. On the other hand, the small colleges, as James Bryce has said, "set learning in a visible form, plain, indeed, and humble, but dignified even in her humility." To these advantages add simplicity of living and a thoroughly democratic spirit—commoner in the West than in the East—and you often have the ideal conditions for training a sturdy American.

But the problem of maintaining a college is not what it was fifty years ago, or even sixteen years ago, when Mr. Bryce wrote the words just quoted. The days when a few inspiring teachers and an outfit of textbooks would do the work have passed forever. Extensive libraries and laboratories must be heavily endowed in order to keep pace with the rapid progress of modern science. Thus it has come about that "universities" which were once the pride of booming Western towns are now ridiculous in everything except their aspirations. Not every thriving railway junction has developed into a Chicago that is willing and able—with subsidies from the oil, wheat, beef, and iron trades—to support a substantial seat of learning. Scores, perhaps hundreds, of colleges are now worrying along, hand to mouth, nothing but a monument to the misdirected ambitions of real-estate speculators or to the wasteful rivalry of sects.

Depressing statistics as to the conditions in the South were prepared in 1901 by Prof. E. H. Babbitt, then of Sewanee, but now of Rutgers. He worked through the catalogues of forty-four of the strongest and most enterprising colleges for white students in all of the States that belonged to the Confederacy except Virginia. He found that a few colleges had an endowment of between two and three hundred thousand dollars, a few others had half that, and many had none worth mentioning; that the average amount of instruction in a Southern college was not more than the full work of six men; and that there were probably not more than 4,000 students who could pass the standard admission requirements. In material equipment (buildings, library, laboratories), productive funds, numbers and quality of faculty, and students, the Southern colleges are, says Professor Babbitt, "pathetically poor." What is true of the South, be it remembered, is also largely true of the West, and to a certain extent of the East. In brief, "there are not students enough for the colleges, and there are too many colleges for the students."

The remedy which Professor Babbitt proposes is the remedy which we have suggested: there are, he notes, "a Methodist tree, a Baptist tree, and a Presbyterian tree, crowding one another and getting puny and unsound; where any one of them would grow into good timber if the others were sent to the woodpile." He would have a benevolent despot, upon the advice of an expert commission, pick about twenty of the strongest institutions and equip them adequately for college work. The rest could be turned into either preparatory or scientific schools, or else entirely blotted out. This plan is, on the face of it, revolutionary; but it is none the less deserving of serious consideration. The colleges themselves will not voluntarily undertake the process or combination, differentiation, and extinction. Local, religious, and personal jealousies would be too strong, even in the celestial minds of alumni, trustees, and professors. The college that is least worthy of the name, that is in every way inferior to such academies as Exeter and Andover, is the very one which would cling most desperately to the title, would be most reluctant to relinquish its right to confer worthless degrees.

Thus the problem is complex and difficult. To persuade one institution to drop its preparatory department, another its collegiate department, a third a pretentious conservatory of music, and a fourth some flabby courses in engineering, is a task requiring both diplomacy and money. Old teachers would have to be suitably provided for, specific endowments would have to be guarded, and innumerable prejudices allayed. To accomplish these beneficent results by an appeal to right reason and pure altruism is an obvious impossibility. Money sufficient to maintain the teachers and officers already attached to the several institutions and to guarantee success after reorganization would be a *sine qua non*. Above all, time would be needed to bring men to an understanding of the benefits of proposed changes. A large fund, wisely administered for a generation or two, might help to perform miracles.

THE AMERICAN ORIENTAL SOCIETY.

SPRINGFIELD, April 28.

A cordial invitation from the local Biblical Club easily induced the Oriental Society to depart from its accustomed haunts and meet this year at Springfield, Mass. Hitherto the usage has been almost invariable to foregather at some university centre. Academic influence, however, is, after all, not remote from Springfield, and professors from Amherst and Smith gave the wonted collegiate touch to the hosts' genial welcome.

About the usual number of papers was presented, some by title only, as the writers were abroad. The Oriental Congress at Algiers, meeting at the same date, carried off several members, either as delegates or as unofficial representatives of the American Society. It has, happily, been a long time since the Society met deprived of so many conspicuous scholars, among whom were the President, Dr. Gilman, and President Harper, both of whom hoped to be present. Several of the forty-four papers announced thus fell out. Of the whole list of papers, nine or ten were of general character, falling into neither the Semitic nor the Aryan

pigeon-hole. One such (unfortunately read by title only) was the study of an early form of religion by Professor Toy, the first American scholar to contribute articles of value to the new "science of comparative religion." Another was Professor Jackson's solution of the names of the cities from which, Marco Polo says, the Magi came to worship the Infant Christ. Other studies especially interesting to those concerned with this subject were grouped together to be read at one session. Four of the lady members of the Society contributed papers; Miss Morris giving a continuation of her Dyak studies, Mrs. Ruutz-Rees discussing a difference in Aryan and Semitic thought, Miss Grieve speaking of some religious aspects of the plague in India, and Mrs. Mumford presenting (through Dr. Gray) an elaborate paper on the Japanese sword and its history. Problems still unsolved in Indo-Aryan cosmology were stated by Professor Warren. Professor Lanman, editor of the Harvard Oriental Series, gave an account of the history and progress of the work under his charge—how great a share of the labor in each volume falls to the editor in such a publication few perhaps stop to realize—and also made a short address on the lessons to be learned by the West from the East. A graphic description of the sacred tree usually ascribed to the Assyrians, by Dr. Ward, proved of equal interest to Semitic and non-Semitic auditors at the "Religious Section," and (since all claim the Hebrew heritage) the same may be said of Prof. H. Preserved Smith's paper on Hebrew polytheism.

The Mohammedans appear to have a special facility in developing weird forms of Biblical and Persian tales, an instance of which was shown in the paper by Professor Torrey on "Og, King of Bashan" in Mohammedan legend, the only essay in this field presented at the Meeting. Several descriptive papers swelled the number of Semitic contributions. Professor Prince, in conjunction with the Rev. Mr. Robert Lau, gave an account of the Pierpont Morgan axehead, a Babylonian relic; and Professor Barton had a paper on some inscribed objects in the collection of Mr. Herbert Clark. Palmyrene tesseræ and Palmyrene inscriptions in the Metropolitan Museum were the subjects of papers by Dr. Spoer and Dr. Arnold, respectively. Only one paper touched on China, a discussion of traces of Babylonian influence, by Dr. Carus. Egypt was represented by Professor Müller in a report on a mission for the Carnegie Institution, and by two resident members, Dr. Reisner, with an illustrated lecture on the cemetery of the First Pyramid at Gizeh, and Mr. Lythgoe, on a prehistoric cemetery at Naga ed-Dêr. The Chicago University expedition to Babylonia was the subject of a paper offered but not read by Professor Harper. Interest in the Philippines was increased by means of a paper on Bisayan dialects by Dr. Blake, and one on the Mangyans by Dr. Gardner of Mindoro. The latter, a newly elected member, presented the Society with an almost unique collection of inscriptions, scratched on the outer rind of a split bamboo. This collection contains short poems and a syllabary, hitherto unknown, carefully explained in Dr. Gardner's accompanying essay on the savages (?) who thus essay literature.

Announcement of projected work was made in several instances. The "Ancient Record Series" was announced by Dr. Breasted. Part of the 'Mir'ât uz-Zamân' of Sibt Ibn ul-Jauzî will be edited, as announced by Prof. Jewett, from a MS. in the Yale University collection. Some interesting specimens of the work were read to the Society. Dr. Bolling purposes, in conjunction with Dr. von Negelein, to edit the Atharva Veda Parisistas; and Dr. Barret will soon bring out a transliteration and text edition of the first book of the famous 'Atharva Veda' of Kashmir, extant only in one precious copy. The latter scholar also discussed some Śārada manuscripts of the Kāthaka Grhya Sūtra.

As the most "popular" paper of the Session, may be designated the brief but forcible presentment of certain facts by the Rev. Dr. Peters, whose paper was entitled simply "The Nippur Library." Dr. Peters claimed that the result of the various expeditions (as far as the determination of location of most of the tablets said to be of the Library goes) is negative; hence it is impossible to say that we have a "business section," etc., of the Nippur hill. "Our information is so imperfect," he said in conclusion, "that it is impossible to assert that these deposits made a temple library. . . . It appears to be impossible to rely upon statements made by Dr. Hilprecht unless his statements can be checked and verified by others." Despite the eager expectations of the reporters, there was no action taken by the Society in regard to the claims made on either side in the controversy concerning this subject. Great as was the interest felt by individual members of the Society in the question whether the Nippur Library is all that it is claimed to be, it was not felt that the Society as such was competent to pass on a matter still *sub judice*. Individual members of the Society, however, had no hesitation in expressing their opinion, to the effect that one cannot trust the statements made in regard to the tablets by the discoverer of the "Nippur Library." There appeared to be no one of all the Orientalists present to deny that Dr. Peters was right in his various condemnatory statements.

Turning to less exciting themes, Professor Oertel's "Contributions, Fifth Series," continued the important work on the 'Jāiminīya Brāhmana' with which the subscribers to the *Journal* have long been familiar. It was also a pleasure to have in Dr. Gray's new drama of Rājasekhara a continuation of the excellent work previously accomplished by the same scholar. Readers of the *Journal* may now have the rare delight of seeing "first translations" of specimens of Sanskrit drama hitherto buried, as far as the non-Sanskrit part of the Society and general public are concerned, under the incubus of titles such as "Viddhaśālabhañjikā," and a text to correspond. The Prākrit text of the drama of this name formed the subject of a special paper by Mr. Haas. Drama also occasioned the "Critical Notes" by Dr. Ryder, on the better-known Hindu play called "The Play Cart," and lyric poetry inspired Dr. Spooner's study of a commentary on the "Cloud-Messenger"; while Yoga philosophy led to Dr. Woods's able discussion of the date of the 'Yoga-Bhāsya' and of the life of Paramārtha. It is noticeable that so many papers by younger Sanskrit scholars were concerned with Hindu belles-lettres, almost to the exclusion of the once all-absorbing topic of the Vedas; just as the Avesta at this session was barely represented by "Notes on some Persian references to Zoroaster," contributed by Dr. Yohannan (who also read a second paper on an Oriental charm) and by Professor Jackson; though the veteran Professor Mills of Oxford sent an elaborate "Pahlavi text," similar to those previously published by the same scholar.

Technical Semitic papers, in the absence of so many Semitic professors, were naturally fewer in number than usual; but Professor Lyon's "Assyriological Notes," Dr. Arnold's note on "Solomon's Horse-trade," and Dr. Blake's discussion of a Hebrew idiom, showed that the Aryans were not having it all their own way. Dr. Langdon, to complete the Semitic list, also had a learned paper, unintelligible, even in its title, to any save the initiated Babelist. Only one review was presented, by Prof. T. F. Wright, that of Dr. Peters's recent volume on the painted tombs of Marissa, discovered by Drs. Peters and Thiersch in 1902. The corresponding secretary of the Society discussed a Sanskrit text, and traced the implied myth of the Fountain of Youth in Oriental and Occidental legend.

The "milk in the cocoanut" of the general papers capable of interesting non-specialists may be condensed as follows: The Magi's three cities are Savah (southwest of Tehran), Avah (southeast of Savah), and Kashan (Cassan), "about three days' journey" from Savah in the direction of Yezd. The worship of Bel of Nippur was not, in Professor Lyon's opinion, unduly depreciated by Hammurabi in honor of Marduk, as has been maintained by Assyriologists; nor can we claim entire originality for the Code of Hammurabi. The difference in Aryan and Semitic thought emphasized by Mrs. Ruutz-Rees consists in the trend of Aryan thought being toward subjectivity, that of purely Semitic thought toward objectivity. In early Hebrew polytheism, Professor Smith said, much indirect evidence regarding the religion of Israel before the exile is to be found in the interpretation of names of people and places. Some names of gods were deliberately suppressed. Others were twisted, or retained with a harmless meaning. Professor Torrey's paper on Og described the giant as being saved from the flood and his name perpetuated as that of a mountain. The greatest harvest god of the Dyaks was shown by Miss Morris to be an exact exponent of the more civilized condition of the agricultural Dyaks as compared with the jungle Dyaks and their malevolent deities.

The Society had the pleasure of seeing, under the guidance of Mr. Smith, the admirable Japanese collection of that gentleman, to whose courtesy the Society was indebted for the use of the Art Museum in which the sessions of the Meeting were held. Dr. Gilman resigned as president of the Society, but was reëlected to serve for one year. In accepting the resignation of Mr. Van Name from the librarianship, the Society gave hearty expression to its recognition of a long term of devoted service on the part of one of its oldest members. The Society adjourned, after an unusually pleasant Session, especially favor-

ed by the weather, to meet again on April 19, 1906, at New Haven.

THE CONGRESS OF ARCHÆOLOGY.—I.

ATHENS, April 7, 1905.

The first International Congress of Archæology has now assembled, and its work begins to-morrow. International it veritably is, since there are, among its 600-odd delegates and 200-odd associate members, representatives of all the established polities that derive through Greece their civilization from the Mediterranean area—all, excepting Spain and her former colonies. Were there but one Spanish delegate, he might stand for numerous South American communities, just as the large British contingent stands for various British colonies otherwise unrepresented. Portugal has one representative, who may be supposed to answer in the rollcall of the nations for some of the too remote communities of the Americas. Otherwise, the Western Hemisphere, so far as it has been penetrated by the energizing ideals transmitted through the Hellenic dispensation, is solely represented here by the twoscore delegates and associate members from the United States. Russia has the advantage of being close at hand, but her contingent would be smaller than ours if we deducted the Greek delegates, several of them from Odessa, once a stronghold of Hellenic activity, and never untenanted since then by Greeks. Not unnaturally, the Greek members of the Congress slightly outnumber those of any other single nationality. Practically all the representatives from Turkey (Samos, Chios, Cyprus, and Egypt come under that designation as well as Crete) should be added as of the Hellenic brotherhood. This brings the Greek membership very nearly up to one-third of the whole. From China none has appeared, nor has Japan any representative. This could hardly be otherwise, even if Tokio were less preoccupied and closer at hand.

Apart from Greeks, the Germans and the French are numerically the strongest here, being about equally represented, if Austria be distinguished from the more purely Teutonic German Empire. After Greeks, French, Germans, and English come the Italians, who have nearly sixty members present. The Russians and the Americans muster about forty each, and then comes Denmark, closely followed by Belgium and Switzerland. Holland and Sweden muster five and four respectively, Rumania sends two delegates, and even Bulgaria is not unrepresented, in spite of the desperate conflict now going on in Macedonia.

A most appropriate prologue to the execution of the official programme took place yesterday afternoon at the house of Mr. Demetrios Bikelas, the well-known president of the Society for the Distribution of Useful Knowledge, where the newly arrived delegates were hospitably received, and enjoyed their earliest opportunity of meeting a warm Athenian welcome, since all Athens stood by him to greet them. Then came an official evening reception by the rector of the University, in the fine hall familiar to frequenters of Athens. The attendance was numerous, and the prolonged presence of all the members of the royal family appropriately indicated that these constituted authorities have the social success of the Congress at heart. Its success otherwise has been assured beforehand by the active committee of reception, upon which, among other members, are the directors of all the foreign Schools, and by that indefatigable organizer of committees and programmes, Mr. Kavvadias, whom we all have known so well for years as the director of all Greek museums and archæological work.

To-day, the first day of the Congress, is also the Independence Day of Greece, which is always celebrated on "Lady Day," the feast of the Annunciation. Accordingly, there was at 10:30 A. M. a most imposing "Te Deum," or, rather, a doxology (since Greek and not Latin is the order of the hour). The whole town, including many scores of singing and parading school children, as well as the majority of the delegates, assembled in the Metropolitan Church, where there was a military service, attended by the King. The singing showed by its genuinely religious quality and real excellence how completely recent changes have removed the reproach of nasality and lifelessness once perhaps attaching to services here. The doxology, although, of course, no part of the programme of the Archæological Congress, certainly brought a moment of most appropriate solemnity.

At 2:30 P. M. the delegates and associate members gathered on the floor of the Parthenon to hear from their president (Diadochos), Prince Constantine. He rose in his father's presence, and read, in clear tones which made it easy to follow the modern Greek idiom used, a remarkably well-conceived allocution, declaring the Congress open. There followed a brief discourse on the progress of archæology by the Minister of Public Instruction, M. Carapanos, known as the excavator of Dodona. M. Kavvadias then spoke feelingly in making the members free to use the museums. Both of these last speeches were in French. Next came a speech in German by Dr. Dörpfeld, who passed in review the work done at Athens and in Greece by Germans. His tribute to Ludwig Ross was peculiarly happy, as were his words about K. O. Müller, and his characterization of Ernst Curtius as the latter-day winner of an Olympian crown of immortality. Then came, in the order of their seniority of appointment as heads, Dr. Wilhelm of the Austrian Institute, Mr. Bosanquet of the British School of Classical Archæology, and Mr. Heermance of the American School. Mr. Bosanquet was far more catholic than Dr. Dörpfeld in his tribute to workers of all nationalities. Mr. Heermance sincerely expressed the gratitude of Americans for the generosity shown in the gift of its present site to the American School of Classical Studies, and of the amenities and harmonious courtesies which have so happily characterized the intercourse between the American and the other Schools at Athens, and classed himself among the juniors who had to thank an elder generation for museums and for an established body of scientific work. He also spoke of the broadening effects upon studies at American universities produced by the School, and of the enthusiasm felt in America for Hellenic ideals. The junior head was M. Holleaux, director of the oldest established of all Athenian Schools. In an admirably conceived address, he spoke of what Greece has been and is to France and Frenchmen, and, after a most courteous expression of gratitude to the Government of Greece, ended with two verses of Chénier. Proceedings then closed with the naming of the presidents of the seven sections into which the Congress is to be divided. Among these are Dr. Evans, MM. Collignon and Maspéro, and Profs. Percy Gardner, Wilamovitz-Moellendorff, Robert Waldstein, and J. R. Wheeler.

The day has ended with very telling illuminations, torchlight processions, and various popular demonstrations, which, although always in order on "Independence Day," have been entered into with exceptional enthusiasm because of the Congress. One feature, has, indeed, been especially added—the illumination of the whole Acropolis with Bengal lights, accompanied by fireworks. Admirably as this was managed, the effect, although curious and interesting, was not very impressive. Simpler arts are best resorted to when so unsurpassed a monument as the Parthenon, with the Propylæa and the Erechtheum, is concerned. The whiteness of newly fallen snow, with a clear sky beyond; the downward-flashing sun breaking through clouds, the brilliant moonlight of clear summer nights in Attica—these will always show the Parthenon at its best. For, with its affiliated ruins, it seems to have passed beyond the compass of human ingenuities, and to keep company with the elements which have marred its completeness only to gild it with colors requiring no enhancement.

LOUIS DYER.

Correspondence.

THE PHILIPPINE CENSUS.

TO THE EDITOR OF THE NATION:

SIR: Reference has been made in the *Nation* to the report of the census of the Philippines as giving a too favorable impression of the condition of the Filipinos, the number of women wage-earners being taken in support of the assertion. The summary issued by the Census Bureau for the use of the press contains a similar instance. From the school schedules it appears that 5 per cent. of the civilized population (350,000) is enrolled in the schools. But, under a different heading, we are told that "the number attending school, as shown by the population schedules, is 811,715. This number far exceeds the returns shown on the school schedules, probably because the calendar year does not conform to the school year." This may be a satisfactory explanation, but to the ordinary mind it is simply a cogent proof that the returns are untrustworthy. Could it be otherwise with the work of 7,500 natives, absolutely without experience and having the inaccurate Eastern mind?

B. B.

BOSTON, April 30, 1905.

JOSEPH JEFFERSON'S DEGREES.

TO THE EDITOR OF THE NATION:

SIR: At the close of the note on Joseph Jefferson, in your issue of April 27, we read: "Mr. Jefferson received the honorary degree of A.M. from Harvard ten years

ago." Your contributor fails to say that he received the same degree from Yale three years before. ALBERT S. COOK.

YALE UNIVERSITY, April 27, 1905.

THE PROFESSOR'S WIDOW.

TO THE EDITOR OF THE NATION:

SIR: There is one application of Mr. Carnegie's wise and munificent gift which I hope is not impossible, since it seems to me the most desirable, but which is not mentioned in the donor's letter.

The professor is the chief hero on the stage, but not the real chief sufferer, in his long, serene career of honorable poverty. He is not supposed to be aware, even, that his food is plain, his shelter humble, his life monotonous. He has at least one decent suit for public occasions. The precious books which only he would open he can usually order for the college library, and even keep them, a year at a time, on his study table. But real self-effacement, silent deprivation, painful economy, are the lot of his wife. Surely, every one who is left a widow after her silver wedding-day, at any rate, has earned the half, if not the whole, of the modest old-age pension her man would have shared with her. She can hardly hope that any prosperous generous soul among the old students will remember her, whom they will barely have seen. Even her mental resources for self-companionship in solitary age have been largely sacrificed in homely devotion.

We believe nearly every professor, if compelled to choose, would say: "Make it certain that my wife, rather than I, will be a helpmeet, not a burden, if either must sit lonely, in old age, at the hearthside of a grandchild, or among stranger folk still."

Very truly yours,

WILLIAM C. LAWTON.

BROOKLYN, May 1, 1905.

SYDNEY SMITH AND THE DEAD LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: It is very pleasant to see, among your reviews a week or two ago, a just tribute to the brilliant parson of Foston-le-Clay. The present age remembers Sydney Smith chiefly for attempts at great reforms, but persons familiar with his career will recall many noble efforts at small ones, so I cannot refrain from drawing your attention to his courage in ridiculing the excessive devotion of the English schools to the dead languages. When we bear in mind the courage it has taken today in many scholarly men to plead for broader and more modern studies at the expense of Latinity, we may realize what it required in Smith 100 years ago.

It is impossible, even for such of us as devoted hard early years to the ancient languages, to avoid laughing at his arguments or illustrations. What derision he invokes by referring to the old scholar who had little admiration for Frederick the Great because, with all his victories, it was doubtful whether he could conjugate a Greek verb correctly! After pointing out the absurdity of incessantly making Latin verses, he says of the English student:

"His object is not to reason, to imagine, or to invent; but to conjugate, decline, and derive. The situations of imaginary glory which he draws for himself are the detection of an anapæst in the wrong place, or the restoration of a dative case which Cranzius had passed over and the never-dying Ernesti failed to observe."

FREDERICK BAUSMAN.

SEATTLE, April 20, 1905.

Notes.

Herbert B. Turner & Co., Boston, announce 'Science and a Future Life,' by Prof. J. H. Hyslop, and 'Ethics of Imperialism,' by Albert R. Carman.

The more than twenty years that have elapsed since the late Lucy M. Mitchell's 'History of Ancient Sculpture' appeared, obviously tell heavily against its reissue now, unchanged and unextended (Dodd, Mead & Co.). One has only to turn to Crete in the index for a few scattering notices, to perceive how one huge chapter of archæological discovery has grown up in the interval, with no slight contributions to the subject of this work. But what has not the spade done elsewhere in two decades to enlarge the material or alter the criterions of criticism? Even the elaborate notes and references and tables of museums have suffered from the march of time. The general index and the cuts offer a certain facility for reference, and the index of citations from the classic authors may be allowed to be absolutely unaffected by temporal considerations.

Mr. T. B. Mosher, Portland (Me.), has brought out with his customary taste a reprint of Stevenson's 'Father Damien,' prefixing Clifford's portrait of Damien, and extending Col. Prideaux's bibliography of this piece. "There are," he remarks, "apparently no translations of the *Letter*." This is well for Stevenson, as no writing from his pen is so disagreeable, not to say repulsive, in tone. A similar get-up, in smaller form, has been given by Mr. Mosher to 'The Book of Heavenly Death, by Walt Whitman, compiled from Leaves of Grass by Horace Traubel.' In this medley, all sides of Whitman except the lyrical are manifest. There is a good bardic portrait of him at the front.

The editor of 'American Book-Prices Current," Mr. Luther S. Livingston, not satisfied with that meritorious labor, has undertaken to combine selectively his own series with the English of corresponding title, and with earlier sources antedating both. Of the four quarto volumes to result we have the first—A to Dick—'Auction Prices of Books' (Dodd, Mead & Co.). This is one of those enterprises concerning which the bare statement as just made is all-sufficient for the connoisseur, while absurdly disproportioned to the toil and expense involved. Mr. Livingston and his publishers are to be thanked heartily, and we trust they will have no difficulty in disposing of the 750 copies to which the edition is limited. We will only remark further that the Bible sales require 26 pages, Boccaccio 8, the Bewicks and Brownings 6, Cruikshank 4½, Burns 4, the Arabian Nights 2½. The highest price paid for any work of Bryant's was $130, and his general valuation has been low. The first London edition of Bryce's 'American Commonwealth' (1888) fetched $19.50 in 1896, and ranges from that sum to $12.

Retrospective reviewing, nowadays almost a forgotten art, is yet preserved in a volume of essays entitled 'Literary Portraits,' by Charles Whibley (E. P. Dutton & Co.). These scholarly studies deal with Rabelais, Comines, Montaigne, and kindred worthies, with the intruding exception of Casanova, here in much better company than he deserves, even though his blackguardism is, in part at least, sedulously veiled. By far the most important, as well as bulkiest, contribution to the collection is furnished in Rabelais, and represents him, in accordance with the best French scholarship, as much more than the ribald shaveling of tradition, delighting chiefly in material grossness. Mr. Whibley dwells on the wisdom of the "abstractor of quintessences," whose fight against the shams and hypocrisy of his day was conducted in a spirit of genial humor, and not in morose indignation. The respective merits of Urquhart and Motteux, as translators, are still disputable points. The Frenchman took, on the whole, fewer imaginative liberties with the original than did his predecessor. In the essay on Montaigne we are introduced to the man, rather than to the philosopher of always elusive attractiveness. No doubt, the self-revelation of the first of essayists is enticing; but a far deeper, a more enthralling, study carries one on to the discussion of the conflicting currents of thought to which the conditions of the time subjected one of the subtlest of skeptics, who seems seldom to have been troubled with the anguish of *spiritual* perplexity. That Mr. Whibley is interested in undecisive writers may also be conjectured from his treatment of Burton and his 'Anatomy.' Several of the essays are suggestive of the prefatory function.

One more superfluous example of literary indiscretion appears in 'The Romance of Victor Hugo and Juliette Drouet,' by Henry Wellington Wack (Putnams). It begins with eighty-nine pages of somewhat rambling introductory narrative, dealing chiefly with a sufficiently familiar liaison of no very exceptional character, followed by a collection of passionate feminine love-letters of no particular character at all. The bare statement that Hugo had an extra-conjugal Egeria—an Aspasia, in fact—who remained constant to him for fifty years, is readily comprehensible to any reader of artists' biographies, without the help of documentary details. What M. François Coppée means by giving the publication his solemn sanction is not so easy to understand. A number of photographic illustrations of persons and places have some value; but we were under the impression (from Marzials's 'Life of Victor Hugo') that the statue in the Place de la Concorde for which Mme. Drouet served as model was Lille, not Strasbourg.

First catch your hare, is Prof. William Z. Ripley's motto in his 'Trusts, Pools and Corporations' (Ginn & Co.). In order to conduct economic instruction successfully in the descriptive field, we must have raw material. This material is to be found in public documents, in legal decisions, and in the periodicals; but a class of one to two hundred men cannot make use of it. Hence, it is necessary to reprint from these sources such facts as are relevant to particular inquiries, so selected, arranged, and condensed as to be easily available. As

Professor Ripley justly observes, the testimony taken in leading cases in the courts is rich in important facts which of course cannot appear fully in the decisions. Such matter is really the basis of economic generalization, and it is certainly desirable that students of economics should have their attention directed to it. Another purpose to be furthered by such a publication is the creation of a public opinion in favor of a reasonable policy of public control over monopolistic and corporate enterprises. There is certainly danger from a public opinion favoring unreasonable control, and every attempt to substitute reason for emotion and violence is to be commended. While this compilation is planned for use as a text-book, it will be found convenient by journalists, and it may be commended to all who wish to know more of the truth concerning industrial affairs than they can learn from the daily papers.

Lawrence Duckworth's convenient manual of 'General and Particular Average' (London: Effingham Wilson) has reached a second edition, and is vouched for on the title-page as "entirely rewritten." The appendix contains the York-Antwerp Rules, 1890, and a number of forms in common use, revised to date. The subject is a very technical one, and the author has the essential gift of clear and concise statement.

In dealing with the 'Catalog of the Gardiner Greene Hubbard Collection of Engravings,' issued by the Library of Congress, it is difficult to resist dwelling upon the beauty of the mechanical execution of the volume. The large type and arrangement of sizes and forms, the handmade paper, the generous page and broad margins, are notable examples of what can be done in the Public Printing-Office, and certainly mark a great departure from the styles of that office to which we have become accustomed. The plan of the compilation was very generous, and included the catalogue proper of engravers, an index of engravers under a chronological scheme, by centuries, an index of artists, a portrait index, and a list of authorities. No similar catalogue exists of an American collection of engravings; it will, therefore, prove a convenient book of reference for collectors. As Mr. Hubbard's taste was very catholic, he wished to obtain good examples of different schools and engravers to illustrate the progress of the art. Of the 2,700 prints listed, only 114 are assigned to American engravers; but the work of German, English, and French engravers is well represented. The collection was presented to the nation in 1898 by Mrs. Hubbard, and in default of a national art gallery the Library of Congress was the most fitting place of deposit. How far it will compare in number or in quality with collections such as the Claghorn collection it is difficult to say, but it certainly does offer an unusually good basis for study and growth in a place central for investigators. The Catalogue will serve to describe the Hubbard collection, and incidentally to indicate the needs of the Library in one line of its activities. The editor of the volume is Arthur Jeffrey Parsons, who is in charge of the collection.

The ninth volume of the new 'Meyer's Konversations-Lexikon' (Lemcke & Buechner) completes the letter H and advances to Ionicus. Long articles are comparatively few, and, as usual, favor is shown in this regard to mechanical and industrial processes and to natural history, the latter affording occasion for many striking color plates. Of the maps, one shows German Southwest Africa, and last year's native rising there is described in the fresh article *Herrero*. Among the tables is one exhibiting the Hohenzollern branches. The article on Hawaii falls short in not characterizing the method by which the "republic" was proclaimed, or recording Cleveland's repudiation of the abuse of the navy and the flag. That on Holbein's Dance of Death might have referred to the preservation of the original designs. Under Homœopathy are given statistics of the considerable stand maintained by this system of therapeutics the world over. Hypnotism is considered at some length, and its extensive literature indicated. A curious theme is illustrated in "Hydrologische Versuchsanstalten," or the establishments for testing the behavior of floating models of ships, such as the North German Lloyd supports. The letter I naturally introduces a large number of phrases and proverbs in Latin and other languages; thus we have the true origin assigned to "Il y a des juges à Berlin" and "In necessariis unitas, etc."

A book of considerable merit upon the relatively obscure colonial possessions of the Portuguese is 'As Colonias Portuguezas: Geographia, Physica, Politica e Economica,' by E. J. de C. e Vasconcellos. It has already passed into a second corrected and augmented edition. The sub-title well describes the scope of the work, which, curiously enough, is modelled upon German colonial handbooks, reviewed from time to time in these columns, whose object is to spread practical information about national possessions. The treatment is minute and careful; first-rate maps of the several possessions are given; and the text of the 1869 "decreto organico das provincias ultramarinas" is supplied for the student. Being so much later than the exhaustive work of J. de Andrade Corvo, this volume furnishes the best available information which we have met with concerning the present-day Portuguese colonies.

We are glad of the opportunity to congratulate the editor and publishers of the Chicago *Dial* on the first quarter-century of its existence as a critical magazine—now the only one (not the organ of a firm) concerned with books alone. It has been fortunate, for the maintenance of high ideals, in having the same editorial direction from the beginning, namely, that of Mr. Francis F. Browne, also the chief owner, and so with a guaranteed independence.

Mr. Albert Matthews has, in the April number of the *New England Historical and Genealogical Register*, an interesting and fairly persuasive paper on the naming of Hull, Massachusetts. His object is to remove the support of Thomas Morton (in his 'New English Canaan') from those who think that coast town was so named—from having been called Nantasket—as early as 1637, whereas it was formally named by the General Court in 1644. The passage from Morton, in a nautical figure describing a prudent captain who was debating whether to execute the Court's order of deportation against the lord of Merrymount, speaks of "this proper Mariner" being "resolved to lye at Hull rather than encounter such a storme, etc." If Hull be written with a small initial, the phrase becomes one very common to the period, with the meaning of to ride out a storm with struck sails, or similarly to drift in a calm.

The "Diffusion Society" of China, which is supported chiefly by foreigners from Great Britain and the United States resident in China, shows in its seventeenth annual report (for 1904) what, besides its own work, has been done in twelve months by the various publication societies, clerical and lay, for the information of the Chinese people. As against 913 works, of a character more or less religious or proselyting, translated into the standard Chinese, there have been 1,481 works of science or general literature composed or translated, which Chinese can read. Of these the Diffusion Society has issued 387, and the Educational Association, having similar aims, 185 publications. In the Diffusion Society's list for 1904, making a total of 19,256,800 pages, are such books as 'Elements of Civil Government,' 'Brief Lives of the American Presidents,' 'Women in All Lands' (seventeen volumes), 'The German Empire,' *Review of the Times* (2,730,000 pages), and the *Chinese Weekly* (1,280,000 pages), all by Dr. Young J. Allen, an American scholar who, with his corps of native assistants, has been active in China for over thirty years. Other books are: 'Universal Civilization,' and 'The Indian Empire' (2,520,000 pages), by Yin Pao-Lo. Among the reprints (11,425,500 pages) are 'Nature Readers,' 'English Law in China' (4,584,000 pages), 'Handy Cyclopædia,' 'Geography for Home Readers,' 'Joseph Neeshima,' 'Elements of Practical Electricity,' etc., etc. All the best books thus issued are at once pirated by native publishers, Hangchow having reprinted six different editions of one book. Thus the sales of a good scientific work are fivefold that by the original owners. Many Chinese scholars coöperate with the Diffusion Society. Among the various reforms discussed in the pamphlet of fifty-three pages is the anti-footbinding work of Mrs. Archibald Little, which seems to be making extraordinary progress, being backed unanimously by the Mohammedans and largely by orthodox Confucians.

Evidently the academic youth of France is thinking of other things than "revenge." The Association Générale des Étudiants de Paris, under the direction of Professor Couchand, formerly lector in the University of Göttingen, has arranged for a "scientific" journey by German students and professors to Paris and the historic sites of Western France, to cover some twenty days during the present spring. The journey will take the visitors to Normandy, Anjou, Touraine and the banks of the Loire. In the University towns of Paris, Caen and Rennes special receptions for the German students will be held by the French university men. One of the purposes of the expedition is to cultivate good relations between the student world of the two countries. Arrangements have been made to accommodate sixty, but no more, on this novel international academic expedition.

The Academic Bureau of Information (*Auskunftsstelle*) established some time ago in connection with the University of Berlin was evidently a desideratum in the world of scholarship. Not only do from thirty to forty students and professional

men daily apply there for information, but communications come from all parts of the world pertaining chiefly to university affairs. Answers are returned only to questions which deal with scientific matter. The Bureau has sent a circular letter to all scientific bodies, corporations, etc., throughout the world, and is in a position to receive reliable information from all quarters.

What seems to have been the last remnant of the old Latin "Zopf" of the German learned world has recently been abolished, when it was made optional by the Church dignitaries of Wirtemberg for the participants in the annual theological tournament held under the auspices of the Deans to use the Latin or the German language. Ever since the days of the Reformation the use of Latin has been compulsory in these discussions. The change was the result of a general petition for it.

According to the report of the Commissioners of the Nobel Fund, the money at their disposal for rewards this year will be 690,446 kronen, as compared with 704,-242 last year, or an average of 135.089 for each of the five recipients. The decrease is owing to the taxes which the Government of Sweden has begun to collect from the Fund.

The Summer School of Library Economy conducted at Amherst College by Mr. W. I. Fletcher enters this season upon its fifteenth year, and will be held from July 3 to August 11.

A Good Roads Conference has been called by the College of Agriculture of Cornell University to meet at Ithaca May 16 to 19. "This conference or school," as the circular calls it, will be free to all comers and will be addressed by many experts. Information may be obtained of Mr. L. H. Bailey, Director of the College.

—William Garrott Brown begins in the May *Atlantic* a history of the Tenth Decade of the United States, confining the initial paper to a kind of panoramic presentation of conditions at the close of the civil war. Magazine history does not stand in very high repute, thanks to the taste for sensational narrative and catchy illustration, but the *Atlantic* and Mr. Brown should be able to redeem it if redemption be possible. The Schiller anniversary draws forth two very readable papers, "Schiller's Message to Modern Life" and "Schiller's Ideal of Liberty," by Prof. Kuno Francke and William Roscoe Thayer, respectively. Schiller's message lies in his conception of beauty as the mediating agent between the sensuous and the spiritual; his appeal to the best, the most moral, the most human in man; his longing for equipoise, totality of character, oneness with self. He makes no vain attempt to turn the wheels of time backward, like Tolstoy in his glorification of primitiveness of existence, nor does he point to a dim and shadowy future. Rather, his philosophy guides with a steady hand toward an ideal that is at once definite and within our reach, a free, noble, progressive, self-restrained manhood. Paul Elmer More writes of the centenary of the birth of Sainte-Beuve. Jefferson B. Fletcher of the department of comparative literature in Columbia University traces "An Unrecognized Affinity" between Newman and Carlyle. One who is editorially certified as an associate professor in one of the largest and wealthiest American universities, demonstrates in detail, under thirty-one different heads, that a college professor needs a salary of about $3,150 in order to live in a condition consistent with proper self-respect, bring up a small family, and leave a small amount to his children at the end of, say, thirty years of service. His own salary has averaged $1,328.15, with an average expense of $2,-794.27, entailing an annual contribution of $1,466.12 from private means for the privilege of enjoying the blessings of the teacher's life.

—The May *Harper's* presents about the usual makeup, with an attractive selection for the reader of short stories, and one poem of real merit, but with no special features of compelling interest. Our territorial expansion has been so insistently exploited that a reference to Prof. John Bassett Moore's paper on the subject may possibly be taken as a warning. Nevertheless, the article is well worth reading by any one who wants a simple outline of the facts, minus the usual admixture of jingoism. Professor Moore thinks that the problem of the Philippines was simplified by taking the whole rather than a part, thus avoiding the friction which might have arisen from having Spain as a neighbor in a continuous archipelago; but it is to be remembered that all or part was not the alternative. Dr. Alden, aside from his editorial department, contributes a brief paper on Subiaco, with five half-page illustrations in tint. Mrs. Ward's serial is concluded in this number, and those who have been chafing at the injury done by over-early publication in book form will doubtless now forget their grievance.

—In the *Century*, Dr. Anita Newcomb McGee continues her account of the experience of the American nurses in Japan, describing chiefly the success of the Japanese in preventing disease and in saving the lives of the wounded. She rightly takes the ground that, after playing the rôle of teacher to Japan for so long, the United States should with becoming humility admit the demonstrated fact that the pupil has bettered his instruction in certain points, and should consent to a reversal of the relation. Happy will Japan be if, among her prophylactics, there be found one to avert the political degeneration so regularly appearing among the after effects of war. Otherwise her brilliant sanitary success of the past year will hardly prove permanent. Some enterprising grafter supplying first-aid bandages of dirty material could alter the vital statistics very materially. Manager Stone describes at length the efforts for a free news service from Russia to the outside world. The Associated Press, he claims, is at present almost a recognized branch of the diplomatic service, usurping the functions of the officially commissioned diplomat, and incidentally making for universal peace by keeping the intelligent masses of all countries informed as to what is going on, so that unnecessary strife cannot be engendered behind closed doors, while the conservative elements of society are ignorant of the danger.

—'The Life of Hugh Price Hughes,' by his daughter (A. C. Armstrong & Son), should delight the lovers of huge books; on a topic not quite of prime importance, most readers might prefer less liberality both of form and of matter. Yet Mr. Hughes (1847-1902) was a notable man, whose interests and activities took a wide range. A leader of the Wesleyans, long head of the West London Mission and editor of the *Methodist Times*, his deepest devotion was to an ideal or "Free" Church, unestablished and probably invisible. "He was a prophet, criticised, misunderstood," and "his life was a continuous strife," yet happy, with "a great following and rare rewards." The motto, from one of his sermons, "Not self-assertion, but limitless self-suppression, is the secret of life," seems scarcely appropriate, for he was not a man to be suppressed by himself or anybody. Dr. Joseph Parker, in 1896, hailed him as "our firebrand," and exhorted him to "burn on." Yet for so positive a person he (as here presented) is somewhat elusive, perhaps in part from his covering so much ground—it might be unfair to say that he rode too many horses at once. He discoursed (p. 366) on Buddhism and Schopenhauer, on Giordano Bruno and John Bright, on Mazzini and Ruskin, as well as on Tennyson and Browning. He said there were "two great tyrannies," the clerical and medical professions; yet he scornfully refused offered assistance at a service from a brother who was not accurately vested and coated. Art, too, was in his province: "The genius of Michael Angelo awed him, . . . but he did not love it as he did that of the Bellinis, or Raphael, or Andrea del Sarto." Botticelli perplexed him, but he greatly respected Andrea Pisano; yet a dilettante moved him to cry, "O that I had known Praise-God Barebones!" Like other strenuous folk, he had too many ideas for all of them to be sound; thus, he found in F. W. Robertson a "lack of vigor," due to his rôle as "exponent of the Gospel of Suffering"—as if that were all of the Brighton preacher. His wide sympathies with liberalism were in conflict with his dominant regard for "Evangelicism"; he admired the Broad Churchmen, but they bothered him. Through all this, one sees Mr. Hughes as in a glass of uncertain color, for his admiring biographer is also his interpreter and critic, and a person of superior claims on her own account. She tries to set down all her father ever did or said, with little order of time and not too much of logic; yet large abstractions obscure practical details. The table of contents gives as little guidance as may be; chapters are headed "The Age of Chivalry," "Inner Side of the Age," "The Catholic Idea of the Church," "The Imperial Idea of the State." Thus the book is not for him who runs; perhaps it was intended for an inner circle of Nonconformist *cognoscenti*, who can appreciate the happy union of orthodox piety with originality, of world-wide culture with Puritan principle. But at whose death was it truly said (p. vii.), "He was the most human saint that ever lived"? Is the reference to Mr. Hughes, or to his Master?

—Mr. T. Sturge Moore's 'Albert Dürer' (London: Duckworth & Co.; New York: Scribners) is a singularly illusive book. It is a stoutish volume of over three hundred pages; and while all the words in it are intelligible, the exact thing that was intended to be expressed somehow escapes one. Again and again the reader follows along a course of thought that seems to be leading somewhere; he waits for the definitive summing-up that shall show just where he was being carried—and the path sudden-

ly vanishes, leaving him baffled. He begins to wonder, at last, whether the fault is not his own rather than the author's, and it is only a trial of some clearer writer that can restore his confidence in his ability to read understandingly the English language. Mr. Moore's aim is avowedly to give an appreciation of Dürer "in relation to general ideas," and he evidently regrets that "too much space has been given to the enumeration of Dürer's principal works and the events of his life, without either being made exhaustive." We must confess that we have found these parts of the book refreshing from their comparative simplicity and clarity, and a welcome interlude in the struggle with general ideas. One does, however, get from this volume certain impressions of Dürer's position as an artist and of the meaning of his theories. Perhaps the most important thing in it is Mr. Moore's explanation of Dürer's canon of proportion, which he believes was intended rather to be departed from than to be adhered to. It was a kind of standard such as every artist, consciously or unconsciously, carries in his head, for the measurement of individual variations, and its use was to make these individual variations more instantaneously perceptible by providing a norm from which they could be conceived as departing. Doubtless, also, it would tend to discourage too great divergence, and to keep the artist within the bounds of moderation. So conceived, the canon was a more rational and possibly useful thing than we have been in the habit of considering it. Mr. Moore is not of those who feel that the world is a gainer by the narrowing of Dürer's art and life, which followed his return from Venice to Nuremberg, and he thinks that something much greater and finer than anything the artist actually produced might have come of his settling permanently in Italy. A few works, notably the "Portrait of a Lady seen against the Sea" in the Berlin Gallery, lend color to this view, and one would wish to believe that Dürer was great enough to have absorbed the teaching of Venice without losing his own individuality. The book is illustrated with many good reproductions of Dürer's paintings, drawings, and engravings, and, above all, with four engravings on copper which look good enough to be from the original plates and may possibly be so; the information afforded on this head is vague.

—A first fruit of the tercentenary of 'Don Quixote's' publication is offered by Albert F. Calvert in his 'Life of Cervantes,' published by John Lane. It is well that Mr. Calvert in his preface should be as modest as he is elsewhere brief, for his book throws no new light upon "the maimed one of Lepanto," and contents itself with paraphrasing the more substantial accounts of H. E. Watts and James Fitzmaurice-Kelly. With some simulation of scholarship, however, this 'Life' lacks its essence. The bibliography of Don Quixote is a second-hand compilation, and the table of Cervantes's proverbs meagrely condenses such lists as may be found in any of the modern English versions of the classic or in separate works like Burke's 'Spanish Salt: A Collection of All the Proverbs in Don Quixote.' Further, Mr. Calvert's literary backgrounds are vague and ineffective. In the pardonable desire to exalt his hero, he disparages everybody else. The great Lope (here generally referred to simply as "Vega") is liberally anathematized, and at length receives the *coup de grâce* in this astonishing statement: "It may be said that not a line of Lope de Vega's prodigious output is now either read or discussed." Towards Avellaneda's spurious continuation of 'Don Quixote' Mr. Calvert feels so mortal an antipathy that he regards it as the father of all literary frauds, declaring that, had it sought only to skim Cervantes's market, it still "would have been almost unparalleled at that period in the history of letters." Apparently he forgets the earlier and notorious experience of Mateo Aleman of Seville, who found his 'Guzman de Alfarache' continued by another, and who rallied to the defence with an authoritative second part. Again, to those who appreciate the very considerable influence exerted upon other literatures by Cervantes's 'Novelas Exemplares,' it is disconcerting to be left with the bald remark that "they have achieved little popularity out of the Peninsula." Other errors, presumably of proofreading, abound. Tirso de Molina becomes "Tirso de Malina" (p. 1); the 'Viage del Parnaso' is the "Viaja" (p. 68); Tarragona is "Tarragoza" (p. 72); the Dulcinea del Toboso hails from "Tobosco" (p. 80); Don John of Austria's title remains inexplicably half-Spanish and half-English (p. 9); the Casa de Medrano is spoken of as though it were a street (p. 45); the word *affaire* becomes "affairé" (p. 21); Spenser is printed Spencer (p. 2); there are occasional grammatical slips (pp. 29, 79); and in two consecutive lines we hear of "nautiating" imitations and "omniverious" readers (p. 52). Indeed, to the scholar, the only recommendation of this 'Life' will be the more than thirty illustrations it contains, comprising several portraits of Cervantes, and reproductions of early title-pages and cuts from rare or curious editions.

JOHN BELLOWS.

John Bellows: Letters and Memoirs. Edited by his Wife. London: Kegan Paul, Trench, Trübner & Co.; New York: Henry Holt & Co. 1904.

Wherein lay the special charm and attractiveness of John Bellows?

His life, his influence over others, and his whole way of thinking give the answer. The secret of his charm and of his power is to be found in the intense vividness of his nature. His brain, his heart, and his soul were full of life.

> " 'Tis life whereof our veins are scant.
> 'Tis life, more life, for which we pant."

If this be true, the man who is, above all men, alive, is certain, when vividness is combined with the simplicity of perfect disinterestedness, to exert over his fellows an almost miraculous power of attraction.

Consider in this light the outward career, uneventful as in one sense it was, of John Bellows.

The son of a Quaker schoolmaster in the small Cornish town of Cranborne, Bellows was at fourteen apprenticed to a local printer. He had gained from his father's instructions rather less of direct knowledge than one might have expected, but he had the inestimable benefit of being trained by a man of high principle, and by one of those rare teachers whose aim it was to make his pupils observant and to help them to think. After fourteen, all that John Bellows learned was the result of his own unaided labor. At the most critical age of his life we see the vividness of his nature. He was a good youth, brought up under Quaker influences, but he could not accept any belief which he did not feel to be real. For a short time he was attracted towards Churchmanship, but he thought the matter well out. He passed in early youth from a nominal to an actual—that is, vivid or living—belief in the truths of Quakerism:

> "I read," to use his own words, "Barclay's arguments especially, and with them the texts both of the New and of the Old Testament which he cites, till, after many anxious days and nights, the light shone on them steadily and brightly as the sunrise in a cloudless sky, and I was made as sure of the truth of what the world calls Quakerism as I was of my own existence."

An experience of this kind has even an intellectual effect which has been too little noticed. It gives energy to the whole of a man's character, it stimulates all his intellectual powers; and this is the more certain to be the case when the convert—if one may use the expression—from nominal to real belief has taken hold of a creed which in no way discourages the pursuit of truth. The reality and the simplicity of Quakerism are visible at every step of the career of John Bellows. All his work as a printer was thorough and good; it gained him, not indeed wealth, as wealth is reckoned by millionaires or by their thousands of admirers, but independence and the means of leading his own true life. His French Dictionary, the book by which he will live in the world of letters, bears the impress of his character. He imagined to himself a model pocket dictionary, filled with excellencies and ingenious devices for aiding the reader not to be found in any other work of the same kind. He had to begin with no great knowledge of French; he made himself an excellent French scholar by working at his dictionary. The labor often seemed hopeless. A friend (Professor Blackie), who saw the scheme of the work, displayed prophetic insight:

> "I see," he wrote, "that you have a dash of enthusiasm about you, and that you will go through with your book for the love of it, whether it ever pays you or not; but I think I can promise you, from what I see of its plan, that, within twelve months from the time it is published, it will be all over the world as the best French dictionary ever printed."

This forecast has been fulfilled to the letter, and the words, "you will go through with your book for the love of it," give the secret of everything which Bellows did. All his work was done for the love of God and of man, and he went through with it for the love of it. He came across Roman remains at Gloucester. He knew little of Latin, but his fervent imagination forbade him to follow the example of most men and to leave unnoticed the notable things which in his case almost literally lay at his feet. By studying the Roman antiquities of Gloucester, he seized hold of one side of Roman history, and made himself an authority with men of learning on the history of the Roman settlement in Great Britain, and especially on all matters connected with the military system of Rome. Thus he became the friend and the valued correspondent of men such as Max Müller and Dr. Hübner,

They must have felt at once that they had met with an inquirer whose knowledge was real knowledge, grounded on the facts before his eyes; who knew and took account of the deficiencies of his own education, but was inspired with the true historical spirit. The present and the past were in his mind linked together; he needed no lecturer to warn him that there was no break to be found between ancient and modern history. He knew apparently little Latin. Latin or Greek books were known to him mainly or wholly from translations; but then, he knew the contents of these translations in a way in which many good scholars fail to know the contents of the originals. Statius, for example, and Strabo, whose writings we may confidently assert have in many cases never been read by Oxford first-class men, were to him as alive and full of interest as is Gibbon or Macaulay or Carlyle to ordinary English readers. Wherever he travelled (and he travelled much), facts learned from ancient authors were before his mind. By their aid and by his own vividness of conception he, so to speak, heard wherever he went the tramp of the Roman army and saw the progress of the Roman Empire.

But, though his studies show the liveliness of his intellectual interest, John Bellows was no mere student. His knowledge gains its reality from the fact that, under the pressure of duty as well as of sympathy with every one who needed help, he took an active part in every public concern which seemed to him to offer an opening for aiding the oppressed, or which raised a conflict between right and wrong. His journeys to Russia were truly missionary expeditions. He and his companion, Joseph Neave, spent time, money, and toil, and at times risked life and health, that they might bring help to the victims of despotism and persecution. What was the measure of their actual success will never be known till the time has passed when the statement of facts might expose to peril the persons to whom they brought help, and from whom they received aid and information. But the journal and letters of John Bellows, characterized though they be by a silence and self-suppression as rare as it is admirable, bear witness to two facts, that the Quaker missionaries labored heart and soul for the promotion of justice and humanity, and that they carried help, comfort, and even consolation, to sufferers who may well have believed that no one cared for the wrongs they endured. For these labors of humanity, Bellows is certain to receive eulogy not greater than deserved, but assuredly greater than he either claimed or desired: nothing is more remarkable than his studious and emphatic rejection of the notion that philanthropic acts are the same thing as religion. He no doubt will receive far less general sympathy in regard to his strictly political efforts. An ardent Unionist cannot expect the admiration of any fervent Home Ruler. A Quaker who, though he held war to be inconsistent with the highest form of Christianity, yet urgently maintained that politicians who did not reprobate war as wrong in itself, had no right to denounce the war with the Boers as marked with inhumanity or injustice, cannot receive the applause of one who held, rightly or wrongly, that the South African war was needless. All that need here be insisted upon is that Bellows, whether as a politician or a philanthropist, was all of a piece. He may have committed errors of judgment, but he was absolutely free from either self-interest or partisanship. He exerted an influence of a kind which could never be gained by any politician, because he appealed with unrivalled force to the moral convictions of Englishmen, and, as every one who knew him felt, had no concern but for the promotion of righteousness.

But here we turn to what was really the essence of the life no less than of the charm of John Bellows—his vivid and living religious faith. Quakerism is to outsiders, such as is the present writer, apt to seem a drab-colored faith. A Quaker is to ordinary observers a benevolent and humane person. He wears, or used to wear, a peculiar dress; he says "thou" or, rather, "thee" where the rest of us say "you"; he will not "swear," though he will "affirm"; he is, above all things and on all occasions, a devotee of peace. These peculiarities belong, or did belong, to a Quaker; they are several of them admirable, but they are none of them very interesting. They lack interest because they are the embodiment of rules which conceal rather than illustrate the principles they are meant to exemplify. Even to some Friends, as we may conjecture, these precepts have taken the place of the fundamental ideas which to George Fox and his immediate followers constituted the essence of Quakerism. These ideas can never lack interest; they can excite opposition even where they do not gain sympathy, but in reality it is impossible that they should not often arouse not only attention but sympathy. For ideas or truths that at one time were the peculiar property of Quakers, possess a very significant affinity with certain modern beliefs about God and man. Now the salient feature of John Bellows as a representative of Quakerism was that, while he was in one sense a very strict Friend, the vividness of his imagination and his faith enabled him to go back to the principles on which Quakerism was founded. He escaped from precepts to doctrines, from the letter to the spirit.

Even to illustrate this characteristic at all satisfactorily would require more space than can be conceded to any writer in the *Nation*, and would lead to the consideration of topics hardly suited for the pages of a newspaper. One example must suffice. On nothing did John Bellows insist more consistently, both by word and by action, than on the "great truth" taught by the early Friends, that we "should endeavor to walk according to our *measure* of light, and the state in which we are"; whence he drew the inference that "few things do more practical mischief than the notion that because we are not what we ought to be, it is of no use trying to do anything until we are." This faith looks like a truism; but, let it once be put into practice as it was daily by John Bellows, and we see that it affects the whole theory of religion and the whole conduct of life. For one thing, it breaks through the hard line drawn by many sincere Christians between the converted and the unconverted; who, in the words of John Bellows, "make out, resting upon a *half truth* (which is often a *whole lie*) that anything and everything the latter do is wholly displeasing to God. But they entirely ignore what Fénelon bore witness to—that God speaks in the hearts of the unconverted in a variety of ways, *to draw them to Himself*. If there is *any measure* of yielding to this drawing, does it need argument to prove that, *in so far*, the person who endeavors so to yield is acceptable to God?" What is of far more consequence than even the preventing a real distinction from being turned into a misleading division is, that this doctrine affects the whole conduct of any Christian teacher. This was so at any rate with Bellows. Not his intellect only but his imagination and his soul seized firm hold of the belief in the measure of light. Hence he could tell strange Russian Jews, who at first looked upon him with suspicion, that their duty was to believe in and practise all that was best in Judaism. He could do much more than say this. Though he could speak only through an interpreter, he could bring home his conviction to his Jewish audience so that they blessed him for his message, and realized perhaps for the first time all that a good Jew and a real Christian had in common. He could tell Tolstoy's daughter without any compromise of his own firm Trinitarianism that, though he trusted she might see more light, her one duty was to follow the light that she did see, and wait till God showed her more.

The 'Letters and Memoirs' of Bellows literally teem with examples of the way in which this belief in the measure of light brought him into unity with, and enabled him to arouse all that was good in, men of different creeds and of different races. With no class, one would think, must a Friend find it harder to deal than with soldiers. To John Bellows the matter presented no difficulty whatever. He met two English soldiers on the way to their homes before joining the army then fighting the Boers in South Africa. The men would no doubt soon be engaged, and might likely enough die in battle. He showed them in the first place great and practical kindness. He then wrote them a letter which was certainly kept and could hardly in any case have been forgotten. Take but a few words from it:

"*If* you should [thus die], get this thought fixed firm in your hearts beforehand, and you will find it will hold you up even in death—that God who made you is as near to you as his own breath is, and that His Spirit keeps in touch with your spirits: so close in touch that He does not even need a cry from the lips to reach Him, only . . . a determination to trust in His goodness and mercy, . . . or, to put it into Bible words, He is able to save to the *uttermost* all that come unto Him: and in His own words, 'Him that cometh unto Me I will in *no wise* cast out.'"

This language, some logician will tell us, cannot be reconciled with Quakerism. The words might and assuredly would have been applied by the speaker to Boer soldiers going to join the native army, no less than to the soldiers of the Queen. They are, like every word uttered by John Bellows, vivid words of life, spoken by a man who was himself full of life.

DILL'S ROMAN SOCIETY.

Roman Society from Nero to Marcus Aurelius. By Samuel Dill, M.A., Hon. Litt.D., Hon. LL.D., etc. Macmillan. 1904.

With the time and energy spent upon the subject, it might seem a matter of surprise that the facts of Roman society have not

long ago been duly assorted, labelled, and put upon the shelf; but the wraith is not at rest even yet. Under the influence of common historical tradition, it is hard to think of anything good at all in connection with an age and an empire which put a Nero and then a Domitian at the head of the civilized world. Andrew D. White, in commenting upon the famous satirical tractate in which a clever German professor used the faults and follies of Caligula to condemn by inevitable suggestion the career of the German Emperor, has recently said: "As men began to think, they began to realize that the modern German Empire resembles in no particular that debased and corrupt mass with which the Imperial Roman wretches had to do, and that the new German sovereign, in all his characteristics and tendencies, was radically a different being from any one of the crazy beasts of prey who held the imperial power during the decline of Rome." There are not wanting among recent critics, on the other hand, those who assail with great vigor the trustworthiness of the evidence on which such an unfavorable view is based. Even Nero has found an apologist in an Oxford devotee of historical research, and it is now generally admitted that much of the odium has been lifted from the memory of Tiberius, though we may not follow Mr. Tarver in setting him up as the ideal Roman. Evidently, then, the problem of Roman society under the Empire has not reached a state of stable equilibrium, and Mr. Dill cannot be accused of spending his years in flailing away at straw from which the grain has already been exhausted. And in spite of the words of Dr. White, the differences between the society of Rome and that of the German Empire or any other modern civilized nation are not so great as to deprive the lessons of the former time of a very vital bearing upon the problems of our own.

The author's general method is similar to that of his study of Roman society in the last century of the Western Empire, published six years ago. In the present volume, his materials are grouped under three main headings, Social Life, the Gospel of Philosophy, and the Revival of Paganism. We may take the phrase of Horace, *aurea mediocritas*, as the key to his general attitude towards the many debatable problems naturally arising in such a series of studies. Rome was neither the Sodom and Gomorrah which the Christian moralist is readily tempted to paint it as an effective background against which to display the comparative purity of New Testament morals, nor yet was it the paradise of virtue which it might have been, had its best pagan preaching been a correct index of its actual life.

Professor Dill does not, of course, attempt any unified characterization of his period as a whole. "The truth is, that society in every age presents the most startling moral contrasts, and no single comprehensive description of its moral condition can ever be true." There is certainly contrast enough between Nero and Marcus Aurelius, "the tyranny of one of the worst men who ever occupied a throne," and the "mild rule of a Stoic saint"; but even here we are cautioned against the hasty conclusion that the change at the head marked any deep-seated moral revolution among the masses. The old Roman character was a stubborn type. Contemporaneously with the brutalized court circle around a Nero, it could preserve a respectable nobility of no mean numerical proportions, either geographically aside from the reach of infection or morally immune, There was the idle mob of poor in the city, living upon the largesses of those who had an interest in the purchase of its favor, but there were also, in districts remote from the city's demoralizing influences, thousands of industrious families digging an honest living out of their little farms after the humble and self-respecting manner of the older days. And if the mephitic exhalations from Nero's circle could not rot the good all out of his empire, neither were its baleful elements withered away under the healthful moral sunshine radiating from the court of Aurelius.

But, without any revolution radically affecting the great mass of the population, Professor Dill does find certain moral forces so busily at work as to constitute a distinctive feature of the period. The dominant attitude of those who thought seriously upon such matters was one of sincere groping for a better foothold than the traditional faith had been able to furnish. The Roman religion spent itself upon the outward act of formal worship, the technical fulfilment of a vow to do some specific thing; it set up no ladder for the soul that aspired to climb above the earthy level, held out no sure promise of a recompense beyond the grave for the hungry spirit that could find no satisfaction in the paltry pleasures and rewards of the present life. Hence the eager turning to the various faiths to which imperial expansion gave an easy channel of entrance from the East, such as the religions of the Magna Mater, of Isis and Serapis, and preëminently of Mithra. In some of these cases, of course, the higher element desired came freighted with accretions that wrought disastrous demoralization; but in the aggregate there was a real moral gain, and especially so in the introduction of Mithra, the God of Light, whose robes had been kept comparatively clean of the licentious contaminations from which the religions of the East so easily suffered. This tendency among the choicest spirits to turn to other gods for the higher things, naturally put the devotees of the national faith on their mettle, and the revival of paganism which began under the influence of Augustus, largely from political motives, was marked later on by a sincere attempt to prove the old religion adequate to the satisfaction of all legitimate demands of the soul.

The one seriously vulnerable point in Professor Dill's method, we think, lies in his attempt to treat this phase of his subject entirely aside from its connection with the existence and rapid growth of Christianity in the Empire. It had become a noticeable factor in the life of the capital at the beginning of his period, and it was seriously worrying the governors of the provinces long before the period came to an end. It is hardly logical to assume that the clutching at Mithra for a better life in this world and a more confident assurance of immortality had nothing to do with the existence of a faith which put its main emphasis upon these very points. There is a strong scientific presumption that such an element must have reacted vitally upon all lines of moral development, in some way or other, and to eliminate it from the discussion is to insure inadequacy, if not inaccuracy, from the beginning. We may agree with the author, and with M. Boissier, whom he quotes in justification, that the historian of the Antonine period is free to treat paganism apart from the growth of the Christian *Church*, but the Christian religion and the Church as such have never been exactly identical, and the one has been excluded quite as strictly as the other. It would have been better to brave all controversial difficulties and present the matter whole.

Recent criticism has brought it about that the attitude displayed towards Tacitus is, within due limits, a very fair test of the fitness of a writer to deal with the period which Tacitus covered. For centuries his burning words were read with no thought of due allowance for the personal equation, and the result was a greatly distorted view of Roman history at some of the most important points. Then careful scholars began to read him with a better appreciation of his temperament and his point of view, and to correct his biassed opinions from his own conscientious statement of facts. At once a third class sprang forward, actuated perhaps too often by what Professor Dill calls "the scholarly weakness for finding a new interpretation of history," ready to fling his hitherto honored statue down the Gemonian stairs as that of an intentional traducer of his people and their rulers. To accept the one extreme or the other is to go hopelessly astray from the very start, and Professor Dill is too competent a scholar to do either. Indeed, it would be hard to find a better brief summary of the character of Tacitus as a historian, both in his merits and in his defects, than is presented in a few pages of the opening chapter. We commend these pages especially to those narrow-visioned critics who have not been able to realize that historical justice to Tiberius involves no serious detraction from the fame of one of the most effective and suggestive writers of history who ever lived, whether in ancient Rome or in any other land or age. The key, of course, lies in recognizing him primarily as a moralist. "The ideal which he is avenging is not a political but a moral ideal. The bitter sadness is that of a profound analyst of character, with a temperament of almost feverish intensity and nervous force." During the period covered by his historical studies, the transmission of the imperial sceptre had been attended by a personal descent in moral level in every case save that of Vespasian, and the outlook was certainly not hopeful.

It is easy to assume too radical a divergence between the Rome of Tacitus and that of the younger Pliny, and we are not sure that Professor Dill is careful enough to present the two writers in their proper relation. It did not fall in Pliny's way to present the dark features of Roman life so prominent in Tacitus, but there is ample evidence in his letters of his knowledge of the existence of those features. His moral nature, though of equal fineness, was not so insistent. He lays the burden of the time aside and tells us cheerily of many things that pleased him; but that burden was bound fast upon Tacitus by the hand of inevitable Fate, and the evil which he was thus forced to denounce precluded more than a merely incidental expression of counterbalancing good. The close and lasting friendship between the two was no doubt based upon moral and political views es-

sentially harmonious, and we but throw dust in our eyes if we imagine serious variation.

In general, it may be said that Professor Dill is quite happy in his treatment of the names which belong to the literary history of Rome as well as to its social history or its politics. It takes a broad mind to sympathize warmly with the moralizing of Seneca, and still to appreciate heartily the mire-stained pearls of the 'Satiricon' of Petronius. The repugnance sometimes expressed towards Seneca tries his patience: "His apparent inconsistency has condemned him in the eyes of an age which professes to believe in the teaching of the Mount and idolizes grandiose wealth and power. His rhetoric offends a taste that can tolerate and applaud verbose banalities with little trace of redeeming art." The forced and extravagant character of his rhetoric is of course admitted, but the sincerity of his moral teaching is vigorously defended. "The Christianity of the twentieth century might well hail with delight the advent of such a preacher, and would certainly forget all the accusations of prurient gossip in the accession of an immense and fascinating spiritual force." There was a consuming moral earnestness in his preaching, we are told, firing it with the emotion of modern religion and driving it down to the roots of conduct, where lie the fundamental principles which are true for all ages alike. Whether this is fully warranted or not, it is well that a Christianity somewhat overloaded with the characteristic Anglo-Saxon intolerance should be called back to a careful review of some of the more important visions of moral truth which have been vouchsafed to seeking souls generally discredited as outside the pale. Even in Petronius Mr. Dill finds indications of commendable moral purpose.

"We may perhaps surmise that he was at once perverted and disillusioned, alternately fascinated and disgusted by the worship of the flesh and its lusts in that evil time. . . . Is it not possible that the gay, elegant trifler may sometimes have scorned himself as he scorned his time? Is it not possible that along with other illusions he had parted with the illusions of vice, and that in the 'Noctes Neronis' he had seen the adder among the roses? He has written one of the keenest satires ever penned on the vulgarity of mere wealth, its absurd affectations, its vanity, its grossness. May he not also have wished, without moralizing in a fashion which so cultivated a trifler would have scorned, to reveal the abyss towards which a society lost to all the finer passions of the spirit was hurrying?"

This and the volume of six years ago, though free of any statement to that effect, convey the impression that the author intends to fill the intervening gap at least, if not also to go still further back and give a volume to the century from Julius Cæsar to Nero, thus covering the social development of the Empire from its beginning down to the cessation of its formal existence in the West. Doubtless there were personal reasons compelling the illogical order in which the different divisions of the period have so far been taken up, but it is a misfortune, nevertheless. The forces Mr. Dill deals with were continuous in their development, and could best have been investigated and presented to the reader by following the current. In conclusion, we want to emphasize the point that this volume is not a mere raking over of dry bones, with nothing but an antiquarian interest for the reader of to-day. It is more vital to the student of modern social, religious, and political tendencies than a large share of the strictly modern sociological theses, studies, and dissertations now issuing in such profusion from the workshops of the doctor-making universities. And, aside from its inherent importance, its thoughts are so lucidly and attractively expressed that no intelligent reader, whether a Latinist or not, can fail to find it pleasant reading.

The Napoleonic Empire in Southern Italy and the Rise of the Secret Societies. By R. M. Johnston. The Macmillan Co. 1904.

Mr. Johnston's first book dealt with the *Risorgimento*, and his second with Napoleon. In his third he brings Italy and Napoleon together by sketching the annals of that short-lived state which, after having Joseph Bonaparte for its first ruler, passed into the hands of the more brilliant and daring Murat. Nelson's relations with the Neapolitan Bourbons, the feats of Fra Diavolo, and the tragedy with which French pretensions to Southern Italy closed, are all familiar subjects; but when we turn from the picturesque and anecdotal side of Neapolitan affairs during the Napoleonic period to the details of domestic reorganization, we enter a region which, for most readers, is *terra incognita*. Mr. Johnston's efforts would have been well put forth had he done nothing more than revive the memory of one quiet and patriotic reformer, Giuseppe Zurlo.

When the French Revolution broke out, there was no part of Europe which required renovation so badly as the realm of the two Sicilies. Taine has given us, in his 'Ancien Régime,' a long series of graphic statistics concerning the misapplication of public funds in France and the unfortunate consequences of privilege. In many of the German states the general conditions were equally bad, and sometimes may even have been worse. But northern Europe never suffered quite so severely from the operation of outworn feudal customs as did Naples and Sicily in the second half of the eighteenth century. On the whole, we have found Mr. Johnston's first chapter a more striking piece of portraiture than any other portion of his two volumes. Taking up the state of Naples in 1805, he shows how feudal tenures of fifty different kinds

"involved services in person, payments in kind and in money, under more than 1,400 specified heads. . . . There was a tithe on hens, a tax for keeping them within doors, a tax for setting them, for killing them, on their eggs; in some baronies it was forbidden to dispose of them; in another, the right of taking as many of them as the Baron required was asserted. . . . Fuel was taxed as thoroughly as food: hearths paid toll, while even pine cones and dead leaves did not escape detection. . . . At Tufara the peasant was made to pay for the notable privilege of throwing the *immondezze* of the household out of the windows into the street, while at Conversano the cause of sanitation was dissimilarly advanced by the Baron, who exacted payment for the privilege of constructing a drain."

Of course, people like the *lazzaroni* of Naples do not want to be reformed, nor are they quick to appreciate the benefits of a decent administration even when these are thrust upon them. The chief interest of this work centres in the activities of men who sought to give Naples something of the blessings that France enjoyed under the Code. In times past, historians have lavished too much notice upon Mary Caroline and her inconsequent husband, Ferdinand—a man who could cheerfully go hunting while the funeral of his nearest relative was proceeding. Of far more consequence than this self-indulgent Bourbon and his meddlesome queen—of far more consequence, indeed, than Joseph Bonaparte and Murat—are the statesmen like Roederer and Zurlo, who strove with sincere purpose to clear away the evil heritage of thirty centuries. Roederer, working under Joseph, did a good deal to improve the financial condition of the kingdom, but the most lasting results were attained during Murat's régime by a Feudal Commission meeting under the direction of Zurlo.

"In a little more than a year this court disposed of no less than 5,000 cases. . . . The records of the Feudal Commission are voluminous; they are to be found in ninety-six printed volumes and about 5,000 bundles of documents now stored at the Archivio di Stato at Naples. . . . What was perhaps most noteworthy in Zurlo's conduct of this essentially revolutionary work was that he never allowed his zeal for reform and for improving the lot of the peasantry to outstrip his sense of justice and equity. He knew how to refuse the tenant an unjust release as well as how to compel the Baron to contribute his due to the prosperity of the community."

"When uplifting, get underneath" is the shaft launched by a modern satirist against dilettante benevolence. Zurlo certainly got underneath, but the spirit of self-help was even less apparent among the subjects of Murat than it had been among the subjects of the Spanish Bourbon, Charles III. Mr. Johnston's second volume takes up the Carbonari movement which succeeded Ferdinand's restoration in 1815 and culminated in the revolution of 1820. While it is hard, at this time of day, to take characters like Pepe and Rossetti very seriously, the Carbonaro Parliament throws more light upon the Neapolitan attitude towards and capacity for democracy than does any other incident which is connected with the revolutionary movement in Southern Italy. Never has a genuine aspiration for freedom been more highly colored by the ridiculous and the grotesque. For the amusement of Italian students we append a delightful squib which Mr. Johnston has unearthed from the manuscripts of 1820. After the Austrians had chased such of the genuine Carbonari as remained into the mountains of the Abruzzi, the following jest went the rounds of the capital:

"Pulcinello malcontento
Disertò dal reggimento,
Scrisse a mamma a Benevento
Della patria il tristo evento.

Movimento, parlamento,
Giuramento, pentimento,
Gran fermento e poco argento,
Armamento e nel cimento
Fra spavento e tradimento
Siam fuggiti come il vento.
Me ne pento, me ne pento.
Mamma cara, mamma bella,
Prega Dio per Pulcinella."

Mr. Johnston has a great aptitude for the description of campaigns, and gives us an excellent account of the fighting which attended the French occupation of Southern

Italy. Here Murat stands out above and beyond all others, nor has Mr. Johnston neglected to emphasize his best qualities as a ruler. For ourselves we must say that the general reform of Neapolitan administration under French influence seems a much more notable subject than is afforded by the personal experiences of any single actor in this drama, and accordingly we have laid most stress on the motive of reconstruction. Altogether, Mr. Johnston's work is a distinct contribution to knowledge, and strengthens the favorable impression which has been made by his previous books.

Theodore Thomas: A Musical Autobiography. Edited by George P. Upton. Chicago: A. C. McClurg & Co.

Probably the most extraordinary thing about the life of the late Theodore Thomas was that, until prostrated by his last illness, he was never absent from, or late at, a concert or rehearsal during a period of more than fifty years. Mr. Upton gives some striking examples of his tremendous strength. On one occasion, finding his progress on the sidewalk impeded by four ruffians walking abreast, he flung two of them against a building, while the other two went sprawling into the gutter. On another occasion he placed his hand flat down upon a table, and, raising his third finger, brought it down with such force as to make the glasses on the table fairly dance. It was this strength and robust health that enabled him to bear a burden of labor for half a century that would soon have broken down any ordinary person. And his mind was made of the same tough fibre:

"I guess I am a little blue to-night," he once said to Mr. Upton. "I have been thinking, as I sat here, that I have been swinging the bâton now for fifteen years, and I do not see that the people are any farther ahead than when I began, and, as far as my pocket is concerned, I am not as well off. But," and he brought his powerful fist down on the table, "I am going to keep on, if it takes another fifteen years."

Most fortunate it was for the cause of music in America that Theodore Thomas had such strength of body and mind, for he was doing pioneer work in a most unpromising soil—"doing the kind of work for music in this country that the first settler does who ploughs his furrows in the primeval wilderness." When he first came to New York, it took vessels six weeks to cross the Atlantic, and pigs ran through Broadway. For a musician the only resource was joining a brass band and playing for parades or for dancing, or in the theatres. In the autobiographic sketch which takes up the first 113 pages of volume i., Thomas tells us how, when he had to play all night at a ball, he looked on this "as a mode of practice." Once, when hard up, he fiddled in the bar-room of a hotel till he had gathered in what he needed. Later, when he had got as far as giving concerts in New York with William Mason and others, he did not hesitate to stand at a street corner distributing circulars—an interesting detail not mentioned by Mr. Thomas or his editor.

The first conductor who played with a large orchestra in New York was Louis A. Jullien. One of his pieces was a "Fireman's Quadrille," during the performance of which an alarm of fire was regularly sounded, and a brigade of firemen appeared in the hall! Thomas was one of Jullien's violinists for a time, and this may help to explain why he himself, in 1867, when he gave his Terrace Garden concerts, once created a sensation by making the piccolo players climb up into the trees before the piece began. On another occasion the tuba player had been sent behind the audience into the shrubbery. When he began to play, the police mistook him for a practical joker who was disturbing the music, and tried to arrest him. "I shall never forget the comical scene," Thomas writes, "as the poor man fled toward the stage, pursued by the irate policeman, and trying to get in a note here and there as he ran." Possibly it was in consequence of the talent unexpectedly shown by Theodore Thomas in this line that Barnum one day called on him to engage him for a tour of the country.

"After he had gone, and I had recovered from my astonishment, can anybody blame me for feeling properly elated that the greatest manager of the greatest menagerie on earth considered me worthy of his imperial guidance, and was willing to place me advantageously before the public beside the fat woman and the elephants!"

The life of Theodore Thomas thus had its comic episodes, but for the most part it was serious, not to say pathetic. His disappointments were numerous, and it was not till a few weeks before his death that he reached the goal he had striven for all his life—a permanent orchestra in its own hall and with a fund sufficient to take away all worry for the future. One of his greatest disappointments was the Philadelphia Centennial Exposition. The musical programme had been planned on the grandest scale, but "the undertaking was a dismal failure, and the orchestra had to be disbanded at the end of July." This, and later experiences at Chicago, convinced him that people "go to a World's Fair to see and not to hear; to be amused, not to be educated"; and when he was consulted, in 1904, by the commissioners of the St. Louis Exposition, he advised them to give plenty of military music out of doors, which advice the commissioners wisely followed. In such cases Thomas felt himself helpless; he could not compete with all the rival "shows"; but in his life-work as a whole he was successful in convincing thousands that if they would only come to him to be educated, they would remain to be entertained and delighted.

Nothing in these volumes is more suggestive than the reference to his method of coaxing people to his concerts. He liked to give his audiences something "to chew on," as he used to say—but not too much at a time. He put the best music in the first or second part of the programme, and filled the third with popular delicacies, so that the hearers could not get away from the better music without giving up the tinkling tunes. He knew that if they thus heard the good music repeatedly, they would soon learn to prefer it to the syllabub. In his little essay on Programme Making, in the second volume, he explains why Beethoven and Wagner became the pillars, as it were, of his programmes: "Beethoven answers a double purpose: he gives delight to the educated, and teaches the uneducated," while Wagner "represents the modern spirit, and his effective scoring makes the desired climax. Wagner excites his hearers, especially the younger generation, and interests the less musical." But while these were the "pillars," Thomas had room for all the others, of whatever time or country. The second of Mr. Upton's volumes, which is mainly taken up with the best of the programmes arranged by Thomas during half a century (there were over 10,000 to choose from!), attests the great conductor's catholicity of taste, and forms an invaluable document for historians, conductors, and musicians in general. Mr. Upton quite properly says that they form "a complete musical education system."

The Elements of Railway Economics. By W. M. Acworth. Oxford University Press; New York: H. Frowde. 1905.

An intelligent man, if he will apply his mind for a few hours to the study of this little book, may have a clearer understanding of the problem of railway rates than is now manifested by the President and Congress, by the Supreme Court and the Interstate Commerce Commission, and by most of our public speakers and newspaper editors. Mr. Acworth complains that he was forced to prepare this essay by the lack of a text-book on the subject; but we have no condolence to offer him. He has explained a difficult problem with such admirable lucidity as to bring it within the popular comprehension, and he would have been censurable had he hid his light under a bushel. While his book may have been intended for his students at the London School of Economics, and while its illustrations and applications are primarily English, the American people stand in especial need of its lessons, and their need has never been so great as it will be during the coming years.

The fundamental truth which our people commonly fail to grasp, and which Mr. Acworth establishes in a manner absolutely conclusive, is that equal rates for transportation are impossible. Were all merchandise alike, there might be some approximation to equality; but goods differ in bulk, in weight, in perishability, in value. Iron will bear a rate that coal will not, coal will bear a rate that stone will not, lumber will bear a rate that firewood will not, wool will bear a rate that cotton will not. It is a common belief that rates should be proportioned to mileage; but the claim will not bear a moment's examination. Suppose a railroad joining two cities between which there is communication also by water. It is evident that if the railroad is to carry freight between these points it must be at a rate as low, or nearly as low, as that of water carriage. It is probable that unless the railroad obtains much higher rates for traffic to and from intermediate points, it cannot be operated at all. Forbid the railroad to grant special rates, or rebates, in competition with the water route, and you require it to earn all its revenue from the interior traffic. Hence it must charge higher rates for this traffic; while if it were allowed to compete with the water routes it would earn additional revenue, and would thus be enabled to make lower charges to the intermediate points. And what is true of the competition of water routes is also true of the competition of other railways, and even of highways.

Few railways are operated to their full capacity. They could move more trains, they could move more cars to the train, they could put more freight in the cars which they do move. Suppose a freight train returns empty from its destination; the cost of moving it is nearly as great as if the cars were loaded. If by allowing a rebate of one-half, or of nine-tenths, of the regular rate, a return train-load of freight can be procured, it will pay to allow the rebate. And it will pay not only the owners of the railroad, but also their other customers, who are very likely complaining of the rebate; for the increased earnings of the road tend to bring about reduced charges. In fact, it might almost be said that no road can reduce its charges except by increasing its earnings; and earnings are increased by accepting all the traffic which can be handled—at any rate which produces any profit whatever. Mr. Acworth's demonstration of these truths is beautifully simple, and it would be a fortunate thing for our country were it brought to the public attention. When we consider that our Government is now largely engaged in transporting mail matter; that it charges thirty-two times as much for some kinds of this matter as for others; that it charges as much for carrying a bundle a mile as for three thousand miles; that in many cases the rate of charge is two or three hundred times, sometimes a thousand times, as great as in others—when we consider all this, it is certainly remarkable that any one should propose to make the equalization of railroad rates a Governmental function. Yet this proposal may be carried into effect unless our citizens are willing to listen to men like Mr. Acworth, who are at the pains to present in a few words the lessons derived from a long experience.

Neolithic Dew-ponds and Cattle-ways. By A. J. and G. Hubbard. Longmans. 1905.

"We have no waters to delight
Our broad and brookless vales—
Only the dew-pond on the height
Unfed, that never fails,
Whereby no tattered herbage tells
Which way the season flies—
Only the close-bit thyme that smells
Like Dawn in Paradise."

We wonder how many persons who read this stanza in Mr. Kipling's fine poem "Sussex" understand what he meant by the third and fourth lines. The word "dew-pond" has so far escaped the net of the compilers of the Oxford Dictionary, but it still has a chance to appear under "pond." In the work cited above, the authors endeavor to solve the question of the water-supply of the Neolithic dwellers in hill-encampments on the Downs in the South of England. There were apparently no wells, and they had to depend on the "unfed" artificial dew-pond. The art of making these has never quite died out in England. There are still wandering gangs of men whose trade it is to construct for farmers a pond which, in however dry a situation, will contain more water in the summer heat than in the wet winter season. The supply is independent of springs or rainfall. The dew-pond makers

"hollow out the earth for a space far in excess of the apparent requirements of the proposed pond. They then thickly cover the whole of the hollow with a coating of dry straw. The straw is then covered by a layer of finely puddled clay, and the upper surface of the clay is closely strewn with stones. The pond will gradually become filled with water, the more rapidly the larger it is, even though no rain may fall. . . . During the warmth of a summer day the earth will have stored a considerable amount of heat, while the pond, protected from this heat by the non-conductivity of the straw, is at the same time chilled by the process of evaporation from the puddled clay. The consequence is that, during the night, the moisture of the comparatively warm air is condensed on the surface of the cold clay. As the condensation during the night is in excess of the evaporation during the day, the pond becomes, night by night, gradually filled. . . . In practice it is found that the pond will constantly yield a supply of the purest water."

From all which we may justly conclude that labor was more available than boring tools for Neolithic man, and that even now there is a good deal of leisurely and cheap labor in the South of England.

Closely connected with the dew-ponds are the cattle-ways down which primitive man drove his herds from the entrenched settlement to water. These ponds were always outside the earthworks, and were themselves sometimes fortified. As for the encampments themselves, the readers of Mr. Hardy's 'Mayor of Casterbridge' will remember his description of the huge, mysterious earthworks outside Casterbridge (which is, of course, Dorchester). Maumbury Ring, as it is called, is an oval structure measuring 218 by 163 feet. Its embankment is about thirty feet high. At the northeast there is an opening some thirty feet wide. Mr. Hardy always refers to this Ring as a Roman amphitheatre, but the present writers maintain that it is a solar temple, one of the earliest of its kind, having the orientation of Stonehenge and originally holding a sun-stone in its eastern cleft; the stone itself was still to be seen in the eighteenth century. Where Mr. Hardy and the majority of antiquaries see "the slopes lined with a gazing legion of Hadrian's soldiery," our authors, carrying their imaginations further back, behold hordes of Neolithic men. Just so were their settlements constructed. All through the Downs can be traced vast hill-encampments, in some cases as old as the Egyptian pyramids, and built, it must be remembered, without metal tools. Specimens of their flint tools have been found in the neighborhood. The remains of dew-ponds are always to be found near them, with the cattle-ways as has been described.

The whole study is well worth reading even by those who have no immediate interest in antiquarian topography. There are numerous and very clear photographs of dew-ponds both dried up and still in commission, and of those imposing embankments wherein primitive man toiled to entrench himself and his cattle against wild beasts and hostile neighbors.

Philosophy as Scientia Scientiarum, and A History of Classifications of the Sciences. By Robert Flint. Imported by Charles Scribner's Sons. 1904.

A Syllabus of Certain Topics of Logic. By C. S. Peirce. Boston: Alfred Mudge & Son. 1903.

Judicious and thorough, the historical part of Dr. Flint's volume satisfies well the conditions that are most essential to a satisfactory history of any department of philosophy. Devoted students of the subject, the few there are, will not need to be told this. It is not merely that Dr. Flint's skill in the clear presentation of the history of philosophy is known to them by his 'Vico,' his 'Historical Philosophy in France,' and his 'Philosophy of History in Europe,' but that for now nearly twenty years they have had the larger and major part of this very work at their elbows, undeterred by its obliging them to harbor volumes of the old-fashioned review in which it first appeared, ponderous volumes—in their avoirdupois we mean, and not merely in their tone. A certain tell-tale redolence of the quarterly-reviewer clings to Dr. Flint still, in a habit of pronouncing judgment concerning questions of philosophy and criticism without having submitted much evidence, if any, to the judgment of the reader, to whom alone it really appertains to pass judgment. This harmless addiction is certainly not a mark of great philosophical strength, nor can that quality be claimed for Dr. Flint; but it has been one of the foibles characteristic of Scottish philosophers, and we all know how the stock of one or two or these has been rising of late in the world's market of criticism. That man has not learned to read philosophy to serious purpose who, other things being equal, does not more enjoy, in a discussion of a *purely theoretical* question, to read that from which he deeply dissents than that with which his own opinions mainly concur. Besides, Dr. Flint's habit brings along with it that sturdy Scottish freedom of private opinion which does not quail before the face of any host of authorities—a trait, for all its amusing us at times, which in a historian of philosophy is as valuable to his student, after those of thoroughness, level-headedness, and fairness, as any that occur to us, simply because the writer who possesses it suggests ideas, while he who follows the great authorities suggests nothing to the student who reads their works for himself.

If Dr. Flint asserts many things which, so far as appears, he is unable to prove, they are for the most part propositions which recommend themselves to natural good sense, and thus at any rate suggest interesting questions. He has attempted no classification of his own, and, as long as he has not been moved to do so, we need not lament it. In this and other historical works he has employed his philosophical capacities with such wisdom as to render them more conducive to philosophical progress than those of many a more vigorous thinker, though it be only indirectly, by the pabulum his works afford to the more vital thought of others. We must say, however, of this book that its utility would have been appreciably enhanced if an appendix had exhibited the schemes of those classifications which are described merely in general terms in the text. Moreover, we should have preferred an alphabetical index to the analytical table of contents that is furnished; but why might we not have had both?

As for fairness, perfection in this virtue is as unattainable as in any other. Dr. Flint is a professor of theology, and it is to be presumed that some cause renders it more difficult for divines to be fair than for other men. We quote the passage which seems to be the most suspect in this respect of any in the book:

"We now reach Auguste Comte, than whom,

perhaps, no one has done more for philosophy as positive. He owes the high place he holds among philosophers to the power and skill and general truthfulness of his elaboration of the doctrine of the so-called positive sciences as a whole, not to the merits of his treatment of the particular problem of the classification of the sciences. He claimed, but had no right whatever to claim, that he originated the classification which he adopted. If that classification possess any merits, they must be ascribed to Dr. Burdin, who conceived it, and to Saint-Simon, who first received and published it; not to Comte, although he showed how much could be made of it. . . . The classification cannot be dissevered from the celebrated 'law of the three states.'"

As to this law, M. Lévy-Bruhl remarks that it

"had been anticipated and even already formulated in the eighteenth century by Turgot, then by Condorcet, and by Dr. Burdin. Comte, nevertheless, takes to himself the merit of the discovery. As he is generally most precise in doing full justice to his precursors, we must admit that, according to him, none of them had seen the scientific importance of this law. It certainly is one thing to gather the notion of a law out of a number of facts, and another to understand its capital importance, and to discern in it the fundamental law which governs the whole evolution of humanity."

It will be seen, from this admission of a writer who, though not a Comtist, is extremely favorable to Comte, that no charge of unfairness on the part of Dr. Flint can be sufficiently supported upon his rather harsh phrases. It is by no means beyond a doubt that the general truth of the Comtian classification depends upon that of the law of the three stages.

It may very likely strike the general reader that the classification of the sciences must probably be a very small matter to have a history that can be expanded into a book. How many such classifications have ever been proposed in all, he may ask? Dr. Flint does not tell, nor can the reviewer; but the latter has examined upwards of a hundred that may fairly be said to be independent of one another. Of titles of publications approximately covering the question, Dr. Ernest Cushing Richardson, in his book called 'Classification,' enumerated about half as many again; but these are not all independent. Their multitude will not appear surprising if one considers that, in the first place, the different writers aim to make their several classifications subserve several widely distinct purposes, and that their theories of the nature of classification in general are very diverse; that, in the second place, the general word "science" means, for some, what *scientia* and *ἐπιστήμη* meant for the ancients, while for others it means, with Coleridge, systematized knowledge, and, with a third party yet, the whole business of research as an existing activity; that, in the third place, those who entertain substantially the same notion of science in general, may nevertheless differ as to the nature of "a science"; and that, in the fourth place, while the majority of those who attempt to classify the sciences have in view all possible sciences, there are not a few who intend only to enumerate those which have hitherto developed somewhat extensive doctrines. Thus there is no lack of substance for the history.

The second title at the head of this notice is that of a brochure distributed last winter, which gives an outline sketch in four pages of a somewhat elaborate inquiry into the relations of the actual living and advancing studies as they are conceived by the researchers themselves. The outline embraces only theoretical sciences of research; but the study on which it is based allots considerably more space to the practical sciences.

Dr. Flint's essay on philosophy as *scientia scientiarum* sketches his own notion of what philosophy should be. There is little argument in it, and that little rather inconclusive.

Manual of the Trees of North America (Exclusive of Mexico). By Charles Sprague Sargent, Director of the Arnold Arboretum of Harvard University. With six hundred and forty-four illustrations from drawings by Charles Edward Faxon. Boston: Houghton, Mifflin & Co. 1905.

The times are ripe for this book. In this country there is an increasing interest in forestry and in trees as trees. The large and expensive volumes of Professor Sargent's 'Silva of North America' are now accessible in public and private libraries throughout the United States and Canada, to those who wish to identify the native species of ligneous plants; but, from the nature of the case, such consultation must needs be in the house. Every lover of trees desires to take into the field some convenient guide which can answer a good share of his questions offhand. This task of providing a handy book of reference in field-work fell naturally to the author and illustrator of the 'Silva,' Both have done their work well. While disagreeing wholly with certain features of the nomenclature both in the 'Silva' and in this Manual, and not favoring the splitting up of certain species, we are far from withholding hearty praise to the industry which has brought this mass of materials together, and to the marvellous skill of the artist, who has given to all the sketches, more than six hundred in number, a delicacy and strength which belong to the very first order of illustration.

According to the classification now generally adopted by naturalists as exhibiting best the evolutionary relationships of vegetation, this volume begins with the Pines and their allies, close cousins to the Ferns and *their* kindred. Then come the Palms and the Yuccas. From these we pass to the Walnuts, Willows, Birches, Beeches, Oaks, and Elms, concerning all of which the amateur desires to know much both in summer and in winter. In the new classification of plants, known as Engler's, and here used as the basis, one comes next to the Magnolias, Sassafras, Witch-hazel, and Plane-trees. And now we are brought face to face with the groups which will cause much perplexity among the students of this treatise, namely, the Thorns. The genus Cratægus, the common Hawthorn, everywhere known for its fine foliage, handsome flowers, and richly colored fruits, is here made to pay the penalty of its caprice. Many of the species are extremely variable, diverse characters appearing sometimes on the same plant. Doubtless writers have hitherto been too conservative, making fewer species than this polymorphic genus is entitled to; but one shudders at the thought that the genus as represented in North America (exclusive of Mexico) is here divided into 131 species, to all of which names have been given, for which descriptions have been made, and illustrations drawn. A fate worse than that which has befallen the genus Rubus (the Bramble), at the hands of certain botanists in the Old World, has befallen our hawthorns. It is to be feared that our amateur botanists will now treat the hawthorns as Old-World botanists treat the brambles, namely, they will let them alone, since the identification of species based on very minute characters is hardly more attractive as a branch of study than the matching of patterns anywhere. One thing, however, is brought out clearly by such a presentation of slight characters in a genus—the point of view is everything. Otherwise it would not be possible that the genus Cratægus, when reviewed in Engler's 'Pflanzenfamilien,' should be credited with only forty species for the whole world, and should, besides, have its identity lost by being merged with another genus, Mespilus. In the Manual, the genus not only preserves its individuality as a genus, but is stated to contain within the limits mentioned more than one hundred and thirty species.

It is highly probable that in the genus Cratægus and the near of kin, the Brambles, we have some species *in the making*. Such mutations are attracting great attention in certain quarters, and deservedly: a minute trustworthy pictorial record of such changes and changings must have its value. To Mr. Faxon's unerring eye and pencil we owe such a record. It will be very interesting to see how many of these species will stand the test of the short period which will elapse before a second edition of the Manual is called for. It is noticeable that a few of the new species of Cratægus even recently described have fallen by the way, or perhaps have been assigned to other positions in the list. It is worthy of mention that a recent treatise on the Plants of the Southern States contains more than 180 species of Cratægus within those limits alone. This must be interpreted, we think, that, in the recognition of species, the personal equation as well as the point of view is an important factor.

The Italian in America. By Eliot Lord and others. New York: B. F. Buck & Co. 1905.

The authors of the above work have done a service to students of Italian immigration in bringing together in book form the data, statistics and information relating to Italians in the United States which have from time to time appeared in American magazines and reports. In this compilation, some parts are taken bodily from other works without citation of the sources or even the use of quotations marks. But the labors of others are here presented in logical sequence and in a sympathetic spirit, resulting in an interesting and readable book.

The design of it is stated in the preface to be to "present clearly the contribution of Italy to American development and citizenship." In fact, however, the compilers do not and cannot carry out such purpose. It is too early to examine the effects of Italian immigration on our country; all that can be done is, as is here actually done, to present the ethnic and historical antecedents of the Italian, which are certainly in his favor, and to study what the Italian immigrant has been doing

here in the twenty-five years since his advent. Some popular fallacies in the mouths of people who ought to know better, such as the assumption that the influx from Italy is affecting racial character, are ably exposed. But the popular ignorance regarding the stranger within our gates seems so ingrained that it is doubtful if even the mass of evidence gathered in this book will convert the unconvertible. The protectionist tendencies of the nation undoubtedly affect public opinion regarding immigration. "America for Americans" is still the favorite phrase, and no amount of proof of the desirability of foreign recruits, such as is presented in this book, will affect preconceived opinions.

Mr. Eliot Lord's chapters on "The Flow of Emigration" and "The Inheritance and Progress of United Italy" are forcibly written. On the other hand, "Causes and Regulation of Italian Emigration" is a rather feeble summary of the existing Italian Emigration law and its application. The causes of the drifting of Italians to our cities are sufficiently explained, and the success of certain experiments in agricultural colonization interestingly set forth. But one looks in vain for an answer to the really vital query, "How can the Italian immigratory current be turned towards the country?" The success of the Italian agricultural colonies at Independence (La.), Bryan (Tex.), Greenville, (Miss.), Vineland (N. J.), and Asti (Cal.), is given undue importance and a misleading significance. These colonies represent a class of immigrants different from the great mass of their countrymen who come here. The latter, it is true, are peasants, but peasants without means to speak of, and looking for work which will yield immediate profit. To expect these to buy land, even on the most generous terms, and to wait till the first crop for profits, is to misunderstand the character of such immigration. This fact seems to have escaped our authors, and their work is silent on this, the most pressing and important question. When they affirm that the real problem is one of distribution rather than of restriction, they only restate the question in different terms. What we must know is how to obtain such distribution. We believe it is at present impossible through what might be called natural methods, both because the demand in the cities is still active, and because the demand from the country is not made sufficiently attractive. The New Orleans and Erwin lynchings of Italians have had a direct economic effect, for it will be long before Italians will care to take chances in what they still think "a wild section." The book is lacking in another essential—a study of the second generation of Italian immigrants. That generation has done enough already to deserve attention, and would be a fairer and safer test of the desirability of Italian, or of any other, immigration. Mr. Barrows's chapter on "Pauperism, Disease, and Crime" is a noteworthy contribution, from a most competent source, to a subject about which there is both confusion and prejudice.

The book is not free from dubious assertions, such as that the Italian Government "is moving vigorously for the protection" of its forests, or that the Ministry of the Interior is directly interested in the application of the Italian Emigration law. Likewise one might challenge the statement that "the organization for self or coöperative help is now widespread" among Italians here, or that "the innate bent of the Italian for politics is, in truth, strongly marked, and nowhere is this more plainly shown than in America." The last chapter, on "Privileges and Duties of Italian American Citizenship," is rather meaningless except as a poor example of spread-eagle Americanism. It bears evidence of the best intentions, but breathes a spirit of "benevolent assimilation" in striking contrast to, if not in contradiction of, that of the preceding chapter on "Progressive Education and Assimilation."

Talks in a Library with Laurence Hutton

RECORDED BY ISABEL MOORE

Mr. Hutton was one of the kindliest and most genial of men, and drew to himself a host of friends—players, writers, artists, and well-known men in every walk of life. Further than this, Mr. Hutton possessed a fascinating collection of portraits, autograph letters, inscribed books, play bills, and other literary and artistic bric-à-brac. It was in the room containing this collection that Mr. Hutton talked with Mrs. Moore. Browsing among his treasures, he would pick up here a book and there a portrait or autograph letter, and as the object brought to his remembrance the personality associated with it, he would have something to say concerning the personality and the occasion. Nothing could be more spontaneous and less artificial than this record of talks with such a charming host.

It may be added that the manuscript was revised by Mr. Hutton before his last illness, and the volume stands, therefore, as his final word to his friends and to the public.

Net, $2.50. (By mail, $2.75.) 8vo, with Portrait and 65 other Illustrations

The St. Lawrence River

Historical—Legendary—Picturesque

By GEORGE WALDO BROWNE

Author of "Japan—the Place and the People," "Paradise of the Pacific," etc.

8vo. Fully Illustrated. Uniform with "The Hudson River." Net, $3.50

This work presents in a single volume a succinct and unbroken account of the most important historic incidents connected with the river, combined with descriptions of some of its most picturesque scenery and frequent selections from its prolific sources of legends and traditions. In producing the hundred illustrations care has been taken to give as wide a scope as possible to the views belonging to the river.

Educational.

CONNECTICUT, Old Lyme.
BOXWOOD MANOR SCHOOL.
For Book of Information address,
Miss I. LOUISE TEBBETTS, Prin.

MASSACHUSETTS, Boston.
BOSTON UNIVERSITY Law School.
New features. Address the Dean.
M. M. BIGELOW.

MASSACHUSETTS, Cambridge.
THE GILMAN SCHOOL FOR GIRLS.
ARTHUR GILMAN, A.M., Director.

HARVARD UNIVERSITY
EXAMINATION FOR ADMISSION
Will be held in New York, in the rooms of the Harvard Club, June 26 to July 1 inclusive. The terms of admission, fees, expenses, and privileges in any or all departments of the University may be learned from **DESCRIPTIVE PAMPHLETS**, which *may be had on application* to the Secretary, Harvard University, Cambridge, Mass.

RADCLIFFE COLLEGE
CANDIDATES FOR ADMISSION
and other women who wish to take the Harvard Examinations will be examined in New York, at the same time as the candidates for admission to Harvard University. All information with regard to these examinations may be had on application to the Sec'y of Radcliffe College, Cambridge, Mass.

DIVINITY SCHOOL
—OF—
HARVARD UNIVERSITY
CAMBRIDGE, MASS.
AN UNDENOMINATIONAL SCHOOL OF THEOLOGY.
Announcement for 1905-06, Now Ready.

COÖRDINATE SCHOOLS.
ST. MARGARET'S HALL, San Mateo, Cal,
ELEANOR TEBBETTS, Acting Principal,
BOXWOOD SCHOOL FOR GIRLS, Old Lyme, Conn.
IDA L. TEBBETTS, Acting Principal.
Same courses. Same rates. Same management.
Pupils of either school may spend a year at the other school, for climatic or other reasons, without interruption of studies or disturbance of school discipline, and without added expense except in so far as additional expense is incurred by the journey across Continent. For further information address either school, either principal.

ROCK RIDGE HALL
A School for Boys. Location high and dry. Laboratories. Shop for Mechanic Arts. A new gymnasium with swimming pool. *Strong teachers. Earnest boys.* Fits for College. Scientific School and business. Illustrated pamphlet sent free.
Dr. G. R. WHITE, Principal, Wellesley Hills, Mass.

BERLIN, GERMANY
WILLARD SCHOOL FOR AMERICAN GIRLS
General Courses in German, French, Literature, Art, Music. Prepares for American Colleges. Foreign travel. Twentieth year opens Oct. 4. For circular address Dr. ALICE H. LUCE, Principal, 27 Luitpold Strasse, Berlin, Germany.

EDGEWORTH Boarding and Day School for Girls,
122 and 124 West Franklin Street, Baltimore, Md.
Will reopen September 29, 1904.
Mrs. H. P. LEFEBVRE, Miss E. D. HUNTLEY, Principals.

Summer Camps.

CAMPING TRIP MOOSEHEAD LAKE TO CANADA
For boys and young men. Booklet.
J. EDWIN WING, Cambridge, Mass.

School Agencies.

THE FISK TEACHERS' AGENCIES
EVERETT O. FISK & CO., Proprietors.
4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 155 Fifth Ave., New York; 414 Cent. Bld., Minneapolis; 543 Cooper Bldg., Denver; 80 Third St., Portland; 203 Mich. Blvd., Chicago; 325 Stimson Block, Los Angeles; Hyde Block, Spokane; 420 Parrot Bldg., San Francisco.

ALBANY TEACHERS' AGENCY,
81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions.
HARLAN P. FRENCH Proprietor.

Teachers—Schools—Tutors—Governess—Property. Tel. 6129 18th.
JOHN C. ROCKWELL, Mgr., 3 E. 14th St., N. Y. C.

Situations Wanted.

A COLLEGE WOMAN DESIRES position for the summer as secretary, companion, or governess. Address A, care of *Nation*.

Important Publication

Harry's Aeschylus. Prometheus

Price, $1.50

IN this edition all the information needed by the student for a thorough appreciation of the play is provided. In the introduction particular attention is given to a consideration of the tragedy as a masterpiece of literary art. The notes are full, but fresh, clear, and to the point. The editor has sought to be really helpful to the student in his interpretation of the author. No other edition of a Greek writer lays under contribution for illustration a wider range of literature.

NEW YORK, THURSDAY, MAY 11, 1905.

The Week.

The strike of the union teamsters in Chicago seems to have originated in a sympathetic movement intended to constrain the employers of the garment workers to grant their demands. The teamsters themselves had, in the first instance, no quarrel in any way relating to their own pay, hours, or conditions of work. Whatever the grievances of the garment workers may have been, the Teamsters' Association took part in a fight in which it was not primarily concerned, and in consequence incurred the responsibility of a third party which makes the redress of others' wrongs its object. The limitations upon the sympathetic strike are not slight. If the doctrine is pushed to the limit, it would justify the attempt to paralyze all industry at the instigation of a single body of workers. To involve industries only slightly related to the original source of trouble, thus widening the circle of hardship to the general public, imposed a responsibility upon those precipitating such a struggle which can neither be disguised nor forgotten.

The resort to violence by the teamsters induced the Employers' Association to import strike-breakers from the outside to man their wagons and make delivery of goods. The question of thus superseding workers who have given up their jobs cannot be properly approached, still less solved, by any sentimental gush about aliens "taking the bread out of the mouths" of home workers. It is not out of the mouths of workers, in any case, but of quitters, that bread is taken; and until it is established that there is a certain kind of property right in a particular job, the denunciation of the strike-breaker is simply wasted breath. Philosophic sociologists may differ whether the tenure of a job should be grounded on any other basis than mutual consent. Such tenure hitherto in human history has existed very widely. The industrial system consecrated to the theory was known as slavery, and there are those who argue that a beneficent reproduction of that discarded system might be found in authoritative or compulsory arbitration. But this is a long way off from the Chicago situation. What that city needs is public peace and order, not based on the distant echo of the late election that "the city owns the streets," by which plea fearsome Chicago papers argue for the restriction of civic hostilities to vacant lots or to the suburbs, but on the unassailable right of the individual citizen to be protected by law in his rights of life, property, and liberty. The real friend of the worker, union or non-union, is he who repels every shadow of attack upon the individual's right to decide for himself, uncoerced by social tyranny, when, where, and how he shall work.

The statement filed with the Senate committee last week by the Interstate Commerce Commission has an important bearing on the question of new railroad legislation, because it brings out the nature of the complaints investigated under the existing law. Curiously enough, the number of formal complaints of unjust or unreasonable rates decided by the Commission, with or without hearing, is almost exactly equal to the number of complaints of unjust discrimination so settled. Of the cases taken to the courts, fifteen involved the question of unreasonable or excessive rates, and thirty-two that of unjust discrimination; but while the ruling of the Commission was sustained in only three of the excessive rate cases, it was upheld in eight of those dealing with discrimination. All the witnesses who have testified before the committee have made a sharp distinction between these two problems, and have undoubtedly done much to clear up the general haziness as to the real source of existing evils. At least a month more must be devoted to taking testimony. When we remember the cheerful alacrity with which the House passed the Esch-Townsend bill last winter, the Senatorial patience under this burden of testimony becomes indeed impressive.

Mr. James J. Hill, in his testimony before the Senate Committee on Interstate Commerce last week, made one strong point against the plan of Government rate-fixing for railways. The ability of the railways to finance their necessary improvements and reëquipment, he contended, would be threatened with destruction under such a plan. This argument had immediate reference to the doubt which would certainly spread through the investing community about an enterprise whose revenue-earning power was to be governed arbitrarily by an outside commission. But the reasoning may be carried further. One of the most interesting and most wholesome developments in railway finance, during the past five or six years of prosperity, has been the increased use of earnings to pay for improvements. This reversed the policy of twenty years ago, when our railways were frequently in the habit of issuing bonds for all expenditure of this sort, and using increased earnings merely to swell their dividends. The upshot of that policy was disastrous; the load of mortgage indebtedness proved in the end too great for the industry to bear. The wiser policy of the present day has kept down dividends as compared with the "boom times" of the eighties, but it has placed the railways in a position, physical and financial, which is happily altogether different from what they then occupied.

There are exceptions among the railways of to-day, but the fact that companies which have not pursued such a policy have incurred severe public criticism, and have been adversely rated on the Stock Exchange, shows the trend of feeling in the industry. The point to notice is, that pursuance of this prudent policy has depended wholly on maintenance of the companies' earning power. A commission, scaling down rates, from time to time, to what it might deem a reasonable basis—even to a basis providing for moderate dividends—would still have the power to cut off wholly such use of current income, leaving the companies to pass or reduce their dividends, or to throw on their capital account the entire burden of new equipment and construction. This is but one of many directions in which the proposed rate-regulation act, designed to correct abuse, might easily end by only crippling. The danger is too serious to incur lightly, when the abuses which the proposed law seeks to remedy may be dealt with by the proper use of the machinery already in the Government's hands.

The Supreme Court handed down on Monday an opinion giving finality to the decision of the Secretary of Commerce and Labor to exclude Chinese from entering the United States, even though the Chinese thus debarred are native-born citizens of this country. From the decision of the Secretary there is no appeal, nor any recourse to the courts, even to substantiate the claim of citizenship. Justice Holmes, who delivered the opinion of the majority of the Court, said that, even assuming for the sake of argument that Ju Toy was entitled to the protection of the Fifth Amendment, "due process of law" does not require in his case a judicial trial. This decision is very similar to the one rendered in the case of Sing Tuck versus the United States, and is equally to be regretted. Justice Brewer, with whom Justices Day and Peckham agree in the dissenting opinion, presents very cogently the argument that the majority decision is a denial of Constitutional rights to a member of a despised race. In brief, Justice Brewer contends that

there can constitutionally be no punishment except for crime; that Ju Toy has been judicially pronounced innocent of any crime; that he is subjected to the punishment of perpetual exile from his native land, and is denied the protection of either a grand or petit jury. To all intents and purposes, the decision gives summary and final power to an administrative official to exile forever a native-born citizen of the United States of Chinese extraction, in case the Chinaman ever dares to venture beyond the national boundary line. The decision is unworthy of the Court.

"Sam Fessenden's political heir" is the designation applied to Representative Frank B. Brandegee, who has been selected by the Connecticut Legislature to succeed the late O. H. Platt in the United States Senate. The suspicion that Fessenden's withdrawal from the contest a few days ago was not simply the act of a "quitter"—a tribe cordially hated by the Almighty, as Fessenden emphatically declared in 1896—but a shrewd move to block the State "machine," is apparently confirmed. Brandegee's work as Fessenden's political lieutenant in the contest for the gubernatorial chair in 1900, when the latter's rival, George P. McLean, was elected, is recalled, as well as Brandegee's activity in the contest last January, when he worked with the faction opposed to ex-Gov. Bulkeley's election to the seat of Gen. Hawley. The fact that ex-Gov. McLean was the leading candidate before the caucus at this time gave Fessenden the opportunity for hitting back he has long waited for. Relying upon the argument that Hartford was not entitled to both Senators, the Brandegee-Fessenden combination was enabled to win. Mr. Brandegee is well spoken of in Congress, though his service there has not been conspicuous. As for the effect of the selection on politics at home, we have at least the hope expressed by State Senator Paige at Hartford on Friday, that the new machine will not "hog it" over the State as did the old.

Gov. Deneen of Illinois, in his campaign speeches last fall, declared that he should regard his administration as a failure unless it gave the State a reformed primary. After nearly four months of wrangling over the details, a direct primary bill has at last been agreed on by the Governor, the Lieutenant-Governor, and the leaders of the House and Senate. It applies to all cities, towns, and villages of more than 1,000 population, except Chicago. For county officers the party central committees shall decide whether nominations shall be made directly or by a county convention. The Illinois legislators did not follow the new Wisconsin law to the point of abolishing the State convention, but the voters are to express their choice on the several candidates for the gubernatorial nomination. If one candidate secures a majority, it is to be a binding instruction on the delegates from any locality, while a mere plurality will be regarded as merely an expression of preference. The same rule will apply to Congressional nominations. The most interesting feature is, perhaps, the direct vote for United States Senator. As a State Senator in charge of the bill said, it is "merely to be considered an expression of opinion." This was hardly necessary, as, without an amendment to the Federal Constitution, it could not be legally anything else. But a Legislature will be extremely unlikely to disregard the instructions of a State primary. Here we have another advance in the remarkable movement which is indirectly bringing the choice of Senators into the hands of the people.

Such performances as that at Albany on Thursday lead men to say in their haste that representative government is a failure. The Legislature voted to take certain powers from the New York Board of Aldermen because that body is incompetent and venal. Moved by exactly the same argument, the people might vote to abolish the Legislature. The defeat of the bill for cheaper gas in this city is as shameless a display of corruption as this State has witnessed for many years. The investigating committee had found abundant evidence that the quality of gas is below specification; that the price is extortionate; and that the Consolidated Gas Company is using its monopoly franchise as a letter of marque. Honest men proposed to stop this robbery, but the New York State Senate, led by the notorious McCarren, promptly took sides with the plunderer and against the gagged and bound consumer. Those who followed McCarren offered no defence of their course, for none is possible. Of the Tammany Senators, five were deaf to Mayor McClellan's appeals. Further comment is superfluous; for everybody knows by what argument the gas lobby persuaded men to this treachery.

We extend our hearty sympathy to those ill-treated Senators at Albany who, having sold themselves to the Gas Trust and done their very best to obey its orders, are now denied their thirty pieces of silver. Is there no longer honor among thieves? We decline to believe it. Probably there is merely a misunderstanding, such as a confusion of the retaining fee and final payment. Should it prove otherwise, we hope the injured Senators will sue their employers. They have an admirable case, for here is plainly a breach of contract of a very reprehensible nature, such as could not fail to enlist the sympathy of any court. If, for the sake of avoiding notoriety, they should forswear legal remedies, we would urge the Trust's Senators to console themselves with the thought that, after all, the most important anti-Trust bill was lost, and that the corrective powers, if not the constitutionality, of the new Lighting Commission must yet be tested. Perhaps Gov. Higgins's high praise of the late Legislature because it was not more corrupt, and because there was, after all, a limit to the bad bills it passed, may also somewhat console the patriotic statesmen who must face irate constituents "not nearly as rich" as they confidently expected to be a few days ago.

The Corrupt Practices bill introduced by Senator Brackett was left to die. In burking this measure the Republican leaders have given notice that they do not wish to check bribery at the polls. Although no law can serve as a substitute for an alert public conscience, this bill, drafted by experts, was admittedly a long step in advance of present legislation. It had passed the Senate. The Assembly did not dare defeat it by a direct vote, and therefore tried the trick of an amendment, which would necessitate reprinting and delay. This action, bad enough in itself, is still more sinister as evidence of the attitude of the Republican bosses. The party has been in office too long in this State; its power is too uncontrolled; it is suffering severely for want of an intelligent and able Opposition. In cool and cynical contempt for decency, the Odell machine is a rival of that of the late Senator Quay of Pennsylvania.

As further evidence of her recuperative powers, Baltimore voted last week to spend $13,000,000 on civic improvements, in addition to the $9,350,000 advanced directly after the fire fifteen months ago. Ten millions are to be used to build a modern sewer-drainage system, two millions are to be devoted to opening streets and developing property in an annex to the city, and one million is for the initiation of the system of parks and boulevards as planned some years ago by Frederick Law Olmsted. Of the money appropriated last year $3,350,000 was for the widening of streets and other improvements in the burnt district, and $6,000,000 for new docks and the improvement of waterfront streets. Naturally, the newspapers which have all along advocated these public improvements are elated, and the *Sun* dwells upon the fact that of the 23 candidates for the City Council recommended by the Municipal League 11 were successful. The fact that the Democrats came into the control of both branches of the City Council, and will work with a Republican Mayor in forwarding the im-

provements, is not regarded by the *Sun* as likely to cause a hitch. The responsibility of installing a proper drainage system, which has hung fire for years, will be shared by the Mayor and Council, and, as the *Sun* puts it, "the official who permits politics . . . to stand in the way of this great work can only be regarded as a public enemy."

Our readers will remember that Gov. Vardaman was, on February 23, called from his family circle in the executive mansion at Jackson, Miss., to prevent the lynching of a "black brute." A long letter from a white clergyman describing that night of horror and telling how he, a teacher of the doctrines of the Prince of Peace, tried to stay the Executive's hand and begged him to let lynch law take its course, was printed in the *Evening Post* soon after, as a curious study in clerical morals. Now it appears that the negro, Johnson, who was accused of the crime and who narrowly escaped lynching because, it is believed, of Gov. Vardaman's stand, has been tried and acquitted. The woman who claimed to have been assaulted failed to identify the prisoner, and he was allowed to go free. This is gratifying and encouraging for the future. Had not the Chief Executive of the State interfered, another case of wanton killing in hot blood would have been added to the long list of innocent persons who have been lynched because the color of their skins and the passions of the white mob prevented their having even a chance to prove an alibi.

The unchecked progress of the Undesirable Aliens Bill has given Mr. Chamberlain a chance to break the fiscal truce. On Tuesday week he advocated strongly the exclusion of cheap labor from England, and added that the next step must be to exclude the products of cheap labor. Whether Mr. Balfour accepted the interpretation of his bill as a first stage towards protection, the dispatches do not state. For the bill itself certain considerations speak loudly. The English working class is fairly homogeneous, and has neither the faculty of absorbing immigrants, nor, by moving up a rung in the industrial ladder, of making a place for them at the foot. Immigration, then, is, potentially at least, a disturbing factor. On the other hand, it should be said that England is obviously so bad a field for immigration that she has practically suffered little or not at all from that cause. So far as the Aliens bill is sincere, it represents chiefly the general uneasiness provoked by Mr. Chamberlain's jeremiads. As a sop to labor from a party daily increasing its unpopularity in that quarter, it has an obvious tactical value. The bill naturally has been eagerly opposed by such Liberals as Mr. Bryce and by such Radicals as Sir Charles Dilke, who fear that exclusion, which they regard as unnecessary, will compromise that right of asylum which England has proudly held out to all the world.

Full reports of the interpellation on the Moroccan affair in the French Chamber of Deputies make it clear that M. Delcassé's quickly withdrawn resignation was in the nature of a personal protest against the kind of treatment the Chamber accorded him. On both the Nationalist and Socialist side of the tribune the attempt was made to show that he had bungled the affair. He was taunted with the delay in arranging at Fez a treaty conformable to the Anglo-French agreement. M. Jaurès reproved him for failing to consult Berlin, and implied that the embarrassing activities of the Kaiser were the natural result of an elaborate plan to ignore Germany. Even M. Rouvier was forced to admit an overture of an unusual sort; he had invited criticism or comment from Berlin on Mediterranean matters, and apparently still awaits a response. M. Delcassé, not a little surprised at finding himself represented as a firebrand, appealed to his record of mediations and direct arbitrations—a long and notable one—and placed his resignation at M. Rouvier's disposal. It was most fortunate that he was not allowed to resign on a point of personal pique, just as events were showing that he had been no less the friend of France than of peace. One has only to recall the remarkable visit of King Edward to France, the impending military solemnities held at the request of the young King of Spain, and the credible rumor that Italy and France will jointly undertake the pacification of Crete, to realize that, in the Mediterranean, France was never stronger than she is to-day. The report of a Balkan *entente* between Italy and Austria, while unconfirmed, is, even as a rumor, an indication of the increasing isolation of Germany. These, as M. Delcassé justly observed before Parliament, are facts which should weigh against M. Jaurès's theory of the civilities due the Kaiser.

French discussion of the Kamranh Bay incident shows an inclination to construe the duties of a neutral with rather dangerous liberality. The *Temps* asserts that France not only has not given, but will not give, assent to the rule limiting a belligerent's stay in a neutral port to twenty-four hours. Such a practice, it is pointed out, greatly favors England, with her worldwide network of coaling stations and harbors of refuge. Pressure in behalf of the twenty-four-hour rule naturally comes from so interested a party; nations insufficiently provided with naval stations must on their lives stand for a less rigid policy. Summing up, the *Temps* holds that a neutral can be held to nothing more than a loyal attitude towards both belligerents; that she must therefore be the sole judge of the duration of her hospitalities, and that her only concern is to prevent a visitor from making martial preparations under cover of asylum. The vagueness of this principle as compared with the clear-cut rule under which England proceeds, will escape no observer. Evidently the French plan of indefinite asylum opens the way to all sorts of covert assistance to a belligerent, and makes for suspicion. It is in every way unfortunate, also, that France has made the precedent for this kind of latitude in the case of an ally. With the English maintaining a strict rule, and the French virtually none at all, unhappy possibilities of misunderstandings and rancors are always present. The French contention shows the greater need of an international conference to establish a standard having the weight of law.

The demonstrations in Warsaw, apropos of the anniversary of the promulgation of the Polish Constitution in 1791, will find an echo in provinces where Poles abound, from Lithuania to the Ukraine, but also beyond the frontier, in Posen and East Prussia. The Poles are watching their opportunity; and while it would be rash to predict a fourth Polish insurrection, it is evident that the ultra-conservative element in the party is giving way to the National Democrats and the Socialists. The Polish National Democrats in Russia, in formulating their "irreducible minimum"—a promise of loyalty to the Government "as far as consistent with the interests of Poland"—have virtually declared, through their committee, for final independence. They profess indifference to the agitation for freedom in Russia proper, and have on various occasions advised the Warsaw students to abstain from manifesting sympathy with their colleagues in the Russian universities. Never was the Russification of the provinces containing Poles more complete than now. In the South, where, before the insurrection of 1863, the Poles owned 90 per cent, of all the land, they have now about 40. In Lithuania and White Russia the Polish landowners have gradually, by due process of law, been deprived of 8,000 square miles of property. In those provinces no Pole is allowed to enter the public service. He cannot purchase land, nor loan money on it, nor farm, nor administer land belonging to a Russian. If he sells property that came to him by inheritance, it must go into Russian hands. Prussia's policy, initiated under Bismarck, of devoting a large fund— a year or two ago increased to 200 million marks—to the purchase of Polish estates in Posen, has borne similar fruit.

RELIGIOUS FREEDOM IN RUSSIA.

The Czar's Easter ukase proclaiming complete religious liberty throughout his dominions is the most important and far-reaching event which Russia has experienced in centuries. The emancipation of the serfs fifty years ago alone can be compared with this emancipation of the spirit, which must inevitably reflect itself in every vital relation, as well as entail notable administrative changes in many directions. Toleration has been the principle of the Russian Government towards all religions, while firmly upholding the State Church; and the chief avenue of St. Petersburg, the Nevsky Prospekt, has often been called "Toleration Street," because of the prominent Roman Catholic and Lutheran churches which adorn it along with the national cathedrals. But toleration has never included the right, on the part of a member of the State Church, to leave that church and enter another without forfeiting his civil rights; neither has it included the right of any other church to proselytize. Marriages between members of the Russian (Eastern Catholic) Church and of any other Christian church must heretofore, in order to be valid, be performed by a priest of the Russian Church (though a supplementary ceremony in the other church, as a mere form, was not prohibited), and the children of such a marriage had to be brought up in the Russian Church. Occasionally this law was not enforced; and on the western border, where intermarriages with Roman Catholics from Poland are frequent, boys were permitted to be reared in the faith of the father, the girls in that of the mother. All this is altered by the new edict: marriages may now be legally solemnized by the clergymen of any church, and children may be reared in any faith. If one parent leaves the Russian Church, the children remain in it with the other parent; while if both parents leave it, the children's religion becomes that of their parents.

So far all is plain sailing. The difcult problems which must lead to new laws of marriage and divorce arise in the cases of union of members of the Russian Church with non-Christians. Up to the present time there has been no way in which an Orthodox Russian could marry a Jew or a Jewess, unless the latter was previously baptized. On the other hand, it must be stated that, if a Hebrew joined the Russian Church and the other party to the marriage remained in the Hebrew faith, the marriage was not annulled—on the Scriptural principle that a believing husband or wife might convert the unbelieving partner. It is obvious that civil marriage, hitherto unknown, must be introduced to meet such cases as these; and in its train must follow civil divorce. The complications will, no doubt, be great; but both reforms will be welcomed by the best religious element, inasmuch as it will obviate the necessity of bestowing the blessing of the Church under conditions which are distinctly contrary to the canon law and to the conscience of the officiating priest, as now too frequently happens. Marriage is regarded by the Church as a sacrament, and, according to the canon law, there is but one cause —the Scriptural one—for dissolving it. In practice, however, several other reasons are recognized by the State: such as the absence in exile (as a criminal or political offender) for five years, or simple desertion for a stated period. Priests have been obliged to do violence to the ecclesiastical law and their own consciences by performing the marriage ceremony for persons thus affected, whom they regard as bigamists.

The Old Ritualists or Old Believers, who have been oppressed in various ways and in varying degrees under different reigns since the inception of the sect in the time of Peter the Great's father, will now obtain recognition of their episcopate and priesthood, and the marriages celebrated by their ecclesiastics will be regarded as valid. The differences between them and the State Church are essentially trivial, of usage and detail, not of dogma, and have never really warranted the restrictions imposed upon them. These differences do not go beyond the manner of crossing with two fingers instead of three, on the part of the Old Believers, and stiff adherence to the letter of the Scriptures and service-books, of which other lands offer plenty of examples. This sect, as well as the Roman Catholics, the Jews, Lutherans, and other sects, will now be able to obtain ready permission to erect churches, chapels, synagogues, or houses of prayer in greater numbers than heretofore, and in towns and on sites hitherto restricted.

It remains to be seen whether the ukase has conferred upon the Hebrews of the Empire much more than the rights above mentioned in the case of the other sects. Had the Pale of Settlement been abolished, and entire freedom of domicile included, that fact would surely have been stated in the dispatches thus far received. In a measure, however, the ukase, even in its available form, contains an implied guarantee of future revision as to the whole status of the Hebrews. The problem is not simple nor religious, the Pale of Settlement and the restrictions imposed upon the Hebrews having been originated and persisted in for economic reasons. The conferring of civil rights through baptism exclusively has represented a sort of force exercised by the State upon the Church, and has, unfortunately, complicated the situation by imparting to the restrictions imposed upon Hebrews the appearance of being founded solely on religious intolerance. The immediate result of the new edict will indubitably be that many baptized Hebrews who have been converted merely as a matter of expediency, will now revert to Judaism. On the other hand, there are, probably, Hebrews of the highest character who will embrace Christianity, now that any misunderstanding of their motives is impossible.

The most interesting feature of the ukase, and most pregnant for the future, is its effect upon the State Church. The amazing but incontrovertible fact is that that Church is now placed at an immense disadvantage, and left trammelled, in comparison with the status just vouchsafed to all other religions. The Church may and does expect numerous secessions of persons with whose temperament or convictions it is not in consonance; or of those who have entered it from other than purely spiritual motives. Meanwhile, it is left largely powerless to employ the methods for retaining its members which the rival churches will employ to estrange them, and will so remain until its long-cherished aspiration of separation from the State and complete independence shall be realized. Peter the Great abolished the Patriarchate and established the Holy Synod because the troubles between his father and the Patriarch Nikon had taught him that danger to the State might arise from the conflicting interests of the Church and the blind loyalty of the masses to the latter. But that danger is entirely eliminated. What the clergy of the Russian Church now desire is an elective Patriarch who shall have free access to the Emperor, with power to present the Church's views directly to him, instead of being reduced to the necessity of communicating with him, as now, solely through a layman (the Procurator), who, however devout and devoted to the interests of the Church, must of necessity regard matters, to some extent, from the worldly point of view. An elected Council, composed of bishops, priests, and laymen, to discuss ecclesiastical affairs and govern the Church, is also desired; and that all bishops shall be elected to their dioceses and priests to their parishes, instead of being, as often now, practically appointed by the civil power.

Thus freed from the civil bureaucratic power which, as chancellery, prepares measures for the consideration of the Holy Synod, and absolutely severed from the State, the clergy would be able to act strictly in accordance with canon law, which is at present impossible in some cases where Government officials are concerned. For instance, they would be free to refuse to perform an uncanonical marriage ceremony for an official, where now such refusal would constitute technical disobedience to the civil laws. They would be able, without being misunderstood, to discipline and excommunicate Government officers (who now rank as their unassailable com-

manders), or undesirable persons of whatsoever position, in cases of extreme infraction of the Church laws, or for heresy or abuse. The general result would be that the Church would undergo a revival, both intellectual and spiritual, of incalculable importance to the Empire and to Christianity.

THIS YEAR'S BALLOT AGITATION.

It was to be expected that the politicians whose calculations were upset by the unprecedented amount of independent voting in last fall's election would turn their attention very promptly to the machinery by which such unexpected results were brought about. From the other side, too, came in several quarters a demand for a system that would make non-partisanship easier for the future. The ballot laws have therefore received this winter at the hands of various State legislatures a good deal more scrutiny than the changes actually made would indicate.

The official ballots used in the various States differ very greatly in respect to the premium which they put on voting the straight ticket. It was a significant fact that of all the States which elected Democratic Governors along with Republican Presidential electors, or otherwise gave unusual exhibitions of independence, only one, Missouri, belongs in any of the classes which make it difficult to split a ticket. Almost as soon as the Legislature met in that State, agitation was begun against what the Kansas City *Star* called the "un-Jeffersonian" ballot. The citizens of Missouri having awakened at last to the fact that it was possible to vote for a Presidential candidate of a party without simultaneously accepting all its other nominees, fair play demanded that this disposition be given a better chance in the future. Mr. Folk's victory was doubly remarkable from the fact that every one of his Republican supporters was put to the trouble of writing in the Governor's name on the Republican ballot. A change to some more enlightened method of voting was earnestly urged, but without result, for the State Senate, where the old Democratic ring was still intrenched, quashed the ballot-reform bills very promptly.

In Colorado much the same thing happened. The hearings in the Peabody-Adams contest made plain the weaknesses of a system so far from real secrecy that voters on the witness stand were able to identify their own ballots, and handwriting experts to reject dozens at a time as the work of a single person. An intelligent effort was made to secure consideration for a carefully-drawn bill on the lines of the Montana law. This would have provided a ballot like that of New York, but with the party circle omitted, so that the straight-party man and the independent would be required to make the same number of X marks in order to vote. But a Senate and Assembly torn by the violent factionalism of an election contest were fatal to careful consideration for such a measure.

Thus failed the most important of the attempts made this year to improve bad ballots. In two of the States which had particularly good ones, the reverse process was tried. In Minnesota, where the candidates' names are grouped by offices, and there is no provision for voting a straight ticket at one operation, an effort was made to introduce the party column in the form of a voting-machine bill which practically would have made the design of any particular machine adopted supersede the State statute if it chanced to be provided with levers arranged on the party-column plan. Luckily, the significance of the bill was discovered in time, and the trick defeated.

But in Rhode Island, a Republican Governor having been elected for the first time since 1901, one of his first acts was to recommend a revision of the ballot laws, and lately Mr. Utter had the satisfaction of signing the bill which carried his recommendations into effect. Rhode Island, with all its political faults, has in the past been distinguished for a good deal of independent voting. In the city of Providence a great body of citizens has long been in the habit of picking out desirable candidates of various parties for local offices, while Gov. Garvin's two elections, when all or nearly all the other State officers and a majority of the Legislature were Republicans, were remarkable "off-year" achievements. There are very few matters, however, in which the average man is more prone to follow the line of least resistance than in the marking of his ballot. In proportion as the changes in the Rhode Island law make it easier for the citizen to vote a straight ticket, they are strengthening the hold of the Aldrich-Brayton organization.

For this reason, the change deserves more attention than it has yet had. It must be explained, to begin with, that several of the alterations made in the law—as for instance in the provisions regarding the count of votes and the rejection of improperly marked ballots—were sadly needed; but as these could have been secured quite as well without any change in the general plan of the ballot, they do not offset the objections to the latter. To illustrate the difference between the old and the new ballot, take the hypothetical case of two voters. A, who desires to vote a straight Republican ticket, and B, who prefers Democratic nominees for the offices of Governor, Attorney-General, and Representative in Congress. Suppose, also, that in this particular election ten offices are to be filled. Under the old ballot, A and B must each make ten marks, and are forced, in doing so, at least to run their eyes over all the names printed. Under the new ballot, A will make a single mark at the head of the Republican column. B will do the same, afterwards crossing out the names of three candidates in that column and marking opposite the corresponding Democratic names.

The process of splitting is thus more troublesome than in New York State by reason of the trouble of erasing the names not wanted in the selected column. The trouble is little enough, in any case, the friends of this form will say. But it is not, as a matter of fact, the mere mechanical difficulty, but the fear of invalidating their ballots, that causes voters to take the simplest way; and the fact that a large proportion of them do so is indisputable. Four States last year chose electors, Governors, and State officers with a ballot resembling the one Rhode Island has just abandoned, five with the one she has just adopted. In the first group the average proportion of voters who recorded their choice at once for a Democratic Governor and a Republican President was about 19 per cent.; in the second it was about 8 per cent. In the first group the amount of discrimination exercised by voters among the various State officers averaged 12 per cent.; in the second group only 5 per cent. And if the candidate for Governor be left out of the calculation, and the figure be taken to represent the discrimination among minor State offices, it is on the average 6 per cent. in the first group to about 1½ in the second.

The same thing may be shown in another way. In 1901 Dr. Garvin, then defeated, ran 5.24 per cent. ahead of the lowest member of his State ticket; in 1902, at his first election, 10.14 per cent.; in 1903, 7.09 per cent., and in 1904, though again defeated, 9.83 per cent. In all the elections of the last four years, in the States using the form of ballot prescribed by the new law, there is only one instance in which a Governor ran more than 5 per cent. ahead of the lowest member of his State ticket. That was in Michigan last year. It would be absurd, of course, to argue that merely by the adoption of a model ballot independent sentiment in politics can be generated; but few realize the degree to which the form of ballot affects the manifestation of that sentiment.

EXPERIMENTAL MUNICIPALIZATION.

Chicago's dramatic pronouncement by popular vote in favor of municipal ownership and operation of street railroads has apparently distracted general attention from the interesting and novel stage of the same agitation recently reached in Cleveland. Mayor Tom L. Johnson, it is true, has gained no little notoriety in the past for his persistent advocacy of a municipal system of trans-

portation, and for his equally persistent contention that a uniform three-cent fare is perfectly feasible. After a great many moves and counter-moves for position, the Mayor and the Cleveland Electric Railway Company have apparently got into touch with each other. The president of the company, Mr. Horace E. Andrews, requested a parley with the Mayor to discuss the renewal of franchises "on a business basis." At least one of the franchises, that for Central Avenue, so the Mayor asserts, had already expired, so that the company was virtually compelled to take the initiative. Every year that elapses brings the remaining franchises so much nearer their expiry, the last terminating in 1927. Mr. Andrews proposed that the company's franchises be extended twenty-five years, and in return promised a fare of about four cents —the present fare, including transfers, being five cents. The Mayor declined to consider a renewal of franchises on less than the three-cent fare basis. This Mr. Andrews declared to be impossible. Thereupon the Mayor suggested an alternative proposition, at once novel and seemingly capable of very promising extension and development.

The Mayor's proposal contemplates the renewal of the company's franchise for twenty-five years provided the company will turn over its property, including the franchise, to a holding company which is to guarantee the interest on the company's bonds and the regular dividend of 5 per cent. on the company's stock. The holding company is to be essentially a board of trustees mutually agreed upon by the city of Cleveland and the Cleveland Electric Railway Company. This board of trustees, or holding company, besides operating the road and paying the dividends and interest aforesaid, is to provide for all needed improvements and extensions. Should it have any surplus after meeting these fixed charges and providing for extensions, it is to devote the surplus to retiring the bonds from time to time, and to reducing the fares if such reduction proves possible. The mayor insists that experiment will demonstrate within five months the practicability of the three-cent fare. In short, the Mayor's plan is that the company, instead of taking the chance of contingent gain or loss, shall accept the guarantee of a definite income yearly; that the city, instead of making terms with the company for franchise grants, shall take the chance of getting an equivalent for its grant of franchises in lower fares; and that, by means of a holding company mutually acceptable to the city and the railway corporation, the business shall no longer be operated for profit, but at cost, including in cost the fixed charges on both stocks and bonds. Default in the payment of interest or dividends, or failure to maintain the property, will work a forfeiture of the holding company's lease, and reinstall the present Electric Railway Company, which will take possession again and operate the road for the unexpired period of the twenty-five years of the franchise. The Mayor also tacks to his scheme an option by which the city may purchase the property outright at its present value at any time within twenty-five years in case the Legislature of Ohio within that time authorizes municipal ownership of street railways.

We do not pretend to pass judgment upon this particular proposition, which has been, however, under consideration by the directors of the Cleveland Electric Railway Company. The valuation of the corporation's property which is implied in the option of purchase will doubtless be a material consideration. Moreover, the chance of legislative action allowing the option to be closed, as well as various other factors, makes of little value the opinion of any one but an expert acquainted with the Cleveland situation. But the Mayor's proposition is exceedingly ingenious, and several features of it may be employed to advantage in solving the whole question of public-service corporations.

The first feature of the scheme which makes it worthy of consideration, if a city is bent on experimentation in the domain of municipal public-service industries, is its tentative character. If the operation by the holding company, alias the board of city trustees, proves a failure, the city is not indefinitely saddled with a losing venture whose deficit must be made good out of the proceeds of taxation. Failure of public management to make receipts cover expenses, and to maintain the physical property, ousts the city control and reinstates the private corporation. If such change of control can be effected without delay, the plan virtually gives the city power to conduct an enterprise while it shows its capacity for the task, and no longer.

A second feature of the plan which merits consideration is the joint nomination of the holding company. The management of the present street railway corporation may be reasonably trusted to assent to the appointment of none but capable transportation managers. The city, on its part, at least under such jealous advocates of its rights as Mayor Johnson, will not be likely to assent to any one who will not reasonably safeguard the city's rights. Politics and patronage will certainly be less able to play a malevolent rôle than under an elected city board, or even under a board or commissioner whose appointment comes as the reward of party service.

The most cautious and unbiassed students of municipal monopolies have always insisted that the success or failure of city ventures in that field depended simply on management. The malign influence of politics and a scale of remuneration inadequate to secure for municipal enterprises the same grade of directive ability as private corporations command, have always been put in the forefront of adverse conditions. Both drawbacks seem fairly to be surmounted by this plan. The "holding company," so called by reason of its joint origin, in order to successfully administer its business, can and must be fairly free from "politics." Its peculiar status, being a private corporation in one aspect and a public trust in another, ought to enable it to employ freely such business methods as efficient administration requires. Unlike a regular city bureau, it will not be cumbered by the vexing restrictions imposed on a regular city department. If municipal operation is capable of successful extension, the Johnson plan affords a scheme of organization in some important respects superior to any previous models.

THE CONFERENCE FOR SOUTHERN EDUCATION.

The Conference for Education in the South, held at Columbia, was an unqualified success. The prime object of such a gathering is, of course, to promote education. An exchange of courtesies between residents of different parts of the country, and a more cordial understanding of the difficulties under which each section labors, are highly desirable things, but they are accidental rather than essential. The root of the matter is to set people to thinking, talking, and working for education. The Conference was rich in by-products, so to speak; but above everything else it accomplished its first purpose. Its effectiveness was increased rather than diminished by a few newspaper attacks.

In a democracy no great movement can succeed unless it wins popular support. Leaders there must be, but their voices cry in the wilderness until the hosts are ready to follow. The problem in this particular case was to rouse the listless thousands, to bring home to their hearts the conviction that for them and their households the school is the way of salvation. Our modern machinery for doing such work is public discussion. Whatever men may think at the outset, however misguided their views, let them debate the question in the street, on the platform, and in the press; sooner or later—such is the very theory of our government—they will arrive at a sound conclusion. A vigorous opposition, then, that forces men to give reasons for the faith that is in them is a thousand times better than inert unanimity. In the South, as in States like Pennsylvania, general discussion is specially needed. The overwhelming dominance of a single party has inevitably

narrowed the range of thought on all political and social questions, has robbed the population of some of that training in civics which is the privilege of every community where the independent voter holds the balance of power. Thus it comes about that the Charleston *News and Courier*, the *Manufacturers' Record* of Baltimore, and their disciples have rendered valuable service to the cause against which they have fought. They have helped to move the stagnant waters, to stir up pure minds by way of remembrance, to provoke the indifferent into zeal, and to make the epithet "Ogdenite" a term not of reproach, but of honor.

The mere existence of a sentiment against the union of friends of education, North and South, in common endeavor is one of several proofs that persons presumably well-informed, to say nothing of the rank and file, fail to realize how much must yet be done for the schools of the South. First slavery and then the ravages of war set the country back economically by a whole generation. The South has not had the money to develop its educational plant, a fact which the most progressive Southerners admit without qualification. Moreover, the rural schools are not only poor, but poorly attended. One of the ablest speakers at the Conference, W. H. Hand, superintendent of schools at Chester, S. C., made a plea for compulsory education. He began by remarking that the North and the West had ceased to argue on the desirability of compulsory education, but already took his proposition for granted. The South Carolina Legislature, however, in spite of agitation of the subject, and in spite of the enlightened views of Gov. Heyward, is still sitting in darkness.

This backwardness is not due wholly either to poverty or to undervaluation of education, though the large percentage of illiteracy among the whites themselves is a sign of apathy which cannot be mistaken. The situation is complicated by the presence of the negro, whom bigoted members of the superior race would keep in ignorance, on the theory that schools are too expensive a luxury for black folk. To devise a school system which shall save the whites and not the blacks is a task of such delicacy that a few surviving reactionaries are willing to let both perish together on the pathless mountains. The fear, then, that misguided or malignant Northerners will enter like a serpent and destroy a Southern paradise by giving the negro the fruit of the tree of knowledge, is a factor still to be reckoned with in politics. It prompts suspicion of educational projects. It compels even the liberals to tread warily. Apparently in deference to this prejudice, no negro spoke at the Conference, and the colored people stayed in the "nigger heaven" of the theatre where the sessions were held. And yet the most rabid negrophobe cannot deny that negro educators, and thus indirectly the whole South, might have profited by the discussions; and that, as a class, negroes, as much as the whites, need stimulation and also instruction in sound ideals of education.

The great majority of the speakers at the Conference were, very properly, Southerners. The Northern visitors came to learn, not to teach. The specific lesson depended, of course, on the pupil himself. None, however, could fail to be impressed with the magnitude of the task before the leaders of education in the South, and with the splendid energy and courage with which, in a land devastated, drenched in blood, robbed of the flower of its youth, crushed by poverty, dependence, and ignorance, they have taken up their burden. Men like President Alderman of the University of Virginia, President Denny of Washington and Lee, Chancellor Hill of the University of Georgia, and Booker Washington — to name only four of many conspicuous figures—have faced disappointments and discouragements that would have defeated all but the bravest. They have battled through evil report and good, through dark days and bright; and they have discovered afresh the old truth that it is not mere money that builds schools, but men and ideas. While the South possesses these, all things else shall be added unto it. These strong souls, the champions of education, are the real reconstructors of the South. To fortify them, to hold up their hands, is a privilege which any man might covet.

THE LEXICON OF YOUTH.

Periodically the discovery is made by some literary light that the average person's vocabulary is preposterously small. Within a few weeks the collection of words which the contemporary young man has at his command has been stated at sixty-five or less. This is very much the lowest estimate ever made, and, as such, deserves consideration; but since each new edition of a dictionary published contains at least a few hundred more words than its predecessor, the problem is evidently not one of production, but of distribution. There are words in plenty if people would only make use of them.

Even if the typical specimen of the generation now coming of age is only half as well off as Kipling's civil servants, with their equipment of "one hundred and fifty words and the adjective," the situation is not altogether hopeless. George Ade has declared that he made a European trip with pleasure and profit, knowing only "nine words of French and the names of twenty things to eat in German." If the young man has chosen his sixty-five words wisely and well, he may be a more useful citizen than his neighbor who does not put his greater fluency to good uses. Besides, these critics are speaking of the number of words which the young man will use, spontaneously, out of his own head. There are hundreds of others which he might put into a letter—an application for a new job, for instance. He certainly understands thousands of others. Does any one suppose that Shakspere used in familiar chat at the Mermaid Tavern all of the 15,000 words with which the rhetoric text-books credit him?

The occasional efforts which are made usually by advanced students of English, to determine accurately the scope of the vocabularly of some everyday man or woman, often give curious results. Thus, a candidate for a degree in a Western university once tried to gauge the verbal equipment of his father, who was a locomotive engineer, a man of intelligence and character, but of small literary education. The student's first idea was to keep by him a pocket dictionary, direct the conversation whenever he could into unusual channels, and then check off every new word his parent used. But after some months the number of words so marked was still preposterously small. Family pride rebelled at such a result. Besides, the method was extremely slow, and there was always the possibility that hundreds and thousands of additional words lay just beneath the surface, waiting for the proper stimulus. Therefore, the procedure was abruptly changed, and the subject taken into the confidence of the investigator. The pocket dictionary was brought out from its hiding-place and read aloud to the student's father, every word for which he could give a reasonable definition being checked off. The result was that, instead of ranking with savages and school-children, the test indicated that the old engineer's command of language approximated that of Addison or Lamb.

Being a purely abstract personage, who cannot be haled before a board and examined, this "average man" has to put up with a good deal of abuse which he does not deserve on the score of ignorance and illiteracy. A few years ago two English playwrights engaged in earnest argument regarding the actual speech of artisans and small tradesmen. One of them had criticised a certain bit of the other's dialogue as "stilted." The argument into which he had plunged, however, had the effect of making him listen to the talk on the tops of omnibuses. He ended by withdrawing his slur entirely. The immediate cause of his apology was, if memory serves, the construction, "Nor do I believe," used in an offhand way by some member of the very class whose speech he had accused his brother dramatist of misrepresenting. He found that expres-

sions conventionally regarded as purely bookish were really used colloquially by all sorts and conditions of men. The speech of folk of the humbler sort cannot be reproduced merely by putting in their mouths short and common words and simple constructions.

How much may be made of a small vocabulary may be learned by a glance at some of the tongues which offer least range of choice in words. The language which secures the maximum efficiency at the minimum tax on the memory is perhaps the Chinook jargon, which is the medium of intercourse between whites and Indians and between different tribes of Indians throughout the Pacific Coast region from Oregon northward. The vocabulary of this remarkable language contains only about 400 root words; all ideas of greater complexity being expressed, if at all, either by combinations of these or by circumlocutions. It is not a language of subtlety or delicate shading. Yet every activity of human life is covered by it after a fashion. It serves the purposes of a multitude of commercial transactions in furs, ammunition, provisions, whiskey. The native gives the white trader, trapper, or miner directions for finding his way in a language in which "Illahee" stands indifferently for the earth and, practically speaking, the fulness thereof—town, neighborhood, field, place, locality, and all related ideas. Sermons are preached and books of hymns written in this same Chinook, though the single word "tumtum" denotes the heart and its beating, the soul, and all spiritual attributes whatsoever.

The decline in the old art of conversation is a phenomenon universally deplored. We have known college students who felt so strongly on the subject that they have kept special books in which to note every new word encountered for the later enrichment of their discourse. But effect must not be mistaken for cause. If the young man has something to talk about, he will somehow find words to put it in, while, if he has not, even his sixty-five will serve him very comfortably.

THE ARCHÆOLOGICAL CONGRESS AT ATHENS.—II.

ATHENS, April 10, 1905.

At the general session held in the University Hall last Saturday morning, the Diadochos, Prince Constantine, was in the chair, while many addresses of congratulation were handed in. Then came the address of welcome, delivered by the Rector of the University of Athens, and containing a bare statement of the creditable record of modern Greece in archæology, with generous appreciations of assistance derived from foreign scholars. Rector Lambros showed equal tact when he made allusion to the struggle for independence as having liberated the Acropolis, so that Independence Day might usher in a festival truly Panathenaic, because all civilized nations had responded to the summons and were joining in it, as the spiritual sons and common defenders of ancient Athens—chips of the old Hellenic block.

First to respond was M. Collignon, president of the French Academy of Inscriptions, who spoke for all societies and learned bodies of Europe and America. After a tribute to the labors of living Greek archæologists, he augured success for the future from the union of hearts which made the present congress possible. The answer, in English, was from Prof. Percy Gardner, speaking for all universities in Europe and America. His theme, thoughtfully dealt with, was that "the noblest study of mankind is man," and that Athens was the inevitable meeting-place for the first archæological congress, since the beauteous fragments of ancient Greece first taught archæologists to use their eyes, and mankind first learned from Greece to think methodically. What Olympian and Delphian assemblages did for ancient Greece, our modern congresses did, he claimed, for Europe, whose peoples were bound together by common Christianity, and also by their common growth from seeds derived at the time of its splendor from ancient Hellenism. He closed with greetings from the universities of the world to the spiritual nurse of them all. "Without Athens," he said, "we should all be living on a lower spiritual and moral plane, nor do we fail to wish the flourishing University of Athens a constantly increasing depth of intellectual life, an ever widening range of influence."

The third answer was that of Dr. Kyriakos, who saluted the Congress from his Holiness the Œcumenical Patriarch of Constantinople and from the Patriarchs of Alexandria and Jerusalem, with whose greetings he coupled those of many educational centres in the Greek Levant, and those of the Philological Society of Constantinople, the Evangelical College of Smyrna, and other bodies whose delegates were in attendance. The Patriarchs welcomed the invitation to participate in this Congress. Its labors had their blessing and their prayers for a fruitful consummation, because the traditions of the Greek Church, for which they stood accountable, had ever sought to blend Christianity with the lore of ancient Hellas. Gregory and Chrysostom compassed this harmony. Next, in Byzantine days, Photius, Gennadius, Eustathius, and Scholarius achieved the like, while Eugenius, Boulgaris, and his fellows, in the days of enslavement, still taught the same lesson of harmony. "St. Sophia," he said, "was reared under the invocation of divine wisdom in Christ, while the Parthenon was the home of the personified wisdom of the ancient Hellenic mind. Each is to-day an acropolis of the genuine spirit of Hellas." The whole Greek race, be it scattered never so far, was stirred, he said, by the impulse which gathered this Congress at Athens—stirred and inspired by the ideal of a resuscitated life for the glories of ancient days. Devotion to Hellenic antiquity and love of the Blessed Gospel animated every orthodox Greek, while St. Sophia and the Parthenon were charactered side by side upon all loyal Hellenic hearts.

Besides the reception of written addresses, the further business transacted concerned the association of two new presidents with each of the seven named in my last letter at the meeting in the Parthenon, and the further nomination of four presidents-at-large. Profs. Percy Gardner and Carl Robert were associated with M. Collignon for the Classical section. For the Prehistoric and Oriental section of M. Maspero, Drs. Furtwängler and Evans were named. Messrs. Milani and Babelon joined Dr. U. von Wilamovitz-Moellendorff in the section of Coins and Inscriptions, while in that of Excavations and Museums Dr. Waldstein was reinforced by Mr. Cecil Smith and Dr. Montelius; for the Byzantine section Dr. Ouspensky was assisted by Messrs. Marucchi and Strzygowsky. To Messrs. Pignorini and Conze, in the two remaining sections of Geography and of Teaching, were assigned respectively Dr. Keil and M. Radet, and Profs. J. R. Wheeler (Columbia) and Von Duhn (Heidelberg). Professors Mahaffy, Von Stern (Odessa), Reisch (Vienna), and Hampel (Budapesth) were named presidents-at-large. In order to make the list of twenty-five presidents widely representative, the Athenian committee, including all heads of schools and all Greeks, passed an ordinance of self-exclusion. All the presidents were needed at one time or another, because of the appreciable distances separating the several rooms assigned for the sections. The Classical section was housed by the University, while the no less sumptuous *aula* of the Parnassus Society accommodated the Prehistoric and Oriental section. The Archæological Society welcomed the section of Excavations and Museums, and the Academy found ample room for the Byzantine section. The French and the German Schools respectively took in Coins and Inscriptions and Geography, while the section of Teaching met in the National Library.

All these preliminaries over, the Congress repaired to the English School, and was joined in the Penrose Memorial Library by the Diadochos and the whole royal family. Proceedings began with a sketch of the history of the British School, addressed to the president by Mr. George Macmillan, delegate of the Hellenic Society and Hon. Secretary of the Committees of the British School and of the Penrose Memorial. The royal president cordially responded; declared the Library open by unveiling the memorial tablet, and announced the intended gift from the Greek Archæological Society of a bust of Penrose. Mr. Cecil Smith then gave some account of the Macmillan Hostel (of which, as first planned, the library was to be one wing), and referred to the laying of its cornerstone by the Diadochos. A very touching appreciation of Penrose was then given by M. Homolle, who was followed by Mr. Heermance with a few words of fraternal congratulation to the British School. These were corroborated by Prof. J. R. Wheeler, who drew attention to the significant disappearance of the wall formerly dividing the now united holdings of the American and British Schools. Last came genial words from Dr. Conze, eulogizing Penrose, and suggesting schemes of coöperation among all the Schools at Athens.

There was barely time to reach the several meetings of the four sections by five o'clock, when work began. At the Arch-

æological Society's room Dr. Furtwängler talked of his excavations, past and present, at the temple of Ægina; and recent excavations in Egypt by Professor Petrie and Dr. Grenfell were heard from, although the latter could not be present at the congress. At the French School MM. Babelon and Théodore Reinach discoursed upon coins, while Professor Ouspensky, at the Academy, described an illuminated "Octateuch" from Constantinople, and advocated dropping the name of "Byzantium" in favor of "Christian Greece" for the archæological period of that section. Acting upon the same proposal made by M. Bikelas, it may be remembered that the late Lord Bute entitled his translation of the former's 'Byzantina,' 'Seven Essays on Christian Greece.' The fourth meeting was that of the section of Classical Archæology, where, in the presence of the royal family, Dr. Dörpfeld argued against the current notion that the customs of burial and cremation were successively practised and abandoned in the Greek world. Such oscillations of funeral observance were inconceivable. He made sure of a custom which began with partial burning and proceeded to burial. Mr. Montelius was slightly skeptical, and Dr. Evans instanced sudden epidemics of cremation—one of recent date, near Belgrade, the other in England, under Henry II. In both cases the motive was fear of ghosts, who could be laid only when the flesh of the dead was consumed. M. Homolle followed with a circumstantial justification of the rebuilding, now in progress at Delphi, of the Treasury of the Athenians, and the Ephor General of Antiquities, Mr. Kavvadias, gave an interesting account of the recent reconstruction of the Temple of Apollo at Phigaleia. Thus ended the first day's work. In the evening there were receptions at the various Legations, where nearly all the members of the Congress met and compared notes.

Yesterday (Sunday) afternoon saw the Congress making a pious pilgrimage to Eleusis—a feature in the programme happily borrowed, be it said, from that of the Educational Congress held here last summer. Yesterday evening was less mystically bestowed upon entertainments offered at the French and German Schools, and this morning saw work begin again at 10 in four sections, which also held afternoon sessions from 5-7, at which hour a fifth section also met. In the morning session of the Classical section M. Collignon spoke of a lekythos in the Louvre, entering into important details concerning the gradual substitution of shading for the sharp outline of the earliest style of painting. Dr. Waldstein argued that the east pediment of the great Olympian temple was really by Pæonius, and exemplified a loose or flaccid treatment of flesh observable also in the Olympian Nikë; while Dr. Jörgensen submitted to the Congress a publication by the sculptor N. K. Skovgaard advocating an entirely new and very effective grouping of the extant fragments of the west pediment of the same Olympian temple. In the afternoon session of the Prehistoric and Oriental section. Dr. Montelius discoursed on the Mycenæan age, and was followed by Dr. Evans's account of the nine periods through which the potter's art at Knossos passed, the last of them corresponding to the Mycenæan period elsewhere. Dr. Evans offered also a protest against the purely "philological" school of Egyptian chronology, and urged the necessity of taking Cretan monuments into account and of calling in "a new world to redress the balance of the old." Proceedings closed with Dr. Dörpfeld's account of and comparison between Cretan palaces and the place at Tiryns.

To-day's amusements have been first an evening reception now in progress at the house of the mayor, accompanied by torchlight processions and illuminations, and, secondly, this afternoon's performance of the "Antigone" in the brilliant stadium by the society for the performance of Attic dramas. It had the vivid charm of living speech, and all its noble sentiments were applauded to the echo by crowds which packed all the seats at the curved end of the stadium, where Dr. Dörpfeld's views about stage and orchestra had been carried out faithfully under his supervision. The result has made him no converts, for the altar blocked the view, the actors were constantly confused with the chorus, while the entrances and exits were ineffective. The costumes left much, indeed, to be desired, even apart from the disillusioning effect of Attic sunlight upon modern wigs and false hair—masks and buskins would really be less disconcerting. The performance itself was creditable—a vast improvement upon the "Philoctetes" as performed here sixteen years ago by students of the University.

April 13.

Since my letter of last Monday night, there have been, besides various sectional meetings, two joint sessions—one yesterday evening, and one which closed the Congress this morning. It is noteworthy that, in the meetings of the Prehistoric and Geographical Sections, Athenian scholars contributed a lion's share of the more important proceedings. Dr. Stais was heard on the Antikythera bronzes, and gave an illuminating and quite new account of the gold ornaments found in Mycenæan graves by Schliemann; recent finds in Bœotia, Naxos, and Thessaly were discussed by Professor Tsountas, Dr. Stephanos, and Dr. Sotiriades, who also spoke about Kallion, in Ætolia, and the destruction of the Galatians. The contribution of Professor Æginetes, director of the Observatory, discussing the Athenian climate in ancient times, was very important and original. Greek scholars have also done much in the Byzantine Section, although its three closing sessions of yesterday and the day before were alike notable for extremely valuable contributions by Russian delegates, who again monopolized the closing session of the Geography Section—one of the most interesting of the Congress.

One American, however, Professor Frothingham, was heard from, and much heeded, in the Byzantine Section on Tuesday, having already discoursed on Triumphal Arches in the Classical Section. A communication made yesterday morning in the last-named section by the present writer prevented his hearing Miss Harriet Boyd, whose account of Gournias was given at the same hour in the Prehistoric Section and aroused much interest. The remaining three sections—Inscriptions, Excavations, and Teaching—have had only two sessions each since Monday. The closing session on Inscriptions was memorable for the suggestion by M. Holleaux of a Lexicon of Epigraphical Greek, and Dr. Hiller von Gaertringen's plan for a compendiously printed Corpus of Inscriptions.

Three social events must be recorded: Tuesday afternoon's joint garden party at the English and American Schools; a reception and ball in the "Actæon" Hotel, at New Phalerum, given on Tuesday evening by the President of the Reception Committee and Mme. Pesmatzoglou; and this afternoon's garden party, given at Kephissia, by the Minister of Public Instruction, Mr. Carapanos. Moreover, in addition to the fixed sessions of the Congress, there took place yesterday, between its morning and evening sessions, two events of much scientific interest. Mr. Bikelas introduced to its members M. Gaston Maspero. Surrounded by the educational materials and models of the Society's museum, this great Egyptologist gave a memorable *causerie* on the education of children in ancient Egypt. His conclusion was that, although there was little or nothing to be borrowed from Egyptian practices, the enormous difficulties patiently surmounted by learners in Old Egypt and other Oriental lands, as well as the incontestable fact that education in those remote days reached the masses, might well spur us on to redouble our efforts in extending and improving education for the masses in our own time and after our own fashion. Meanwhile Dr. Svoronos, who made no communication otherwise during the Congress, spoke in the numismatical museum housed at the Academy on a series of coins lately acquired by a German museum, and showed them to be forgeries. Dr. Svoronos thus corroborated the case which Mr. Cecil Smith and Professor Petrie had already made out in the section on Excavations and Museums. They both suggested common action among all museums for various purposes, and especially as to forgeries, favoring a scheme by which every museum should bind itself to notify all others of counterfeits. Mr. Cecil Smith also urged a uniform system of cataloguing.

This last proposal and other practical suggestions and projects for the advancement of science were adopted at this morning's session. It was also then and there decided to hold the next congress at Cairo, not sooner than two or later than five years hence, according to the convenience of the Egyptian Government, which had empowered M. Maspero to welcome the proposal of Cairo as the next place of assembly, in case it was made. As there is a Congress of Historians fixed for three years hence at Berlin, the second Archæological Congress will probably assemble four years hence. In addition to the plan above described and proposed by the section on Excavations and Museums, the joint meeting adopted from the Byzantine Section (1) a project for preparing an Iconography of the Byzantine Emperors, the execution of which was entrusted to a committee consisting of Messrs. Krumbacher, Schlumberger, Ouspensky, Millet, and Frothingham, with Rector Lambros as secretary; (2) M. G. Millet's project for a Corpus of the Inscriptions of Christian Greece, to be prepared by M. Millet. Finally, a scheme from the Geographical and Topographical Section for the determination of place-names in ancient Attica was adopted, as proposed by Rector Lambros.

LOUIS DYER.

EARLY PRINTED BOOKS IN THE CHANTILLY LIBRARY.

PARIS, April 20, 1905.

The inventory and description of the various works of art left by the Duke d'Aumale to the Institute with the Château of Chantilly began with the two magnificent volumes on the pictures, by M. Gruyer, member of the Academy of Fine Arts. M. Gruyer described afterwards in a special volume the miniatures of Jean Foucquet; he gave in a fourth volume an account of the curious collection of portraits by Carmontelle. The series of quarto volumes, magnificently brought out by Plon, was continued by the description (in two volumes) of the manuscripts kept in the Library of Chantilly, by M. Delisle, who was still at the time the head of our National Library in Paris. No better choice could have been made; M. Delisle has a world-wide reputation, and all his works readily find a place in all the great libraries, in Germany, England, Italy—I may perhaps add, America.

A new volume has just appeared, with the title, 'Le Cabinet des Livres Imprimés antérieurs au milieu du XVIe Siècle.' In the preface, M. Delisle writes:

"The curators of the Musée Condé were appointed not only to maintain the order in which the founder had arranged his admirable collection; they have also for their mission to describe them, as well in order to make their importance known to the public as to facilitate their use by writers and artists. The Duke d'Aumale was not content to declare that such were his intentions; he had begun to write and to have written for him catalogues which were to be published. The friends whom he charged with the execution of his last wishes have resolutely entered on the path of which he traced the first lines."

M. Delisle very modestly calls the two volumes describing the manuscripts "the personal work of the Prince." They are really a joint work. It is quite true that the Prince did undertake the description of his seven hundred manuscripts; but his work was interrupted by death, and it was finished and to a very great extent enlarged by M. Delisle. The Library of Chantilly is composed of nearly 25,000 volumes, in two very distinct parts. On the ground floor, in a room which served as a theatre in the time of the last Condé, there is a collection of books in current use, chiefly on history and literature. On the second floor of the Château is a long gallery prepared to receive the books which were particularly rare and valuable, the historical bindings, the books adorned with miniatures, etc. The roof of this gallery is finished with coffers, in which, under the Duke d'Aumale's directions, were painted the arms of all the companions of the Great Condé; on the chimney-piece, which is at the end of the gallery, there is a magnificent and life-like bust of Condé, in terra-cotta, which time has so darkened that it looks like bronze. This gallery receives the light from five windows, which open on the inner court of the Château.

The books are not placed in a methodical order, but still, as the Duke left them, according to their size, so as to produce a more harmonious effect. He himself knew his books so well that he never had any hesitation in finding those he needed or liked to see. M. Delisle has thought it necessary to commence a methodical catalogue with the most ancient series, by far the most valuable. The middle of the sixteenth century has seemed to him the limit to adopt; it corresponds exactly with the end of the reign of Francis I., the appearance of the first works of Ronsard, which are characteristic of an important evolution in French national poetry, with the abandonment of Gothic characters in French printing-offices, and with the transformation of the art of printing. Before entering into his description of books, M. Delisle has been moved to give some details concerning the way in which the Library of Chantilly was formed. The Duke d'Aumale had been a brilliant student at the Collège Henri IV. in Paris, and acquired there a decided taste for history, for Greek, Latin, and French literature. He had, however, spent the early years of his youth in Algeria, where he had to make war as Governor, and afterwards to organize the administration of the colony. It was only after the Revolution of 1848, when he was in exile, that he felt his true calling to become a bibliophile. As early as November, 1848, he gave his first instructions touching the books which he had left in France. He also conceived at that time a desire to write, from original documents, a history of the Princes of the House of Condé.

"My great momentary preoccupation is my work. My manuscripts are here. I should like to explore everything that appertains to the seventeenth century, and particularly to the Great Condé. I believe that to be the most salient part, and that I ought to begin with that. My intention would be to collect, to put in order, and to publish the curious and inedited documents, adding to them notices and historical views of my own; and I am anxious to begin soon. But I fear that I shall not find at Claremont the place necessary for this kind of work. At present I am obliged to leave my manuscripts in a warehouse in London; I shall take them away when I have a house of my own."

Meanwhile the Prince, who had but slender resources at that time, bought a few books in London, and among others Brunet's indispensable vade-mecum for bibliophiles, the 'Manuel du Libraire.' At the beginning of 1849, while still maintaining his residence at Claremont, he took, in Northumberland Street, London, a small residence, where he placed his books and manuscripts. "The manuscripts," says M. Delisle, "had real importance; the same cannot be said of the printed works." The rare and curious printed books of Chantilly were bought by the Prince after 1849, at first during his exile and afterwards when he returned to France. He followed all the great sales which took place during nearly half a century. In 1849 and 1850 he was occupied chiefly with his manuscripts, and worked often with one of the keepers of the British Museum. "I amuse myself," he writes, "in the evening by cataloguing my manuscripts." He made discoveries in them, and researches of all sorts. He wrote to his old preceptor in Paris:

"I have had a scruple about the exaggerated price of books. I know that rare books are dear, as well as fine bindings; but I love them both, especially when they are united, and I am willing to give the price for it. . . . You are right in telling we not to yield too much to the attraction of books. It is a taste which does not much suit the present time; *sed homo sum.*"

The manuscripts with which the Duke d'Aumale was so much occupied immediately after his arrival in England were the remnants of the library of the Princes of Condé. There were among them the archives of the Montmorencys and the archives of the Condés, besides a numerous series of manuscripts on vellum or on paper, some of the Middle Ages, some of modern times, full of theological, scientific, literary, historical texts and documents. The manuscripts with painted miniatures formed an important series. The library of the Condés had, besides, a valuable collection of printed works, beginning with the sixteenth century and considerably increased in the seventeenth and the eighteenth centuries. During the Revolution, all the manuscripts were consigned to the National Library. They were returned to the Prince de Condé in 1814. The vicissitudes of the most important books are told at great length by M. Delisle, in the introduction to his Catalogue; many books of the old Condé library were sold even in foreign lands, in England, Belgium, and elsewhere. The rarity of the bookbindings executed for the Constable de Montmorency is explained by the unfortunate changes made towards 1770 in the bindings of the library, in order to render them more uniform. Many fine bindings of the sixteenth century (the golden era of binding) were sacrificed to the fashion of the day. At the close of 1851, the Duke d'Aumale bought the Standish collection, which had been left to King Louis Philippe by Frank Hall Standish, a wealthy Englishman, who was a great lover of France. This collection had to be sold by the King's executors, and the Duke acquired it, though he had but the vaguest idea of its contents. He bought also what had been saved of the books of the King, after the pillage of the Palais Royal and of the Château de Neuilly; a part of those books came from the fine library created in the Château de Rambouillet by the Count of Toulouse, and which had fallen to Louis Philippe in the heritage of the Duke of Penthièvre.

Among the Duke's purchases we must cite the fine library of Cigogne, which he bought *in toto*. M. Cigogne was a stockbroker of the Paris Bourse, who had formed an exclusively French collection of books chosen with exquisite taste. No modern bibliophile has shown more preoccupation with what is called the *condition* of a book—an expression which applies to the material parts, such as width of margin, perfection of binding, etc. He was merciless to books which had the slightest defect, and he accustomed all modern bibliophiles to be very careful in their selection. He died on the 20th of March, 1859. The famous bookseller Potier prepared the catalogue of his library, and the books were to be sold at public auction when the Duke d'Aumale was so fortunate as to obtain the whole collection from the heirs at the price of 375,000 francs, which seems extremely moderate, when compared with the prices which such books as those of Cigogne now obtain at public sale.

M. Delisle gives many particulars about the installation of the Duke d'Aumale's library at Twickenham, where a special house was built for it; about its final installation in the Château of Chantilly; the importance which the Duke attached to the illustrious primitive owners of his books; his researches concerning the first books printed

in France; his relations with the famous French binders of books of our time; the plans which he had formed for his catalogue. This introduction by M. Delisle will be read with much profit by all those (and they are becoming more numerous every day) who are devoted to the noble study of bibliophilism.

Correspondence.

THE NEW YORK APHRODITE.

To the Editor of The Nation:

Sir: Those of your readers who have followed the discussion in the public prints concerning the origin and merits of the marble statue lately exhibited in New York, and representing an Aphrodite closely resembling the Venus di Medici, will be interested to know that a full account of this statue can be found in the 'Strena Helbigiana' (pp. 188 ff.), published in 1900. This account was written by Professor Milani, the director of the Royal Archæological Museum in Florence. According to Professor Milani, this statue is first mentioned in 1357 by Benvenuto da Imola in a commentary on the tenth canto of Dante's "Purgatorio." In 1591 it belonged to Baccio Valori. From him it passed into the possession of the Palazzo Montalvo in Borgo degli Albizzi, in Florence. About 1898 an antiquary, named Volterra, in Florence, gained possession of it, and from him it passed into the hands of Mr. Linton, the present owner.

Professor Milani points out in the article referred to that the statue is probably a Roman copy of a Greek original, and that it bears striking resemblance to a bronze statuette on a Roman fibula which belongs to the period of the Republic. He further states that an analysis of a head in the possession of Lord Leaconfield in London shows certain characteristics in common with this head, and suggests a Praxitelean origin or style. That the marble of this statue is Pentelic or Parian, Professor Milani is inclined to doubt.

It seems strange that our American archæologists should not have recalled or known of this publication of the statue by the Florentine scholar. It was brought to my attention in a conversation with Professor Milani, who at once recognized the resemblance between the photograph of the statue, which I had brought from New York, and his own reproduction some five years ago.—Yours very truly,

Martin L. D'Ooge.

Athens, April 21, 1905.

Notes.

Shortly forthcoming from Macmillan Co. are 'A Wanderer in Holland,' by E. V. Lucas; 'Norway,' illustrated, by Nico and Beatrix Jungman; and 'How to Know Wild Fruits,' by Maude Gridley Peterson.

A group of essays, 'The Life Worth Living,' by Thomas Dixon, jr., and 'Fairy Tales Every Child Should Know,' edited by Hamilton W. Mabie, are announced by Doubleday, Page & Co.

James Pott & Co. announce 'To-day on the Nile,' by H. W. Dunning; 'The Ruined Abbeys of Great Britain,' by Ralph Adams Cram; and 'The Japanese Spirit,' by Okakura-Yoshisaburo.

Houghton, Mifflin & Co. undertake a number of monographs "dealing with the origin and development of a single literary *genre*," *e. g.*, 'The Ballad,' by Professor Gummere; 'The Novel,' by Bliss Perry; 'The Lyric,' by Prof. F. E. Schelling; 'The Short Story,' by Prof. W. M. Hart; 'The Essay,' by Ferris Greenslet, etc., etc. A bibliography will accompany each treatise.

A. C. McClurg & Co., Chicago, publish this month 'The Interdependence of the Arts of Design,' by Russell Sturgis; 'A Selection from the Great English Poets,' by Sherwin Cody; and 'Iowa: The First Free State in the Louisiana Purchase.'

A number of British amateurs have undertaken the task of reproducing notable drawings of the Renaissance, and, claiming the patronage of one of the earliest and greatest collectors in this kind, call themselves the Vasari Society. Mr. Sidney Colvin has accepted the chairmanship, and, appropriately, the first year's publications will be taken from the British Museum drawings, of which he is keeper. In this first instalment we shall have Pisanello, Jacopo Bellini, Piero di Cosimo, Leonardo, Titian, Timoteo Viti, Hans Holbein, and Guardi, among others. The intention is not to compete in fields covered by similar publishing clubs, like the Dürer Society or the Arundel. Collotype will be the medium of reproduction, and, wherever it seems possible or desirable, the original colors will be followed. Drawings of 10x12 inches or less will be collotyped in exact scale. The annual subscription is $5, which may be sent to the Honorary Secretary, G. F. Hill, 10 Kensington Gardens, London, S. W.

The Scribners have reissued Mrs. Burton-Brown's 'Recent Excavations in the Roman Forum' in a cheaper form, adapted for the pocket. The preface by Comm. Boni is now omitted, and the author of the book has availed herself of the opportunity to make such brief changes and additions as were necessary in order to extend her account over the work of 1904. A comparison with the first edition shows also that the wording has frequently been improved, and correction made of a number of misprints and other errors, such as we noted in our mention of the book upon its first appearance, a year ago. There is yet something to be done in the same direction.

The demand for Dr. W. Cunningham's 'Growth of English Industry and Commerce during the Early and Middle Ages' (Cambridge [Eng.]: University Press; New York: Macmillan) has warranted a fourth edition of volume i. of this instructive work, an invaluable companion to the political history of the period. We greeted the third edition in 1896. The revision has been mostly in matters of detail. Novel features are an appendix on the Florentine wool trade, a map of a normal virgate or yardland in the Hitchin common fields, and a frontispiece photograph of the Clothall fields, showing open fields and "balks." The present effort in England to check immigration *en gros* of undesirable needy foreigners contrasts with the immigration of alien craftsmen in Norman and Angevin times as exhibited in appendices E and F ("Protection of Native Industries").

The 'History of the United States from 986 to 1905,' by Thomas Wentworth Higginson and William MacDonald (Harpers), is mainly a continuation of Mr. Higginson's 'A Larger History of the United States of America to the Close of President Jackson's Administration.' The preface speaks of "revision"; but the revision is apparently confined to the recasting of phrases. Six new chapters have been added, bringing the story down to the present. Externally these chapters conform to the earlier ones, but the treatment is less partial, and they reflect present scholarship much better. The illustrations are numerous; many of those from the earlier work have been excluded, however, and a number of new ones added.

A second edition of 'The United States under the Constitution,' by C. Stuart Patterson (Philadelphia: T. & J. W. Johnson & Co.), is, the author says, "to a great extent a new book." The first edition, which appeared in 1888, has been not only revised, but "largely rewritten." The author's work is reinforced by notes and references to additional authorities by Robert P. Reeder. It is a compact treatise on constitutional construction under our system, and brings the subject down to the latest dates—those of the "Insular" cases and the Northern Securities merger. The subject is one of the most difficult in the law, and if anybody were equal to the task of developing a consistent theory from the cases, the author might claim the distinction.

With Nuttall's 'Journal of Travels into the Arkansas Territory during the Year 1819' (1821), and James's 'Account of an Expedition [Long's] from Pittsburgh to the Rocky Mountains,' 1819, 1820 (1823), Mr. Thwaites's 'Early Western Travels' (Cleveland: Arthur H. Clark Co.) revert to standard works depicting wilder scenes, the haunts of the aborigines. Both are lithographically illustrated. Of Long's expedition we have volume one, three more being in reserve. Of an Iowa chief, we read on page 266: "We showed him our books of engravings, with which he was highly pleased. The Indians, almost all of them, delight to look over engravings, particularly those which represent animals; they are not soon fatigued when employed in this way."

The fourth volume of Mr. Thwaites's admirable edition of the 'Original Journals of the Lewis and Clark Expedition' (Dodd, Mead & Co.) finishes, in the double narrative, with the monotonous winter sojourn at Fort Clatsop, and introduces the arduous return journey. Fort life was favorable to natural-history description, which quite outbulks the narrative of petty events, and is constantly illustrated by Clark's skilful pencil on the large and on the small scale, as shown in facsimiles. On resuming the march, the leaders' medicinal knowledge availed more than force or "magic" to procure favors of the reluctant "nations" encountered.

Dodd, Mead & Co. meet a presumed demand with a little book for pouch or pocket, 'My Automobile: A Handy Record.' It consists one-half of blank pages, for sketches of the several tours according to an engraved example, but has pages for a photograph of the vehicle, a description of it, and a list of repair stations, besides the Records proper. There is a pocket in the cover for a map. Companionable with this is a smaller 'New

York Official Automobile Register and Tourists' Guide,' for 1905, a new venture. It contains the official registry of automobiles from 1 to 16,154; an alphabetic local guide with indication of hotels and communications; forty-one measured routes in detail; lists of associations; customs regulations; supply and repair shops; and New York automobile legislation. It is issued by the Hall Publishing Co., No. 150 Nassau Street.

Mr. William T. Comstock, No. 23 Warren Street, sends us the sixth annual edition of his 'Architects' Directory and Specification Index,' for 1904-5. The novel feature is the inclusion of landscape and naval architects—numerically of about equal strength. The specification index is to manufactured materials and equipment of all kinds.

From these small volumes we pass to the mammoth 'Knauer's Manufacturers of the United States,' now in its fifth issue (New York: Manufacturers' Red-Book Publishing Co.). This is a mine of information and direction for articles and trades and manufacturers and exporters, filling more than 2,300 quarto pages. The number of manufacturers alphabetically listed and classified is nearly 514,000.

E. P. Powell's 'The Orchard and Fruit-garden' (McClure, Phillips & Co.) covers a very wide range of cultivated plants, taking in not only our fruits of temperate climates, but also dates, olives, pineapples, bananas, and a few other tropical productions. The illustrations are for the most part good and are well chosen, and the practical directions are generally judicious. The manual ought to be of considerable assistance to the large class of amateurs who are fond of watching their gardens in process of formation. There are many people who learn a foreign language much more readily from a dozen elementary manuals than from one well conned. In all probability, every amateur who uses this book will have also at hand a shelf filled with the excellent modern works on fruits and fruit-culture, and perhaps either the English or American 'Cyclopædia of Horticulture.' This book is well worth a place on that shelf.

The very handsome edition of the 'Works of Charles and Mary Lamb,' edited by Mr. E. V. Lucas (G. P. Putnam's Sons), several volumes of which have already received notice in these columns, is now brought near completion by the publication of two volumes of correspondence. A Life of Lamb, in preparation, will complete a work for which every lover of Elia will thank the accomplished editor. This correspondence is to a large extent new to the public. It comprises the letters of Mary Lamb, correspondence with the Wordsworth family and the Moxons, with many other pieces of great interest never before published. The letters bring the real living Lamb before us as nothing else could do. In his essays and other writings, spontaneous as they seem, there is always the literary touch, the consciousness of the public eye; but here we have the mood of the hour, the whim of the moment—things that he would never have said if he had thought twice, and things of which he would never have thought if he had tried to think of them. Perhaps no single friend could have known him as well as the reader who here takes the place of all his friends. The editor has used extraordinary pains to make clear the innumerable allusions to persons and things well known to the correspondents, but unknown to us—a task the labor of which no one who has not undertaken the like can possibly appreciate. The illustrations, as in the preceding volumes, are excellent and full of interest.

In a little volume called 'N-Rays' (Longmans, Green & Co.), Mr. J. Garcin has shown his French tact in book-making by simply translating Blondlot's papers just as they stand in the *Comptes-rendus*, which gives the book a life and interest that no literary make-up could ever impart. The N-rays, so called from the town of Nancy, in whose university M. Blondlot is professor, are simply light-rays; but they can scarcely be described as ordinary light, since (unless there is a misprint of cm. for mm.) they can be detected after passing through a thickness of over two feet of metallic copper. They are ultra-violet rays. An ordinary eye with an ordinary spectroscope can hardly (without fluorescence) perceive any light of lesser wave-length than 400 micro-microns. (A micro-micron is a thousandth of a micron, and a micron is a thousandth of a millimeter.) About eighteen months ago the Smithsonian Institution published a research by Dr. Victor Schumann, showing that by replacing the glass lenses and prism of a spectroscope with lenses and prism of fluor-spar, and by exhausting the air to a high vacuum, the spectrum of hydrogen could be photographed as high (*i. e.*, to as short a wave-length) as 100 micro-microns. Long before that point is reached, air has become absolutely opaque, even in layers a hundredth of an inch thick or less; so that not a scintilla of such light reaches us from the sun. But now these new N-rays, whose wave-lengths range over more than two octaves, from 18 down to 3 micro-microns, pass through air with perfect ease, and are observed by Blondlot with a prism and lenses of metallic aluminium. They are found in sunlight and in various artificial lights. They are absolutely cut off by the thinnest film of pure water, but pass through it readily if a little (even a very little) table salt be dissolved in the water; and they are faintly perceptible to a good eye if it be reinforced by placing behind it an artist's power of seeing without looking. The means of experimentation may be reduced to extreme simplicity, and all that is requisite for it is actually bound up in the volume—the instrument itself, we mean. These rays ought to become the rage.

Students of the American Revolution will be interested in the pamphlet recently published by the Library of Congress under the title 'Some Papers Laid before the Continental Congress, 1775.' The papers here published are: The Declaration on Taking Arms, July 6, 1775; Franklin's Articles of Confederation, July 21, 1775; Reports on the Trade of America, July 21, October 2, and October 13, 1775; Report on Lord North's motion, and reports on the Committees on Recess and Unfinished Business. The value of the pamphlet lies principally in the care which has been taken to show the evolution of the final document in each case from the first draft through the intermediate forms. It is much to be hoped that the Library of Congress may be able to increase its activity in this kind of work very greatly in the future.

We have received No. 1 of Papers and Proceedings of the three-year-old Bergen County (N. J.) Historical Society, a modest publication, containing, among other matter, Mr. W. A. Linn's researches concerning Baron Steuben's connection with Hackensack. This serious and solid study makes all the more regrettable a grave defect in Col. W. D. Snow's Report of the Committee on Colonial and Revolutionary History and Historical Places. The reporter goes out of his way to give fresh currency to a manifestly fraudulent letter attributed to Cotton Mather, concerning a threatened arrival of Quakers at Boston by sea, and the bloodthirsty measures he records and approves for heading off the calamity. This document, condemnable by its style, is a condensation of one that first appeared in the Easton (Pa.) *Argus* of April 28, 1870. It has been exposed again and again as a complete and palpable forgery. At the date of the letter (September 15, 1682), Cotton Mather was a youth of nineteen, an age ill fitted to engage in such piracy. The second number of the above Society's Proceedings should contain a proclamation of the truth in this matter.

The annual report of the Providence Public Library, the twenty-seventh of its veteran librarian, Mr. W. E. Foster, shows steady development and growth in every branch. The larger use of it did not come about by the simple means of multiplying popular books. The accessions of fiction were only 393 volumes out of a total of 5,326, and the fiction circulation was the lowest in the history of the Library, 53.82. An instance of the successful way in which the valuable contents are brought to the knowledge of readers is the alphabetical index of more than 500 references to works on "civic art" prepared in connection with an exhibit on that subject. The industrial, as well as the educational, interests of the city are cared for, and the use of the industrial collection increased 20 per cent. last year, while designers of jewelry and silverware are constantly employed in the Art alcoves. The total number of volumes in the Library is 115,349; or, if the "deposited" collections be included, 133,000.

Mr. Goldwin Smith's presidential address, as read to the American Historical Association last December in Chicago, is given in full in the *American Historical Review* for April. It is in general an argument for a philosophy, as opposed to a science, of history, and is strewn with many illuminating sentences. Mr. Smith had searched our latter-day juvenile text-books in American history with an eye to their fostering anti-British sentiment. He found this greatly diminished. The books were not rancorous, but dry. "For writing children's books special genius is required." He would "emphatically acknowledge Carlyle's greatness as a teacher of history. In picturesqueness he has hardly a peer. . . . I would venture to commend [his 'French Revolution'] as a valuable training in its way for the historic sense." "In the sentiment and style of Mommsen's 'History of Rome' we perceive Germany passing from the metaphysical to the militant, and hear the tramp of the German armies marching on Paris." "Through all this, mankind, or at least the leading members of the race, have been struggling onward to social, moral, perhaps spiritual life. Are things tending to

a result answerable to the long preparation, . . . or will the end of all be the physical catastrophe which science tells us must close the existence of the material scene? That question not even a 'Cambridge Modern History' attempts to answer."

The results of the National Antarctic Expedition are summarized in the *Geographical Journal* for April by its leaders. Capt. Scott dwells chiefly upon the ice-problems, his most interesting points being the evidences that the great ice-barrier is afloat and that the glaciers are dwindling, or, in other words, that the vast ice-formations are not the result of present-day conditions, but are the rapidly wasting remnants of a former age. Mr. Ferrar describes the physical geography of the region, and Lieut. Royds the meteorology of the winter quarters of the *Discovery*, with some incidental graphic details of the company's life. The rehearsals of the entertainments, the concerts, theatricals, negro minstrelsy, were in a hut, and "as in this palace of varieties there was invariably a temperature of —20 degrees and below during the time we were rehearsing, it was no great pleasure playing the piano." There are also papers on the distribution of seals and birds, and on the biological collections. A review, by Mr. R. N. Hall, of his eight years' researches in the ancient ruins in Rhodesia more than confirms the earlier reports of their magnitude and the architectural skill of their builders. The Zimbabwe temple is now generally admitted to be the finest and best preserved example of a Nature-worshipping shrine known to the world. Capt. Rawling narrates the principal facts of his expedition in Western Tibet, and the Rev. H. S. Cronin contributes a study of Ptolemy's map of Asia Minor with a view to discover his method of construction. An interesting and valuable feature of this issue is the large number of photographic illustrations.

Lord Cromer's annual report on Egypt, just published, is largely occupied with a discussion of the needed reforms in the Capitulations and Mixed Tribunals. In his chapter upon the Sudan, he calls attention to the rise in six years of the revenue from $40,000 (£8,000) to nearly $3,000,000 (£576,000), the result, he believes, of a policy of low taxation. Of this in such countries as Egypt and the Sudan he has been the persistent advocate during the whole of his administrative career. He holds that it brings tranquillity in its train; that it is an essential to steady and continuous moral and material improvement. Expenditures on objects, however desirable in themselves, should be postponed rather than that the principle of maintaining taxes at a low figure should be infringed. Egypt has now passed out of the first stage of development, and the Sudan is rapidly approaching the time when there can be an increase of expenditure, in order to carry out various reforms and improvements. An indication of the progress in Egypt is the interest taken in these reports, which Lord Cromer endeavors to render a means of political education to the Egyptians themselves. They are now eagerly read and discussed in the native schools and colleges, and the report of last year was translated into Arabic by one of the principal native journals.

The library of Michael Bernays, late professor of German literature at Munich, has recently been presented to the University of Chicago. As Bernays worked entirely from the comparative point of view, and specialized in the eighteenth century, his collection, which consists of some 9,000 volumes, is rich in original editions of Goethe, Schiller, Lessing, Wieland, Herder, Haller, Bodmer, Breitinger, etc.; Voltaire, Rousseau, Diderot, Marivaux, etc.; Metastasio, Alfieri, Gozzi, etc. It further contains many valuable German periodicals of this epoch, and an important collection of the works of Dante, Petrarch, Tasso, Ariosto, etc.

—The May *Scribner's*, in response to the suggestions of the season, puts its emphasis largely on out-door topics. Its best work in illustration is a series of eight photographs taken by Dwight L. Elmendorf at the edge of the Grand Cañon and printed in tint. (The old *Scribner's Monthly*, it will be recalled, was the first of the magazines to present the remarkable features of the Grand Cañon to the reading public.) A comparison of these photographs with the illustrations which accompanied Major Powell's description of the Cañon, impressively discloses the progress which a few decades have seen both in nature photography and in its application to magazine illustration. Connolly's rather harrowing sea story, "Dory-Mates," taxes belief in the possibility of a sailor lost at sea in a dory rowing steadily for six days and nights, his hands frozen fast to the oars during the last third of that time and his dory-mate lying frozen to death in the stern. Prof. George P. Fisher contributes his recollections of a visit to Washington during the Compromise debate of 1850, digressing into a defence not exactly of Webster's position in that debate, but of the integrity of the motives which led him to take that position.

—At length there is a prospect that within a few years we shall be provided with that much-needed book, a lexicon, which shall also be a complete index, to the poems of Virgil. The Yale doctoral dissertation of Dr. M. C. Wetmore, called 'The Plan and Scope of a Vergil Lexicon' (New Haven), defines the principles in accordance with which he is preparing such a work, and illustrates these principles by specimen articles in which ten different words are fully treated: six substantives, one adjective, two verbs, and one preposition. These are submitted to the consideration of scholars, whose criticisms and suggestions are invited by the author. It may be said at once, however, that, guided as he has been by the advice of Professors Morris and Oertel, he has developed a plan which must meet with general approval; above all, scholars will welcome his decision to make the treatment of each word formal in its arrangement rather than logical, thus leaving as little room as possible for the debatable ground of subjective interpretation. This arrangement commends itself in all the specimen articles, unless possibly in the case of the preposition, which is *ab*. Here the arrangement of the prepositional combinations according to the dependent word rather than according to that by which the preposition is introduced, seems to us of very dubious advantage over the usual method. For the rest, our strictures are confined to small details. Under *fluvius*, on page 26, what is the principle on which the ablatives are arranged? Under the usage of *video*, the first section is perhaps superfluous, especially in view of Æn. x., 790, which is classified under the third section. On page 116, the heading of the eighth section is inconsistent with that of the ninth and following sections; it should read, "With one object and a predicate." The word "after" in such expressions as "dative after verbs," "after adjectives," and the like, we hope will be abandoned altogether. Usually and more correctly the word "with" is employed by Dr. Wetmore. A certain number of Germanisms disfigure the treatise, such as "time nouns," "the *videre* article," and indeed its very title, "Vergil Lexicon." Such things are growing too common in the writings of our younger scholars.

—Finally, we suggest that Dr. Wetmore should, before he begins to print, consider carefully a scheme of typographical devices which will save the eyes and the time of those who are to use his book. We understand, of course, that his specimens are not printed in the form in which they will ultimately appear; at present they are set up with an extravagance of space which actually obscures what ought to be made perfectly clear. He must, for instance, decide what use is to be made of italics, and state somewhere exactly what his usage is. Shall the word under treatment always be italicized? or shall italics be employed for the word which introduces it? or shall they be reserved for variants? In his specimens he seems to be governed by no rules in this matter. It is probable, also, that full-faced type may advantageously be employed to draw attention to certain specified details. The absolute neglect of the science of typography in the new Latin Thesaurus is a dreadful warning to all who are planning lexicons of any kind. We expect better things of Dr. Wetmore, who shows himself well qualified for the useful work which he has undertaken.

—Literature in themselves, though not primarily so intended, the Psalms have called into being a huge literature—or what may be called thus by courtesy—in many tongues. They have been the occasion of learned treatises and "elegant" essays beyond numbering, though perhaps not of many works at once elegant and learned. Dry-as-dust commentaries have been written on them, and fervent appeals to the emotions they so readily arouse. If the theme can be held to admit new treatment, Mr. Rowland E. Prothero has done that surprising thing in 'The Psalms in Human Life' (London: Murray). With skill, sympathy, and infinite patience he has traced the influence of this great hymnary upon successive generations, from Origen to our day. The list of his "Principal Authorities" (in Appendix A) covers eighteen pages, and includes well over 300 books cited; yet his touch is as far as possible from pedantry. He combines research with popularity, and the many who will use his volume may be instructed as well as edified. He can quote from Byron and Borgia, from such perfunctory pietists as Queen Elizabeth and Henri IV. The hand of the scholar, the man of letters and of modern ideas is visible throughout; that of Dean Stanley's biographer may be seen in his rapid glance at the bigotries of Past or Present. Thus: "To men of Luther's temper, leaders of

the New Learning were cowardly palterers with truth. He denounced Erasmus as 'a very Caiaphas,' and . . . prayed for a curse" upon him; "to him also Sir Thomas More appeared 'a cruel tyrant.' Yet here again the Psalms were common ground." And as to the Boers: "Treachery, guile, cruelty . . . are not inconsistent with religious sincerity, when minds of a peculiar type and training are imbued with the spirit of the Old Testament, or convinced that they are fighting the Lord's battle against His enemies." The book was first printed at the end of 1903, and has been much praised by the British press, which cordially recognizes its eloquence, insight, erudition, feeling, interest, and impressiveness. It has been slow in reaching America, where it can hardly be less valued. A second appendix, "to the use of particular psalms," makes it easily available for reference. There is also a good general index.

—Mr. Lang's talent for threading the mazes of the marvellous is never permitted for any length of time to fust in him unused. His latest volume, entitled 'Historical Mysteries' (Longmans), contains fourteen articles, almost all of which have appeared during the past year in the *Cornhill Magazine*. Spain is placed under contribution for "The Murder of Escovedo"; Germany, for "The Mystery of Kaspar Hauser"; France, for "The Chevalier d'Éon," and three other papers; while the remainder of the subjects are chiefly connected with Great Britain. In the case of the Gowrie Conspiracy, Mr. Lang compacts into a short article a story which elsewhere he has made to fill out a whole book. "The Case of Alan Breck" will interest lovers of Stevenson, taking them back, as it does, to 'Kidnapped' and the murder of Glenure. Subjects like "The Murder of Escovedo" and "The Cardinal's Necklace" have received such illumination from Major Hume and M. Funck-Brentano that few novelties are left for Mr. Lang, save here and there in point of theory—since he is always willing to offer a solution of his own. But in "The Campden Mystery" he has the field more fully to himself. Here the circumstances are decidedly unusual. "The ordinary historical mystery," says Mr. Lang, "is at least so far clear that one or other of two solutions must be right, if we only knew which. Perkin Warbeck was the rightful king, or he was an impostor. . . . The Man in the Iron Mask was *certainly* either Mattioli or Eustache Dauger. James VI. conspired against Gowrie, or Gowrie conspired against James VI., and so on. There is reason in human nature at the back of these puzzles. But at the back of the 'Campden Mystery' there is not a glimmer of reason or of sane human nature, except on one hypothesis, which I shall offer." In 1660 a certain William Harrison, living in Chipping Campden, Gloucestershire, disappeared under circumstances which suggested foul play. Almost immediately afterwards his servant, John Perry, laid an accusation against his own mother and brother, who, with himself, were presently hanged for murder. Two years later Harrison returned with a cock-and-bull story of having been abducted by three horsemen, carried by them on their steeds to Deal, and shipped off to Smyrna, where he was sold as a slave. Considering that Harrison was seventy years of age when the abduction took place, he would hardly have been good booty for kidnappers. Altogether, it is a very pretty mystery, and furnishes Mr. Lang with the most novel subject that is treated in this volume.

—Prof. Ernst von Halle of the University of Berlin, known to American readers by his work on 'Trusts,' published about ten years ago, is the editor of a volume of nearly 800 pages, with the formidable title, 'Amerika, seine Bedeutung für die Weltwirthschaft und seine wirthschaftlichen Beziehungen zu Deutschland, in Sonderheit Hamburg' (Hamburger Börsenhalle). As its name implies, the book is intended to set forth the commercial importance of the American continent, and it necessarily devotes much space to discussing the question of our competition in European markets, which has almost become a nightmare in the European and especially in the German business world. More than a dozen writers contribute the various chapters. Nearly one-half of the volume is devoted to the United States, forty pages being taken up with an article on our banking system, by Professor Emery of Yale. Of course, there is a chapter on our Trusts, treating first of Trusts in general, and then giving an account, derived from the most recent literature, of the six leading ones, the Standard Oil Company, the Steel Corporation, the Tobacco Company, the Amalgamated Copper Company, the Smelting and Refining Company, and the Sugar Refining Company. The chapter on our Railroads and Navigation Systems is by Dr. Alfred von der Leyen, son-in-law of Friedrich Kapp; and the author of two works on American railroads. The closing article is on the Panama Canal and its importance for the commerce of the world. There are numerous illustrations, mostly portraits, embracing the Presidents of all the American States, labor leaders, and other heroes of the press; also a large folding-sheet, giving the pictures of more than a hundred of the most frequently talked-about Wall Street magnates. These pictures remind one of the plate, 'The Apollo of Syracuse and the Self-Made Man,' inserted by Ruskin at page 131 of his own edition of 'Aratra Pentelici.' A valuable feature of the book consists in the bibliographies appended to the several divisions, and a word of praise should be said of the two indices. Altogether, this work can be recommended as a useful compendium of the latest accessible facts concerning American material and economic interests.

—The Schiller centennial is bringing forth in Germany the usual number of reprints, new editions, facsimile reproductions, and similar anniversary contributions. Among a good deal of this sort that is only curious or of interest exclusively to the antiquarian, there are a few publications of more general import. Professor Witkowski publishes, from a copy by Schiller's sister Christophine, a hitherto unknown version of the earliest poetic effusion of the fourteen-year-old boy, a hymn to the sun, entitled "Aufgang der Sonne," in rhapsodic Klopstockian manner. Dr. H. G. Gräf of Weimar has edited, for private circulation, an unpublished memorandum, by Caroline von Wolzogen, about Schiller's last days, the most significant passage of which reads: "On the last morning of his life he lifted himself up repeatedly, gazed with a noble expression upward, as though he had collected all his strength, and said several times: *Judex.*" Finally, Professor Bernhard Suphan, the director of the Goethe-Schiller Archiv at Weimar, publishes in the *Schriften der Goethe-Gesellschaft* facsimile reproductions of three important manuscripts: Schiller's own copy of "Die Huldigung der Künste,' which he presented to the Grand Duchess Maria Paulowna; Marfa's monologue in "Demetrius," probably the last lines that Schiller wrote; and the original version of Goethe's 'Epilog zu Schiller's Glocke.' Each of these documents Professor Suphan accompanies with minute and careful, one might almost say loving, studies of their personal and literary relations, thus giving a truly worthy tribute to the memory of those days, a hundred years ago, when Goethe and Schiller, as one spiritual entity, stood for the highest ideals of life.

THE ANNALS OF AN AUSTRALIAN COLONY.

A History of the Colony of Victoria, from its Discovery to its Absorption into the Commonwealth of Australia. In two volumes. By Henry Gyles Turner, Fellow of the London Institute of Bankers. Longmans, Green & Co. 1904.

The self-governing colonies of Britain are among the most interesting political creations of the modern world, and well deserve to have their history written. No history composed in our own days can be final—not so much because the materials are still unpublished (for in these new and popularly governed communities pretty nearly all the important data are soon given to the world), as because we are still too near to the events, many of which can be judged only by consequences that are still unborn. It is well, however, that these events should be forthwith recorded and described by men who have actually witnessed them; men who know the sentiments which they evoked at the time; men who can give us that "contemporary's view" which we often long to have more fully given in the chronicles of distant times, when few wrote, and when most who did write confined themselves to a bare enumeration of facts. The most interesting, if not always the most permanently valuable, histories are those which have been produced during the period described, or so soon after it that the impressions made by men and deeds have not lost their freshness.

Mr. Turner, the author of this book, tells us that he has lived in Victoria for half a century—that is to say, during the whole period for which the colony has enjoyed responsible self-government. He is, therefore, a first-hand witness for the longer and more important part of the whole life of the colony. That life began, in one sense, with the first settlement at Port Phillip in A. D. 1835; in another, with the separation from New South Wales in 1850; in a third, with the new constitution in which full responsible government was granted, by a statute of the British Parliament, in 1855. He has known most of the leading men who have figured in Victorian politics. He has watched their struggles and suffered, like others, by their blunders. He modestly disclaims the title of a scientific historian;

and, though he writes of what he has himself seen and noted, he is certainly not a Thucydides, nor even a Guicciardini, or a Clarendon, or a Burnet, or a Gabriel Hanotaux. He writes none the worse for being entirely unpretentious in manner and style. He is plain, straightforward, with no literary graces, but making his meaning clear, and free from repetition or prolixity. He gives us a good, level narrative which recalls that of another better-known colonial historian, Dr. Theal, who has written so fully regarding South Africa. Without any great dramatic quality, he nevertheless succeeds in giving a pretty fair notion of the leading personages that have figured in Victoria. The portraits are not elaborate. They do not bring the men vividly before us. They are not delicately shaded. But they are sufficient to show the kind of people that come to the top in colonial politics, the kind of gifts that gain, or retain, the admiration or the confidence or the respect—things which do not necessarily go together—of the average voter. Neither is Mr. Turner a philosophic historian. His reflections are sensible, but not profound. He seldom tries to pierce beneath the surface and examine either the general causes that were giving their color to the public life of the colony, or the results upon Australian character of the almost incessant political struggles of half a century, during which a whole new generation has risen up and grasped the helm. He does not seem to know much of the politics of other democratic countries; at any rate, he scarcely ever refers to the phenomena of England and never to those of the United States or France or Switzerland. Still, he has presented us with a solid, useful book, in which those who desire to compare the working of democratic institutions in Australia with those working in America will find much suggestive matter. Such a reader will be struck by the great difference which the adoption of the British system of so-called colonial government has made—how it has caused constant changes of administration and parliamentary crises, and how much less there seems to be in Australia than in America of a regular party organization. Australian statesmen seem to be constantly forming new combinations by which to create and support new ministries, and they are very little hampered in their measures by any such restrictions as State constitutions, and the courts which interpret constitutions, impose on State Legislatures in America. In his references to the men who figure prominently in the narrative, Mr. Turner sometimes excites a slight suspicion of partisanship by the rather sneering tone he adopts towards the objects of his disapproval, such as Sir Charles Gavan Duffy and Sir Graham Berry. Yet he does not appear to be unfair in his statement of facts. It is only in the way of putting things that he departs a little from the attitude fit to be maintained by an historian who desires to be read in a distant future.

Among these men there are several who are remarkable, but none of the first order of ability for practical success—that is to say, none who combined in high measure the gifts of the parliamentary leader with the gifts of the constructive statesman. Two of the most eminent were Irishmen, first, Sir C. Gavan Duffy, who began his career as one of the Young Ireland party in the later days of O'Connell, though he belonged not to O'Connell's so-called "Moral Force" party, but to the "Physical Force" section of William Smith O'Brien, Thomas Meagher, and John Mitchel. Convicted of treason in Ireland, he lived to be prime minister of Victoria, and afterwards Speaker of the House, and to receive a knighthood from his old enemy, the British Government. Mr. Turner dislikes him, and he doubtless had some of the faults which are associated in Australia as well as in America with the name of "politician." But he was a man of untarnished integrity, a sincere Irish patriot, and personally worthy of respect through the whole of a very long life. The other prominent Irishman, Mr. George Higinbotham, possessed more brilliant gifts, for he was a powerful and impassioned speaker. He was not only a conscientious but a singularly disinterested man, and he won and retained the confidence of the Victorians. But he was a little too uncompromising or idealistic for practical politics, and ultimately quitted that arena, ending his career as chief justice of the colony, and always refusing to receive a title. The best type of the "man-of-business statesman" presented to us is Mr. Service, a Scotchman by origin, clear-headed, practical, independent, upright. His continued influence with the citizens speaks well for their appreciation of these sterling qualities. Against him may be set the figure of Sir Graham Berry, who appears in these pages as the typical demagogue, a sort of Australian Cleon, a strong man, half-educated, and ignorant of economics, rough but vigorous in speech, with a great power of exciting enthusiasm; shifty, adroit, ready to play down to any popular sentiment; unscrupulous in his methods, but free, so far as we gather from Mr. Turner's unfriendly pages, from any taint of personal corruption. He was an Englishman born, and indeed nearly all the men whose careers are described in these volumes were of British birth. It is only towards the end of the narrative that we meet with persons, who, like Mr. Alfred Deakin, recently prime minister of the Australian Commonwealth, and one of the most attractive figures in Australian politics, are thorough Australians, redolent of the new soil.

One is naturally inclined to compare these men, who have given its character to the political life of Australia, and have now built up the new Federal Commonwealth on lines resembling those of the Federal system of the United States, with the creators of the American Constitution. There is of course a great difference between the ideas and habits of thought of the eighteenth century as we see them in Washington, Franklin, Jefferson, Madison, Gouverneur Morris, Roger Sherman, John Adams, James Wilson, Alexander Hamilton, and the rest of that remarkable group, and the ideas and conditions of the end of the nineteenth century. That difference is too obvious to need comment. But when we compare the intellectual quality of the two sets of men, we are struck by the smaller stature of these Australians. Victoria, to be sure, is only one colony. In order to have a proper "stock-taking" of the total brain-power of the country, we should have to include four other communities—New South Wales, Queensland, South Australia, and Tasmania. Yet the result of including these, with such capable men as Sir Samuel Griffith from Queensland, Sir Henry Parkes and Mr. Reid and Mr. Barton from New South Wales, would not materially affect the judgment to be passed. The great Americans of the Convention of 1787 strike us as being of a superior order, with wider and deeper thoughts and a larger vision. An Australian may reply that the generation to which Jefferson and Hamilton belonged was quite exceptional, and has perhaps no parallel in the subsequent history of the United States, as perhaps the generation of Edmund Burke, Charles James Fox, and William Pitt has never been quite equalled in the subsequent history of England. Still, the fact remains, and will, we think, strike every one who reads this history, that there is something lacking to the public life of Australia which was present in that of the American States in the first two generations after the Declaration of Independence.

In the earliest days of the colony of Victoria, after responsible government had been conferred upon it by the British Parliament, the questions which chiefly occupied and agitated it were connected with the discovery and working of gold, which drew a vast and disorderly crowd of diggers into the country. There were also some disturbances, caused by the proximity of the convicts whom the mother country had unwisely sent to Tasmania (for Victoria herself had not been a penal settlement). Presently, when these troubles were over and gold mining had become a settled industry, carried on by large companies, other controversies emerged which lasted longer. One of these turned upon the occupation of the land, and the claims of the classes respectively called "squatters" (the large holders) and "free selectors." Another, still more important, raged round the fiscal policy of the colony. The early tariffs had been on few articles, and moderate in amount. They were tariffs for revenue; and, in a new country, duties on imports furnish the easiest way of raising revenue. But, in 1865, protective tariffs were recommended to the workingmen as certain to provide for them more work and better wages, because the articles which had up till then been imported into Victoria would thenceforward be made in Victoria, and would supply work to her workers. The workingmen were caught by these proposals, advocated with declamatory eloquence by Graham Berry. Protection was carried, and it has held its ground in Victoria ever since, though often assailed in the Legislature and at elections. According to Mr. Turner, it has proved pernicious, and has wholly retarded the progress of the colony. *Post hoc, ergo propter hoc* is the easiest, and is, therefore, apt to be the most frequently used and the most frequently fallacious, of all sorts of inference. Still, the facts and figures he gives do seem to bear out his conclusion, especially when they are compared with the parallel facts and figures supplied by the bordering colony of New South Wales.

"In 1866, when the first protective duties were levied, the population of Victoria exceeded that of New South Wales by 200,000. Thirty years later it had fallen nearly that number behind the mother colony [New South Wales], though an unhealthy congestion of the people in Melbourne retained for that city a larger population than Sydney [the capital of New South Wales]. In 1866 the area under crop in Victoria was

already 600,000 acres, being just double that of New South Wales. By 1900, according to Coghlan's statistics, the area in the latter colony had grown to 2,400,000 acres, against 3,100,000 in Victoria. When it is remembered that both soil and climate are in the Southern colony [Victoria] immeasurably superior, that it suffers less from droughts, and that the producers are not handicapped by the great distances from market which burden the New South Wales farmer, it is evident that some malign influence must have retarded the growth of this main factor in a country's prosperity. To some extent it was due to want of labor, which had been diverted into more artificial channels. It was, of course, also affected by burdensome duties of from 20 per cent. to 50 per cent. laid upon everything used in the process of cultivation. This alone induced many sturdy farmers to betake themselves later across the Murray River, and to risk the more unfavorable climatic conditions. . . . In 1866 the volume of imports and exports of Victoria was very nearly double that of New South Wales. By the end of the century it was, in round figures, £36,000,000 in Victoria as against £54,000,000 in the colony with unfettered trade. . . . A retrospect of more than a generation of protective duties would seem to show that they have not achieved the object for which they were ostensibly imposed, namely, to secure to the Victorian workman the right of manufacturing at least a large part of the goods represented by the £20,000,000 annually paid for imports. The actual increase of population in the interim will not nearly account for the figures, and the inference is that the laws of supply and demand cannot be arbitrarily superseded by any tariff legislation, although demand may be slightly circumscribed by making supply unduly costly. Meanwhile professional classes, the farmer, the miner, and the men who live on fixed salaries bear the impost in the enhanced cost of living, a few manufacturers make large profits, a number of mechanics earn good wages, and thousands of young people crowd into a gorged metropolis and earn a bare subsistence at work which teaches them nothing. Eventually, as improved machinery or periodically glutted markets drive them forth, they join the ranks of the unemployed, one of the permanent evidences of misdirected legislation" (Vol. II., pp. 350-352).

Nevertheless, Victoria still clung to her protective system till, in 1900, the creation of the new Federal Commonwealth of Australia transferred the power of fixing a tariff from the Legislature of the colony to that of the Commonwealth. The colony which adjoins Victoria on the west, South Australia, had also been latterly protectionist. (So is the colony of New Zealand.) The preponderance of protectionist sentiment has given a victory to the protective system in the Commonwealth Parliament, despite the resistance of New South Wales. There is no more singular instance in the modern world than the fiscal history of Australia presents of the power of fallacies to prevent and mislead the masses, because in Victoria it was not by the intrigues of manufacturers or for the sake of pleasing them that this high tariff on manufactured articles was imposed. The appeal was made to the masses: it was the vote of the masses that enacted the tariff.

Constitutional questions affecting the machinery of Government and the allocation of political power have played a less important part in Victoria, because she adopted, early in her career, manhood suffrage. It ultimately became, by the inclusion of women, universal suffrage. (Women now vote in all Federal elections in Australia.) However, a long struggle was waged between the popular House of the Victorian Legislature and the other house, which was elected on a more restricted franchise, limited to persons possessing a property qualification. Deadlocks and constitutional crises were the result. There are now two houses in the Federal Legislature, but both are elected on the same universal suffrage.

The general impression which a perusal of these interesting volumes conveys is not very easy to formulate. We are struck by the almost constant turmoil and by the incessant changes of administration. The average life of a Victorian ministry is given at eighteen months. Even France and the Spanish American republics do not equal this record. There is much unwisdom in legislation. There is sometimes great extravagance, sometimes great incompetence, in the management of finance. A huge debt has been accumulated. The working of the railways by the colony has resulted in a constant deficit, and the public servants have become far too numerous, and a dangerously powerful factor in the whole body of voters. In 1889 there were 31,247 persons in the public service, drawing salaries aggregating £3,452,857 (about $17,250,000); and one in every thirty-two of the entire population (then about one million) was in receipt of Government pay. Many costly experiments, not always successful, have been made in the way of setting the State to undertake work left in other countries to individual enterprise. And it is not cheering to find from Mr. Turner that about one-half of the voters do not trouble themselves to vote unless at some exceptionally exciting moment, when a vote attaining two-thirds is the limit. Nevertheless, it is to be remembered that a high level of integrity appears to be maintained, both in elections and among members of the Legislature and among officials. Elections are honestly conducted. City government is pure. Party organizations have not extinguished the freedom of the voter, though they are said to aim at turning the member into a mere delegate. The forces which make for good and for evil in government carry on a struggle in which victory is perpetually oscillating, just as it oscillates in France and in other places which we know better.

RECENT NOVELS.

The Red Cravat. By Alfred Tresidder Sheppard. Macmillan.

Return. By Alice MacGowan and Grace MacGowan Cooke. Boston: L. C. Page & Co.

Little Citizens. By Myra Kelly. McClure, Phillips & Co.

The Princess Passes. By C. N. and A. M. Williamson. Henry Holt & Co.

After the Divorce. By Grazia Deledda. Translated by Maria H. Lansdale. Henry Holt & Co.

The Matrimonial Bureau. By Carolyn Wells and Harry P. Taber. Boston: Houghton, Mifflin & Co.

The Courtship of a Careful Man. By Edward Sanford Martin. Harper & Brothers.

Little Stories of Courtship. By Mary Stewart Cutting. McClure, Phillips & Co.

Mr. Sheppard has taken an excellent period for his novel, in the reign of Frederick William I. of Prussia, and an excellent subject in the levying of that army of giants who wore the red cravat that meant the King's service. The theme indicated by the title, however, is but one of the topics unfolded to the reader. Frederick William's time was one of picturesquely grotesque customs, his court a beargarden of eccentrics, his violent personality a strong pivot for a story. The first book of the three which compose the novel concerns itself with Wusterhausen and that Baron von Gundling who was at once chamberlain and court fool, a vacillator in love, immensely learned and wholly without sense—with his understudy, Fassmann, the Saxon, the sharp adventurer whose knaveries set in motion the villanies of the plot—with the simple aristocrats and the homely, mother-witty peasantry of a Prussian village. The next book takes us to the great Michaelmas fair at Leipzig, to rub shoulders with all Europe. In this hubbub the love story begins. *She* is an English girl on her way to the Prussian court; *he* an Englishman of exceeding height. Now height was a dangerous attribute in the days when Frederick William's one extravagance was the maintenance of his giant grenadiers, and when his recruiters throughout Christendom, by fair means and foul, were gathering in the victims for a service as monotonous and inglorious as it was oppressive. To the Saxon fair, to pretty English Joan, to her unhappily tall lover, add a jealous rival, a Prussian recruiter with his kidnappers and desperadoes, for the principals of this act, which affords not a few glimpses into the publicities and privacies of a time of mighty stir abroad and a great homeliness at home. The third book minutely pictures the dreary life of the King's "spick-and-span toy soldiers," brings the career of the chamberlain-buffoon to a close among his potations and quotations, and, of course, winds up the love story with an ingeniously melodramatic turn of affairs.

The novel owes much to its setting, and, while a story of adventure, seems made upon almost new lines from its leisurely style. There is ample room and verge enough for the telling of details that indicate careful research. If they lean toward the grotesque, that is owing not to the author, but to his period. The combination of his deliberate manner with his swashbuckling theme puts him into relations with the older and the later schools of semi-historic novelists. This is a position which might precipitate an unskilful author to earth, but, to our thinking, Mr. Sheppard's merits should commend him to readers of both classes.

About the time when Frederick William was dying and bequeathing his giants to his son Frederick the Great, the colonists in Georgia under Gov. Oglethorpe were contending with the Spaniards of Florida for the possession of the coast islands, which to have lost would have been to let Spain loose upon the whole Atlantic seaboard. Out of this struggle is made the historic half of the novel 'Return.' Of this, too, it may be said that it is told in no haste, making liberal delays in the progress of the story for the sake of the story's trimmings—the times, the fashions, the manners. Georgia as it was under its great founder is a pasture relatively new in fiction. Here we see the Georgia of Oglethorpe, Georgia as a refuge for "those persons at home who had become so desperate in circumstances that they

could not rise and hope again without changing the scene and making trial of a different country"—the chosen home of the oppressed Protestant, of Highlander, Lowlander, and German, a colony rejecting slavery, and fighting hostile Indians with friendly ones. Oglethorpe himself moves freely through the pages, nor needs idealizing to fit easily into a romance, guardian of his people's domestic and political interests. Whitefield preaches in the open air, the battle of Bloody Marsh is fought, the massacre at Moosa painfully ends the expedition against St. Augustine, and all serves as a garnish to the love story of Mistress Diana Chaters. Jilted for her sins of flirtation by a young blood, and vowing revenge in the first chapter, she finds herself caught in a coil which is disentangled only in the last. Some of the accessory characters are among the best drawn—notably Lit, the daughter of the old Scotch ex-pirate Buccleugh. The episode of the wild stallion descended from the horses of De Soto and his roving band is admirably told. A tendency to language is occasionally in evidence, as well as an intermittent inconsistency of some language with other language. But these are imperfections not worth insisting upon in a book of fresh, wholesome romance.

Had there been Myra Kelly books a hundred and fifty years ago, how helpful the authors of these and other period-stories would have found them! Writers of historic fiction a century hence will have much specialized documentary wisdom to their hands, and no one who shall be writing of the development of Manhattan Island will venture to omit from his original sources these faithful witnesses to the early status of the Russian Jew, with revealing sidelights upon his fellow-citizen, the young son of Ireland. Studied in the embryonic stage of naturalization—not farther than the First Reader—they stand in instructive contrast with their parents, round whom still clings the atmosphere of the Old World. To forget an old world and assimilate a new is a feat of varying difficulty for varying natures. Speaking generally, little Pat chiefly hopes to be as grand as "me father, the cop." Little Izzy, while not forgetting that the fat of swine "is not fer us," yet looks beyond his parents' condition to something different for himself, and in effect is the would-be educator of his grandfathers. The first condition of solution is statement, and this Miss Kelly's stories picturesquely afford. They pile up material for the future, and are in the present prodigiously amusing.

All is grist to Mr. Hopkinson Smith's cheerfully active mill. We have seen that his Southerners can be matched by his Venetians, his Parisians, his Hollanders; they, again, by his lighthouse-keepers and bridge-builders; and these by his underdogs. For his latest gallery he tells us that he has searched 'At Close Range,' as with a magnifying glass, the secret places of many minds and hearts, with the result of confirming his theory that "at the bottom of every heart-crucible choked with life's cinders there can almost always be found a drop of gold." His optimism does not stop short of the heart of the commercial drummer, a subject far beneath the underdog for picturesqueness, one would say. But the author's point of view, that of sympathy, fun, and sentiment, and his touch, at once positive and light, carry the day. Other types are here besides, some of them already familiar, as gondoliers, Frenchmen intent on the code of honor, a modern Emersonian "Guy," who possessed the "talisman" without always making a strictly Emersonian use of it, and some altogether desirable Life-Saving Station figures. But, be the type friend, acquaintance, or stranger, each individual has found some fresh way of putting himself at the centre of an episode. Mr. Smith not only is a perennial bloomer, but he blooms doubly, in parallel lines. His sentiment is frankly old-fashioned, his catholicity wholly modern. He has the snagless style of long literary training, yet he shuns prolixity. His topics—they are whatever he sees, and he sees with multiplying glasses—overflow the limits of classification, and range to regions alike remote from the drawing-room, the wheat market, the jungle.

From the youngest and noisiest child of invention—the motor car—and the most time-honored device of romance—a device as old as Viola and Imogen—have the authors of 'The Princess Passes' constructed their new story. Aided by the scenery of Switzerland and France and by neat characterizations of men, women, and mules, and abetted by our old friends the Lightning Conductor and Molly, now his wife, it offers a front of airy and charming promise, and dances in graceful mirth down its appointed hour. If the story taxes belief, the characters are lifelike enough to satisfy any novel reader in good standing. Now the motor car eats up the Alpine road with dizzying voracity—the St. Gothard Pass at a meal, the Simplon at a gulp. Now we travel afoot with the hero, his pack mule and his Chamouni muleteer, through Alpine ways of delight. All the intoxication of mountaineering is here, from the thrill of dawn upon the snow range to the content of the omelette and the bed at the day's end. The scenery is more than described, it is conveyed. Switzerland and Savoy may be had by the most sedentary. A gay and breezy fun plays duets very prettily with much genuine enthusiasm for beauty, and makes amends for any overplus of improbability. We may be allowed to wonder where Lord Lane saw a "fading sunset, when a young moon is rising"; and we may express the hope that Molly and Jack will not again defy the law which forbids automobiles on Swiss passes.

Mr. Bates's 'Madcap Cruise' is without doubt an interesting production for a young man of twenty-two. Inherited talent and unusual opportunities of travel may account for much in the book, and we may probably thank the influence of Kipling for the wealth of nautical details. Still, after due subtraction is made, there remains a promising residuum of lively narrative and clear-cut description, written for the most part in excellent English. The story is of a young Bostonian, fresh from Harvard, who successfully pursues his lady-love to the Mediterranean in a yacht, temporarily stolen from his uncle at North Haven. His companion is another Harvard graduate, whose adventures in helping an unprincipled archæologist to smuggle treasures out of Italy provide the most exciting, if also the least probable, chapters. Hardly more credible is the irresponsible fashion in which the hero keeps back a business letter directed to his uncle, thereby unconsciously saving the uncle from ruin. But it would be captious to demand as yet from Mr. Oric Bates a highly developed plot, or much subtlety in characterization. We should rather thank him for a thoroughly wholesome, readable book, and wish him success in the literary career on which he has embarked so young.

Certainly, if the outcome of a divorce law were necessarily as gloomy as that depicted by Grazia Deledda, few would ever have been found to advocate its enactment. The authoress of 'After the Divorce' lays her scene in Sardinia of the year 1907; and, in a very attractive stage-setting, she works out a most unattractive drama. The hero, Costantino, is tried for murder and sentenced to twenty-seven years' imprisonment. At the end of three years his wife gets a divorce and marries again; but within two years more the real murderer makes a death-bed confession, and Costantino is released. The story ends as disagreeably as it began; and even when the hero and heroine are reunited in marriage, we can take no pleasure in them. Only the charm of one or two minor characters, the beautiful pictures of Sardinian scenery, and a certain powerful if sordid pathos, mitigate the general feeling of repulsion, to which the painfully literal translation also contributes. As a thing of beauty and a joy forever, the book is a failure; as a manifesto against divorce, it might be adopted by all good Catholics.

The title of 'The Matrimonial Bureau,' and its covers, which are profusely adorned with hearts and wedding-rings, are not likely to mislead the intending reader with any promise of a serious tale of lovers and the course of their affections. We have never read a more improbable tale, and not often one that so completely failed to amuse. The improbability any one might overlook, but only in consideration of being entertained. We might follow with some interest the schemes of a maiden lady in a remote village to marry off her girl protégées to her eligible male cousins and their friends, provided a certain amount of ingenuity were applied to describing the complications that would naturally arise. But there are apparently no such complications. The young men arrive, drink a great deal of tea, depart with their brides; and no more said. The reader, however, is left asking himself why the idea of a bureau is dragged in to simplify the matrimonial problem for young men and women whose striking characteristic is their readiness to marry at a moment's notice the first person they chance to meet.

Few writers of fiction can be reproached with too light a touch, but we should say that Mr. Martin is one of them. Of the stories in the volume named above, five are love stories of the conventional pattern; the sixth, which describes how a married couple with a very limited circle of acquaintance can rake together the material for a ball at a fashionable New York restaurant, is the only convincing episode in the book. The fact is, that what interests the author is not the hearts of the persons concerned in these five courtships, but the attitude of their friends and guardians—the middle-aged point of view, which he hits off with perfect precision. The lightness of which we complain consists in a sort of matter-of-fact flippancy in treating of the affections of the hero and hero-

ine, which makes the reader feel that he has been defrauded of the appropriate emotions. One sees the young people being gently guided into an alliance by their elders, one hears the sigh of relief with which they are dispatched on their honeymoon.

"They were married in October. 'Charles,' said Mrs. Finch, after the wedding, 'what do you think of it?' 'Excellent plan. . . . They can start in now and live a simple, God-fearing, two-maids-and-a-furnace-man life in town, and by the time Clarkson needs more income I dare say he will have learned how to get it. . . . Anyway, the inconvenience of maintaining a family on a fixed income of any reasonable size is so much greater than the inconvenience of working, that I have little fear but that, barring accidents, he will turn out a useful man.' "

That is the keynote of these brief romances. On the whole, we are driven to the conclusion that the more commonplace treatment, which takes the lovers seriously, and ropes in the parents merely because there must be some background, some relief from the tension of the love interest, is really more entertaining. In a long novel the case is rather different, and the epigrammatic reflections of the middle-aged may be allowed to balance the passion of the young. But perhaps Mr. Martin wanted to show what romance has come to with young people who go to colleges for women like one of his heroines, or with modern young men who, like the hero of another, talk more to their sweethearts about the desirable situation of a house in the Park Avenue neighborhood for men of certain incomes than about the state of their hearts.

There is no lack of sentiment or passion in Miss Cutting's 'Little Stories of Courtship.' Here the young people have it all their own way, and their mothers and sisters are kept in a state of breathless excitement in which the reader is bound to share to some extent. "They were parting. Her white arms were slipping from his shoulders, his were half round her still. The young face of Josephine was raised to the tender, protecting rapture of his. . . . 'Well, we've all of us been there,' said Mr. Belmore sentimentally, breaking the silence that still followed the closing of the door." Perhaps we should observe that these are all provincial stories, and that in the provinces there is probably time for romance. At any rate we believe that this is how it should be done. In a love story let us have as much sentiment as possible; and if even the middle-aged parents can be made to take the purely romantic point of view assigned to them in Miss Cutting's simple but effective stories, so much the better.

BOOKS FOR MUSIC LOVERS.

A Handbook to Chopin's Works. By G. C. Ashton Jonson. Doubleday, Page & Co.

Beethoven. By George Alexander Fischer. Dodd, Mead & Co.

Beethoven and his Forerunners. By Daniel Gregory Mason. Macmillan Co.

The Art of the Musician. By Henry G. Hanchett. Macmillan.

Opera Singers. By Gustav Kobbé. New ed. Oliver Ditson Co.

Sir Edward Elgar. By Robert J. Buckley. John Lane.

While a good piece of music is sufficient unto itself, most amateurs like to know something about it before they hear it, and it is for this reason that programme notes have come more and more into demand at concerts. Mr. Jonson's 'Handbook to Chopin' is an attempt to do for the home-circle, so far as one composer is concerned, what those notes do for concert-goers—to form a permanent analytical programme, a kind of musical Baedeker through the Kingdom of Chopin. He writes not only for the small number whose technical powers suffice to master this music, but for the much larger number who owe their acquaintance with it to the semi-mechanical instruments which have come into such astonishing vogue within the last three years. He gives a list of books on Chopin, and then proceeds, according to the opus numbers, to describe the 214 mazurkas, nocturnes, valses, sonatas, &c., giving his own descriptions and opinions, besides citing the most interesting and illuminative remarks of the recorded authors. The result is an exceptionally valuable book, which every devotee of pianoforte music should have at hand for daily reference. In the preface Mr. Jonson says: "So great have been the pleasure and profit to myself of the task of preparing this book, that, whether it proves successful or not, I intend, and have indeed already begun, to write similar handbooks to the works of Beethoven, Schumann, Grieg, and other great composers"; which is good news.

A satisfactory short biography of Beethoven, summing up in a few hundred pages the substance of what is scattered in hundreds of books and other documents, has long been a desideratum. Mr. Fischer's volume comes, perhaps, nearer the goal than its predecessors, but it need not discourage others from attempting the task. It is a character study rather than a biography and criticism, and there are special chapters on the composer's relations to women, his meeting with Goethe, his methods of composition, his sense of humor. The chapter on humor is one of the best in the book. Speaking of the Scherzo, created by Beethoven, he says: "The satirical, sarcastic humor which escaped him in social intercourse at times, is vented on a colossal scale in the Scherzo, in which he often makes sport of humanity itself, making it the subject of his jest, his ridicule—its foibles being shown up, its follies exposed." A final chapter discusses Wagner's indebtedness to Beethoven. Mr. Fischer seems to have fallen a victim to the umlaut epidemic; he makes Gluck masquerade twice as Glück, and Hummel eight times as Hümmel.

Music lovers might be divided into two classes: those who find their greatest joy in music of which the songs of Schubert and the operas of Wagner are the highest type, and those who prefer purely instrumental music like the symphonies of Beethoven. Mr. D. G. Mason belongs to the second class. "Music," he tells us, "is *always fatally* handicapped by association with words" (the italics are ours), and "the limitations of all vocal music are in many ways serious." These cruel blows at the great song and opera composers occur in his essay on the "Periods of Musical History," which opens his volume. The next chapter contains some exceptionally luminous remarks on "Palestrina and the Music of Mysticism." The modern spirit is then discussed in an antiquated manner. The greater part of the volume is taken up with readable chapters on Haydn, Mozart and Beethoven. Of special interest are Mr. Mason's remarks on Mozart the man and on the different types of expression in Beethoven's music.

"The statement that music is an art is likely to pass unchallenged." A book with such a sentence at the forefront seems unlikely to appeal to readers of intelligence, but in the case of Mr. Hanchett's volume that unfortunate sentence is quite misleading; there is a great deal in his pages which music lovers will find interesting, particularly those who are given to divining the reasons which prompt men and women to approve or disapprove of a given song or piece. "It is lamentable," he declares, "that the musical standards of persons of good, general education are so shamefully low," and he proceeds to give, in fourteen chapters, a mass of information and hints that would go far toward remedying this state of affairs if his book should get all the readers it deserves. It is really a treatise on how to listen to music. There are few musicians and critics who might not peruse with advantage Mr. Hanchett's remarks concerning the differences between time, metre, and rhythm, which are frequently confused. He comments on the great stimulus given to the study of musical analysis by the numerous lecturers and commentators on Wagner's leading motives. He is liberal enough to see a large and legitimate field for the semi-mechanical instruments: "Hearing music requires practice no less than performing it, and a pianola can give the ear very good practice, indeed." He eloquently defends Liszt (p. 198) against the charge that there is no counterpoint in his music—a charge which has been brought against Schubert and Beethoven too. He observes that "endurance and vogue" are not infallible tests of musical excellence; for instance, "the Gregorian chant [which the Pope has recently tried, with scant success, to reestablish in the churches] is not entitled to a high place in the temple of art—in fact, it may even have its claim to any consideration as an expression of musical art challenged; yet it is very old and very widely in use to-day."

Mr. Kobbé's book on the great opera singers is much more than the usual pictorial souvenir. The text is not a mere filling in for the numerous pictures of the famous artists; besides being full of anecdotes, the compilation is of great value as giving biographic sketches of the singers taken down from their own lips, sometimes with the aid of stenography. The new edition adds the lives of Ternina and Caruso to the earlier list.

It is well known that Norway's greatest composer, Edvard Grieg, is of Scotch ancestry. Apparently Great Britain has tried to get even with the North, for Edward Elgar has a surname of Scandinavian origin. Whether the exchange was a fair one need not be discussed here; Elgar is undoubtedly the musical lion of the hour in England, where all classes, from royalty down, are vieing with one another to honor him. Mr. Buckley's biography is, therefore, timely; it is authentic, too, being based on material obtained from Elgar himself; and as for the comments on his works, the writer says they are the re-

sult of a close study of them extending over nine or ten years. It remained for a foreigner, it seems, to discover England's musical genius. Hans Richter, says the author, "did for Elgar what he had done for Wagner thirty years before. England was won for Wagner by Richter and the 'Tannhäuser' overture. England was won for Elgar by Richter and the 'Enigma' variations." The last chapter is devoted to "The Apostles." There are ten portraits and illustrations.

Economic Method and Economic Fallacies. By William Warrand Carlile. London: Edward Arnold; New York: Longmans, Green & Co. 1904.

Whatever we may think of the conclusions reached by Mr. Carlile, we cannot help admiring his courage. Great names do not overawe him, nor is he staggered by diagrams, or algebraic formulas, or the elaborate jargon with which some modern writers on economics carry on their discussions. Doctrines are not venerable to him because they are old, or true because they are accepted. He has his own views, and he sets them forth in good, crisp, vigorous English. If his reasoning is not convincing, that is not because his language is not clear. We may not altogether agree with him, but we know what he means; and his criticisms are well pointed, even if they do not always hit the mark.

Such criticisms are to be found in the chapters devoted to "The Logic of Political Economy." The inconsistencies of several eminent writers are pointed out, and we are told to ask ourselves whether their methods must not therefore be erroneous. It does not follow. Men constantly use language that seems to imply the doctrine of free-will, but even those who hold that doctrine always assume, in scientific discussion, that men are apt to act alike under like circumstances. The fact that Mill appeals to the "man in the street" and the "man with no theory to support," does not prove that popular approval settles the truth of a proposition, or that any economic proposition expressed in language not conforming to popular usage must be false. There are very good reasons for employing words in their popular sense, when that sense can be accurately defined; but the resemblances between objects which cause men to apply to them a common name are often too slight and temporary to furnish a satisfactory basis for classification. Mr. Carlile's position was thoroughly exposed by Socrates, and, though often reoccupied, it can never be held. No doubt, in objective science, formulas must be compared with facts; but we may not infer that "in mental science and in economic theory we should bring all our abstract formulas to the test of conformity with the popular meaning of language." The attempt always leads those who make it into a Serbonian bog of ambiguities.

Let us take the case of the Ricardian doctrine of rent. No doubt this word in the vernacular means whatever is paid for the use of real estate. But it has acquired a specific and very definite meaning in political economy, and while we may regret that the phenomenon has not received a name of its own, it is too late to change. Mr. Carlile, indeed, disputes the existence of the phenomenon. "There appears to be no truth whatever in the paradox that economic rent does not enter into the cost of production." If it does, he insists, it is the cost of production under the most, not the least, favorable conditions that regulates prices. It is true that Adam Smith can be quoted in support of this proposition, and the late Duke of Argyll wrote an elaborate treatise to maintain it. But it has been carefully examined and deliberately rejected. Mr. Carlile admits that we can talk of certain hypothetical land as returning the ordinary profits of capital only, but no rent; but he declares that we cannot illustrate the distinction by any individual instance. *Solvitur ambulando.* Many a farmer in New England has illustrated the distinction, and will to-day speak of fields that "it just pays" to cultivate. Nevertheless, Mr. Carlile's criticism is worth reading. Most of us find it profitable to review, from time to time, the reasoning through which we have attained our creeds.

In his review of modern psychology and mathematical economics, Mr. Carlile is at his best. It is true that several writers have carried their refinements to an absurd extent, and vanish with their science from the ken of the world of affairs in a cloud of logarithms. No one, so far as we have learned, has found these formulas useful in carrying on business. No one, Mr. Carlile observes, has enriched himself by predicting prices by the aid of diagrams illustrating marginal utility. It is easy, given the price, to say that a certain degree of utility exists; but the only way of finding the utility, practically, is to find the price. "We can never say with even any *prima facie* appearance of plausibility that the final degree of utility of any commodity is so much, and that, therefore, its price will necessarily be so much, also. We can only say that the price paid for it was so much, say a shilling, and that therefore its final degree of utility must also have been the exact equivalent of a shilling." The profit of such learning is not obvious, and Mr. Carlile may well complain that "if pure economics has nothing more in it than this, it seems about as useful a study as learning to spell backwards, or to write from right to left after the Semitic fashion."

We should be glad to quote many a trenchant saying both on this matter and on others discussed by this clever writer. But as we should be moved at the same time to controvert a number of his assertions, we think it best to advise those interested in economic inquiries to read the book for themselves. There is a good deal in it. As much entertainment as instruction is to be got from it; and that is saying a good deal. It is dedicated to an American economist, Mr. Horace White.

Trees and Shrubs of Central Park. By Louis Harman Peet. New York: Manhattan Press.

This is a convenient guide through the intricacies of an interesting arboretum. Plans of the different sections, in which the names of the more important single plants and groups are distinctly given by means of numbers and keys, render the identification of the individuals easy and safe. By the help of this handbook it is possible to lay out a series of walks which will give one a clear idea of the wonderful richness of the treasures in trees and shrubs which New York city possesses. The pictures are not very numerous, but they are all from well-chosen points of view.

Here and there one notices a bit of a slip in the text, but there is nothing very serious or misleading. For example, the following good description is not out of the way, but the interpretation is not in accordance with the views of most botanists. The extract is from an excellent account of the mountain laurel (*Kalmia*):

"Come, then, and behold in silence the wondrous work of Nature in the saucer-shaped corollas, rose-flushed with the hues of dawn, that this shrub unfolds to your delighted eyes. Look down into the lovely chalice and follow the windings of that wavy line of rose and faint purple which flushes around the cup like a rainbow over a sky of pearl. See the ten little stamens with their heads all tucked away in little pockets, curved back, like miniature catapults, waiting the touch of the golden bee to set them off, with a shower of pollen from their flying anthers. Touch them with but the tip of your pencil, and the trap is sprung. The golden pollen flies and Nature's end is accomplished. The lovely flowers are succeeded by a woody pod or capsule."

The inference from this spirited description is that the pollen flies to the receptive stigma of the very flower in which the entangled anthers are released. But, as Professor Beale has well shown, the pollen is thrown not upon the stigma, but against the under surface of the visiting bee, and by him is carried to *other* flowers of *Kalmia* waiting to receive it. The straightness of the shooting of the pollen against the bee must have been one of the most fascinating of the illustrations used by the late Mr. Gibson in his lectures.

We cannot too much commend the fulness and accuracy of the lists which Mr. Peet here gives us.

Florence. Painted by Colonel R. Goff; described by Mrs. Goff. London: A. & C. Black; New York: Macmillan. 1905.

Colonel Goff's watercolor impressions of Florence, published in book form, are an excellent example of how far color reproduction can go towards the exact rendering of work of really artistic merit done without regard to the limitations of the process. It will be, of course, an immense pleasure to travellers to possess such a vivid record of things seen in Florence and Tuscany, for Colonel Goff's pictures include all that is most striking—church ceremonies, flower markets, gardens, flowers, street-sellers, wine-carts, etc., besides the monuments and church interiors, and those exquisite effects of dawn and sunset, so brief that one wonders how they can be truthfully put on paper. Italy is so essentially a country where atmosphere and color predominate in its landscape, a few minutes making squalor out of what has seemed exquisite in pictorial effect, that views so well chosen and so admirably rendered by Colonel Goff's facile brush are especially valuable. It would be unreasonable to expect from any mechanical reproduction the luminous effects and delicate gradations of color, the purity of tint, of the original watercolor drawings. Here and there the values are altered, darks are exaggerated, and yellow tints predominate; one remarks

these shortcomings chiefly in skies and water; the architectural subjects come out remarkably well. Colonel Goff's method of working rapidly with wet color seems to suit the process; in many instances one can see the brushwork. Several of the places given have disappeared—the Mercato Vecchio, in 1884, for instance, before the destruction of the Ghetto; many of them are fast disappearing under the natural impulse of modern Italy for building and better hygiene.

Mrs. Goff's text is full of interesting details relating to Florence, its history, and the subjects of the pictures, and many of these are of Pisa, and Lucca, and Via Reggio, besides the villas and farms of the hillside above Florence. The book seems the most satisfactory of the series.

Copyright Cases: A Summary of Leading American Decisions on the Law of Copyright and on Literary Property, from 1891 to 1903. By Arthur S. Hamlin. G. P. Putnam's Sons. 1904.

Copyright Cases, 1901-1904. By E. J. MacGillivray. Stationers' Hall, London, 1905.

Mr. Hamlin explains that his work is addressed to the layman rather than the lawyer; hence, while including all other copyright cases, those which deal only with matters of practice or of pleading, as well as such portions of the decisions as have to do merely with the technicalities of procedure, are omitted. The attempt has been, while saving the space which would have been required for reporting the decisions in full, to summarize them so as to present something more than a mere digest of the legal principles involved. So far as possible, the wording of the judicial opinion has been retained within quotations marks, and only occasionally has Mr. Hamlin added a note of explanation.

The result is a readable summary of these interesting and important decisions. The date, 1891, on July 1 of which year the so-called International Copyright Act went into force, has been chosen as the convenient point of separation from the considerable mass of American decisions dealing with intellectual property. But the year 1891 did not mark any noticeable division in copyright jurisprudence. In fact, except for a couple of cases dealing with the type-setting clause of the act of 1891, the decisions here reported are not concerned with the provisions of that special enactment. It would, therefore, have been an advantage, when occasion offered, if some annotation had connected the decision reported with the earlier opinions which established the principles followed. The cases are grouped (without any apparent order) under the following captions: (1) Articles Entitled to Copyright; (2) Statutory Formalities; (3) Notice of Copyright; (4) Publication; (5) Transfer of Copyright; (6) Infringement, and (7) Remedies and Penalties. A selection of English cases has been printed in a separate section, and some decisions of the Treasury Department as to importation, together with the Copyright Office edition of the laws in force, have been added. The editor records his appreciation of the need for revision of the laws, and his approval of the recommendation of the Register of Copyrights that a commission be appointed, charged with the preparation of a bill for a general copyright law; maintaining that all existing copyright statutes, except those of the United States, have been the work of such commissions of experts, and that a codification of the laws so prepared might obviate the necessity of the greater proportion of copyright issues which have arisen from the unnecessary complexity of the provisions of the existing statutes, and from the difficulty, and in some cases the impracticability, of fulfilling the obligations imposed by these statutes.

Mr. Hamlin's work, while at the service of any purchaser, was primarily intended for the benefit of members of the American Publishers' Copyright League. The similar compilation, 'Copyright Cases, 1901-1904,' has been prepared for the English Publishers' Association, by Mr. E. J. MacGillivray, whose excellent 'Treatise upon the Law of Copyright' was recently noticed by us. The record begun in this volume with the new century, it is proposed to follow with annual reports of all legal decisions which are of particular interest to publishers. Some cases are therefore included not directly concerned with copyright, *e. g.*, a case awarding damages to an author whose book was not published on the date promised, and a case brought to determine whether a bookbinder has a lien for his charges on the books sent him to bind.

The first case, White *vs.* Constable & Co., is interesting. It was agreed that the author's Irish novel, 'The MacMahon,' should be published on March 20, 1898; but its appearance was delayed until April 18, nearly a month later. The author alleged that the book had thus lost the benefit of the extra demand for light literature created by the Easter holidays, and, further, that as the book was of particular interest to Americans, on account of a description of President McKinley's ancestry, it had lost by the retarded publication a large possible sale in America, owing to the outbreak of the Spanish-American war. It was held that the delay was due in part to the author himself, by reason of his omission to set right an error on the title-page when correcting the proofs, and nominal damages (£5) were awarded.

Mr. MacGillivray summarizes each case in his own words, making no attempt to distinguish the language of the judicial opinions. The rule or principle of law which each case decides or illustrates, is stated as a headnote and printed in italics—a valuable feature, the lack of which is noticeable in Mr. Hamlin's book. The present volume reports 46 cases, of which 35 are decisions by English courts, 7 are American, 3 Canadian, and 1 Australian. The increased citation of American copyright decisions is gratifying. In view of the extraordinary situation in England in regard to the protection of music which we commented on the other day, it is curious that but three or four of the above decisions have to do with musical copyright.

The Dark Ages. By W. P. Ker. Charles Scribner's Sons. 1904.

This initial volume of the series of "Periods of European Literature," edited by Professor Saintsbury, is very well done. The author, who is known as a competent mediævalist, combines a first-hand acquaintance with most of his documents and a broad knowledge of literary movements. By wise selection of his materials, lucid exposition, and occasional happy characterization, he maintains the interest even of those who are prepared to find the Dark Ages pretty dull and unprofitable. To say that the book will never mislead the general reader and give him incorrect or one-sided impressions, would be to say that it had achieved the impossible. We sometimes think that no historical generalization is really understood by any one except the man who makes it; and certainly the literature of five centuries cannot be adequately or accurately described in a handbook of three hundred and fifty pages. But scholars are not to be held responsible for all the uses to which their formulas are put by the unlearned. Professor Ker's volume is likely to correct more misimpressions than it creates, and it ought to win new readers to the direct perusal of the writings with which it deals.

We commend the author particularly for insisting upon the continuity of intellectual life in ancient and modern times. Though most of what he says is familiar enough to scholars, it has not yet become a part of general information; and many readers will be enlightened by the opening chapter, in which the elements of mediæval education are traced to ancient Athens, and in which allegory, a typical literary device of the Middle Ages, is shown to have been common in the Greek and Latin classics. "The Dark Ages," as Professor Ker says, "did not invent their own absurdities." But in the matter of allegory we are not sure that he has not overstated the case on the other side; for, after all, ancient allegory did not have the relative importance that belongs to such characteristic mediæval monuments as the 'Divine Comedy' and the 'Roman de la Rose.' Even in so short a sketch as Professor Ker gives of the history of allegory, we think more should have been said of the influence of the early Christian theologians, and we miss the mention of the name of Philo. In another place, too, where the author is discussing the continuity of literary style, we cannot quite agree with him. He appears to hold Gorgias and the classical tradition responsible for all the floridity of the Dark Ages, even in the northern vernaculars. We incline to the view that the Germans and Celts also developed an artificiality of their own. Similarly, in dealing with 'Beowulf,' Professor Ker looks perhaps too readily to the ancient culture of the South to explain the state of manners portrayed in the poem, and even to account for the very existence of extended epic in Anglo-Saxon. But these are all debatable matters.

The author and writings discussed range from Boethius and Cassiodorus in Italy to the Eddas and the Irish sagas in the far northwest. Over this wide field Professor Ker's characterizations are generally judicious, and often have the freshness and vivacity which spring only from personal impressions. Even in Celtic, where his knowledge of the material appears to be less complete and familiar than elsewhere, his habit of direct observation has stood him in good stead. Though he disclaims in his preface any special credentials in the field, his chapter is free from the usual conventional formulas and better than most accounts of Celtic literature of equal length.

Of actual error we think the work will be found to contain very little. On page 146 Professor Ker might have been more

careful to avoid the implication that Adamnan was the author of the vision that goes by his name. The existing text of the 'Fis Adamnan' is clearly Middle Irish; and though an older form may underlie it, it does not purport to be by Adamnan. Again, on page 209, we think the reader will gather the impression that all Irish metre is purely syllable-counting, whereas in fact most of the modern verse is accentual in rhythm. On page 259, too, we believe Professor Ker is in error (though he states the commonly accepted opinion) in attributing so much originality to the author of the Anglo-Saxon 'Genesis B.' We are not prepared to say what was the exact source of the Cædmonian account of the temptation of Adam and Eve, but it may very well have contained some of the elements ascribed by Professor Ker to the "imagination and good sense" of the poet. These elements are by no means without parallel in the literature of the subject.

Prizes for Economic Essays

SECOND YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate an examination of the value of college training for business men, a committee composed of

PROFESSOR J. LAURENCE LAUGHLIN, University of Chicago, Chairman;
PROFESSOR J. B. CLARK, Columbia University;
PROFESSOR HENRY C. ADAMS, University of Michigan;
HORACE WHITE, Esq., New York City, and
HON. CARROLL D. WRIGHT, Clark College,

have been enabled, through the generosity of MESSRS. HART, SCHAFFNER & MARX, of Chicago, to offer again in 1906 four prizes for the best studies on any one of the following subjects:

1. To what extent, and by what administrative body, should the public attempt to control railway rates in interstate commerce?
2. A just and practicable method of taxing railway property.
3. Will the present policy of the labor unions in dealing with non-union men, and the "closed shop," further the interests of the workingmen?
4. Should ship subsidies be offered by the government of the United States?
5. An examination into the economic causes of large fortunes in this country.
6. The influence of credit on the level of prices.
7. The cattle industry in its relation to the ranchman, feeder, packer, railway and consumer.
8. Should the government seek to control or regulate the use of mines of coal, iron, or other raw materials, whose supply may become the subject of monopoly?
9. What provision can be made for workingmen to avoid the economic insecurity said to accompany the modern wage-system?

A First Prize of One Thousand Dollars, and
A Second Prize of Five Hundred Dollars, in Cash,

are offered for the best studies presented by Class A, composed exclusively of all persons who have received the bachelor's degree from an American college in 1894 or thereafter; and

A First Prize of Three Hundred Dollars, and
A Second Prize of One Hundred and Fifty Dollars, in Cash

are offered for the best studies presented by Class B, composed of persons who, at the time the papers are sent in, are undergraduates of any American college. No one in Class A may compete in Class B; but any one in Class B may compete in Class A. The Committee reserves to itself the right to award the two prizes of $1,000 and $500 to undergraduates, if the merits of the papers demand it.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and not needlessly expanded. They should be inscribed with an assumed name, the year when the bachelor's degree was received, and the institution which conferred the degree, or in which he is studying, and accompanied by a sealed envelope giving the real name and address of the competitor. The papers should be sent on or before June 1, 1906, to

J. Laurence Laughlin, Esq.,
University of Chicago, Box 145 Faculty Exchange, Chicago, Ill.

Pearson's Essentials of Latin for Beginners

90 CENTS

THIS book is designed to prepare pupils in a thorough fashion to read Caesar's Gallic War. It contains seventy lessons, including ten that are devoted exclusively to reading, and six supplementary lessons. The vocabularies have been carefully selected, and contain, with very few exceptions, only those words that occur with the greatest frequency in Caesar's Gallic War. The more difficult constructions are first considered from the English point of view. The topics, such as nouns, adjectives, pronouns, and verbs, are not treated in a piecemeal fashion, but four or five consecutive lessons are devoted to one topic before passing on to another. The work is provided with ample reviews; the regular exercises review the vocabulary and constructions of the preceding lessons, and these are supplemented by review exercises.

Commodore Perry's Landing in Japan

It is of especial interest at this time that the opening of Japan to relations with the western world was effected by the United States. The publication of Commodore Perry's report to Congress on the subject, No. 151 of the Old South leaflets, is timely.

Price 5 cents a copy, $4 per 100.

STURMSEE

A novel on Social Questions by the Author of

CALMIRE

Of the earlier book, the *International Journal of Ethics* (Professor Royce) said: "The author . . . is a 'whole man,' and one of an enviable type . . . widely read . . . has seen much, has suffered much, and has even dreamed much; but . . . the bitterness of life has not been able to affect his true gentleness of heart . . . There is something acid and merciless about his manner as an opponent; but as a friend, as a lover, as an adviser of the erring, as a sympathetic helper in the hour of grief, he shows nothing so much as a noble simplicity and kindliness . . . The work is an important one, wherein a genuine ethical earnestness is well joined with a fine and manly vigor. . . . It ought to be widely read."

The Dial said: "Certainly a remarkable book. . . . He commands resources of opposite illustration and metaphor which make his expositions simply brilliant, while at the same time they are as far as possible from being stilted and otherwise unnatural. . . . Distinctly a helpful book. . . . To those who can comprehend it, the work offers a faith as far transcending that of our childhood as the wide world transcends the nursery."

The Tribune said: "The studies of Calmire, of Muriel, of Nina, and of Minerva are careful vigorous, true to nature, and often brilliant. . . . The author . . . writes with much force and skill."
